CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with Physicians who treat mental or nervous disorders. Not a secret. Formula on every label.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion; refreshes weakened vital powers in old or young. A Vital Phosphite, not a Laboratory Phosphate.

It is used by the Emperor Dom Pedro, Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

PUBLISHERS,
1, 3, and 5 Bond Street, New York.

FRENCH BOOKS JUST PUBLISHED:

LE MARIAGE DE GABRIELLE. By Daniel Lesueur. (Ouvrage couronné par l'Académie Française.) 12mo, 60c.

This is a pure and delightful romance of contemporaneous Parisian life, illustrating, in a most interesting story, the social relations of the old *noblesse* and the *nouveau richesse*. It comprises number five of the series "Romans Choisis," of which the following have been already issued:

DOSIA. By Mme. Henry Gréville.
L'ABBÉ CONSTANTIN. By Ludovic Halévy.
LE MARIAGE DE GÉRARD. By Andre Theuriet.
LE ROI DES MONTAGNES. By Edmond About.
12mo. Each 60c.

CARINE. By Louis Enault. 18mo, 25c.

This pretty story is the seventh number of "Contes Choisis," which have met with such favor from the press and the general public, which is looking for good French literature which is interesting and free from moral impurity. 'Carine' will be found a very attractive addition to the series, and will introduce another French author to American readers. The preceding numbers in the series comprise:

LE MÈRE DE LA MARQUISE. By E. About.
LE SIÈGE DE BERLIN. By A. Daudet.
LE MARIAGE D'AMOUR. By L. Halèvy.
LA MARE AU DIABLE. By George Sand.
PEPPINO. By L. D. Ventura.
IDYLLES. By Mme. Henry Gréville.

Any of the above books will be sent post-paid by the publisher on receipt of price. All the latest French publications received from Paris as soon as issued. Catalogues on application. Importation orders promptly filled at reasonable rates by

WILLIAM R. JENKINS,
Publisher and Importer of French Books,
850 Sixth Avenue, New York.

RECORD OF POLITICS and Politicians in the United States, 1865-1882: An analytical index to the *Nation* for that period (with occasional parallel references to McPherson's Political Handbooks and other sources). This index supplements the chiefly literary index to the *Nation* published in 1880. Valuable to all libraries, students, and editors. Price, in paper, $1 00. (Purchasers will please remit with order; accounts cannot be opened.) Address PUBLISHER of the *Nation*, Box 794, New York City.

THE NATION.—Sets, vols., and numbers bought, sold, and exchanged. The largest supply in the country. A. S. CLARK,
34 Park Row, New York City.

Delightful Reading.

ZEPH. Helen Jackson's posthumous story, "illustrative of the omnipotence of perfect, patient love." Fifth 1,000. Price, $1.25.

MADAME MOHL: Her Salon and Her Friends. There is a fascination in the very term a "Paris Salon." "To say that this is an extremely interesting book would be faint praise," says the *Nation*. Two portraits. Price, $2.50.

NAPOLEON THE FIRST. Prof. Seeley, the author of 'Ecce Homo,' has written "a great book which it is difficult to recommend too heartily," says the *Beacon*. Two portraits. Price, $1.50.

RACHEL. "This memoir of the great French actress is simply and quietly told, and the tale is well worth the reading," says the *Woman's Journal*. Price $1.

OUR LITTLE ANN. By the author of 'Tip Cat,' 'Miss Toosey's Mission,' and 'Laddie,' "fully deserves to rank with these three delightful and exquisitely graceful and tender fictions," says the *Saturday Gazette*. Price, $1.

Sold everywhere. Mailed, postpaid, by the publishers,

FRENCH DISHES FOR AMERICAN TABLES.

By PIERRE CARON,
Formerly *chef d'entremets* at Delmonico's.

TRANSLATED BY MRS. FREDERIC SHERMAN.

The receipts in this volume come from a *chef* of great experience, and are written with singular clearness, so as to be comprehensible to any person of ordinary intelligence. There are many people of moderate incomes desiring to live well and yet within their means, and to this class this book will prove specially useful. While economy is not its sole object, the variety of receipts for palatable dishes that may be prepared at small cost is very large.

12mo, cloth. Price, $1.00.

PUBLISH TO-DAY:

Letters to Dead Authors.

By Andrew Lang. 1 vol. Elzevir 16mo. Gilt top, $1.00.

It is a happy fancy of Mr. Lang's to unbosom himself of some of the brightest, wittiest, and most thoughtful criticisms of recent years by writing it directly to the great dead themselves —always with thorough reverence and appreciation, and the most charming regard for their ways of thought, but with perfect frankness. The public thus gains at second-hand one of the brightest collections of literary estimates which any contemporary writer—not even excepting the author of "Obiter Dicta"—could have given them. The little Elzevir volume, with its page and print, would of itself have appealed to many of the dead authors, as it will to modern readers.

CONTENTS:

To W. M. Thackeray.
To Charles Dickens.
To Pierre de Ronsard.
To Herodotus.
Epistle to Mr. Alexander Pope.
To Lucien of Samosata.
To Maitre Françoys Rabelais,
To Jane Austen.
To Master Isaac Walton.
To M. Chapelain.
To Sir John Manndeville, Kt.
To Alexandre Dumas.
To Theocritus.
To Edgar Allan Poe.
To Sir Walter Scott, Bart.
To Eusebius of Cæsarea.
To Percy Bysshe Shelley.
To Monsieur de Molière, Valet de Chambre du Roi.
To Robert Burns.
To Lord Byron.
To Omar Khayyám.
To Q. Horatius Flaccus.

The Fight for Missouri in 1861.

From the Inauguration of Jackson to the death of Lyon. By Col. Thomas L. Snead. 1 vol., 12mo. Cloth, $1.50.

The struggle which determined the position of Missouri in the Civil War was in reality an epitome of the Civil War itself. From the fact that the State was almost the only one actually divided against itself, with every individual citizen straining every nerve to carry it his way, makes this episode one of the most absorbing in the war history. Colonel Snead, himself a very prominent actor, and with original sources of information as to every phase of the struggle, has done in this book a work long expected from him, and has made one of the most interesting contributions yet given to this literature.

The Illustrated Library of Wonders.

A new and revised issue of twenty-four volumes, containing over a thousand beautiful illustrations. Each volume 12mo, complete in itself. Sold separately at $1.00 per volume.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 25, 1886.

The Week.

THE danger of the passage of any law requiring the Secretary of the Treasury to pay out all the money in the Treasury except the $100,000,000 which constitutes the greenback redemption fund, is very slight. Such a measure, if passed by the House, would pretty certainly be stopped in the Senate, and would surely encounter the Executive veto. It is most humiliating, however, that the House should have any such measure under serious consideration, and the hardship is all the greater since the Democratic party is pushing this destructive policy against its own Administration, the Republicans on the Ways and Means Committee and Mr. Abram S. Hewitt alone resisting the attack. The Democrats in the House are certainly doing all they can to drive the Independent voters back to the Republican party. When they go they will have a reinforcement of Democratic Mugwumps sufficient to make politics interesting in the next campaign.

Mr. Bland was defeated again in the Coinage Committee on Wednesday, this time in a most unexpected manner, by the vote of Mr. Norwood, of Georgia. The latter gentleman had received the same petitions from the business community of Savannah in favor of suspension of the coinage that "old Joe Brown" had received in the Senate, but he treated them very differently. He conformed his action to the wishes of his constituents, while Mr. Brown, by the gift of omniscience, discerned that the petition of the Savannah merchants had a printed heading, and must therefore have come from some other State than Georgia, where the art of printing is unknown and where merchants cannot read, and ought therefore to be held of no effect. Mr. Norwood's vote in the Committee left Mr. Bland, as it were, high and dry. He is now in worse shape than ever, so far as his Committee is concerned. But the friends of honest money are in much better shape. They are now in a position to force the fighting.

Attention has been drawn to the clauses in Mr. Morrison's Tariff Bill relating to lumber, the suggestion having been made that it is not intended to admit pine and spruce lumber free of duty. The two clauses are the following:

"FREE OF DUTY.—Lumber, hewn and sawed, and timber used for spars and in building wharves. Timber, squared or sided, not especially enumerated or provided for.

"DUTIABLE.—Sawed boards, plank deals and other lumber of hemlock, whitewood, sycamore, and basswood, and all other articles of sawed lumber when planed or finished: for each so planed or finished 50c. per 1,000 feet, board measure."

There is certainly no ambiguity in these clauses All sawed lumber except hemlock, whitewood, sycamore, and basswood, is to be admitted free, and all planed and finished lumber is to be charged 50 cents per 1,000 feet. It is very likely that this part of the bill will pass, whatever may be the fate of the remainder. The Western farmers have grown tired of paying an ever-increasing tax in the way of stumpage to a few owners of pine lands, and the whole country has been slowly but sensibly aroused to the dangers flowing from the destruction of the forests and the denudation of the uplands which constitute the natural reservoirs of the country. We do not see any sufficient reason for taxing hemlock and basswood more than pine and spruce.

There seems to be very little that is good and a great deal that is irredeemably bad about the appointments which the President made on Wednesday for Collector and Naval Officer at Baltimore. From a private letter received by us from a citizen of Baltimore whose knowledge and judgment in the matter cannot be questioned, we quote the following:

"Mr. I. Freeman Rasin, who has been appointed Naval Officer of this port, has for at least eighteen years been the chief lobbyist in Baltimore. He has long been at the head of the most powerful of the local factions. Even among politicians of his own school he has acquired a reputation for unscrupulousness and faithlessness passing the ordinary measure of professionals. To carry his point he has never hesitated to cheat at primaries. Through his tools and by his orders the worst of the election frauds of the last ten years have been perpetrated. Every one can tell you of more or less well authenticated stories of his having sent for persons interested in legislation pending before the City Council and the State Legislature, and telling them that they would have to pay a precise sum to win. Of one such incident I was myself personally informed three years ago by a gentleman, of the highest character, upon whom the demand had been made. Either the Civil-Service Reform Association or the Reform League will doubtless take the matter up. Ex-Senator Groome is a respectable gentleman of mediocre abilities, entirely under Gorman's control."

Mistakes like these, after the Higgins and Thomas appointments have shown the character of all of Gorman's friends, seem entirely without excuse.

It really begins to look as though Ohio might become a decent State. The Legislature, with a Democratic majority in the Senate and a Republican majority in the House, has passed a law which provides that in the four cities of Cincinnati, Cleveland, Columbus, and Toledo the Governor shall appoint boards of commissioners, consisting in each case of four persons of good character, divided equally between the two parties, and that these Commissioners in turn shall appoint all the election judges and clerks, who must also be of good character and selected from the two parties. Ohio people congratulate themselves, apparently with good reason, that this system will put an end to the outrageous election frauds that have so long disgraced the State, which invited them by an election system worthy of a community of barbarians.

Saco is a Maine town of 6,389 people, which used to be as free from disease as other places of similar size. The prohibitory law of Maine forbids the sale of liquors except for mechanical or medicinal purposes, and establishes in every large town an agency for their sale for such purposes. At a recent temperance meeting in Saco, official statistics were presented showing that in 200 days 16,000 prescriptions were put up at the local liquor agency, being an average of eighty a day. The effect of prohibition upon the public health evidently demands investigation.

The Senate is giving a good deal of time to the Blair bill, but the great importance of the proposition fully justifies the close attention which it is receiving. We are glad to see that the considerations which we have urged against the project during the past month are being employed with effect in Congress, as for example, by Senator Morgan, of Alabama, who has made a strong speech against the bill, citing the case of Connecticut. Senator Hawley sustained the position that the experience of his State is a forcible argument against the project, and laid proper stress upon the fact that its Board of Education considers the pending bill an unwise measure. General Boynton, the veteran Washington correspondent, says that there is no doubt that the better judgment of many Senators who do not come out promi nently in opposition to the scheme is against the policy of the bill. A similar change of sentiment is clearly perceptible in the press. When the proposition was originally broached, many newspapers hastily accepted the plausible pleas in its behalf which were made by the Rev. Mr. Mayo and other friends of education, and advised the passage of the bill. Now that the fatal objections to the scheme are indicated, several of these journals have ceased to advocate it, others give it but a halting support, and still others, like the New York *Times*, admit that it would not be advisable to pass the bill.

Senator Ingalls, of Kansas, pointed out another radical defect of the Blair bill when he urged that Congress had no right to appropriate money for educational purposes which must go in large measure to the Northern States, which do not need it. We have urged that the bill should be defeated because its passage would be so demoralizing to the cause of education in the South; but Mr. Ingalls does well to show that its influence would be only less bad upon the North. The only device by which a cloak of constitutionality can be thrown over the measure, is to apportion the money among the different States in the proportion which the illiterates in each bear to the number of illiterates in the whole country. A Northern State with a small percentage of illiteracy, but a large total population, may thus establish a claim to a greater share of the fund than a Southern State with a large percentage of illiteracy but a small total population. Of the whole $77,000,000 which it is proposed to appropriate, New York would receive $2,721,066, or considerably more than the $2,503,170 allotted to Arkansas; Pennsylvania, $2,825,324, or almost two-thirds as much as South Carolina's $4,582,792; Ohio, $1,633,718, or not far short of half Louisiana's $3,945,051; and Massachusetts, $1,152,-

116, or nearly $160,000 more than Florida's $993,548. Senator Ingalls pronounced it "an act of grand larceny on the Treasury" to take out money raised by taxation and pass it around on such a scale. In the name of Kansas, he refused to have his State share in any such larceny. Senator Hawley has made a similar disclaimer for Connecticut. The Massachusetts Senators will probably feel bound, for consistency's sake, to support again a measure which they were persuaded hastily to favor two years ago, but the Boston *Herald* brings the encouraging news that the bill "is not likely to have the support of all the Massachusetts Republicans in the House of Representatives." Senator Evarts, who is bound by no previous committal upon the question, ought to repudiate all share in the subsidy on behalf of New York; but unhappily Mr. Evarts is now running for the Presidency upon the platform of "the old flag—and an appropriation."

The Atlanta *Constitution*, as the leading newspaper of a commonwealth which justly calls herself "the Empire State of the South," does little credit to either its State or itself when it—rather shamefacedly, we are glad to observe—pleads that the nation should come to the help of Georgia's schools. It is true that the public schools of Georgia fall far short of being as good as they ought to be, but it is also true that Georgia is abundantly able to make them worthy of so prosperous a State. Georgia, as the *Constitution* would be the last paper in the country to deny, is one of the richest States in the whole South, and is hardly surpassed by any in the steady and rapid development of its resources. Yet Georgia is doing much less toward the education of her children than other States which have not only less wealth, but also a greater load of ignorance. Florida in 1880 had only about one-sixth the population and less than one-eighth the resources of Georgia, while the percentage of negroes to all the inhabitants was about the same in the two States; yet Florida expended $172,178 upon her schools in 1884, and Georgia only $653,868, or not two-thirds of what she ought to have raised to keep pace with Florida. Mississippi, in 1880, had but three-fourths of Georgia's population, and only about half her amount of wealth, while nearly 58 per cent. of Mississippi's inhabitants were negroes, against only 47 per cent. in Georgia; yet Mississippi expended $803,876 upon her schools in 1884, or $150,000 more than Georgia. The *Constitution* really must not ask the country to believe that the State which it represents as being at all other times rich, progressive, and prosperous, becomes suddenly so poor, when it comes to the matter of raising a school fund, that it cannot do even as well as Florida or Mississippi.

Senator Frye's proposed Pan-American Convention reminds us, and was perhaps intended to remind us, of the similar step once proposed in a vague sort of way by Mr. Blaine. The Blaine scheme was shrouded in sufficient mystery to enable anybody to claim any advantages from it that the most lively imagination could suggest, without showing how they were to be gained. Mr. Frye's is open to the serious objection that it offers a plan for securing them. Among the declared objects of the Convention is the following:

"Second—Measures toward the formation of an American customs union, under which the trade of the American nations shall, so far as is practicable and profitable, be confined to American waters, and there shall be *a free interchange of the peculiar natural and manufactured products of each.*"

What on earth can Mr. Frye be thinking about? The most peculiar natural product of South America which Mr. Frye proposes to admit duty free is wool. This is the one thing whose admission free of duty would be likely to make the greatest commotion in the State of Ohio. What will the wool-growers think of Mr. Blaine when they read this?

The *Herald* publishes a very sweeping but obviously just decision of the United States Supreme Court, to the effect that the law of Congress which authorizes the arbitrary seizure of a merchant's books and papers by Custom-house officers is unconstitutional and void, being plainly obnoxious to Article IV. of the amendments which guarantees "the right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures," and also to Article V., which declares that "no person shall be compelled in a criminal case to be a witness against himself." This decision falls in very pat with Secretary Manning's able and thorough discussion of the machinery of the tariff laws, sent to Congress a day or two since, the purport of which is that the laws are not by any means sufficiently stringent to enable him to collect the existing duties on imported goods. And now comes the Supreme Court and sweeps away the main reliance for the discovery and proof of frauds and undervaluations which has been in force ever so many years. In view of this decision one's mind naturally reverts to the great black-mailing case against Phelps, Dodge & Co., which depended for its success upon a seizure of books and papers as arbitrary and ruthless as was ever known.

The tyranny and cruelty of which trades unionism is often guilty have seldom been displayed in a more repulsive light than in Newark to-day. The compositors employed by the *Daily Advertiser*, of that city, have not hitherto belonged to the Typographical Union, although they have been paid higher wages than the Union rates, and have had no complaint to make on that or any other score. A committee of the Trades Assembly recently waited upon the proprietor, and requested that the *Advertiser* office should be enrolled under the auspices of the Typographical Union, to which he offered no objection, provided the men desired to become members of the organization. The Committee, however, served notice that seven men who were employed in the office, including one who had been in its service for forty years, would not be admitted to the Union, because they abandoned a strike in which the office was involved about five years ago, when they returned to work without permission from the central authority. It thus became evident that the sole object of the movement to make the office a Union office was to punish these seven men for an alleged offence committed five years ago, to deprive them of their present means of supporting their families, and to turn them adrift with little chance of finding work elsewhere, as their names would be everywhere "posted" by the Union. The proprietor refused to consent to such injustice and inhumanity, as any man of proper feeling would have done, and the Trades Assembly promptly retorted by ordering that the *Advertiser* be boycotted. It is encouraging to learn that the American love of fair play is manifesting itself in Newark, and that the *Advertiser* is doing a brisker business than before, since this outrageous attempt was made to destroy it for simply doing its duty.

The Rutland (Vt.) *Herald* lately took a most gloomy view of the conditions and effects of farming life in New England. The familiar statement was again repeated that the farming class yields a larger percentage of insanity than any other, and this was accounted for on the ground that the average farmer and his wife and daughters are under-nourished, grievously overworked, and much subject to anxiety and nervous stress.

"To take a New England farm and make it pay means toil, incessant toil, early and late; physically the farmer, and especially the farmer's wife, is often severely overworked to the extent of a broken-down nervous system. The food of the farmer is no better, not always as healthful, as the food of mechanical city workers; and the fatigue, exposure, anxiety, and overwork of the average farmer is more than is ordinarily encountered by the city worker of the same intelligence," etc.

A correspondent of the *Evening Post*, which had reprinted the article, writes to that paper to say that twenty-five years of experience upon a farm, and much observation, lead a farmer's wife to very different conclusions. It is true that she writes of Connecticut and not of Vermont, but the conditions of the same class cannot be widely different in the two communities. No doubt there is difference in ease of living among farmers; a little advantage in point of capital, or intelligence, or even temperament, will cause that. The insanity results, however, if they were known, would be really significant of average condition, and the popular conviction certainly is that farming life does yield more than its due proportion of insane patients.

It may be doubted whether this conviction is well founded. We have before us the latest reports of the Danvers and the Worcester Lunatic Hospitals in Massachusetts, a State which, touching both Vermont and Connecticut, has very similar conditions of climate and soil. The males engaged in agriculture in Massachusetts amount to almost exactly 9½ per cent. of the whole male population. Yet of the admissions to these two hospitals during the last year reported the farmers numbered less than 6 per cent. of the whole number of males, while of wives or daughters of farmers, specified only in the Danvers report, the proportion was barely 3½ per cent. of the females. These proportions become more significant when contrasted with the returns from other classes of society. Laborers, for instance, furnished 19 per cent. of all males, and wives or daughters of laborers (reported from the Danvers Hospital only) supplied about 8½ per cent. of all females, while full 20½

per cent. of the admissions of females to both hospitals were from the class of domestic servants. Finally, what may be considered most striking of all, is the fact that of the whole number (nearly 800) embraced in both reports, the proportion of patients of "no occupation" is a little more than 6 per cent. for men and a little less than 6 per cent. for women. The proportion of the whole population represented by each of these classes excepting the farmers, whose number is known by the census, must be a matter of estimate, but no estimates can disturb the conclusion from these reports that the farmers and their women-folk furnish very much less than their natural proportion of insane patients. The representation from the very small "no occupation" class, equalling that from the great agricultural division of society, calls to mind Dr. Robson Roose's paper on "Wear and Tear of London Life," in the last *Fortnightly Review*. Dr. Roose says, on the authority of "a distinguished American physician" (whom we take to have been the late Dr. James R. Wood), "that the number of the insane is greater in a community in proportion to the political and religious freedom of the population; that is, to the opportunity they enjoy of working out their own purposes, whether in relation to this world or the next, in the manner most agreeable to themselves. The explanation, of course, is, that in such communities the causes of insanity are always numerous and wide spread." This is a lightning-flash of insight to put beside the popular theory, the substance of which is that it is from lack of "causes of insanity" that farmers go mad.

The Rochester *Democrat and Chronicle*, discussing our recent contrast between the rapidity with which the political generation of the war period is passing away, and the length of time that the generation of Revolutionary soldiers and statesmen remained upon the stage, speculates as to the causes of the difference, and is inclined to conclude that "the lives of men who are foremost in affairs have been shortened rather than lengthened" during the century since the foundation of the Government. We think upon more careful investigation it would find another element, still more potent, in the earlier age at which the men of the Revolutionary period attained prominence than those of the Rebellion era. When the civil war broke out in 1861, Lincoln, Hamlin, and Andrew Johnson were each 52 years old; Fremont and Douglas were each 48; Seward was 60; Chase, 53; Cameron, 62; Stanton, 46; Greeley and Sumner, each 50; Wilson, 49; Fessenden, 55; Trumbull, 48; Wade, 61; "Thad" Stevens, 69; Banks, 45; Hendricks, 42; Curtin, 44; John Sherman, Morton, and Colfax, each 38; Grant, 39; Tecumseh Sherman, 41; McClellan, 34; Hancock, 37; Sheridan, 30; Seymour, 51; Tilden, 47; Hayes, 38; Garfield, 29; Logan, 35; Lamar, 36. Here are thirty-three men, then prominent in politics, or destined to prominence in the field, of whom a full third had completed their fiftieth year, and but three were under 35, while the average age of all was nearly 46.

On the other hand, when the Revolution broke out in 1775, Washington was 43; John Adams, then a delegate in the Continental Congress, 40, and his colleague, Thomas Jefferson, only 32; Madison, just entering on public life in Virginia, but 24; Monroe, a boy of 17, contemplating joining the patriot army the next year, and eight years later a member of the Continental Congress at 25; Hamilton, a college student of 18 in this city ready to be Washington's aide-de-camp at 20, and a member of the Continental Congress at 25; Rufus King, afterward United States Senator from New York as late as 1825, a Harvard student of 20, preparing himself to be an officer in the army at 23 and a member of the Continental Congress at 29; Charles Pinckney, afterward Congressman so late as 1821, a boy of 17, who was to be one of South Carolina's representatives in the Continental Congress at 19; William Jackson, afterward Secretary of the Constitutional Convention of 1787, a lieutenant in the army at 16 and Assistant Secretary of War at 23; while in the Continental Congress sat such already prominent men as John Jay, not yet 30; Robert R. Livingston, 28; Frederick Frelinghuysen, but 22, among colleagues nearly half of whom were men under 40. Without further multiplying illustrations, it is evident that the chief reason why men who were prominent in the Revolution continued prominent so long afterward that the last President of that school did not retire until 1825, was because they were as a rule so very young when they assumed public duties; while the chief reason that the politicians and soldiers of the Rebellion period are dying so much sooner after the close of the struggle is because they were very much older men than their prototypes of the last century when the struggle opened.

We shall probably hear, before many days, a great outcry from the Gloucester fishermen against the preparations making by the Canadian authorities to protect their fisheries under the revived treaty of 1818. One of the clauses of this treaty forbids our fishermen to trade with the Canadians and Newfoundlanders for bait, ice, and other articles indispensable for fishing. When the advocates of a fishery commission pointed out this matter to the Gloucester fish protectionists they replied that this trade was just as advantageous to the Canadians as to our people, and that trading was a natural right anyway, and that if they were not allowed to go ashore to buy bait, etc., the sellers of those articles would paddle their canoes out to the fishing fleet and do the trading beyond the three-mile limit. But now we are told that the Dominion authorities will take steps to prevent this contraband traffic by stationing cruisers along the shore to keep all the bait at home. It is difficult to see how this trouble is to be met. We keep our people from trading in the most innocent articles, except when and as our laws permit. We are not allowed, for instance, to buy a ship of foreign build under any circumstances, nor is a foreign-built ship allowed under any circumstances to carry a passenger or a pound of freight from one American port to another. In point of principle there is no difference between this kind of prohibition and the prohibition of bait trading and ice trading in Newfoundland. Upon the whole, it seems likely that the additional cost of fishing will amount to at least 1 cent per pound, which is the rate of duty on fish concerning which all the row is made.

The Dilke scandal in England grows a little more mysterious every day. How the Judge came to grant a divorce on the husband's report of the wife's confession, without any corroborating testimony, has never been clearly explained, but we suppose that the failure of the wife to put in any defence operated as a default on her part, and enabled the husband to get judgment against her. But then Dilke was a co-respondent, and did not either appear or offer any evidence, and yet, although the judgment against the wife indirectly convicted him, the charge against him was somehow—nobody seems to know how—dismissed. As matters stand, the proceeding has all the air of a divorce by collusion between the parties, and the public in England evidently so regards it. Under these circumstances, it is in England the duty of the Queen's Proctor—the law officer of the Crown in the Admiralty and Divorce Courts—to intervene, and have the proceedings reopened, and this he will probably now do. According to the latest accounts nobody ought to desire this more than Sir Charles Dilke himself, for he is now said to have all along had a complete answer to the charge against him, but was prevented from making it by the advice of the wicked Joseph Chamberlain, who insisted on his keeping silent. But this was such obviously bad advice that if offered in this country, by Blaine to Logan for instance, it would be looked on as an attempt to "knife" a hated rival. Sir Charles Dilke is now said to see his mistake, and to be anxious to make his statement. That he should not have seen that a truthful denial of an act of great baseness was always seasonable and becoming, to use no stronger words, is very extraordinary for a man with as much experience of life as he has had.

The new rôle of Lord Randolph Churchill as head of the Irish Orangemen is in all respects worthy of this really remarkable mountebank, who was seven months ago coquetting with the Parnellites. But his performances in Ulster the other day can only help the Home-Rulers by disgusting the British Radicals. No party in England can ever afford to make much of Orange support, because the Orange creed contains only one article, and that is that Protestants should have all political power and Catholics none. Every English statesman who has ever tried to improve the condition of Ireland has had to face their hostility and defy their threats.

The formal surrender of the Greeks to "superior force," which was announced in England on Tuesday, will form another sorry episode in Greek history. The frantic appeal they have put forth to the English and Irish to save them from the British fleet, commanded by a Prince of the blood, will make their situation a little more ridiculous. They are now in the position before Europe of having again tried to better themselves by pretending to be going to fight, in the hope that the Powers would make Turkey give them something in order to keep the peace.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 17, to TUESDAY, February 23, 1886, inclusive.]

DOMESTIC.

THE Republican Senators decided in caucus on Wednesday that the Edmunds resolution relative to the respective powers of the President and the Senate in the matter of nominations should be favorably reported in open session of the Senate. Mr. Edmunds's resolution covers these points: First. That the Senate does not approve the answer of the Attorney-General in refusing to give information as to suspensions. Second. That the Senate cannot confirm persons nominated to succeed suspended officials where the reasons for suspension are not given. Third. That the Senate does not approve of the removal of ex-Union soldiers without cause. The resolutions were presented in the Senate on Thursday.

The present situation in the contest between the President and Senate is stated as follows: The reports that the Republican Senators are not in accord as to the resolutions presented by Mr. Edmunds are not well founded. Whatever differences of opinion there may have been in the first instance as to the policy to be adopted, the Republicans are now a unit in their support of the resolutions. These resolutions themselves are a compromise, and represent the concession that had to be made to those who were opposed to a policy of wholesale rejections. They have been misinterpreted in a good many quarters, as is apparent from the character of some of the press comments outside of Washington. Only those nominations are to be rejected as to which information, when asked, is refused, and it is quite clear that all nominations will be rejected where the information, meaning by that term the "papers," is withheld. Care will be taken not to call for information where the Republicans do not have what they call a "good case." The papers will be called for in a great many post-office cases. It is probable, for instance, that the Postmaster-General will be asked to furnish the papers in the case of every Presidential postmaster in the State of Virginia.

In the Senate on Wednesday a bill was introduced appropriating $250,000 for a Grant monument in Washington. It was passed on Tuesday.

The Education Bill was again under discussion in the Senate on Thursday, and was opposed by Mr. Ingalls (Rep., Kan.) and Mr. Coke (Dem., Tex.). Mr. Riddleberger (Read., Va.) spoke in its favor, and Mr. Evarts followed on Friday. It is believed that the bill will be defeated.

The Senate Commerce Committee has decided to report favorably upon the bill to permit the Baltimore and Ohio Railroad Company to bridge the Arthur Kill, but the height of the structure has not been determined.

The Republican members of the Senate Judiciary Committee will report against the confirmation of Mr. Goode as Assistant Attorney-General.

The House on Thursday passed the Fitz-John Porter Bill by a vote of 171 to 113. On Friday a resolution was passed authorizing the President to furnish a gold medal to Joseph Francis, of New York, for his distinguished services as an inventor of life-saving appliances.

In the House Coinage Committee on Wednesday Mr. Norwood, of Georgia, who had voted with the Bland men, announced that his constituents opposed a further coinage of silver dollars. The recent decision to report adversely on Mr. Wait's resolution for a suspension of coinage was then laid on the table by a vote of 7 to 6.

The Ways and Means Committee on Tuesday morning had an animated discussion on the various propositions that were submitted as to the manner in which the Morrison Tariff Bill should be considered. The Republicans insisted that the Committee should hear delegations of manufacturers and others who might be affected by the measure. The Democrats insisted that the hearings given by the Tariff Commission and since were sufficient to make known the views of the protectionists, and that it was important that the bill should be reported to the House as soon as practicable. Finally the Democrats made what they call a concession, and permitted the Committee to adopt a resolution that hearings will be given to parties in interest until March 12, when the Committee will proceed to act upon the bill. This delay is much greater than Chairman Morrison had expected or desired.

There is to be determined opposition to the bill. Mr. Morrison says he has presented the bill to give the Democrats an opportunity to determine whether or not they will support their party platform.

Secretary Manning reports that the Morrison Tariff Bill will reduce the revenue only about $12,000,000 instead of $20,000,000. When the bill was reported it was stated that the reduction of taxes would be about $5,000,000 by the extension of the free list, $10,000,000 by the sugar cut, and $5,000,000 by other changes. Mr. Manning finds that as it is stipulated that the reduction in the sugar duties shall not be applicable to countries laying an export tax, and that 74 per cent. of the sugar imported into the United States comes from Cuba and Porto Rico, both imposing export taxes, the reduction will be only $2,000,000.

The House Naval Committee has practically agreed upon a comprehensive plan for the reorganization of the navy. It is proposed to build six cruisers and a number of torpedo boats.

Rear-Admiral Jouett telegraphed the Secretary of the Navy from Aspinwall on Friday that the United States steamship *Galena* had sailed for Key West, Fla., with the steamship *City of Mexico* as a prize. The *City of Mexico* was bought some time ago by friends of ex-President Soto, and has on board a part of the expedition which has been preparing for some time to descend upon the coast of Honduras.

United States District-Attorney Dickson was attacked in Salt Lake City on Monday evening by a son of George Q. Cannon and two other men, who struck him in the face with a stone. His injuries are not serious.

About two o'clock on Monday morning the Chinese residents were driven out of Oregon City. They were wakened by a mob who drove them on the steamboat *Latonia* and paid their fares to Portland. Forty-two, in all, were driven out. They were employed in woollen mills.

In the Virginia Senate on Wednesday the bill prepared by Lieutenant-Governor Massey to facilitate the settlement of the public debt of the State was introduced. It authorizes the Governor to appoint three citizens of Virginia as a Board of Commissioners to confer with the bondholders, and to acquaint them with the material and financial condition of Virginia, and explain the facts which make the settlement under the Riddleberger act just and equitable, and its acceptance by them necessary for the protection of their interests. The Commissioners are empowered to take steps to arrange with West Virginia for a just proportion of the State debt as it existed prior to the 1st of January, 1861, to be borne by West Virginia and not by Virginia. The bill further provides that the amount secured to be paid by West Virginia shall be divided pro rata among the holders of West Virginia certificates which have been issued under the different acts of the General Assembly of Virginia, or which may be issued before the 1st of January, 1887.

In the New York Assembly on Thursday an amendment to a civil-service bill, that no competitive examinations be had for soldiers and sailors, was defeated 39 to 66.

The strike in the Pennsylvania coke regions has virtually ended in a victory for the strikers.

Henry Watterson, editor of the Louisville *Courier-Journal*, is improving in health and will probably recover.

John B. Gough died in Philadelphia on Thursday afternoon. He was born August 22, 1827, at Sandgate, Eng. When a boy of twelve he came to this country, learned the bookbinder's trade and earned a fair salary for a boy. He became intemperate, and, on account of his mimetic powers, was very popular with his companions. At one time he appeared on the stage in Boston. The theatre was soon closed for want of money, and Gough lost his earnings as well as his position. He was married soon afterward, and established a bookbindery of his own, but his intemperance increased, and his wife died within a year. Gough signed the temperance pledge in 1842, at the suggestion of a Quaker named Stratton, and then began to speak at temperance meetings. His natural eloquence gained him a great reputation. Since then he has lectured all over this country and Great Britain. It is estimated that more that 300,000 people have signed the pledge by reason of his efforts, and that at least 9,000,000 have heard him speak. He lived in a comfortable home at Worcester, Mass.

FOREIGN.

Mr. Gladstone has assumed the office of Lord Privy Seal. This is taken as an indication that he has difficulty in filling that Cabinet position.

Parliament reassembled on Thursday. Mr. Gladstone stated, in the House of Commons, that, after the Government had concluded the financial business they had to place before the House, they would be able to state a part, if not the whole, of the Irish measures they intended to introduce. He expected, he said, to be through the financial business about March 22. Mr. Gladstone announced further that the Government had no intention of renewing coercion in Ireland. Alluding to the foreign policy of the new Government, Mr. Gladstone said he would follow the Eastern policy inaugurated by his predecessor, Lord Salisbury.

Mr Parnell was on Thursday night questioned with reference to Mr. Gladstone's statement that the proposed Irish measures would not be introduced until March 22. He replied: "The situation, as it existed after the defeat of the Conservative Government two weeks ago, has not been altered in any way by the declaration of the Prime Minister. I think it is only reasonable the new Ministry should be allowed the time Mr. Gladstone asks for the consideration of these proposed measures with regard to Ireland." Mr. Parnell again insisted that the home-rule question must precede all other Irish measures, and added: "I am further of the opinion that if the land question be left to the determination of an Irish Parliament, landlords will obtain a more favorable settlement than if they be thrown upon the mercy of the present Parliament at Westminster."

The leading members of the Conservative party met in London on Thursday, to confer upon the course the party should pursue in regard to Irish affairs. Lord Salisbury presided. Lord Randolph Churchill and 150 other prominent Tories were present. The meeting was very enthusiastic. Lord Salisbury predicted a union with the Conservatives of the section of the Liberals which follows Lord Hartington and Mr. Goschen. He urged the Conservatives to do all that was possible to bring such a union into effect. Some of the speakers commented severely on Lord Randolph Churchill's attack upon Catholics and his intimacy with the members of the Parnellite party. The meeting resolved to make home rule a test question in the House of Commons, and for this purpose will support the Parnellites in their demand to have it precede land reform in the consideration of the House.

In the House of Commons on Monday Mr. Gladstone announced that the Government did not intend to suppress the Irish National

League. In moving the appointment of a select committee on procedure, he said it was the Government's intention to facilitate business rather than to adopt clôture measures. Captain O'Shea met with a chilling reception in the House on Monday. It is asserted that Chief Secretary Morley has so instructed the police and military authorities as to render it virtually impossible to effect evictions.

In the House of Commons on Friday night, during a discussion on a vote for the Irish constabulary, Mr. Dillon expressed the strongest desire to make smooth Mr. Morley's path, because, as he said, he knew that Mr. Morley wished to leave Ireland as soon as possible. Mr. Morley replied in an unconcerned manner, repudiating Mr. Dillon's motive of sympathy. He said that the question how long English ministers would rule Ireland was rapidly approaching a solution one way or the other. Loud Parnellite cheers greeted Mr. Morley's remarks

The impression is gaining ground in London that the present Cabinet will prove unworkable, and that it will be impossible to hold it together. Mr. Chamberlain denies that there is any dispute or difference of opinion concerning the Government's policy toward Ireland between himself and his colleagues in the Cabinet.

Mr. Joseph Chamberlain, President of the Local Government Board, has quarrelled with his Radical colleague, Sir Charles Dilke, and abandoned him utterly. The reason given by Mr. Chamberlain's friends is, that Sir Charles refused to adopt Mr. Chamberlain's advice to testify under oath that he was not guilty of the offences charged against him as co-respondent in the Crawford divorce suit. On the other hand, friends of Sir Charles say that he was dissuaded from testifying by Mr. Chamberlain. They reassert the innocence of Sir Charles.

Sir Charles Dilke met the Chelsea Liberal Council on Friday, and declared that he had no intention of resigning. By a vote of 294 to 6 the Liberals declared their confidence in him.

The hearing in the case of the Socialist leaders, Hyndman, Burns, Champion, and Williams, who are charged with inciting to riot, contempt of law, etc., in connection with the recent demonstration in London, was begun in the Bow Street Police Court on Wednesday morning. The counsel for the Government quoted from speeches made by the accused, showing that they incited the mob to breaches of the peace. They will probably be prosecuted for misdemeanor. The hearing was adjourned one week.

A great Socialist meeting, numbering 50,000, was held in Hyde Park, London, on Sunday. Speeches were made from three stands. Burns delivered an effective oration, in which he deprecated any attempt at looting or rioting, attributed the previous rioting to mockeries of clubmen, and appealed to the audience not to take their ransom prematurely, nor to give the police spies a chance to traduce them. Hyndman, Williams, and Champion spoke in their usual strain, but without using violent language, although earnestly demanding a social revolution in the positions of capital and labor. When the meeting was ended the crowd moved in an orderly manner to the exit at Hyde Park Corner. There, without warning, bodies of mounted police made a furious rush into the crowd, especially in the vicinity of the leaders' wagonettes. Many blows were dealt, and the police were hooted. The temper of the crowd was rising, but in response to the appeals of the speakers they behaved admirably. Thirty thousand people have applied to the Mansion House in London for relief.

The Chief of the Metropolitan Police force of London has resigned on account of the recent severe censures growing out of the riots. A thorough reorganization of the force is probable.

Mr. Joseph Chamberlain, President of the Local Government Board, was visited on Tuesday by a deputation of unemployed workingmen, who stated their grievances and asked what the Government meant to do to relieve the prevailing distress. Mr. Chamberlain, in his reply, deprecated riots and all similar forms of disturbance to manifest the needs of help. He said he was opposed to emigration as a means of relief, unless the distress were chronic. This opposition was based on many grounds, not the least among which was the fact that the colonies would refuse to welcome large numbers of paupers, because, among other reasons, their influx would cheapen the labor market. Mr. Chamberlain added that he hoped the Government would soon be able to establish the British laborer upon the soil he tilled. Pending the accomplishment of this, he (Mr. Chamberlain) would not cease urging the local boards to start relief works, such as paving and improving the streets, to furnish the means of subsistence to such as were in absolute need.

At the meeting of the Chambers of Commerce in London on Tuesday, Mr. Forwood, Conservative member of Parliament from Lancashire, and a prominent shipowner of Liverpool, presided. He attributed the present depression in British trade to the appreciation of gold, assisted by the competition of foreign products and manufactures turned out by skilled labor improved by technical education. The Dublin Chamber of Commerce offered and the Glasgow Chamber seconded a resolution "against weakening the union between England and Ireland," because of "the disastrous nature of the results which would ensue to the commercial and trading interests of Great Britain."

The Earl of Aberdeen, the new Lord Lieutenant of Ireland, made his state entry into Dublin on Saturday. There was little enthusiasm. Some students in the procession were attacked by the crowd and wounded.

Lord Randolph Churchill arrived at Belfast on Monday and was received with unbounded enthusiasm. Many processions with Orange colors paraded the streets. The crowd unharnessed the horses from Lord Randolph's carriage and drew it through the streets. When he rose to speak, the cheering lasted more than five minutes. He said it lay with Ulster to say whether Ireland should remain a part of the empire. He denied that the Parnellites were true representatives of the will of the Irish people. As for Mr. Parnell, his only title to be continued as leader in the party lay in actions of which no one could be justly proud. By playing upon the terrors of the peasantry and by means of brutal outrages upon human beings and animals, he had secured five-sixths of the Irish members of Parliament. He appealed to all, regardless of creed, to declare in favor of a freer and closer union. If the appeal failed, he said, he would not mind leaving the issue to the people of Ulster. He believed the storm would blow over, however, and that the Union would emerge stronger than it had ever been. The meeting adopted a resolution to oppose Nationalism and to call upon the people of England and Scotland for help.

Mr. Parnell, in an interview on Tuesday in regard to Lord Randolph Churchill's Irish tour, said his visit was likely to end in smoke. It was not generally known that the proportion of Catholics to Protestants in Ulster was forty-nine to fifty-one. Lord Randolph was a most contemptible politician. He would have taken either side just as suited his purpose at the moment. He was virtually on the National side and against the Orangemen just before taking office. He was extremely unpopular with the Orangemen then. His militant orations may be summed up in one word—"talk." The Orangemen do not intend to fight. The last Orange demonstration in Ulster proved this. As soon as a few Orangemen were pricked with bayonets by a handful of policemen, all bolted. Lord Randolph, he added, was no more violent than was to be expected. Mr. Sexton, in an interview, said the speech rendered Lord Randolph impotent to affect English opinion. His position on the Irish question was one of bad faith. Everybody knew that if the elections had made Lord Salisbury independent of the Orange members, Lord Randolph would now have been engaged on a home rule bill.

The Irish party will hold a meeting at the Cannon Street Hotel, London, on St. Patrick's Day. Mr. Parnell will preside. The object of the meeting will be to issue to England the ultimatum of the Irish people concerning home rule. As the date selected for this event precedes by but five days the 22d of March, the date set by Mr. Gladstone for the commencement of the Government's work on Irish legislation, it is believed that the Nationalist leader means to force a crisis on the home-rule question. Mr. Parnell has also arranged to have his party hold fifty meetings throughout Ireland simultaneously with the one he will preside over.

Lord Tennyson has sent a despatch to Senator Hawley, thanking him for the stand he has taken on the subject of international copyright.

A committee of the French Chamber of Deputies on Friday, by a vote of ten to seven, rejected a proposal for the expulsion of the princes, and by eleven to six passed a motion giving the Ministry power to expel them if necessary.

Prince Jerome Napoleon (Plon-Plon) publishes a letter in Paris in which he protests against the proposed proscription of the French princes, and insists that such treatment would be unfair. The Bonapartists, he declares, were defenders of the Revolution. What the republic requires to increase its strength and prestige, he says, is reform of its methods of government. The expulsion of the princes would tend to the destruction of the republic. Prince Napoleon also takes occasion to criticise the manner in which the President is chosen. He says that the people should be allowed to elect their own Chief Magistrate, and that the method which gives the power of selection to the National Assembly should be abolished. The manifesto has created a sensation in Paris, and the press demand the expulsion of Plon-Plon.

A bill has been introduced in the French Chamber of Deputies to enable the city of Paris to raise a loan of 250,000,000 francs to be used in public works.

The Greek Ministers of War and Marine having threatened to resign unless war against Turkey was declared, owing to the popular eagerness for hostilities, the Powers sent a final note to Greece before blockading her fleet in Salamis Bay. The Sultan refused to grant any concessions to Greece.

The British Minister at Athens telegraphed on Tuesday that Greece had formally submitted, but Premier Delyannis will prepare a protest to the Powers that Greece submits only to *force majeure*. Mr. James Bryce, Under Foreign Secretary, said in the House of Commons on Tuesday night that the Government did not entertain the opinion that the present was a favorable time to approach the Sultan with a view to securing accession of territory to Greece. The statement was cheered by the Conservatives.

The Portuguese Ministry have resigned. The King has summoned the Progressists to form a new cabinet.

The Berlin *North German Gazette* (Bismarck's organ) says: "The prosecution is imminent of numerous Germans who style themselves doctors on the strength of diplomas purchased in America. There are 3,400 such doctors in Berlin alone."

RESPONSIBILITY IN THE NAVY DEPARTMENT.

THE plan of reorganizing the Navy Department outlined by Secretary Whitney in his annual report has been formulated in a bill now before the House Naval Committee. The favorable impression which we had formed of the plan makes us regret all the more to find introduced in it a most objectionable feature, the effect of which will be to increase the very evil which it is intended to obviate. This is a provision for a "Board of Council," to be composed of the chiefs of the several bureaus or departments, together with three officers of the navy to be appointed by the Secretary. In reading this section of the bill we feel as if meeting an old familiar face, which has appeared at our door from time to time with a modest tender of services, now in this capacity and now in that, ever since the abolition of the old Board of Navy Commissioners in 1842. In the hands of Mr. Herbert's committee the Board has thrown off its old modesty, and asks for nothing less than the decision of all questions of naval policy which the Secretary may submit to it. Its former tenders have been so varied in their character, and made under so many guises and aliases, as to leave the impression that it would be satisfied to perform almost any service, not positively menial, if it could only secure the much-coveted privilege of a footing in the Department.

At the first blush nothing could appear more reasonable or more natural than the organization of such a board. Secretary Whitney has himself taken pains to inform us that he knows very little about the workings of the complicated machinery which he has in charge, and that he deeply feels the need of sound professional advice. What better plan can be devised than that Congress should require him to choose three officers of rank and experience to join their powers to those of his chiefs of bureau, and thus enable him to substitute the combined wisdom of seven experts for his own inexperience? It seems almost cynical to hint that anything sinister can lurk under so prepossessing an exterior. But when we proceed to inquire more closely into the grounds for the board, we find a suspicious circumstance which no one has ever ventured to explain. It is that the proposed law only directs the Secretary to do what he already has ample power to do, and does actually do whenever he finds it necessary and practicable. He can of his own motion organize any kind of an advisory board he wants. He can to-morrow order his chiefs of bureau to form themselves into a board, just as other Secretaries have done in times past; and if he thinks that three other officers would be useful in the board, he can command their services without a word being said by Congress. Wise men look with distrust upon legislation to do that which is already done without legislation; and if Secretary Whitney ever lies awake o' nights, he can very profitably employ his thoughts during the still small hours in pondering over the question why he should want Congress to legislate him into the performance of a very simple duty. We would assist his meditations on this subject by first pointing out what will appear to be the strongest reasons in the affirmative, and then showing how insufficient they are.

There are certain passages in the Secretary's annual report which seem to point very strongly to the desirableness of such a board as that now in question. The case of the *Omaha*, which he there cites, is just to the point. This ship was surveyed at a navy-yard and found to need extensive repairs. The repairs were ordered as a matter of pure routine, without any searching inquiry into their advisability. Before they were finished they cost as much as the building of a new steel cruiser, and resulted in turning out a ship which "could neither fight nor run away from any cruiser built contemporaneously by any other nation." It is supposed that nothing of this kind could have occurred had the Secretary referred the matter to a competent board. And if asked why the Secretary does not avail himself of his existing power to refer the matter to a board whenever it arises, the answer would no doubt be, that such a board would not be invested with the responsibility of one ordered by law.

The fallacy of all this is shown by the fact that only two weeks ago Secretary Whitney himself put a far more effective plan into execution without impairing his own responsibility. It was reported to him that the *Juniata*, now lying at the Brooklyn Navy-yard, required a suspicious amount of repairing. Having the case of the *Omaha* in mind, he declined to approve the repairs as a matter of routine, and sent his constructor-in-chief to make a personal examination and report. The constructor performed this duty under a sense of personal responsibility to the head of his Department which a board could never be made to feel, and the result was a large reduction in the estimates for repairing the ship. It is quite safe to predict that the case of the *Juniata* will not be parallel to that of the *Omaha*. Yet the two Secretaries who brought about these results were equally unsophisticated in naval affairs, and worked with the same organization and with the same kind of men. The only difference is in the spirit which animated the two heads of the Department. Like master like man, is true from the President downward through every grade of the public service. When the master looks upon his department as a political machine, or runs it as a mere matter of routine, he gets one kind of service; and when he makes clear to his subordinates that their official heads depend upon their fidelity to the public interests, he gets a different kind of service from the same men.

The great objection to the proposed board is that it does away with the individual responsibility of each subordinate to his chief, and of the head of the Department to the public, and establishes a system under which no one person will be responsible for anything. It is Congress saying to the Secretary of the Navy: "We recognize the fact that you know nothing about naval affairs, and we therefore give you seven good men and true whom you will consult on all questions of naval policy, and who will give you the best attainable advice. You will have nothing to do but preside at their meetings and follow their counsel." Then when a new Secretary comes into office, he will find the board all ready to receive him and take care of him, and will be saved from all necessity of learning anything about such technical matters as ships and guns.

The Navy Department is the last one on which any such plan should be tried. It is the one in which class feeling and class interests are the strongest, and in which these interests are most apt to clash with those of the public. A majority of the seven members of the board will be officers of the line, which means that they will be under a moral and social pressure of the strongest kind to do all they can for the promotion of the interests of these officers as a class. The very fact that the public know so little about naval affairs makes this the easier to do, and at the same time makes it the more necessary that the Department should have a single responsible chief, incapable of being moved by the influences which are sure to surround him.

THE PROHIBITIONIST FALLACY

WE print elsewhere a letter from a Baltimore Prohibitionist touching the duty of the State toward liquor-dealers and manufacturers whose business is ruined by prohibitory legislation. The United States Circuit Court in Kansas has decided that they are entitled to compensation, and we think it right. But Mr. Lawrence Turnbull furnishes us with an elaborate analogical argument showing that they are entitled to nothing. Their claim, he says, is no better than that of manufacturers injured by changes in the tariff, or that of lottery-dealers whose business was in many States destroyed by prohibitory legislation, or that of gas companies damaged by the introduction of electric lights, or that of the owners of opium dens shut up by the police, or that of butchers ruined by the prohibition of butchering within city limits, and so on.

It is always extremely difficult to argue with a Prohibitionist on any topic connected, however remotely, with alcoholic drinks, because he will insist on assuming, what the great mass of civilized men resolutely refuse to concede, that the manufacture and consumption of intoxicating drinks, either in large or small quantities, is *per se* a crime, or an anti-social act which ought to cover its perpetrators with infamy. No matter how often and how solemnly you may warn him at the outset of the discussion that you will grant him nothing of the kind, and no matter how cheerfully he may promise not to argue from it, he is sure to work it in before long, either directly or indirectly, covertly or openly, as his minor premiss, and ask you, with an air of innocence, how it is you are opposed to the legalization of brothels when you do not object to the licensing of taverns, or why you are so fierce against murderers and robbers when you are so mild with men who sell whiskey to the fathers of families.

We believe we have more than once intimated to Mr. Turnbull that we cannot discuss prohibition with him on this basis, or on any basis which does not contain the admission that the moderate consumption of alcoholic drinks has been approved time out of mind by the great majority of the human race, and is

not now regarded as sinful or harmful by the majority of the wisest and best men of all civilized communities. But here he is at us again with his "opium den" and lottery illustration, and his criminal and "guilty" and "inhuman" and "unpatriotic" distillers, brewers, and dealers; and wants to know how it is we do not agree that the total destruction of their property without any compensation would be "less than exact justice for them," and why we wish to see them taken better care of than the people whose business is incidentally injured or ruined by legislation.

Well, the reason is, briefly stated, this—that in the cases Mr. Turnbull mentions, such as the gas companies injured by the electric light, the manufacturer injured by the tariff, and the butcher by his exclusion from the city limits, the loss is caused by an improvement effected, with or without the aid of the State, in the very business in which the sufferers are engaged. Gas companies suffer from electricity because electricity gives a better light; the manufacturer suffers because the lowering of the tariff gives the consumer his goods at a lower rate; the butcher suffers that his customers may have better meat; the stage-owner, to use an illustration of our own, because the railroad furnishes better transportation. In almost every case in which incidental injury is inflicted on property by legislation, the injury is due to the recognition or support by the Legislature of some better way, some way more conducive to public safety and comfort, of doing the business in which the injured property-holders are already engaged. For this every rational man who goes into a business of any kind must be and is prepared. The introduction by others of improvements on his processes, which may ruin him, is one of the risks of his calling which he always has in mind. But for the prohibition of his business as a public nuisance he is not prepared, and ought not to have to be prepared, and against this risk the Constitution protects him.

Now, applying this rule to the Kansas distillers and brewers, and warning Mr. Turnbull that we will not submit to having them treated as notorious criminals, for whom total confiscation is even leniency, what do we find? Why, that a business which has been carried on from time immemorial, with the approval of all civilized communities, and with the full sanction and protection of the law in this one, and in which large amounts of capital have been invested, is suddenly and directly stopped by law. The law does not injure the brewer or distiller "incidentally," by encouraging some better mode of making beer or whiskey, or by encouraging the production of some equally attractive and more wholesome drink. It simply tells them that the State has come to the conclusion that their trade is injurious and must cease, and offers no compensation for the deception caused by the long period of State approval. Nothing of this kind has ever been done to any other calling pursued through long periods with general approval and believed by the bulk of Christendom to be in itself harmless. The State may have a right to change its mind suddenly about any man's lawful business, and prohibit it, but it has no right to change it at his expense, and cannot escape its responsibility to him by calling him names or telling him ruin is too good for him.

HOW THE FASHIONS ARE STARTED.

Everybody knows how powerful is the influence of fashion in matters of dress; how rapidly an article which has ceased to be fashionable gets to look odd and even ugly in the eyes not only of fashionable people, but of people who care little or nothing about the fashions; and how surely, even if slowly, a decided change in fashion forces its way even among the humblest and most secluded. When trousers came in as a substitute for breeches they exposed the wearers to the utmost ridicule, but they not only held their own in the fashionable circles in which they first appeared, but finally drove the breeches out of the remotest hamlets and farm-houses, and a man in breeches, until the recent knicker bocker revival, felt very foolish or bashful. Courts have until lately always been the primal source of fashion. The dressiest king or queen in the leading court—that of France until lately—showed the dressy people of the world what they ought to wear every season, by wearing it, though its material and make-up were doubtless always settled in consultation with or on the suggestion of a tailor or dressmaker. The French court never since the Revolution exercised such an influence on female fashions as during the Empress Eugénie's short reign. She loved dress, and spent enormous sums on it, and under her there arose that new and striking social phenomenon, the male dressmaker, who tells women what will suit them and gets it ready for them. Since her dethronement, dressmakers and tailors in Paris have been thrown on their own resources, having no official personage to try their devices on. President Grévy hardly cares what he wears more than President Lincoln cared, and somewhat the same thing may be said of his wife. As regards the leading politicians in France, it may be said in general terms that they are considered in the Paris clubs to be among the worst dressed men in the world nowadays.

In England the Prince of Wales has been for the last twenty-five years the great promulgator of fashions for men and the Princess for women, and he has succeeded in some degree in bringing Frenchmen within his jurisdiction. English fashions are, in fact, more or less "the rage" among the pleasure-seeking portion of French society, which cultivates monarchical traditions and "le sport." But the French tailors and dressmakers do not succumb to any foreign influence, and still try valiantly to maintain the old French influence in matters of dress. A writer in the *Temps* has recently been giving an interesting account of how they do it. The leading tailors in Paris appoint a committee every season, whose duty it is to get up a "fashion plate," and this settles, both for the Parisian tailors and those of the provinces, what changes are to be made in men's clothes for that season. But the dressmakers in Paris have no organization like that of the tailors, and do not meet and provide fashions through a committee. Nevertheless every season witnesses the most startling changes both in the material and the cut and the ornamentation of women's clothes—changes far more complicated and difficult than any which take place in those of the men.

Under the Empire a fashion was started by trying a dress on the Empress, or one of her immediate circle, the Princesse de Metternich, or the Duchesse de Morny, the Maréchale d'Albuféra, or the Comtesse de Hon, at a ball or a court reception. If it was liked, it set the fashion for the season, and the court ladies wore it as a sort of livery. Nowadays the same thing is done through a circle of about twenty fashionable women, who employ the same dressmaker and meet in his "salon d'essayage." They are of all parties: Legitimists of the Faubourg, Imperialists, Orleanists—in fact, a little of everything except Republicans—and they sink their differences when they meet at the dressmaker's, to discuss his proposals. What they adopt carries the season. Occasionally they succumb a little to the influence of foreign courts; for instance, it is announced that orange is to be the dominating color in female toilettes during the coming season, owing to the fancy for it felt by a Russian princess of the blood. And the soft woollen stuffs which French women have been lately wearing are an importation from England, started by the Princess of Wales to encourage the suffering woollen industries of the North.

The fashion once set in this way, its diffusion among all classes and conditions of women now takes place with a rapidity formerly unknown. This is done through the intervention of the great stores, known as "Magasins de Nouveautés." A dress, for instance, has been approved of and worn by a well-known fashionable woman. All her set soon get the same thing. The society papers describe it and the smaller dressmakers of the capital copy it, and it makes its way among the dressy well-to-do people of lower social grades. But this, after all, carries it but a very small distance. It has to penetrate to every town and hamlet in France, and be seen within six months on every shop-girl, and maid-servant, and seamstress, and even peasant girl in the more populous districts. This is brought about by the Magasins de Nouveautés, which, when a dress is once fairly in vogue, order from the manufacturers immense quantities of stuff resembling it, but at about half the price, and the manufacturers supply it often at a loss, fearing to lose other orders. Copies of the dress are then turned out in such numbers and at such prices that every woman who cares for "the mode" soon has one, at a cost which a sewing-girl can afford. By the time this comes to pass, we need hardly say, the women of the world have dropped it.

MISERY, DISCONTENT, AND AGITATION IN ITALY.

Lendinara, January 4, 1886.

It is generally held that a revolution to effect a change of government would be fatal to the interests, probably to the very existence, of this country. Yet with such we are threatened, not by organized socialists or conscientious republicans, but by misery such as I verily believe does not exist anywhere else on the face of the civilized globe. The poorest class of workmen in the cities are badly enough off, but a roof over their heads, a pavement under their feet, and wooden

or stone walls around, they do find, albeit the overcrowding is fearful, viewed from the point of health, decency, and morals. But if you go to the outskirts of any town or city in Tuscany or the Marches, where the division-of-profits (*métayer*) system exists, you will find numberless families crouching together on the bare muddy soil, with Indian-corn canes for all wall and roof. Some few of these hovels have a brick chimney, others no fireplace at all. When you inquire what is the food of the family, you will find that it consists solely of *polenta* (Indian meal), often of very inferior quality, or damaged by damp and mildew. The water, drawn from the nearest ditch, full of animal and vegetable matter, is not only hurtful to the health generally, but, combined with *polenta*, produces the fearful disease known here as *pellagra*. Statistics have been compiled, inquiries made, fierce discussions held as to the origin of this comparatively new and awful scourge. I can pretend to throw no new scientific light upon the subject, but from minute researches extended over various provinces, in one case for ten years, I can affirm that I have never seen man, woman, or child affected with *pellagra* (save in the case of hereditary disease) without finding that the patient had been living exclusively on *polenta* and water, good, bad, and indifferent. Asked by a friend of mine, a member of Parliament, to assist him in collecting information for a new code of health for the rural districts, I accepted those of Venetia, Padua, and the Polesine, and, as far as *pellagra* went, every new inspection confirmed the *polenta* theory. As for the dwellings, "from bad to worse" must be the verdict. In the outskirts, and even within large cities such as Adria, I found Naples in miniature, minus the underground grottoes: two, three, and even four families stived in a room, six and even eight in a hovel; no drains of any sort; human and animal filth accumulated at the door; scrofula, consumption, asthma prevailing, and records of annual diphtheria and smallpox. But where the use of wheaten or rye bread prevailed, or, as in some parts of Venetia, barley-and-rice soup, *pellagra* was absent; and when you remember that those affected by this fell scourge go through every form of madness—melancholy, imbecility, idiocy to raving lunacy—it will be understood that exemption from *pellagra* almost sounds like health.

As the friend—a medical man—at whose request I had undertaken the tour was extremely anxious on this head, we revisited together most of those places where *pellagra* specially prevailed. One set of cases struck him especially. Dropping down (literally) from a broad, white, high road along one of the embankments of the Adige, we came upon some hovels scooped out just below and brought forward on the level. There were no pavements, but the walls were of bricks and the roofs tiled. The *medico-condotto*—that is, the parish doctor who accompanied us—told the story of each family. He was at that moment in search of the wife of the landlord, if such a dignified name can be given to the owner of the hovels, and, as no one could find her, it was supposed she had drowned herself, having attempted this every time she had been removed from the lunatic hospital at Venice: the husband himself and the children were all *pellagrosi*. In another house there were two idiot children who had inherited *pellagra;* in another an old man lay, not mad enough to be sent to the hospital, nor yet sane enough to be allowed to go out to beg alone, in sad contrast to his healthy young son, a conscript just returned for a holiday! All these people that I have mentioned lived exclusively upon *polenta;* there was but one healthy family in the row, consisting of a husband and wife and five children of various ages, and it turned out that the father of these was a fisherman, who told us that he and his boy, obliged to stand in the water every morning, drank a "dram" (which you must understand is about a halfpenny worth of *sciampagnin*, a horrible concoction, but distilled, I believe, from the very rags of the grape-skins). Then they told us that they ate up all the fish they couldn't sell. So, considering that every other surrounding of misery, dirt, and nakedness was alike, as these alone were exempt from *pellagra*, here is another piece of strong circumstantial evidence that *polenta* is the guilty party.

Another decided proof of the fatal effects of exclusive living on Indian meal may be deduced from the fact that in all the hospitals where the doctors are allowed to treat their patients as they choose, "regardless of expense," they simply put them on a diet of meat, raw or very slightly cooked, white wheaten bread, and a certain amount of spirits or good red wine or Marsala; and invariably, when the case has not reached the last stage of lunacy, in a few months, and often in a few weeks, the patient recovers, to relapse again as soon as he returns to the old régime. In one commune that came under my knowledge, the doctor, a rough-and-ready sort of fellow, tired of the constant grumblings of the municipal authorities every time he went to them for an order for a patient to go to the hospital (the daily cost of each person being about a franc), made them an offer to send no more patients to the hospital (save those too far gone at that moment to be treated at home) if they would undertake to allow him to supply common wine and white bread (for there was no butcher in the town) to those in the first and second stage. The authorities agreed, and the plan has succeeded perfectly—the doctor, whose parish is not a large one, seeing himself that the patients in question do eat the bread and drink the wine themselves. If further proofs be wanting, they may be found in the fact that after the inundations of 1882 *pellagra* decreased at least fifty per cent., because the poor inhabitants, though compelled to live in their damp and tumble-down dwellings, were fed on soup, white bread, and meat twice a week during the four winter months.

Now, I am treating of general misery and of this special form of it in normal times and seasons, when, saving two months in the year, the agricultural populations can reckon on earning eightpence a day a man, sixpence a day a woman, fourpence a child (women and children, though, are only used for hoeing, weeding, plucking corncobs, grapes, and tending silk-worms in the mulberry districts). But take such an exceptional season as this: before all the corn could be sown heavy rains set in, then snow, then thaw, then snow followed by frost, and then snow once more. With the exception of chopping wood, no work has been done in these northern fields since a week before Christmas Day. Such slight jobs as could be done are performed by the ploughmen and herdsmen resident on the soil. Though these are by no means in an enviable position, still they have a house over their heads, and a certain portion of wood, maize, and wheat is allowed them; but the day laborers who live from hand to mouth, what can they have been living on for the last six weeks? Savings they cannot have possibly; work cannot be performed, out-door relief there is none—only in the very large towns are there soup kitchens, and these rarely gratuitous. Monks and friars have been stripped of their possessions, there is no State charity and precious little private; therefore, in order to live, these multitudes must either go daily from house to house begging for scraps of broken food, or they must steal, and the fact is they manage to keep body and soul together by a judicious combination of both systems. But perhaps some one will ask, Are there not such things as congregations of charity? There are such, but they are a disgrace to the name even as are the so-called Monti di Pietà, or pawn-shops. I have examined their accounts, being authorized to do so, and have felt shame that wealthy municipalities should assign such a miserable pittance to be doled out by unwilling distributors; and these small sums, after all, even if properly distributed, only reach poverty-stricken widows or young and helpless orphans. How, then, can any one be surprised that crime is not only on the increase, but that Italy carries off the unenviable palm of standing first on the crime-list after Spain in Europe? Often and often when visiting the Neapolitan prisons of Naples, on finding the same prisoner in the same ward after an interval in which I knew he had been released, the same answer to my question, "What have you been and gone and done again?" has been proffered: "Ho fatto una piccola mancanza tanto da dormire e mangiare" (I have committed a very little fault just to eat and sleep). So I suspect do others than Neapolitans during these hard times, but these are only the very poorest and the most ignorant.

Englishmen have often said to me, "Why don't your people do as we do, agitate and agitate and agitate until they get the vote and can then make their own laws?" and most surprised they are to learn that fifty per cent. of those who possess the vote don't use it. Nor is this abstention confined to the clerical party, for, if the truth be known, the Catholics do vote under the rose, nor has Leo XIII. taken any special measures to prevent them; on the contrary, his attitude seems to be, "Vote where you please as long as you vote for the right persons; only don't ask me to sanction your so doing." It is the working classes and peasants who don't take the trouble to go to the urn, who say, "Whether Tom, Dick, or Harry is elected deputy, whether the Liberal, Retrograde, or Moderate party are in a majority, I find no difference either in the amount of taxes I pay, or in the protection I get from the police—which is none at all—or in the administration of justice, if ever I have the ill-luck to need it. By going and voting I only make enemies, for it is nonsense talking about the vote being secret: everybody knows how everybody votes, and you can't please everybody, let alone yourself." These convictions are so deep-seated that no reasoning or persuasion can alter them. Only on special occasions, when the populace has been wrought up to an unusual degree of wrath, can you get such a vote as was given to Professor Sbarbaro lately in one of the quietest, most highly cultured cities of Italy, Pavia. There, "just to spite Depretis," who was supposed—and the suspicions are grounded on many precedents—to have secured the absolution of the most fraudulent bankrupt that the Italians have known, and the severe punishment of a half-cracked professor (who showed up the minister's young wife and the wife of another minister, both of whom make and meddle too much in politics), over nine thousand votes were given to the said professor, then in prison for libel. He was duly elected, and immediately released, and has now taken his seat in the Chambers.

The reason that lies at the bottom of contempt for parliamentary institutions may be found in the fact that Parliament passes no laws which people care about in their daily life. Were an Italian Dickens to arise, certainly his first theme would be the Italian Parliament, which has outdone any Anglo-Saxon institution in the art of "how not to do it." With all the gaunt misery which I only hint at and don't attempt to describe, just imagine that not one single act of Parliament has been passed to better the condition of the absolutely poor or the working classes, not even to "give unto the poor that which is

his." Twenty-five years ago the reform of charitable institutions was promised, and their wealth is far more than enough to open hospitals for the *pellagrosi*, and to enable the communes to feed such as may yet be saved, to create orphanages, alms-houses, and places for the absolutely destitute who are too ill or too old to work; to open industrial schools, really popular loan banks, to assist mechanics and small farmers whom a little capital would save—to do everything, in short, that is necessary to alleviate the inevitable suffering created by the sins of omission and commission of the whole community, and to give such moral training and technical education as shall render it impossible for future generations to show such a hideous list of crime and of misery.

A law which weighs most hardly upon the poorer classes, and which was pointed out as a crying abuse in the good old days of Cavourian Piedmont, is the law that allows a stupid or revengeful policeman or prætor or magistrate, or who not, to cast a man, woman, or child in prison, to keep him there weeks, months, and years without ever bringing him to trial, very often without his knowing what he is accused of. There are at the present moment, according to the latest statistics, taken previous to the agrarian agitation, 20,000 untried prisoners in the various parts of Italy; you may be quite sure that not more than half, if so many, will ever see the inside of a court of justice. Now, apart from the injury and injustice done to these people and their families, it should be noted that each individual costs the state a franc per day, without, of course, calculating the expense of prisons, jailers, and the ordinary outputs of such establishments. So another seven millions goes in wasteful cruelty. This system of preventive imprisonment was to have been abolished in 1860, but it suits Government and often private individuals to get persons put away "for a convenient season"; and as ministers and authorities are irresponsible, no action can be brought for false imprisonment by the unfortunate victims when they are set at large.

At the present moment two political trials are creating considerable sensation. The first is being held at Rome, eight individuals being there on trial for a "republican conspiracy." Now the authors, one very old and one very young man, Count Marini and Francesco Albini, are two of the most harmless mortals imaginable, but aggravated by the present state of things; and, a paper in which they wrote having been suppressed, they took to the old system of conspiracy, made plans of prisons in order to liberate the *future* members of the Universal Republican Alliance, and distributed inflammatory pamphlets in the barracks. Only one thing prevented their transforming monarchical into republican Italy, and that was that they could not get a single person of note, even among the "Puritans," to listen to their silly schemes. When such people as Aurelio Saffi, the old Roman triumvir, the stanch and devoted disciple of Mazzini, with his band of enthusiastic followers, will have nothing to do with secret conspiracies, but maintain that the republic will come of its own accord when the majority want it, you may be quite sure that the throne and Constitution are in no danger. If, on the discovery of the inflammatory proclamations, the authors had been arrested, tried, and punished, no one would have felt any interest in them save compassion for their absurdity, while every one admits that a crime it is and will remain to conspire for the *forcible* overthrow of a Government established by popular will. But you see these eight men, of whom only two are concerned in the plot, have already suffered a year's imprisonment, and hence are regarded as victims.

A far more serious trial comes on in Venice, and that is of the supposed chiefs of the agricultural agitation in Mantua and Verona. If your readers can call to mind Mr. Arch's career from the time when he was considered the chief of the peasants' rebellion to the present, they will understand what these twenty to forty men have been *hoping to begin to do*, namely, by combination to raise the scale of agricultural wages, without having, poor souls, the slightest notion how to set about it. First, they had no funds, but they held a few meetings, talked very fiercely about their misery, wrote some fierce articles in two newspapers unknown to fame, advised all the peasants who listened to them not to work for less than a certain sum of wages, and threw out hints that there would be fresh strikes at reaping time. I must add that the revolutionary work distributed by the leaders was Mazzini's 'Duties of Man,' which evidently the public prosecutor has never read, or assuredly never would have included it in his "acts of accusation." Be that as it may, syndics, proprietors, prefects, commanders of military corps, heads of police, met in council to devise some means of averting the awful catastrophe threatening property and the state. Of course all the culprits and their suspected accomplices were seized, handcuffed, and thrust into prison. Several hundreds were arrested, but, no fault being found against them, and it being impossible to invent one, by degrees they have been let out, and in the course of a year (for it is a year also since these preventive arrests were made) the numbers have dwindled down for the Mantuan province to about twenty-two, for the Venetian to about ten. This trial is indeed creating great excitement, the absurd "act of accusation" being published by all the newspapers. In any other land than Italy every one of the accused would be absolved, but here it is still a crime, punishable with two years of imprisonment, to concert in order to raise the price of wages unless it be proved that such rise is necessary. Now, as all who are called upon "to prove" are paymasters, the poor men may come badly off. This calamity is due, like the rest, to the failure of members of Parliament and successive governments to abolish the present law on strikes and to substitute a fair one of masters and men. Can you wonder, therefore, that in a large meeting of workingmen delegates held at Mantua, it was decided unanimously that workingmen should keep clear of all political parties, and carry on their work of resistance and emancipation on their own account, and without any interference or assistance from Government? J. W. M.

Correspondence.

INDEMNITY FOR PROHIBITION.

To the Editor of The Nation:

Sir: The principle underlying Judge Brewer's recent decision in the United States Circuit Court at Topeka, Kan., that the State is bound to indemnify individuals for losses resulting from the passage of a prohibitory law, which is so thoroughly endorsed by the *Nation* in its last issue, is, at first sight, an equitable one; but if examined closely, it will, I think, be found to be entirely too broad for any consistent, equitable, or practicable application.

The principle is that if the State practically, though not actually, confiscates private property through any legislation for the public safety, or advantage, or convenience, it is in all cases bound to make reparation to the individual the value of whose property has been thereby depreciated or destroyed. Is this principle sound either in morals or economics? And *does* its violation amount to "legalized robbery by society in its organized capacity"?

It is admitted that if the State *actually* takes and uses or destroys the property of an individual for the public benefit, as when a dwelling is demolished to make room for a street or other public improvement, the individual is to be indemnified. But where the injury is consequential, and not direct, it is impossible to lay down any rule of compensation that is equitable and at the same time practicable. In morals, no distinction can fairly be drawn between prohibitory legislation, so called (though all law is prohibitory in some aspect), and merely regulative legislation, which has the same effect in destroying the values of private property. A few changes in the tariff would as certainly destroy the value of certain manufacturing plants and industries as an enforced prohibitory law would destroy the value of breweries and distilleries. In the one case, as in the other, the public good is the motive and the justification of the law—the destruction of private property values only an incidental, but an inevitable, result; and in the majority of cases it is not a result of which the Legislature or the courts are bound in morals to take any cognizance. Society in its corporate capacity has never entered into any contract with the individuals composing it to maintain all economic and social conditions unchanged, so that private property rights may remain unimpaired; and it violates no principle of justice in its constant legislation, which is all the while practically confiscating the property of some individuals, so long as the legislation is honestly designed for the public good, and is carefully considered, and the injury which results is inevitable and indirect. The Emancipation Proclamation destroyed at one stroke untold millions of property; but though in this case the injury was direct, it was never proposed by the advocates of abolition to compensate the owners of slaves, even in the loyal States, or where the owner was loyal. The laws suppressing lotteries, which were once legal in several of the States, bore disastrously on many individuals, but no one suggested that the State should make good their losses. The *Nation* probably approves the prohibition of opium dens, but I should be surprised to learn that it had recommended that the worthy proprietors of these establishments should be reimbursed their sunk capital.

The legislation which authorizes the building of railroads throughout the country in every instance destroys or greatly impairs the value of vast amounts of private property by changing the channels of trade. The city ordinances requiring the use of electric lights depress gas stocks. The prohibition of butchering within municipal limits has ruined many a butcher. A law, such as has been proposed, requiring cattle to be carried in a certain class of cars, would destroy an immense capital invested in the present transportation trade. Similar cases are almost innumerable; but there is no practical remedy for private losses brought about in this way, and the victims have to content themselves with their individual share in the benefits which result, or are supposed to result, to the public from the legislation which works such havoc with their property interests.

If the principle approved by the *Nation* was to be allowed, how could it be equitably and consistently applied? If the brewers and distillers are to be compensated for losses, so must be all the dealers in drink, wholesale and retail, all the hop, rye, wheat, and barley farmers, all the machinists, the coopers, and the various subordinate industries which depend upon the death-dealing trade. And if all these are to be indemnified, why not the lottery merchants, the opium venders, the owners of disused turnpikes, and of depreciated gas stocks, and of railroad stock ruined by competing lines authorized by the Legislature; and all

the thousand and one industries destroyed or depressed by the shifting of trade resulting from changes in the law?

If any individuals are to be excepted from this law of compensation, surely those who are engaged in the drink traffic should be. They will meet with much less than exact justice if the whole value of their property is destroyed. They have, through public indifference, been allowed to engage in a trade which is fearfully injurious to society, and which has entailed incalculable loss upon every individual in the State; estimating by the lowest standard, the money value, this trade has inflicted upon the State a destruction of values far, immeasurably far, in excess of any possible loss which will be visited upon the victims of a prohibitory law. They have engaged in this trade, not in ignorance, but with a full knowledge of its deadly character; no considerations of patriotism or humanity have restrained them from their war upon society. The State has tolerated them, and has, thus far, been a partner in their guilt; it has, however, been sufficiently punished already by the results of the trade, and is not, in justice, to be further mulcted, that its enemies may go scot free.

In this connection it must be remembered that the *whole* of society has not tolerated these social pests; but a large minority has always fought them with all the means at command. This trade has never respected the protests of this minority; and now that this minority is slowly growing into the majority there is no sense or justice in asking them to indemnify their foes, whom they have so fairly warned that they would destroy them, when they once obtained the power. If society turns upon them and rends them, it is only doing unto them as they have done unto society. The whole trade now defies the law wherever it has been passed, though it has all the sanction that any other law has, namely, the will of the majority expressed through the ordained channels. If, according to the fine-spun theory of Judge Brewer, they ever had a right to indemnity, the majority of liquor-dealers and manufacturers in the prohibitory States have lost it by their violation of the law.—Respectfully,

LAWRENCE TURNBULL.

BALTIMORE, February 1, 1886.

THE MARYLAND APPOINTMENTS.

TO THE EDITOR OF THE NATION:

SIR: Your Baltimore letter reminds one of the man who called on Hercules, instead of putting his own shoulder to the wheel. If the people of Maryland find fault with the appointment of Higgins and Rasin, they have none but themselves to thank for these obnoxious persons. The appointment of Higgins was recommended by all the Maryland delegation in Congress with one exception. If citizens of that State insist upon sending to Congress persons in whose statements no confidence can be placed, they must expect to suffer for it. To blame the President for every appointment is unreasonable. He has important and responsible duties to perform, the discharge of which occupies his whole time. No President has ever given closer or more conscientious attention to them than Cleveland. Of necessity, he has to leave the selection of persons to fill the minor Government offices to his Cabinet officers and subordinates. They, in their turn, cannot be expected personally to know every person appointed, and they must rely upon somebody's advice. Upon whose advice can they rely more naturally and properly than upon that of their own party associates? The idea seems to be that the Administration has nothing to do but make appointments. It came into office, however, not only with pledges as to civil-service reform, but with pledges to do all in its power to revise the tariff and suspend the coinage of silver. Both these are matters of the utmost importance to the welfare of the country, and, in fact, deserve a great deal more attention than they have received.

Your correspondent complains that elections in Maryland are carried by fraud. It is very easy to assert this; but if it be true, as very likely it is, why not prove it in the courts? Tilden won his first laurels as a reformer by vindicating in court the title of Azariah C. Flagg to the office of Comptroller of the State of New York, in the face of fraudulent returns. When the Tweed Ring became unbearable, our people rallied and drove it from power. If your correspondent should say that the judges in Maryland cannot be relied upon to administer justice impartially, the same remedy is open that was open to us when we suffered from Barnard, Cardozo, and McCunn. The Bar Association was formed; it united in pressing proceedings for the impeachment of the obnoxious judges; money was raised by subscription to defray the expenses of the proceedings, and the result was absolute success. Fraud cannot be successfully concealed if it is opposed by vigilance and persistent courage.

Many people seem to think that the President of the United States is as absolute as a Turkish Pasha, and as powerful as omnipotence. If they would only remember that this is a popular government, that the representatives of the people ought certainly to have some voice in its administration, and that the Executive ought certainly to be able to rely to some extent upon their statements, the critics would be a little more moderate in their expressions. To be sure, parties in this country have done little else for ten years but fight over patronage and talk about obsolete questions. But a party has a higher function than this, and the Administration deserves praise, not blame, for devoting part of its time to the revenue and currency of the country. CIVIL-SERVICE-REFORM DEMOCRAT.

NEW YORK, February 20, 1886.

FOREIGN METHODS OF CUSTOMS VALUATIONS.

TO THE EDITOR OF THE NATION:

SIR: The investigation of undervaluations by the Senate Sub-Committee on Finance at the New York Custom-house brings the matter into such prominence that a brief description of the methods employed in France and Germany may perhaps be of value.

In both countries the object of the customs laws is, by a detailed enumeration in the laws themselves of the objects on which duties shall be imposed, and of the rates of those duties, to reduce the discretion of the customs officers within the narrowest possible limits. To do this, specific duties have been adopted wherever possible. But in a complicated customs law, which imposes duties on a great variety of objects, it is, of course, impossible to exclude altogether ad-valorem duties, in which case alone this question of undervaluation can come up. Where ad-valorem duties are thus unavoidable, the French system is as follows: The declaration or entry of the importer is to be taken as the valuation on which the duty is to be assessed. If, however, the customs officers believe that there has been an undervaluation, they have the right to take the goods themselves at the valuation given by the importer, with an additional five per cent.; and, after paying such sum, to sell them for the benefit of the Government. (L. 4. Floréal an IV. and L. July 2, 1836). This is certainly an efficient means of preventing undervaluation, but in many cases may work injustice to the importer, and may result in loss to the Government, as goods will not often, at a forced sale, bring a fair price.

The German method is not so simple or so arbitrary. The law governing the matter is the old German Customs-Union law of the first of July, 1869 ('Bundesgesetzblatt des Norddeutschen Bundes 1869,' p. 317, No. 30). This was adopted as the law of the present Empire by Article 40 of the present Constitution. Section 93 of this law treats of valuations for the assessment of ad-valorem duties. Here, as will be seen, the French law has been copied, but important modifications have been made. The declaration or entry of the importer, which he is obliged by the law to make, is to be the basis of the valuation on which the duties are to be assessed. If the customs officers consider such declared valuation to be too low, they have the same right as in the French law —*i. e.*, they may take the goods at the declared valuation, with an additional five per cent., and, after paying such sum to the importer, may sell them for the benefit of the Government. But both the customs officers and the importer may, if they prefer, ask to have an appraisement made of the goods by experts. Of these there are to be two, one to be designated by the importer, the other by the local customs officer. If these two experts cannot agree, they are to appoint an umpire. If they cannot agree in the appointment of such umpire, he is to be appointed by the President of the Court of Commerce, or, where there is none in the locality, by the presiding judge of the civil court of first instance. Now if the decision reached by these experts shows that the actual value of the goods does not exceed by five per cent. the declared valuation, the duties are to be assessed on such declared valuation, and the costs of the appraisement are to be paid by the customs office. If, however, the appraised value does exceed the declared value by at least five per cent., the customs officers may make use of their right of purchasing the goods at the declared value with an additional five per cent., or may assess the duties on the appraised valuation; while if the appraised valuation exceeds the declared valuation by *ten* per cent., the rate of the duties to be assessed is to be increased fifty per cent. In both these cases the importer is to pay the costs of the appraisement.

By this method of ascertaining valuations the rights of both the Government and the importer are protected. Both are represented in the tribunal making the appraisement, and both will hesitate before calling for such an appraisement on account of the costs which the losing party must pay. Further, the procedure is very simple; there is no appeal; and the result will in all probability be more satisfactory than it would be were the appraisal made simply by Government officers, either alone or in conjunction with merchant appraisers selected by the Government, as ours are now. For in this case the tendency will always be to favor the Government at the expense of the individual. This is always so where such questions are decided by professional officers. Again, with the salaries now paid to our examiners, who are the only responsible appraising officers that inspect the goods, it is impossible to obtain men capable of determining the real value.

Secretary Manning says, in his report on the "collection of duties," that the buyers of the large importing and jobbing houses in New York "receive twice or even three times as much as is the range of salaries paid to examiners in the New York Custom-house who examine similar articles." (Report, page 22.) By the German method, on the contrary, persons of expert knowledge make the appraisement. These could readily be obtained by our system, which, in theory at least, makes service as a merchant appraiser, like service on the jury, obligatory, and allows one appointed to act in such a capacity to get rid of

this duty only by the payment of a fine.—I am, yours respectfully, FRANK J. GOODNOW.

COLUMBIA COLLEGE, NEW YORK, February 13, 1886.

THE SILVER SITUATION IN A NUTSHELL.

TO THE EDITOR OF THE NATION:

SIR: As I understand the situation, the Government has vast accumulations of silver dollars for which there is practically no demand, and therefore is in the position of a manufacturer who has an overwhelming stock of goods on hand for which he finds no demand. I understand, too, that the silver States and Territories shun the buzzard dollar as the Republicans say the Democrats do soap and water. I further understand that these same silver-producing regions are the most eager to force the Government to buy more silver (raw material) and coin more dollars (manufactured product), and that in their efforts they have many able helpers, Senator Beck, for instance.

If the above statements are substantially correct, there can be no argument which will lead a business man to fall in with any party asking the Government to continue the coinage of the silver dollar. His first impulse (and it would be reinforced by his most mature conclusions) would be to stop the coinage, and of course to stop the purchase of any more silver bullion. We always have the raw material (silver bullion) in the open market, and the machinery in the mints; and if ever the people want more silver dollars, they can be turned out on a week's notice.

Would Senator Beck do differently in his own business? Suppose the Senator had been for years buying $4,000 worth of leaf tobacco monthly, to turn it into plugs for chewing. Suppose there had been little or no demand for the plugs, and that all his warehouses, barns, sheds, and other storage were choked with bales, bags, kegs, and barrels of plug tobacco. Would he go right on buying the leaf tobacco? Suppose a lot of politicians and tobacco-leaf growers should call upon him, wrap him up in an American flag, and beseech him to go on in the glorious work of making plug tobacco (while they worked their own teeth exclusively on chewing-gum). Would he be likely to do so? Why should the Government manage its affairs with less sense and judgment than Senator Beck does his? Why should Mr. Beck demand that it should?

It seems to me, as it must to most level-headed business men, to be the clear duty of Congress not only to stop the coinage of silver dollars, but to melt down into silver bullion a large part of them now on hand, sell the bullion, and put the proceeds back into the Treasury, charging the loss to the nation's experience account.

Respectfully, MANUFACTURER.

MANSFIELD, OHIO, February, 1886.

THE POLICY OF YALE AND HARVARD: A COMPARISON.

TO THE EDITOR OF THE NATION:

SIR: Toward the end of the last century Dugald Stewart thus characterized the unprogressive tendencies of certain European universities: They are ". . . not without interest to the historian of the human mind. Immovably moored to the same station by the strength of their cables and the weight of their anchors, they enable him to measure the rapidity of the current by which the rest of the world is borne along."

I have recently attempted to estimate, by comparison, the rapidity of the modern educational current which has carried Harvard to the position of a first-class university—with no small sense of shame, as a graduate of Yale, that it should stand as the representative of that stationary buoy which marks the spot from which the rival college has been wafted forward by the winds of progress. Till 1865 these colleges were almost equal in undergraduates, in the faculties, in graduate students, in popularity, prestige, and influence. In all of these respects Harvard has since distanced its more conservative competitor.

It is but a weak and ignorant criticism that complains of faults, with no effort to display their causes and suggest their appropriate cures. In the present case, the question of cause is mostly a question of differential comparison. In 1865 there was little practical difference between the two colleges, either of government or of instruction. Theoretically more liberal with regard to elective studies, Harvard was at that time too poor to develop the system to practical maturity. So far as location is concerned, the advantage was, and always will be, on the side of Yale. The freedom from the proximity of a great and wicked city, the more cosmopolitan tone of the students, and the accessibility to the American metropolis, are positive advantages which will always weigh in the estimation of parents and guardians. But, in spite of such natural superiority, the administration of Yale College has been unequal to the task of developing a policy which will suffice to keep her abreast of the times. Its apologists call this policy a "safe conservatism"; but when the spell of after-dinner eulogy has passed away, it becomes patent that our college has indeed been preserved, and this is all.

The first great change accomplished at Harvard coincides exactly with the beginning of its progressive era. It had already, in 1810, shaken off the obsolete system of college government under which Yale persisted till 1872, and in 1851 it became no longer necessary that certain clergymen and others should sit among the overseers, to which body they were summoned *ex officio*, with no reference to the duties they were supposed to perform. But in 1865 the graduates were invited to choose the entire Board of Overseers. The results of this policy have fully justified its adoption. Thirty gentlemen of distinction, influence, and ability are now the custodians of the College trusts, and responsible for their administration. Under their management the University has displayed a progress unparalleled in the history of modern education, and the necessary funds have flowed in freely from the alumni whose representatives they are.

Yale's policy has been just the opposite. In the year of grace 1885 the influence of the Yale alumni in the election of a feeble minority of the Corporation has been denounced by the College treasurer as "inexpedient," and the display of interest in a recent election has led to its characterization as an "unseemly contest." He would have us understand that the graduates are the "beneficiaries" of the College, not its founders nor even its supporters. They have no claim to any voice in its management. In this respect Yale is where Harvard was in 1851.

The second cause which has determined the progress of Harvard is the great extension of optional studies which has taken place under the administration of President Eliot. It is not my purpose to enter into any argument of the merits of the optional system. It has existed at Harvard for forty-five years, during the last fifteen of which it has had broad extension and thorough trial. Facts speak for it. It is undeniably popular among both students and instructors. It has been denounced by Yale's venerable triumvirate and their backers as wasteful and demoralizing. Yet they yielded so far to popular clamor, some five years since, as to formulate the system of limited election which now prevails in the two upper classes. If elective studies are good, why were they not adopted years ago? If, on the contrary, they are bad, why adopted at all?

The following table shows, for the college year 1885-86, the number of hours weekly which the student can devote to the studies of his own choice:

HOURS OF ELECTIVE STUDIES (PER WEEK).

	Yale.	Harvard.
Freshman Class	None	9
Sophomore "	"	All
Junior "	9	"
Senior "	13	"

In this respect, then, Yale stood till five or six years ago just where she stood in the eighteenth century, and stands to-day almost exactly where Harvard stood in 1841. Of course the opportunities of choice are far greater at Yale to-day than they could be at any American college forty-five years ago; but they are still far inferior to the advantages which Cambridge now affords.

Subjoined is a table showing the courses given in the Academical Department of each university, and the number of hours of instruction offered weekly in each course:

	Yale.	Harvard.
Semitic Languages	1	17
Indo-Iranian languages	4	12
Greek	13½	39½
Latin	17½	37½
Greek and Latin Philology, etc	....	6
English and Rhetoric	10	24
German	15	20
French	18	26
Italian	6	10½
Spanish	6	10½
Philosophy and Ethics	11	25
Political Economy	4½	14
History	11½	24
Roman Law	1½	4½
Fine Arts	....	10½
Music	....	14
Mathematics	30½	42½
Physics	4	23½
Chemistry	2	24
Natural History	11	49½
International Law, etc	1½	....
Linguistics	½	....
Hygiene	1	....
	170	434½

In other words, the Harvard undergraduate has the allurement and opportunity of over two and a half times the amount of instruction that is offered by Yale. In this respect the latter is somewhat behind where Harvard was in 1871, when 168 hours were offered in the elective courses alone.

Thoroughness of instruction is a more difficult factor to estimate, and one which I approach with great diffidence. I shall be contented with a table of comparison showing the courses given in political economy, which, in importance to the citizen, yields to no other science. At Harvard the instruction is given by a professor, an assistant professor, and an instructor. At Yale one man performs all these functions and is Professor of Social Science as well. The time occupied by each course is reduced to the number of hours per week annually offered:

YALE.		HARVARD.	
Elementary course.	1½ hrs.	Elementary course...	3 hrs.
Longer elementary course	2 "	History of economic theory	3 "
		Economical history of America and Europe	3 "
		Tariff legislation	1 "
		Financial legislation.	1 "
Discussion and investigation	1 "	Discussion and investigation	3 "
		Independent research *say*	3 "
For Seniors	4½ hrs.	For Sophomores, Juniors, and Seniors..	17 hrs.

From this it is apparent that something more is offered at Harvard than a merely superficial knowledge of a subject which few men have the time to pursue in after life. Yale now devotes scarcely more time to the subject than Harvard did in 1872.

It may be well to note in passing that wh le psychology is a *required* study for four terms at Yale, political economy is an *optional* study, which can be pursued at utmost for but two. It is difficult to discern the principle on which this discrimination is based, unless, indeed, that

otherwise a smaller attendance would flatter the one course given by the President of the University!

There can be little doubt that these facts explain the ever-increasing flow of students toward Harvard alongside of the decreasing numbers at Yale. The former offers greater and better facilities for study, and we can blame only human nature if parents, guardians, and ambitious young men go where they can get the most for their time and their money.

It cannot be said that it is easier to enter Harvard than to enter Yale. I was recently assured by a Yale graduate, who has prepared many young men for each college, that it took the average boy a year longer to prepare for the former than the latter, and that the examinations were, if anything, more strict and severe. It used to be said that any man who could pass the Harvard entrance examinations could graduate with very little work. It seems that in former years there may have been some foundation for this assertion, but it is as emphatically contradicted by the statistics of late classes. In the table below are the average percentages of those receiving degrees in the various classes:

	1870 to 1874.	1875 to 1879.	1881 to 1884.
Yale	76.	75.	75.
Harvard	93.	76.	74.

It will therefore be seen that out of 100 freshmen but 75 graduate at Yale, and but 74 at Harvard.

I have endeavored, in the foregoing, to point out some of the essential differences between the administrations of our two greatest universities. The result of these two policies has already been displayed in the wonderful increase of Harvard and the stationary position of Yale. Yale needs not only reform, but a reformer. The latter position can be filled only by the President of the University, who must be a man possessing the qualities indicated in my previous letter. It will not do to cherish a time-worn superstition that this person must necessarily be a Yale graduate, a college professor, or a clergyman. Untrammelled by any such prejudices, it is the duty of the Corporation to call the fittest man to the position, wherever and whosoever he may be. There are two men, both of whom have once been numbered with the Yale Faculty, who are eminently fitted for the task. Both of them have won international reputations as administrators. Either of them is worth at least ten thousand dollars a year to the University. I do not think that the New York alumni will permit a lack of funds to stand as an excuse for not calling one of them.

EDWARD D. PAGE.

February 7, 1886.

THE VIRGINIA COUPONS DECISIONS.

TO THE EDITOR OF THE NATION:

SIR: The dissenting opinion referred to in the *Nation's* article on Virginia coupon bonds will be found page 330 114 United States Reports. In the last cases there were no dissenting opinions filed, the minority of the court allowing themselves to be bound by the majority opinion in the cases of 1884. This renders the position of the bondholders stronger, in that they need not fear a continuing dissent, finally resulting by change of court in a reversal, as happened in the legal-tender cases.—Very truly,

JOHN H. MORISON.

40 WATER ST, BOSTON, February 18, 1886.

Notes.

GINN & Co. will begin next month the publication of a *Political Science Quarterly*, a review devoted to history, economics, and jurisprudence, and edited by the Faculty of Political Science of Columbia College. Primarily it will concern itself with the investigation of questions of present interest in the United States, and the endeavor will be made to have the treatment intelligible to readers who are not specialists. "But the editors," says the prospectus, "by no means take the position that we have 'nothing to do with abroad.'" Further, "they will impose no tests of political or economic orthodoxy," but (a most wholesome check on windy debate) "every article will be signed; and every writer who alleges facts not commonly known will be expected to cite his evidence. The editors will neither take unsupported statements on faith, nor ask the public to take such statements on authority." The first number will contain an introduction by Prof. Munroe Smith, and articles on "The American Commonwealth: Changes in its relation to the Nation," by Prof. John W. Burgess; "Legislative Inquests," by Frederick W. Whitridge; "American Labor Statistics," by Prof. Richmond M. Smith; and "The Conference at Berlin on the West-African Question," by Daniel De Leon. This enterprise seems to us full of promise, and to be a notable evidence of the growth of serious political thought and study in this country.

Henry Holt & Co. will soon add to their "Library of Foreign Poetry" a new translation of Goethe's songs, ballads, and selected miscellaneous poems, by Commander William Gibson, U. S. N.

A memorial of the late George Fuller, by many hands, in prose and in verse, with choice illustrations from this artist's works (a complete list of which and of their present owners will be given), is promised shortly in a limited edition of 300 copies by Houghton, Mifflin & Co.

A new volume of verse by Whittier, containing the poems he has written since the publication of "The Bay of Seven Islands" in 1883, is to be published by Houghton, Mifflin & Co.

A new monthly magazine, the *Forum*, is to be launched directly in this city. It will in form be modelled after the English reviews. Its field is but vaguely described in the circular before us.

Mr. John Morley's 'Rousseau,' in two volumes, follows 'Voltaire' in the new and irresistibly attractive uniform edition of Messrs. Macmillan. The two works belong together by every relation of their subjects, whether between themselves or in the author's mind; and if the purchaser of this edition stopped anywhere, he could not well take one without the other. Both are masterpieces of condensation and generalization.

Last week we had 'Whitaker's Almanack,' and now Mr. Spofford's 'American Almanac' (American News Co.) comes to hand—the ninth issue, if our reckoning is not at fault. Want of public appreciation of this useful work accounts, we suppose, for the neglect into which the stereotyped portion has fallen, even to downright illegibility in some cases. The publishers should look to this, especially since they have always been too careless of the typographical appearance of their annual. In this respect Spofford cannot compare with Whitaker.

We give a ready welcome to Part i. of Vol. v. of 'The Encyclopædic Dictionary' (Cassell & Co.)—none the less a volume because called a "Part," and properly Vol. ix.—with its vocabulary extending from *mem.* to *parbuckle*. The fulness of this vocabulary is the great recommendation of the work, as we have more than once remarked. But there are numerous other aspects in which the Dictionary must be regarded with favor. Its encyclopædic character is well exhibited in definitions like those of Mennonite, mesmerism, meteor, monitor, moon, Mormonism, morphology, Muhammadan architecture, Navigation Laws, negro, nihilism, non-juror, Old Catholics, parabola, etc.

Prof. H. Sweet regrets, in a letter to the *Academy*, that the New English Dictionary was not established on a more modest but more convenient and businesslike scale than the present magnificent one. This is not pleasant language to hear from an Englishman concerning a work which is to be his country's greatest philological glory, and the best dictionary in any language. From another source one might ascribe it to the narrowness and jealousy of a university town, but such words are not to be used of Professor Sweet. Shall we apply to him the saying that an Englishman is never so happy as when he is grumbling?

The twelfth volume of 'Brockhaus' Conversations-Lexikon' (New York: L. W. Schmidt) is completed with Parts 178–180, which end with *Phoxos*. There is a beautiful map of Paris and vicinity, and two of Austria-Hungary—one ethnographical, the other physical; as well as one of Palestine. Excellent color printing is displayed in the plate showing the diseases of plants.

The lesser Brockhaus has long passed the halfway mark with Part 42, ending with *Maurogeni*. *Colonies* and *Congo* are allowed a measure of space in decided contrast with the general brevity of the articles in this handy reference book; and the most striking of three maps is one showing the outlying possessions of the European States. There is also a colored plate of edible mushrooms, besides the customary woodcuts. The death of General McClellan, whose name occurs in this instalment, has not been overlooked.

The eleventh edition of Berghaus's Chart of the World (Gotha: J. Perthes; New York: Westermann), in which, by the way, the nomenclature is English, has been revised as usual, and is the freshest compendium of information for the merchant, the tourist, or the navigator. The German colonial fever has helped to swell the number of steamship routes laid down; railroads and submarine cables have multiplied; the Congo Free State and the Russian advance in Central Asia have developed new lines of transportation and communication. The principal changes noted in the physical facts of the earth's surface naturally relate to the north polar ice-belt, whose positions at a great many epochs in the present century are carefully delineated. Indeed, the Chart is a convenient register of Arctic exploration.

The appearance of Mr. Harrisse's 'Christophe Colomb' and of C. F. Duro's 'Colón y Pinzón' has prompted Prof. Eugene Gelcich to gather up his notes, made during many years, for a defence of Columbus against his detractors as a navigator (*als Nautiker und als Seemann*). His learned and elaborate paper is printed in the Journal of the Berlin Geographical Society, No. 118.

The seventh annual report of the Geographical Society of Bern, of which the text is (as happens) French or German, has a largely American complexion. It opens, appropriately enough, with a tribute to Arnold Guyot, the editor's countryman, and there are also papers on the city of Mexico and its suburbs; on the civil war in Central America, which ended in the death of Barrios; on the Argentine Republic, and especially the Province of Tucuman. One of the two maps is given to Guatemala; the other illustrates an article called "Life on the Congo," a rosy view.

Science for February 12 reproduces the map of Burmah, Siam, and the Shan States published in the Royal Geographical Society's Proceedings for January. Its details will be a great comfort to editors and students who have to follow the progress of the English occupation of the first-named country.

The interest excited in Mr. Samuel Brearley's report to the Harvard Club, in criticism of the elective system at Harvard, has caused it to be

put on sale with G. P. Putnam's Sons, 27 West Twenty-third Street, New York.

The Boston *Journal of Education* for February 18 is wholly a memorial number in honor of the late John D. Philbrick, formerly superintendent of the Boston schools, and for forty years prominent in educational circles. But the *Journal* ought to have suppressed the wretched portrait which disfigures its first page.

Under the rather questionable title, 'A Forgotten Genius: Charles Whitehead,' Mr. Mackensie Bell has lately published (London: T. Fisher Unwin; New York: Scribner & Welford) a biography of an erratic, gifted, and miserable Englishman, who held a fair position in English journalism half a century ago, acting as assistant to Dickens, writing poems and novels, some of which succeeded, and all of which had qualities that demanded critical consideration, and who took to drink and at last died wretchedly, alone among strangers, in a hospital in Australia. Mr. Mackensie Bell examines all of Whitehead's works in prose and verse at great length, and makes abundant extracts therefrom; but it can hardly be admitted that the evidence he adduces proves the right of his hero to remembrance. He even ventures on a comparison with the case of Edgar Allen Poe, just now a more fashionable type of genius and weakness than either Richard Savage or François Villon; but Mr. Mackensie Bell ignores the great difference between Poe and Whitehead. Nevertheless, his book is interesting and careful; and it contains a curious anecdote of Rossetti's remembering a sonnet of Whitehead's, and transmuting its base metal into his own fine gold.

During the last year the *Revue Bleue* has published many interesting letters received by the late Adolphe Crémieux, and these with others are now issued in a little volume, 'Autographes: Collection Adolphe Crémieux' (Paris: Hetzel; New York: F. W. Christern). Crémieux was the chosen lawyer of many of the leading lights of literature and art, a man of high character and great ability. His wife was a charming woman and a fine musician. In his collection are characteristic letters from Hugo and Dumas, Liszt, Rossini, Halévy, and Auber, from Talma and Rachel, connected by a slight thread of explanatory text. Of Talma there is (p. 15) a pertinent anecdote showing that he, like M. Coquelin in our day, is of Diderot's opinion that an actor should not allow himself to be mastered by the emotion he depicts; and (p. 93) there is an anecdote quite to the same effect. The main interest of the collection, however, is in the letters and anecdotes of Rachel, which fill more than a hundred pages. As a member of the same race and faith, Rachel came early for advice to M. Crémieux. She was profoundly ignorant, having read, even in the plays she acted, only her own part and its "cues." She could not spell at all; she writes from London that "M. Stanoppe est un homme fort comiffaut" (p. 211). Crémieux wrote her letters for her to copy for several years until she erred from the straight and narrow path. The letters she wrote to him, asking him to draft notes and replies for her, will hereafter hold a high place among the curiosities of literature.

Westermann & Co. send us Parts 3-5 of the 'Geschichte der Deutschen Kunst' now publishing by Grote in Berlin. They continue to treat of architecture and the subsidiary arts, and are embellished with fine wood engravings of churches and statuary, and with some admirable chromo illustrations.

Even for the origin of the movement cure we must go to China, and perhaps the latest work on the subject is that by P'an Wei, the present Governor of Hupeh, a brochure entitled 'Important Life-maintaining Methods.' He treats of massage and air-gulping, and furnishes material for a very amusing as well as learned article by Doctor Macgowan in No. 29 of the *Medical Reporter*. Twelve figures of calisthenic exercises without instruments are copied from the original.

Of late much has been made of photography in its application to astronomy, but not too much. The researches of the late Doctor Henry Draper in connection with the great nebula of Orion were about the first to show how powerful an adjunct to the tools of the astronomer photography had become. It was made plain that the sensitive dry plates were much more sensitive than the eye—in other words, that many things that could not be seen with a given optical means were easy to photograph with an equivalent apparatus. This line of research has been successfully followed up in England by Huggins, Common, and others, and in France by Paul and Prosper Henry, who now give notice, through the *Astronomische Nachrichten*, of the discovery of a nebula by photography. As yet it cannot be verified by the telescope.

An ideally fine portrait of the late General Hancock, half life-size (or "imperial panel photograph," as the technical designation is) comes to us from Mr. F. Gutekunst, Philadelphia, who has taken extraordinary pains, with extraordinary success, to form a national portrait gallery of "men of the time."

—*Harper's* for March is predominantly geographical, for when the reader has exhausted the laborious article on Krupp and his guns, he has small choice left except to con the new map of Africa, as thickly studded with names as the plan of a mushroom Western town with corner-lots, or else to wander over the very dismal scenes of Turkoman raids and view the tombs of Cain and Abel with an *attaché* of the Afghan Boundary Commission, or to hear again the charms of rural Breton life, or to watch the change of the log-hut acres by the marshy river into the wealth and beauty of the splendid avenues and the smoke of the great industries of the city of Cleveland. This last is an admirable paper, with its vivid touch of early history and sketch of the genuine pioneer character, and its gradual unfolding of a subject hard to bring into the narrow limits; no one of the series to which it belongs has been more instructive in the essentials of the growth and worth of an American city. An article on dogs, by Hugh Dalziel, contains an amount of information, in regard to their management and care, difficult to obtain in so compact a form and of a very practical kind; and considering the unrivalled ignorance of man respecting the treatment of his best animal friends, who "have no rights," an eminent Christian official assures us, "because they have no souls," such an essay as this deserves to be "crowned" by some humanitarian society. The Easy Chair almost surpasses himself in the delightfulness of temper and literary tact of his monologues, which alone in this number remind us that literature is a fine art.

—Not so, however, with the current *Atlantic*, which still flies the flag of belles-lettres, and will, we dare say, till the tattered ensign goes down with the ship or is safely stored away in some museum library. There is nothing in the issue which has not in its kind the special quality of excellence which appeals to taste, apart from a mere curiosity or vacuity of mind to which the day's literature is mainly addressed. The first story, in which the character of the tale-teller is delightfully self-revealed, pleases by its mere daring and freshness, being as unreal as Jack's bean-stalk in a field of mere ordinary realistic beans, and therefore a heavenly relief to the eye; and our correspondents on the vexed question of "the real and the ideal," after cogitating this piece of indescribable fiction, may find some interest in Dr. Hedge's discussion of "the classic and the romantic," which is just over the way from them. To compress the article into an epigram, one would say that the classic is the thing seen and the romantic the thing felt. But let no one rashly identify the thing seen with the real, and infer heaven knows what—and so be lured off into a dance of phrases; for if he be wise he will remember it is always assumed that the classic, the thing seen, is a sort of Hesperian presence of the ideal; and here we pause with the first thread of the labyrinth. Dr. Holmes writes a defence of occasional verses, and gives two illustrations from his recent experience, of which the poem to Dr. Hedge rises above the level. Mr. Van Brunt speaks of the state of architecture, and Mr. Justin Winsor of libraries of Americana, an article which probably could not have found publication except in the *Atlantic;* and it is pleasant to observe, in this most literary of the monthlies, the welcome judgment that Grant's Memoirs is turning out to be one of the memorable books of the world.

—The latest addition to the Johns Hopkins University Studies is a pamphlet of some sixty pages called 'Dutch Village Communities on the Hudson River,' by Irving Elting, A. B., which makes the first number of the fourth series. It is a pleasantly written account of some of the facts connecting village life and common ownership in New York with the primitive customs of the race. The author writes with great knowledge of his subject, having evidently made an examination of the local records at first hand. The brochure can hardly be said to shed any new light on the questions at issue among the European investigators of village community life; indeed, Mr. Elting is unwilling to go so far as to commit himself to a decided expression of opinion that common property preceded individual ownership, and says: "A decision of this question, if it were possible, is not necessary for the present purpose of examining the village communities on the Hudson River." Notwithstanding this extreme caution, he concludes his essay with the following rather broad generalization: "From the banks of the Rhine the germs of free local institutions, borne on the tide of Western emigration, found here, along the Hudson, a more fruitful soil than New England afforded for the growth of those forms of municipal, State, and national government which have made the United States the leading republic among the nations. Thus, in a new and historically important sense, may the Hudson River be called the 'Rhine of America.'" We do not see how the evidence that Mr. Elting has collected tends to establish this. In New York and in the Southern States, we had always supposed that manorial rights played a more important part in the early system of landholding; while in New England it was precisely because the political unit—the town—was also a representative of tolerably equal landownership, reinforced by the commons system, that Massachusetts became the Cradle of Liberty. Of course the scientific mind must always be open to new hypotheses, and we are quite ready to have it proved that it was the primitive Hudson River, or even Long Island Dutchman, and not the "embattled farmer" of New England, who did most for "those forms of municipal, State, and national government which have made the United States the leading republic among the nations." But it ought to be clearly proved. "What is now City Hall Park in New York," says Mr. Elting, "was as late as 1686, *perhaps much later*, known as the Village Commons, where the droves of cattle were sent morning and evening to pasture." But, on the other hand, Boston Common is still

called Boston Common after a lapse of two centuries, and the survival or disappearance of the name is pretty much all we have in either case to indicate the permanence or impermanence of the institution in the affections of the people.

— Sir Henry Thompson's 'Food and Feeding' (F. Warne & Co.) has appeared in a fourth, enlarged edition; and we should be pleased if, some day, we might announce its fortieth edition, for it is perhaps the most useful, suggestive, and at the same time entertaining work on gastronomy in the English language, if not in any language. Brillat-Savarin's famous 'Physiologie du Goût' is more epigrammatic, spicy, and fanciful, but far less valuable from a practical point of view, not to speak of its numerous errors. Sir Henry's treatise is by no means, as its title would seem to imply, a dry, chemico-physiological compilation or book of recipes. It discusses such topics as schools of cookery, public dinners, toasts, *menus;* the question of wine, tobacco, mineral waters, and coffee at dinner; turtle and fish dinners; breakfast and lunch; salads, sauces, soups, stewing, frying, etc., etc. The average man, even among the educated, "cares more for quantity than quality, desires little variety, and regards as impertinent an innovation in the shape of a new aliment, expecting the same food at the same hour daily, his enjoyment of which apparently greatly depends on his ability to swallow the portion with extreme rapidity, that he may apply himself to some other and more important occupation without delay." Sir Henry vigorously combats this vicious propensity; emphasizing everywhere the extreme importance to health and happiness of good cookery, and stating the reasons why one method is superior to another.

— In giving, for instance, a receipt for wholemeal bread (p. 41) he points out as one of its advantages that it is more stimulating to the appetite than ordinary bread because "it retains the natural flavor of the wheat in place of the insipidity which is characteristic of fine flour." In the cooking of meat it is precisely this effort to "retain the natural flavor" that distinguishes English from French cookery. In English cookery the motto is, "Each animal, when served, to be characterized by its own proper flavor, which is on no account to be masked or disguised by others which are adventitious. . . . The French *chef* treats the white meat, veal and domestic poultry, with so many ingeniously contrived sauces as to render these two meats as good as six. So successful is the achievement that he is too often tempted to extend his art to dark-fleshed game, and, seeking to adorn it with new flavors, destroys the original savor and aroma in which consists the value of the dish." It is in vegetable dishes and soups that French cookery is superior to English. Even more than meat a French cook is apt to spoil fish with his sauces. Sir Henry combats the old superstition that fish contains certain elements which adapt it preëminently to renovate the brain; but in another sense, as he shows, fish is the best food for brain-workers, for it is more easily digested than meat, and demands less physical exercise for its assimilation. In another chapter he remarks that "Milk is essentially the food of the growing animal. . . . Those who take much exercise, or follow laborious occupations, may make it a useful portion of their dietary. It is rarely suitable for sedentary persons." The vegetarian controversy is very sensibly settled by the remark that "man is clearly omnivorous; while *men* may be advantageously vegetarians in one climate, mixed eaters in another, and exclusively flesh-eaters in a third." Against one phase of vegetarianism Sir Henry protests vigorously, namely, the use of dried and compressed vegetables which is getting so common in hotels and elsewhere, to save trouble: "All the finest qualities of scent and flavor, with some of the fresh juices, are lost in the drying process; and the infusions of preserved vegetables no more resemble a freshly made odoriferous soup than a cup of that thick, brown, odorless, insipid mixture, consisting of some bottled 'essence' dissolved in hot water, and now supplied as coffee at most railway stations and hotels in England, resembles the recently made infusion of the freshly roasted berry."

— The future essayist who first writes about the "curiosities of catalogues" will not suffer from lack of amusing material. In a recent English catalogue of a second-hand bookseller there are two entries which may be called to his attention for the evidently unconscious humor of the compiler's recommendatory notes:

509 MATRIMONY.—How to be Happy though Married: being a Handbook to Marriage. impl. 16mo, *cloth elegant*, 5*s nett* 1885. The title is borrowed from one of Skelton's Sermons; a copy has been accepted by the Princess Beatrice.

682 SUNDRY BOOKS.—A parcel of 50 (religious) from the Library of the late Rev. H. T. Ellacombe, *suitable for distribution among poor parishioners*, 10*s* the lot, A BARGAIN *v. d.*

It would be interesting to get the opinion of H. R. H. the Princess Beatrice and of the poor parishioners.

— In connection with the recent new regulations, of which we have spoken, the Italian Government last month issued decrees, changing by promotion or otherwise the personnel of the principal libraries, and giving to the institutions themselves rank and appropriations according to their relative importance. The following librarians-in-chief receive the title of Prefect: Domenico Gnoli (a chief living poet, better known by his pseudonym, Dario Gaddi), prefect of the Victor Emanuel Library, Rome; Desiderio Chilovi, *bibliothecist* pure and simple, Biblioteca Nazionale, Florence; Carlo Castellani, bibliographer, Librarian of St. Mark (Biblioteca Marciana), Venice; Isaia Ghiron, Hebraist, author of many works, historical, numismatic, biographical, the Brera Library, Milan; Niccola Anziani, palæographer, Laurentian Library, Florence; Gaspare Gorresio, a well-known Sanscrit scholar, University Library, Turin; Vito Fornari, a philosophical writer and critic, National Library, Naples. The title of Librarian is given to Olindo Guerrini, poet and critic, University Library, Bologna. These appointments are generally in the line of the new policy—to put at the head of the great book collections, and in the subordinate positions as well, not merely learned men, but *librarians* in our American sense of the word. Heretofore in Europe, and particularly in Italy, these positions have been occupied, not by men of high technical bibliothecal attainments, feeling it their duty to make the libraries more and more accessible to the public, to prepare accurate and full catalogues, to publish bulletins, indexes, and the like, but by mere scholars, who have received their posts as a sort of recompense for their learning, and who have used the time which fairly ought to be given to library work in editing MSS. or preparing other works. The second, third, and fourth volumes of the series, *Indici e Cataloghi*, published by the Ministry of Public Instruction, are out. They are: 'Catalogo dei Manoscritti Foscoliani, già proprietà Martelli, della Biblioteca Nazionale di Firenze'—a catalogue of the Martelli collection of Ugo Foscolo MSS., of great interest, particularly the correspondence, in relation to the literary history of his times; 'Disegni di Architettura esistenti nella R. Galleria degli Uffizi di Firenze'—these architectural designs of the Regia Galleria being by the most famous architects; and of great importance will this catalogue be to students of architecture and architectural history; and 'I Codici Palatini della R. Biblioteca Nazionale Centrale di Firenze'—the portion, namely, already catalogued, but somewhat imperfectly, in Palermo's work on these MSS.

GRANT'S MEMOIRS.

Personal Memoirs of U. S. Grant. Charles L. Webster & Co. 1885. Vol. i, pp. 584, 8vo.

Nearly everybody, we take it, heard of General Grant's purpose to write his military memoirs with grave doubts of its effect upon his fame. From the beginning he made known, with characteristic openness, that the ruin of his business affairs made the *Century* Company's offer to pay a large price for some magazine articles a welcome one to him. He has repeated this fact in the preface to the present volume, only adding that what began as an apparent necessity, continued as a pleasing occupation when once it was begun. His countrymen, who were jealous of his fame as of a national possession, feared that a book written under such circumstances, by a man who had shown no desire or taste for literary work, could not prove satisfactory. They distrusted, also, the business management under which the memoirs would appear; for however high the character of publishers, there was danger that a great name might be used to secure great sales without due consideration of the effect upon that name and fame.

The result has happily disappointed these fears. Beginning with a disposition to compress his narrative into the barest outline of events, General Grant learned from the suggestions of friendly critics (as General Badeau has told us) to enlarge the scope of his first sketches, and impart much more vivacity and incident to them. The light of publicity in which he lived has given us, in a degree hardly ever known before in the case of a book likely to have permanent value, the steps in his literary education by which he was led from what might have been the bald reproduction of a military report, to the conception and execution of a memoir which no one can find dull, and which those readers who take pleasure in the analysis of a great man's mind and character will regard of inestimable price. Nine-tenths of the value of autobiography is in the revelation of the writer himself to the world. This book is no exception to the rule. The history of his campaigns may be got elsewhere. Badeau's book is more full and has scarcely less of Grant's authority, for he revised its statements and certified that it contained his views. In all essential things the present work may be said to be an abridgment and paraphrase of the other. As originally prepared, it was in itself the most absolute evidence of the authoritative character of Badeau's history; and the changes which were made after the publication of portions as magazine articles are evidence that the author would have had to modify others of his recollections or conclusions, if the whole could have been subjected to criticism in the same way.

It is, then, for the new light which they throw upon Grant himself that these memoirs will be prized. His personality was too strong to be hidden. When he took his pen to tell the story of his career, the things which flowed most easily from his mind were the judgments and opinions of men and of events in the gross, and not the detailed incidents which the experienced writer would use to fill and color his narrative. We learn what was the Grant method of viewing things, and are greatly helped in forming truthful ideas of his powers and his peculiarities. As to his style, it has the principal element of thoroughly good writing; since we are made to feel

that the writer's only thought, in this regard, is how to express most directly and simply the thing he has to say. His ideas are always clear, his arrangement of them is always lucid, the expression of them is free from mannerism or strain after effect; and therefore, as writing, the result cannot fail to be satisfactory.

The first volume, beginning with Grant's boyhood and service in the regular army, brings his career down to the close of the Vicksburg campaign. By whatever considerations he was induced to make his sketch of the Mexican war fill so large a space in the narrative, it was a fortunate thing that he has done so. More than a hundred and fifty pages are devoted to this subject, and we doubt if there can anywhere be found so intelligible and useful a brief account of the military operations in Mexico. He goes back to the experiences of his youth with the broad judgment matured in the great campaigns of the civil war. His estimate of Scott and Taylor is an unprejudiced retrospect of men who had been his youthful admiration, and his kindly but discriminating judgment of their campaigns may well become a standard authority upon that period of our history. If one were disposed to question his capacity as a writer, this portion of his book would decisively settle the question. That this is original work, no one can gainsay. His materials, except his personal reminiscences of the time, are only such as any writer may command; but the vigor of the narrative, the strong grouping of salient points, the sagacious criticisms, the quick eye for the telling features of a battle or a movement, are all noteworthy, and show that his powers were of no ordinary kind.

When he comes to tell the events of the civil war we look, first of all, for evidence of the growth of his knowledge of his own powers, for it would be absurd to suppose that a man with a career behind him which must be accounted in most things a failure, could have had any very clear consciousness of his own abilities. He does not inform us of his real hopes or expectations at the outbreak of the war. He helped organize the first company raised in Galena, and never went back to the little leather shop to do any business again. Yet he refused the captaincy of that company, while intimating to his friends that he would find a place in the military service somewhere. He showed his zeal by drilling the company, and accompanied it to Springfield, where he was invited by Governor Yates to serve for a time as assistant to the Adjutant-General of the State in organizing the Illinois contingent under the first enlistment. It seems probable that he looked for some public call upon West Point men who were out of the army to return to the regular service, and was disappointed that the Government did nothing of this kind. On the 10th of May, while waiting near St. Louis to muster in some Illinois regiments, he witnessed the initiative taken by Captain Lyon, and the capture of the camp of the Confederate "Home-Guards" near that city. On the 24th he addressed a letter to the War Department, tendering his services and indicating the command of a regiment as the post for which he felt competent. It was probably one of the new regiments authorized for the regular army which he had in mind, for the national Government appointed the officers of no others, and we may thus infer that his hope was for a reinstatement in the regular service. He doubted his ability to perform properly the duties of a colonel, but thought he could at least do as well as the volunteer colonels whom he had mustered into the service of the Government. No answer, however, came to his offer of service, and he failed also in an effort to see McClellan for the purpose of renewing the offer in person; McClellan being now at the head of the Department of the Ohio and a Major-General in the regular army.

Grant seems now to have given up the hope of reëntering the regular service, and upon the issue of the call by President Lincoln for three hundred thousand men, he was appointed by Governor Yates Colonel of the 21st Illinois regiment. Had he been willing to accept the captaincy of the Galena company, he would probably have been made Colonel of the 11th into which it was mustered; but he had wished first to test the possibility of resuming his profession permanently, and, having failed in this, he threw himself heartily into the volunteer service, in which he was to make his fame. His staff service with the Governor made him some valuable friends, and no doubt led to his early appointment as Brigadier-General before he had taken the field. He had no taste for the semi-clerical duties of the Adjutant-General's office, saying of himself, humorously, "The only place I ever found in my life to put a paper so as to find it again, was either a side coat-pocket or the hands of a clerk or secretary more careful than myself." We may be sure, however, that the public men who had come in contact with him had seen the thoroughly earnest but simple business air of the man, and had learned to have faith in his quiet, impassive character.

His first field service was in beating up the quarters of a Confederate Colonel Harris, a little way back from the Mississippi River in Missouri. He describes the weight of responsibility he felt, and the nervous uneasiness with which he approached what promised to be a field of battle. He would have felt none of this, he says, if he had been a subordinate. It was the responsibility for the handling of men, and for the results, that brought his heart into his throat. But the enemy had run at the news of his approach: "My heart resumed its place. It occurred to me at once that Harris had been as much afraid of me as I had been of him. *This was a view of the question I had never taken before; but it was one I never forgot afterward.*" The words we have italicised are a characteristic revelation of the effect of this lesson of experience upon his mind. Many military officers, even generals of high repute, never learned that lesson, which contains the secret of every vigorous campaign. To take the unknown for the wonderful is proverbially common. It is the reason why men will tremble at a burglar's noise in the house at night, who would face an army of tramps if they could see them. It is what makes army commanders believe exaggerated reports of their enemy's strength, and conduct feeble operations against a weaker foe. Grant was not alone in seeing that his enemy had been in more fear than he, but he was singular in remembering it always after; that is, in gaining permanent confidence and courage to take a bold initiative, with steady and clear appreciation of the moral superiority it gave him over any opponent but one whose nerve and judgment were as good as his own. This is the commander's courage, a thing *toto cœlo* different from that of the subordinate or of the soldier in the ranks. These throw the responsibility for the unknown upon their chief: they use only the common courage of facing bravely what they see. The mode in which Grant has put this is as characteristic as the thing itself. He does not generalize upon it or attempt to analyze it. It is simply a concrete fact; he saw that his enemy was afraid of him, and intuitively concluded that he should find it so in other cases.

Another interesting revelation of his mental operations is found in his final attack at Fort Donelson. The naval attack had been beaten off, and he had seen the fleet retire discomfited. His army had found strong entrenchments in front, and had made no impression on them. He visited Commodore Foote, and learned that the gunboats must go down the river for repairs. He began to think a siege might be necessary. General Wallace says it had been actually determined on. In his absence the enemy took the initiative, and was only beaten back by the conjoined efforts of McClernand and Wallace, after the first had been worsted. Coming on the field, he is told that the enemy had come out laden with ammunition and with three days' rations. What others thought an indication of confidence and preparation for a long fight he instantly saw to mean an effort to cut their way out and to escape. His mind jumped to the conclusion that it also implied that the enemy must have concentrated his forces to do this, and that if he could strike quickly at the other end of the line, he would capture their works with little resistance. This made him content to let Wallace keep up a mere show of attack, while he hurried to General Smith with the order to assault headlong on our left. The success was the legitimate result of quick, almost intuitive perception of the true meaning of little facts, and the promptest and strongest action upon his interpretation of them. He was sure they meant—it is better to say he *saw* they meant—but one thing; and his will followed the perception with scarce interval enough to call it reasoning. That is Grant's part in the battle at Fort Donelson, and we must admit that it is the master's part. The march from Fort Henry was an audacity learned in his first march against Colonel Harris, but it was within an ace of failure, when the new and unexpected circumstance of the enemy's sortie gave a momentary opportunity which was instantly seized so as to lead to victory. We may be sure he forgot the second lesson as little as the first. The one was boldness and initiative in the strategy, the other was the quick tactical concentration of attack upon the weak spot which was disclosed in the battle. Add to these, tireless patience in biding his time when it was necessary, and indomitable perseverance in hammering away when nothing better can be done, and we have the principal elements of Grant's military character, which satisfactorily account for his career.

Yet he had lessons still to learn, and his campaign of Shiloh taught him by a severe experience the danger of over-confidence and of having his headquarters too far from the front. It need hardly be said that so apt a pupil learned the lesson well, though the soreness with which he ever remembered it prevented his speaking of it with the freedom with which he referred to his other advantages gained in the school of experience. The official records now make it too plain for fair dispute that neither Halleck, Buell, nor Grant believed the Confederates could rally for a strong counter attack so soon after the fall of Fort Donelson as the 6th of April. Halleck intended to take the field in person when Buell's army should join Grant; Buell moved southwestward from Columbia, Tennessee, steadily but without any haste; and Grant had his headquarters at Savannah, nine miles below Pittsburg Landing, on the opposite side of the river. He did not take the pains to arrange a meeting with Buell on the 5th, the day of his arrival at the same place; he arranged a private friendly visit with General Ammen, an old neighbor who was in Buell's command, for the evening of the 7th at his Savannah headquarters. He informed both Halleck and Buell on the 5th that the enemy's army was at Corinth, and Halleck wrote that he expected to leave St. Louis early in the week beginning with Sunday, the 6th, to meet his assembled army at the front by the time the concentration of Buell and Grant was accomplished. Then the enemy at Corinth was to be attacked, and Grant had expressed the opinion that that place would

"fall much more easily than Donelson did when we do move." Grant's divisions at Shiloh were encamped with reference to convenience of access and eligibility of camp-grounds, and with no expectation of fighting a defensive battle on that field. General McClernand had disputed the seniority of C. F. Smith, who had been in command at Pittsburg Landing till an accidental injury of which he died had made him relinquish his post. No assignment of another was made by Grant, who expected to be with them in a few days, and the division commanders were independent of each other unless an exigency should arise in Grant's absence for united action, when McClernand would have been entitled to command by seniority, under the articles of war and military regulations.

This was the situation when, on the morning of the 6th, about 8 o'clock, the roar of cannon was heard at Savannah, announcing the enemy's attack in force at Shiloh. That Grant then made haste to reach the field, and that when there he did all that his unflinching courage and clear military understanding could do to give unity and plan to the stubborn defensive fighting of his divisions, we could infer certainly from what is now known of his character, if the earlier misstatements in regard to it had not been already corrected by official evidence. It is settled by the testimony of Confederate as well as national officers that the weight and impetus of the Confederate attack had exhausted itself before Buell's command or any part of it had crossed the river, and that Beauregard had issued his orders withdrawing his troops from their advanced positions. Grant had also notified Sherman that he should resume the offensive in the morning. Knowing Grant as we now know him, this is what he was every way most likely to do. At the time, when he was not well known, it was hard to believe that he could have retained the unconquerable will to do this after a long day's battle in which his troops had been driven back mile after mile. On the 7th, with the efficient aid of Buell's splendid command, a decisive victory was won. But we cannot dwell upon this: our present purpose is only to follow the course of Grant's development or education—it matters little which we call it. He was never again found in a position where he was unprepared for a return blow of the enemy, nor were his headquarters ever again separated from the troops of the line during an active campaign.

His Vicksburg campaign also began with errors and untoward events, though they were due to different causes from those which had operated at Shiloh. His sudden abandonment of the line of movement through central Mississippi for that of the river cannot be defended on military grounds. Sherman was clearly right in his criticism of it at the time and in his memoirs. The truth seems to be that Grant was so alarmed at the probable results of a permanent division of his forces by the assignment of McClernand to command the river expedition, that the reunion of all was determined on at the cost of abandoning his true line of operations, which he had to regain by almost desperate means after months spent in fruitless toil in the bayous and upon the swampy banks of the Mississippi. When the situation had become desperate, he rose to the height of the demand upon his brain and courage, and broke out of his embarrassments by a gigantic effort which placed him again upon the high lands east of the river without a formal retracing of his steps. It would seem that the real question in his mind was whether his rôle should be a principal or a secondary one, and his transfer of his army from Oxford, Miss., to the levees at Millikin's Bend was the solution of a personal more than a military problem. When he had extricated himself, however, and from the moment he had gained a firm footing at Port Gibson, the campaign till Pemberton was shut up in Vicksburg is rightly regarded as the flower of his military career, the most perfect combination of bold strategic movement with successful field fighting which it was ever his fortune to make. It was this, when they had reached Haines's Bluff, that aroused Sherman's enthusiasm, and drew from him the memorable words in which he recognized the military genius and power of his commanding officer.

Grant's method of treating his mistakes differs with the situation. No one can be more frank or direct in self-criticism in minor matters, as when he says of himself that he lacked the moral courage to stop and consider when he was making his first little expedition against Colonel Harris. But in regard to things which became subjects of controversy, he was not free from the altogether human desire to defend the course he actually pursued. In regard to the days immediately preceding Shiloh, and in reference to the movement of Wallace's division to the field, his memory is not quite accurate as tested by the official records, which it is plain he did not have the time or opportunity to reëxamine with care, writing as he did in the confinement of the sick-room. We learn to know more of the man himself from his narrative, as we have said already, but we must still go to the great storehouse of the official records for the full correction of the history of the time; and had he lived to see his memoirs published, there can be no doubt that he would have recast some important passages. So, also, in regard to the Vicksburg campaign, he gives as a sufficient reason for his change of base, "the impossibility of maintaining so long a line of road over which to draw supplies for an army moving in the enemy's country." As an argument, this loses its force when we remember how much longer lines were protected by Sherman at Atlanta, and how little he himself regarded the cutting of Rosecrans's communications a reason for abandoning the campaign of Chattanooga. In such cases the personal reasons which influence a man's decision do not always become distinctly conscious to him, or, at most, he will regard them only as adding weight to the other grounds upon which he prefers to base his action. That his likes and dislikes of men powerfully affected his conduct, is too well known to be matter of discussion in Grant's case. In civil administration it became a misfortune of no ordinary dimensions; and while less need of considering this is felt in reading his military memoirs, it will by no means do to ignore it. Yet when all deductions are made, the volume already published is so valuable an aid to the comprehension of General Grant and his times that it cannot fail to have a permanent place in literature, and the continuation of the work will be looked for with genuine interest.

Marvels of Animal Life. By Charles Frederick Holder. Charles Scribner's Sons. 8vo, pp. 240. Illustrated.

THOSE who delight in stories of the wonderful in nature will find this book attractive. It is one of a number, bearing considerable resemblance in good qualities and in faults, recently published by different writers on popular natural history. The principal difference appears in the larger number of topics drawn from marine life. It is very entertaining, and contains a large amount of valuable information. The descriptions are full of life and the interest seldom flags. If the objectionable features had been left out, we should have in it such a book as is most desired for unscientific readers, who wish to gather facts, but make no attempt to be systematic in doing so. In the interest of these readers we shall direct special attention to the characteristics to which we take most exception. A desire to make the most of the stories told has induced some exaggeration and recklessness in statement. In gathering the marvels, some are introduced which should have been described as conjectures; yet, though the author adds nothing to the evidence and had no means of verifying, he does not hesitate to commit himself in favor of what he prefers to believe, even if in doing so he throws shadows of uncertainty upon matter of real value. Questionable information given as such may result in good, from the reader's desire to satisfy himself of the truth; but given as fact, sanctioned by the author, it either misleads or causes suspicion of his judgment.

A few instances, or a single chapter on the best known of the subjects, will serve for illustrations. "The most remarkable statement concerning these fishes made by this author [Schomburgk] is that the Hassar, which is the native name for *Callichthys subulatus*, constructs a regular nest of blades of grass and leaves in holes *just above* the water, where it deposits its eggs, and watches them until the young appear." Schomburgk's words are, "et was *unter* der Oberfläche des Wassers," and the name Hassar is applied to various species. "In Eastern seas we find the grass fish (*Nemichthys*), which is invariably seen upright among the grass it resembles." *Nemichthys*, however, is a deep-sea fish, found in depths of 500 to 2,500 fathoms, and certainly never yet seen in its native haunts by eye of man. *Toxotes* is said with unerring aim to bring down insects at a distance of three or four feet. A chapter is devoted to "Dry Land Fishes," whatever they may be. On plate x. is figured a nondescript "Martinique tree-toad with young clinging to its back." The toad, as the author calls it, breathes by lungs, has pads on the ends of its toes, for clinging to rocks, trees, leaves, etc., and has no swimming membranes; the tadpoles apparently have not lost their gills, have the membranes on the tail, which could not last long out of water, and, clinging to the back by their mouths, are unable to feed. What is it he has given us?

Passing such mistakes as Ceradotus for Ceratodus, Edoux and Toulezet for Eydoux and Souleyet, Acrohordus for Acrochordus, Rhamphorhynchus for Rhacophorus, etc., let us take up one of the weakest chapters, "Our Common Snakes." They are "covered with a coat of scales [?] which is shed in the summer months [?]." Their teeth "are merely for two purposes: first to poison and stupefy the prey [in all cases ?]; and second to prevent its escape." The venom is said to be "accumulated in sacs that are modifications of the salivary gland." "To use the poison the snake has merely to strike its prey, the muscles of the jaw being so arranged that, as soon as the fang enters the flesh of the victim, certain muscles press upon the glands, squeeze the poison through the little canal down through the hollow fang, and the work is done." Use of venom depends on the will of the snake, whether the fang enters the flesh or not. "The poisonous snakes may always be recognized by their broad flattened heads and generally short and thick bodies. They also, as a rule, possess a vertical keel running along the centre of each scale." This would prevent the admission among poisonous snakes of many of the Hydrophidæ and the entire family of Elapsidæ. "The non-poisonous snakes have long bodies, with the head small, no distinct neck, and the scales not keeled." This would shut out our most common species, the garter or striped snakes and the water snakes. That rattlesnakes only strike when coiled is not strictly accurate. "Paralyzed by fear, the victim is often incapable of flight and stupidly awaits its fate. This, I think, will explain all the so-

called cases of fascination." A better explanation of numerous cases is to be seen in the actions of snake and prey after the latter is stricken and the snake is watching its dying throes and waiting its fall. The author decides that snakes swallow their young for protection, and, without observations of his own, brings forward a lot of testimony most of which is hardly as positive as that cited for the snake that milks cows or the phantom ship, neither of which he chooses to believe. Many will see no compliment to the intelligence of his readers in the proof presented. Beauvois's story of the "five little serpents, each about the size of a goose-quill," is repeated. Plate xix. shows a large rattlesnake down the throat of which half-a-dozen young ones are scrambling. The young are not as long as the head of the mother; author and artist would be astonished to see how much larger at birth the young really are. Chateaubriand's fanciful story is once more placed before us. The copperhead is said to be the most dreaded, but, a few lines below, the water-moccasin "is perhaps equally to be feared." Of the moccasins Mr. Holder says, "They rarely attain a length of over twenty inches, and are short in proportion."

"A gentleman in Georgetown, S. C., writes: 'I had for several days noticed a very large moccasin coiled around the limb of a small tree near the pond. I concluded to capture it, and accordingly procured a large rabbit and placed it some way up from the pond, to toll her away from the water. She soon came down and disappeared under a large log; when next seen, she was near the bait, having traced it along the log on its opposite side. When she had nearly swallowed the bait, we made an advance; quickly disgorging it, she gave a shrill whistling noise, and five young snakes ran from under the log and ran down the throat of the old one. We cut off her head and found the five young, which made efforts to get away.'"

In the statement of a writer from Chesterfield, N. H., we find: "I saw a striped snake on the hillside, and noticed something moving about her head, and counted twenty little snakes from one and a half to two inches long. I made a move, and the old one opened her mouth, and they went in out of sight. I stepped back and waited, and in a few moments they began to come out. Then I made for the old snake, and killed her, and forced out several." "Another gentleman writes: 'Some years ago I came across a garter-snake with some young ones near her. Soon as she perceived me she hissed, and the young ones jumped down her throat, and she glided beneath a stone heap.'" "A party of hunters recently observed in Pennsylvania a black ball, two feet in diameter, rolling slowly down a hill, and found on examination that it was composed of hundreds of these reptiles [black snakes]." Mr. Holder says, also, that they are of a steel-blue uniform color, wild and untamable, "often engaging in encounters with other snakes, especially rattlesnakes, quickly killing and forcing them to disgorge their prey." In reality the color varies according to age from light bluish, spotted with brown, to glossy black; they are easily tamed, and swallow their prey alive. Professor Brackett's story tells that he found a lot of snakes' eggs, cut them open, liberating a number of young milk-adders, and that "soon the old snake appeared, and, after endeavoring apparently to encourage the young family thus suddenly initiated into the world, put its mouth down to the ground, and every one that had been liberated from the egg voluntarily and hastily disappeared within the abdomen of the old one." The black snake also is asserted to possess the peculiar habit of taking the young in its mouth. It is known to lay eggs and to be ophiophagous. An Ohio farmer, seeing a large water-snake in Deer Creek, "procured a pole for the purpose of killing her. One stroke slightly wounded her, and she immediately made for the water. After she had swum about her length, she wheeled, placing her under jaw just out of the edge of the water, and opened her mouth to the fullest extent. Some dozen young snakes, three to four inches long, then seemed to run, or rather swim, down her throat, after which she clumsily turned in search of a hiding place. He opened her, and found about twenty living young snakes, two or three seven or eight inches long. This shows them to have the same peculiar habit noticed in so many others." In a breath, some dozen three to four inches in length become about twenty, some of which are seven or eight inches long. The book would be incomplete without a chapter on the sea serpent.

A comical feature is the distribution of the pictures. In the chapter on "Meteors of the Sea" we find "American Gobies Crawling on the Shore"; in that on "Finny Light Bearers," "A Martinique Tree-Toad"; in "Old Friends," a "Sailor-Fish Wrecking a Canoe"; in "Our Common Snakes," a "Hermit Crab in a Tobacco Pipe," the "Pemaquid Sea Serpent," "Elasmosaurus," and "Camarasaurus"; in "Lost Races," a rattlesnake and an "Insect that Mimics a Twig"; in "The Tigers of the Sea," a caterpillar and a "Mammoth Adrift on an Icefield"; in "Living Lights," an "Extinct Sea Cow"; and in "The White Whalers," a "Gigantic Pyrosoma," a "Group of Flying Tree Toads," and an "Extinct Flying Reptile."

Moon-Lore. By the Rev. Timothy Harley, F.R.A.S. Philadelphia: J. B. Lippincott Co. 1885.

THE author of this venture in "light literature," as he playfully terms it, has written an entertaining volume in a sprightly style. It is not an astronomical treatise, but confined in its scope to the knowledge man had of the moon before the days of telescopes and exact science. One might be surprised at the mass of this pre-scientific lore, had not comparative mythology and anthropology popularized much of its information. The man in the moon is, naturally, the leading character, and opens the play; then there is the woman in the moon, the hare and the dog and the rabbit, and all these in their life "play many parts," so that the moon seems well-inhabited. Many of these myths are interesting, and one—the story of Buddha's hare—is of the noblest order of religious parable. The remainder, and larger portion, of the volume is occupied with chapters on Moon-Worship, Moon-Superstition, and Moon-Inhabitation; and all these subjects are treated with fulness, intelligence, and a certain antiquarian charm in the composition which pleases the vacant hours. It seems to be a complete monograph on the subject, and in the division on superstition one will recognize many beliefs of his grandfathers and some still held.

It is interesting to note, further, that the author is a clergyman, and that, being thoroughly well-informed in the work of the modern comparative method which has made havoc of the supernaturalism of the religious sentiment, he loses no opportunity to assert the harmlessness of such knowledge and the desirability of it in common with all science. In not a few cases he diverges from the direct course of his narrative to deliver a five-minute sermon, and the effect is sometimes odd. Listen to this: "Whether we or our posterity will ever become better acquainted in this life with the man in the moon is problematical; but in the ages to come . . . he may be visible among the first who will declare, every man in his own tongue wherein he was born, the wonderful works of God. And he may be audible among the first who will lift their hallelujahs of undivided praise when every satellite shall be a chorister to laud the Universal King." The reader is then exhorted to learn "the music of eternity" by "high and holy living," in order that he may join in "the everlasting song," and so, "in one beatific moment," see more than hitherto "of the man in the moon." The entire seriousness of this is not the least attractive element in it; and we cannot refrain from quoting further from the last page of what is really an admirable work in its department, a sentence in which science and religion have reached a seemingly perfect fusion in the exaltation of "that Universal Father of Lights, with whom is no parallax nor descension." Too long contemplation of the moon is said to have uncanny effects, sometimes.

Victor Hugo. By Algernon Charles Swinburne. Worthington Co. 1886.

THE time for writing calmly of Victor Hugo has not yet come. Mr. Swinburne's rhapsody proves this. The book is merely a reprint of the articles published by him in the *Fortnightly Review* immediately after the death of the poet, together with that which appeared in 1883 when the final part of 'La Légende des Siècles' was published. It seems as if a short preface ought to have indicated this, which would have explained the haste apparent throughout. As a panegyric it has all the beauties of Mr. Swinburne's exuberant and enthusiastic style; it has none of the merits of a deliberate exposition of the great poet's work. It is an unmixed eulogy, spirited and genuinely sympathetic, but seldom discriminating, by a warm admirer, in many respects a disciple who has numerous points in common with *le maître*. The following passage, taken at random, may serve as a mild specimen of the writer's attitude:

"It will of course be understood that when I venture to select for special mention any special poem of Hugo's, I do not dream of venturing to suggest that others are not or may not be fully as worthy of homage, or that anything of this incomparable master's work will not requite our study or does not demand our admiration."

For Mr. Swinburne, Victor Hugo is a poet "not less than the best or lower than the greatest of all time," and the roll and the surge of his measured music are no less wonderful than those of Homer or Milton, or the English version of Job or Ezekiel or Isaiah.

Iconoclasm and Whitewash, and Other Papers. By Irving Browne. New York: James Osborne Wright. 1885.

THE sensational title of this volume is the worst thing about it, for it misrepresents the contents. The first essay, which bears this heading and recounts the various changes in traditionary and anecdotal history and in the reputations of both the good and the bad, is also the least interesting of the four because its subject-matter has been well threshed before. "Bibliomania," "Shaksperian Criticism," and "Gravestones" are all better, except that the last is almost too serious for its subject. The essays, taken together, belong to a kind of writing, like Donald Mitchell's, which is fast disappearing—to the leisurely, discursive, genial, anecdote-loving, broadly-read style, with bits of out-of-the-way information, quiet humor, pleasant and humane thoughts, and an unfailing good taste. They are not meant for instruction, but mere entertainment, and they rest the mind. One of the brighter patches occurs in the review of some Shaksperian commentaries, where an account is given of the semi-mythical inquiry into the character of the "merry man" who was the nurse's husband in "Romeo and Juliet." The concluding essay, however, is a discussion in detail of taste in mortuary memorials, and from the examples cited the author appears to have a wide acquaintance with American cemeteries. What he has to say on this subject is wholly admirable.

Fine Arts.

THE MORGAN COLLECTION.

THE collection of pictures formed by the late Mrs. Mary J. Morgan, which is now on exhibition at the American Art Galleries, is especially rich in the works of the Fontainebleau school and of the other men of that wonderful generation, and no better occasion is likely ever to offer itself to art lovers for a study of the real qualities of the classic French landscape school, and of the one or two great figure painters that, somehow, one always associates with it. A glance at the catalogue, with its 8 Corots—several of them exceptionally fine and important—its 17 Diazes, its 5 Duprés, its 11 Millets, its seven Rousseaus, its 7 Troyons, and its 4 Daubignys, is sufficient of itself to show what a wealth of the art of this period is here, available for study; and though the art of other schools is less fully and satisfactorily represented, yet there is enough of such for comparison.

The first thing that strikes one in such a list as the above is that, while most of the artists contained in it are landscape painters, yet the figure painter Millet and the cattle painter Troyon take their places there as of right, and if one were to add the names of Delacroix and Decamps the list would still have a certain homogeneity; the only name in it that seems at all out of place being indeed that of a pure landscapist—Daubigny. This is only one proof of a general truth, that choice of subject forms no proper basis for classification in art. It is not what subject a painter chooses to treat, but his manner of treating it, that shows us to what school he belongs. If we would know whether or no such a man was a great painter, we ask, *not*, "Did he paint figures, or landscape, or merely still life?" but, "Was he a colorist or a draughtsman? did he submit himself to the actual and become a realist? did he weakly abandon himself to his imagination, and, finding nature 'put him out,' give up the struggle and become a dreamer? Or did he, grasping firmly at great truths and neglecting small ones, dominating the actual and submitting it to his imagination, yet never losing sight of truth, become a master?" These are the questions we ask ourselves, and to which we must somehow find answers if we would place any artist in his proper niche in our Pantheon. Tried by such tests, we find that the painters we are studying were, in their varying degrees, colorists and men of imagination. The two qualities go together, for no colorist ever was or ever can be a realist. Study carefully any one of the completed pictures by Millet in this collection—the little one called "Gathering Beans" is perhaps the most magnificent of them all—and then study any of the three by Gérôme. You will find that the revolutionary, the innovator Millet—the man who dared to abandon the beaten track of classicism, and to bring down upon his head the anathema of the big-wigs by painting the peasant as he knew him—is the most profound of poets and of idealists; and you will find that the polished draughtsman, the continuator of the classic tradition, is at bottom the coldest of realists, seeing nothing beyond the actual model posed before him, or only escaping from the actual by the help of scientific and calculated composition. Gérôme, in spite of his classical training, is the cool and scientific observer; Millet, in spite of his abandonment of tradition and his devotion to nature, remains the passionate *musician*, playing with his deep chords of blue and red and evolving magisterial harmonies from them. He is a colorist by nature, and it is necessary for him that each canvas should be perfect in its harmony, each note of color perfectly balancing every other, and direct imitation becomes impossible to him.

All the work of the school of painters we are discussing is alike in this. Look at the three grand and lovely Corots in Gallery A. Look at the fine and sombre Diaz in the same room: "Sunset After a Storm." Look at the remarkably similar "Twilight," by Rousseau, or Troyon's magnificent "Return from the Farm," with the black cow. These men are primarily painters of pictures. The canvas, as a whole—as a lovely piece of tone and color to look at and to enjoy for its own sake, as one might enjoy a piece of music—is first with them, and nature is second. They are artists, not imitators. There are little miracles of observation in Meissonier and in Gérôme, even in Vibert and Dagnan-Bouveret, of which they show no sign, but they have produced beautiful pictures and the others have too often produced little better than colored photographs—accurate records of observed facts. Even the classic and polished insipidities of Bouguereau and Lefèvre are at bottom only the products of a kind of emasculated realism, prettifying nature, but hardly aiming higher than to amuse by successful imitation of picked and chosen models, and alike devoid of imagination and of decorative feeling.

But the imaginative temperament of the colorist has its dangers when it is not controlled by a hearty love and reverence for nature. Pass from the great work of the great masters of this school to Dupré's "Symphony," and you feel at once that art has too far got the better of nature, and you revolt from the entire artificiality of the picture. One feels smothered in paint. It is well to be ideal and artistic, but there is health too in the love of nature, and while we willingly allow an artist to sacrifice the truth of literal imitation, are we prepared to allow also the sacrifice of essential truth? After all, there is a sound basis of right in the world's notion that painting is to some extent a statement of facts; and while we are willing that the painter should choose his facts, and sacrifice the small ones to the large ones, and imitation to essential truth, and while we demand of him that his statements shall be in beautiful language, as we do of the poet, yet we are no more prepared to admit that his statement shall be *false* than that the poet's shall be. And here, undoubtedly, lies the weakness of this great school of modern painting. The great ones sometimes, the smaller often, sacrifice nature to art too completely. In many of Diaz's landscapes, and in most of his figure subjects, and in nearly everything of Dupré's, one is in a world too thoroughly artificial for healthy human comfort.

It is a common error to imagine that the men whom "nature puts out"—in whom "natural objects deaden imagination" — are the men of the most powerful imaginations. Is not the truth, rather, that the strong imagination is that which dominates nature and moulds it to uses, and then works most mightily when it is seemingly most subjected to law, and that the imagination which flies nature and is "deadened" by it, is either weak in itself or is unsupported by sufficient knowledge to master its material? The weakness that flies nature, and the weakness that submits to nature, do not greatly differ, though the result is so different. The mighty men work calmly *with* nature, knowing always what to take and what to leave, neither slavishly copying the unessential nor weakly losing their grasp of the essential. As Fromentin has said of Rembrandt, the struggle of production in art is ever "the struggle between the actual as it imposes itself and the truth as the artist sees it in himself." It is cowardice to give up the struggle until one has attained something of that final reconciliation of the warring elements which is the triumph of art. And this reconciliation has nowhere in modern art been so nearly attained as in the best work of Millet. Of the weakness that denies nature no more apposite example could be found than the "Adoration of the Magi," by Monticelli, in this collection, in which one may look in vain for any indication that the artist had ever seen one fact of nature, or anything but the dreams of an imagination too feeble to embody them in visible and comprehensible form.

On the contrary, the great charm of Daubigny will always be that he combined with powers of imagination and composition not of the highest order, but sufficiently great to preserve him from mere realism, a clear perception and hearty love of the beauties of nature, and that his pictures refresh one like spring water after the feverishness of Diaz, and charm one like music after the mechanical imitation of much modern work. His little picture here, called "On the Seine," is an exquisite example of his most lovely qualities.

We have left ourselves little space to discuss other elements of the collection, such as the realism tempered by sentimentality of Breton, who, perhaps more than any other one man, is responsible for that form of modern art which has ended by sacrificing so much beauty and so many truths to the single truth of open daylight; or the brilliant charms of Stevens and Fortuny, or the nameless work that is neither realism nor idealism nor naturalism, but is only mechanism. Of this last class one would like to say something, but one despairs of doing any good.

MÉRYON'S ETCHINGS.

THE exhibition of Méryon's collected etchings, now visible at Mr. Keppel's gallery on Sixteenth Street, is worth having formed and worth seeing; it is especially useful in America, where there are positively no artists, etchers, or painters who attend to Méryon's specialty of street architecture. Méryon's example teaches how to make street-subjects look grand, impressive, interesting, without quackery or forcing. As Hamerton truly says, "his work was sanity itself"; it never yields to the temptation of picturesque raggedness, of piquant splotching, of vignetted margins. On his pencil sketch for the "Notre-Dame-Bridge" subject, here shown from Mr. Mansfield's collection, he has written, "Taken with a camera lucida"; and many of the themes have that aspect. The lines of walls are often ruled, and the rest of the time drawn as true as eye can guide hand; and to make a wall look crumbly he never resorts to Prout's forlorn trick of a dash and a point, like a Morse telegraphic despatch.

He attains beauty by his feeling for broad flashes of light, and by knowing how to make the paper work for him, the calm basking gleam being simply bare surface, with a calculated environment. Nothing can exceed his skill in knowing when to leave himself alone; thus the pediment of "St.-Étienne du Mont," where the warm freestone looks so much like an ivory cameo, has hardly any work in it at all: only the slight shadows of traceries and pilasters are kept perfectly large and flat, and this sunny gable prints itself on a sky made of ruled etched lines, as bold and hard as any tint laid by Dürer or Marcantonio in the infancy of engraving. His skies are simple reliefs for his architecture; their values are exquisitely true and wise, but they have no quality in themselves. When, to give these skies incident, he refrains from the etching-needle, and sketches-in cottony clouds with the dry-point,

these clouds are thoroughly bad in themselves—as inorganic as his vines and trees in other places; only their whites and grays are sensitively adapted to the contrast of a shadow-swept spire or a jutting gargoyle.

His fine instinct comes in when there is the quality of stonework to be expressed. The "Pont Neuf" is a picture consisting almost entirely of the inside of a great round arch in shadow; the skill consists in representing this shadow with lines spaced just right and made just deep enough, so as to keep the flicker of light beating up from under the bridge. There are proofs of this subject printed lighter and proofs printed darker—it is no matter: the variation only suggests the change made by some passing cloud; there is always the flicker of light beating up from the water, and this is the beautiful thing that it was essential to keep. In Gosselin's counterfeit of this plate, hung alongside, the shadow under the arch is true enough as to value, but it is done with pains and confusion, and the shadow is mere mud on the paper.

Méryon selects picturesqueness with lover-like passion, and then reports it with calmest lucidity; no better choice of "bits" could be made than his, yet he has none of the melodramatic lying usually to be detected in the lovers of "bits." The "Gallery of Notre Dame" is a kind of jungle of flowering Gothic colonnets; but the artist's effort is to range them, not to clash them together in a Hugo-like chiaroscuro. The "Notre Dame Pumping-machine" rises out of a net of interlaced timberwork, not at all easy to draw; but Méryon studies out the construction analytically, as Jacquemart did his famous bamboo lattice supporting the criminal's head. The corner turret in the "House of Marat," the stone demon on the cathedral tower, and portions of nearly all the other subjects, are just what most sketchers would treat with their most glittering embroidery, as vignettes; but Méryon never embroiders, and in all such places thinks chiefly how to keep his breadths of opal light. His touch was rather restrained and painful than inventive, and he uttered his deep knowledge of values in schoolroom terms, traditional and formal. This gives a quaint prophet-like gravity to every statement, and he is hardly ever more refreshing or better worth attending to than when he has to express some solid convent or other wall, checkered with square black windows, and looking in this treatment as if it had come from old time to stay into new time. What probably created Méryon's worth, to eyes a little tired of the silky lithographs of Célestin Nanteuil, was just this sober-sided austerity, inherited from seventeenth-century engravers who printed without "smudges." Méryon in the present series shows us his education. We see, for instance, his painful copy after Ducereau, the "Salle des Pas-perdus," a most back-breaking piece of drawing, with a double nave filled with rows of innumerable statues in perspective; and the "Old Louvre" and half-a-dozen other fine old things copied from Zeeman, each made up of crumpled and gritty lines like a Bewick. And out of this kind of apprenticeship, and out of reminiscences, too, of Piranesi, the artist constructs his style, using an antique sensitiveness to precision as a kind of fabric to support his modern sensitiveness to effects of light.

What is wayward and Blakelike about him is not his style, but certain definite inventions, as, the shoals of air-borne sharks flying about the Secretary of the Navy's office, and the "Pont au Change," seen here in several states, with the sky first a blank, then darkened with large birds, which change in a later printing to an argosy of balloons.

His madness is said to have been incipiently brought on by the toil over the plate of "San Francisco." This etching, thirty-nine inches across, is a sort of prospectus undertaken for the bankers, Bayerque & Pioche, and is a queer reminder of the shanty metropolis of 1855. He was to construct this panoramic view from a series of five daguerreotypes, inconsistent in perspective and in lighting; in the very middle of the scene, his documents became quite unintelligible, and he had to fill up the space with allegorical figures supporting a label. His letter to Burty describing his trouble in biting this plate—the rust had got at the copper and enlarged his lines under the varnish—reads like Cellini's account of his "Perseus." The task, however, was by no means gigantic; there are armies of young architects in Paris who would have thrown his shanties into perspective for him for a few dollars. But Méryon was so poor that at the epoch of his finest work, the "Rear of Notre Dame," he could not pay ten sous to his printer for a couple of trial proofs.

Méryon died mad in 1868 in the pauper madhouse, and was buried as a pauper in the graveyard of Charenton asylum, at the age of forty-seven. The present collection consists of about one hundred and thirty prints, some of them lent by Mr. Avery and Mr. Mansfield.

"A NOVEL OF THE HIGHEST MARK, FULL OF INTEREST FROM BEGINNING TO END."—The Baltimore Sun.

AFTER HIS KIND.

By JOHN COVENTRY. 16mo, Leisure Hour Series, $1.

EDMUND CLARENCE STEDMAN says:

"A picturesque tale, and unique. Probably no other living man could have written the book, and no dead man save W. M. T. The style is highly poetic."

R. H. STODDARD, in the *Mail and Express*, says:

"The characters are clearly and sharply individualized; the descriptions of scenery are fresh and picturesque; and the customs of the country population are painted with a loving hand."

The Boston *Globe* says:

"As exhilarating as a salt breeze from the sea on a hot summer day. The story never drags for a moment."

OBLIVION.

By M. G. MCCLELLAND. $1.

Henry Holt & Co.,

PUBLISHERS,

29 West 23d St., New York.

The Southern Bivouac

FOR MARCH

Will Contain

A facsimile reproduction of a letter from THOMAS JEFFERSON, relating to the KENTUCKY RESOLUTIONS OF '98.

Also, RESOLUTIONS OF THE KENTUCKY LEGISLATURE, differing materially from the accepted version.

A description of the Teche (La.) Country Fifty Years Ago.

Paul H. Hayne's graphic description of the DEFENCE OF FORT WAGNER, IN CHARLESTON HARBOR; the desperate assault made by the Federal troops under Col. Shaw.

R. M. Kelly's sketch of John Williamson, Botanist and Artist, with numerous illustrations.

Will be ready about February 25. For sale by all Newsdealers, or, sample copies sent on receipt of 20 cts. (Annual subscription, $2; six months, $1.00) to

Southern Bivouac,

B. F. AVERY & SONS, Publishers,

Louisville, Ky.

AUTHORS AND PUBLISHERS.

A Manual of Suggestions for Beginners in Literature. Comprising a Description of Publishing Methods and Arrangements, Directions for the Preparation of MSS. for the Press, Explanations of the Details of Book Manufacturing, with Instructions for Proof-Reading and Specimens of Typography, the Text of the United States Copyright Law, and Information concerning International Copyrights, together with General Hints for Authors. Fourth Edition. Octavo, cloth extra, $1.00.

"The manual contains nothing about Aldines nor Elzevirs, but sticks severely to the business in hand; and, whatever the publishers may think of it, authors and readers and all who use books must recognize in the manual a firm, friendly hand extended where one was sorely needed."—*N. Y. Independent.*

"It should be in the hands of every reader in the country. . . . Its suggestions are invaluable."—*Boston Transcript.*

"The work itself, though a small one, is of great value. It modestly purports to be merely a manual of suggestions for beginners in literature; but there is much in it which the most experienced literary veteran can read with profit, not merely for the views it suggests, but for the information it contains."—*N. Y. Evening Post.*

DIDEROT AND THE ENCYCLOPÆDISTS. Two Vols. March.
ON COMPROMISE. Revised and Enlarged. One Vol. April.
MISCELLANIES. Two Vols. May.

THE PORTRAIT OF A HUMAN SOUL.

AMIEL'S JOURNAL. The Jour- nal Intime of Henri-Frédéric Amiel. Translated, with an Introduction and Notes, by Mrs. Humphry Ward. Crown 8vo, $2.50.

The Journal Intime may be analyzed into three main elements—philosophical meditation, religious and poetical description, and literary and political criticism. The mysteries of contemplative aspiration, says a recent writer, have never been expressed with nobler eloquence. His religious language indeed expands and widens in proportion as the man becomes more and more identified with his thought, and many of his confessions of faith may well stand for typical utterances of that modern spirit which, in the midst of doubt, will neither sacrifice its knowing nor believing, but clings passionately to both.

"A record of his intellectual attitudes—a minute and marvellous though unstudied chronicle of mental impressions, the publication of which was an event in the history of literature, and has insured his name an immortality that might have escaped the most finished conscious performance within the limit of his powers. . . . This marvellous and fascinating production."—*N. Y. Commercial Advertiser.*

"In this volume Mrs. Ward has executed admirably a very difficult task. If there were no other reason to wish it a wide circulation, its technical merit as a model of translation would in this age of schooling be reason sufficient. . . . It is only fair to add that, in our judgment, Mrs. Ward's English is worth having for itself, and that Amiel by her means has increased the literary wealth of two languages. . . . Mrs. Ward has, we hope, secured him plenty of English readers."—*Athenæum.*

MARIUS, THE EPICUREAN. His Sensations and Ideas. By Walter Pater, M.A., Fellow of Brasenose College, Oxford. New Edition. 12mo, $2.25.

"There is no living writer who excels Mr. Pater in grace of style. He does not indulge in passages of sustained eloquence, but every word he writes is calculated to be the best word in that place to have its full signification brought out. Here and there, of course, there are passages of exceptional beauty; but fine as these are, Mr. Pater's special faculty for verbal expression is more noticeable in his occasional use of certain words which, in his mouth, so to speak, are like a charm. While he is the most rhythmical of English prose writers, his is the music of the viola rather than of the violin. . . . It is no joyous evangel that Mr. Pater proclaims in these two volumes, albeit it clearly infers the possibility of many joyous experiences. Everything that is is evanescent; the darkness beyond is still darkness for us; hence it is that these joys, these exhilarating flashes of insight and moments of vivid pleasurable emotion are enhanced 'like the glow of summer itself' by the thought of their brevity. Consciously or unconsciously, there is in all that he has written a strain of that partly sad, partly genuinely contentful resignation, of the great Aurelius."—*Athenæum.*

MACMILLAN & CO.,
New York, 112 Fourth Avenue.

The Nation

VOL. XLII.—NO 1079. THURSDAY, MARCH 4, 1886. PRICE 10 CENTS

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

The Aliens.

A Novel. By Henry F. Keenan, author of 'Trajan,' etc. 12mo, cloth, price $1.25.

'The Aliens' is a stirring, picturesque romance, depicting life and character in strong contrasts, and marked by an affluent and vivid style. The scene of the story is laid in the western part of the State of New York, about fifty years ago, the events coming down to the time of the Mexican War.

II.

The Mammalia in their Relation to Primeval Times.

By Oscar Schmidt, Professor in the University of Strasburg. International Scientific Series. With Fifty-one Woodcuts. 12mo, cloth, price $1.50.

This work derives special interest from the recent death of Dr. Schmidt, which occurred after the book was printed.

"It will be found," he says in his preface, "to contain proof of the necessity, the truth, and the value of Darwinism as the foundation for the theory of descent, within a limited field, and is brought down to the most recent times."

III.

We Two.

A Novel. By Edna Lyall, author of 'Donovan.' 12mo, cloth, price $1.50.

This novel may be considered a companion to 'Donovan,' recently published, inasmuch as like that book it deals with the trials and experiences of freethinkers, suffering from persecution, but brought eventually to Christianity.

"We recommend all novel-readers to read this novel, with the care which such a strong, uncommon, and thoughtful book demands and deserves."—*London Spectator.*

IV.

Protection to Home Industry.

Four Lectures delivered in Harvard University, January, 1885. By R. E. Thompson, A.M., Professor in the University of Pennsylvania. 8vo, cloth, price $1.

For sale by all booksellers; or will be sent by the publishers by mail, post-paid, on receipt of price.

1, 3 & 5 Bond Street, New York.

Romish Teachings in the Protestant Churches.

A Tract for the Times. Price, 90 cents. A review of the traditional Theology received from Rome and retained in the Protestant creeds. *A live coal from the altar of conviction* (Telegram). N. TIBBALS & SONS, Publishers. For sale by all booksellers.

PUBLISHERS,
715 and 717 Market St., Philadelphia.

Inquirendo Island.

By Hudor Genone.

12mo, cloth..... $1 50.

"*A very clever p... work. The sarcasm is bright as it is keen, ana... subject is so well worked out that one does ... to lay the book down until he has read throu... last page. The style is very good indeed. In mi... of detail it is like Swift without his vina...*"—*The Princetonian.*

"*. . . . Good invention and ingenu... decided literary power are manifested. . . . A book which will provoke controversy, but which, if rightly understood, will do good in the purification of religion.*"—*Boston Globe.*

"*The strokes of satire are numerous and telling. . . . The book has all the vraisemblance of Lord Lytton's 'Coming Race.' There is much hard labor, much solid thought, great ingenuity, treasurable fancy and imagination, and a sincerely devotional frame of mind manifested in these pages.*"—*N. Y. Telegram.*

"*The story is very ingenious and is well told. . . . The author reverently exalts what he regards as essential truth.*"—*Episcopal Recorder.*

For sale by all booksellers and sent post-paid by mail, on receipt of price, by the publishers,

G. P. PUTNAM'S SONS,
27 and 29 West 23d Street, New York.

1841. *S. DAVIS, JR.'S* 1841.

DIAMOND HAMS

CINCINNATI.

"*They well sustain their ancient renown.*"—From a patron of 1842. Washington City, Feb. 24, 1872.

Sold by leading Grocers, who have circulars how to cook hams.

G. P. Putnam's Sons,

27 and 29 West 23d St., New York.

READY THIS WEEK:

I. THE MILL MYSTERY. By Anna Katharine Green, author of 'The Leavenworth Case,' etc. 16mo, paper, 50 cents; cloth, $1.00.

IN THE SERIES OF KNICKERBOCKER NOVELS. VOLUME 16.

II. THE STORY OF CHALDEA. From the earliest time to the rise of Assyria. By Zénaide A. Ragozin. With 80 illustrations and two maps. 12mo, cloth. $1.50.

IN THE STORY OF THE NATIONS SERIES, FOURTH VOLUME.

'The Story of Chaldea' deals with the most fascinating of subjects—the dawn of civilization, the beginnings of man's knowledge or imaginings of his own origin and of his relations with his Creator, the first data for the history of mankind, the causes and times of the separation and migrations of races, the points of contact or parallelism between the narratives and traditions of the Old Testament and the records (now rescued from the tablets in the Mesopotamian Mounds), of the tribes from which the Hebrews separated themselves.

III. HUNTING TRIPS OF A RANCHman. Sketches of Sport in the Northern Cattle Plains, together with Personal Experiences of Life on a Cattle Ranch. By Theodore Roosevelt, author of 'The Naval War of 1812.' Popular edition. Octavo, cloth, fully illustrated, $3.50.

"The author may rank with Lloyd, St. John, and a half-dozen other sportsmen whose books will always be among the sporting classics. . . . He vividly describes the pictures which clearly present themselves to him . . . and shows himself a careful naturalist as well as a keen sportsman. . . . His book is a repository of thoughtful woodcraft or prairie craft."—*Saturday Review.*

"Mr. Roosevelt has given a peculiar charm to his book from his intense love of nature and his capacity to communicate to others his own impressions. . . . His book forms a most important chapter in the long history of the conquest of the American wilderness."—*The Atlantic.*

IV. THE WORLD AND THE LOGOS. By the Right Rev. H. M. Thompson D. D., Assistant Bishop of Mississippi. Octavo, cloth, $1.00.

IN THE SERIES OF BEDELL LECTURES, VOLUME 3.

V. THE APPOINTING POWER OF the President. By Lucy M. Salmon. 8vo, paper, $1.00.

The American Historical Association Papers No. 5.

**Full and complete list sent on application.

NEW JERSEY, New Brunswick, 13 Livingston Ave.

THE MISSES ANABLE'S ENGLISH, French, and German Boarding and Day School will reopen September 23.

NEW YORK CITY, 27 East 44th St.

STERN'S SCHOOL OF LANGUAGES of New York City. Classes and private instruction for ladies and gentlemen in GERMAN, FRENCH, SPANISH, and ITALIAN. To teach the modern languages with a pure pronunciation, in a manner as thorough and agreeable as practical, has been the aim of this institution. More than seven hundred students, ladies and gentlemen, have received instruction during the past year, and a like number the year before. Only a few were attracted by the advertisements of the journals; the majority came through the recommendations of the students, who knew the school, its work, its professors, its text-books, and its method. This institution recommends itself because it tolerates but one method of teaching the languages—*the Natural Method*, in small classes, and by competent professors. This institution recommends itself because the text-books for the students were especially prepared for them, and were found of such value generally that, according to the publisher's account, more than thirty thousand copies of them were in use throughout the country during the past few years. It is a recommendation for this institution that many other schools of languages in this city and in other cities have been established and formed after its plans and principles, and that men prominent in the various walks of life have lent their names to promote the welfare of this school, of its method and books. Every one studying a foreign language should visit Stern's School of Languages, of New York City. Prospectus will be sent on application. Programme of the Saratoga Summer School will be ready in 10 days.

NEW YORK, Canandaigua.

FORT HILL SCHOOL (for Boys).—Second year. Enlarged accommodations. $600. Rev. JAMES HATTRICK LEE, Head Master.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of the *Nation* has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. the bindings generally counting for nothing. Volume I. has readily brought $10 and upward when complete, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets. both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased, a few years ago, a large quantity from the publishers. Mr. A. S. Clark, 34 Park Row, also has a stock on hand.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in the *Nation.*

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XL. comprising the first half-year of 1885.]

NEW FRUIT AND ORNAMENTAL TREES

ROSES GRAPE VINES E.T.C.

All who intend to purchase this Spring should send for our illustrated and descriptive Catalogues. They contain full information about *Old and New Fruits, Ornamental Trees, Roses,* etc., and are the most complete published. To regular customers *free;* to others as follows: No. 1, Fruits, 10c.; No. 2, Ornamental Trees, etc., 15c.; No. 3, Small Fruits, No. 4, Wholesale, No. 5, Roses, *free.*

ELLWANGER & BARRY,
Mt. Hope Nurseries. Rochester, N.Y.

Collection Schick.

NOVELLEN, HUMORESKEN, UND SKIZZEN

DER

BESTEN NEUEREN SCHRIFTSTELLER.

Price, 20 cents per Number; $3.00 per year. Issued in Numbers, one appearing every three weeks. Three Numbers constitute a volume. Price of bound volume, $1.00.

The selection of the stories does honor to the critical judgment of the publisher and appeals to the cultivated reader, whose taste it is certain to please. Press-work, paper, and all the typographical details are exquisite.—*Columbus (O.) Westbote.*

This series stands preëminent, not alone for the literary value of its contents but for the typographical beauty of its appearance as well.—*New Jersey Deutsche Zeitung.*

13 Numbers of the "Collection" are now ready. For sale by all booksellers, or mailed on receipt of price by the Publisher.

L. SCHICK,
128 and 130 Lake St., Chicago.

THE TIFFANY GLASS COMPANY

333 & 335 FOURTH AVENUE
NEW YORK

STAINED AND MOSAIC GLASS

MACMILLAN & CO.'S
NEW PUBLICATIONS.

MACMILLAN'S NEW UNIFORM EDITION OF THE MISCELLANEOUS WRITINGS OF

JOHN MORLEY.

In Eight Volumes, Globe 8vo, each $1.50. Uniform with the "Eversley" Kingsley.

THE VOLUMES WILL APPEAR IN THE FOLLOWING ORDER:

Voltaire. One Vol. Ready.
Rousseau. Two Vols. Ready.
Diderot and the Encyclopædists. Two Vols. April.
On Compromise. Revised and Enlarged. One Vol. May.
Miscellanies. Two Vols. June.

"One of the ablest of living thinkers, who at the same time is a master of expression. . . . Mr. Morley's chief work is what may be called an intellectual history of the eighteenth century in France. . . . This epoch of unsurpassed intellectual activity is the subject of Mr. Morley's work, and he has made himself master of all the knowledge that must go to its full comprehension. All the complex questions and issues of this age, all the impulses by which it was moved, all of its lights and shadows—intellectual, social, political—are embraced by Mr. Morley's scheme, and are discussed with an ability, a candor, and a clearness which have not often been united in the discussion of any age. It is this that places these books of Mr. Morley, considered as a single comprehensive work, among the most notable historical writings in the English language."—*Chicago Daily News.*

TWO NEW NOVELS.

By the Author of 'The Portrait of a Lady.'

THE BOSTONIANS.

A Novel.

By HENRY JAMES,

Author of 'The Portrait of a Lady,' &c., &c.

One Volume, 12mo, $2. *Just Ready.*

By the Author of 'Mr. Isaacs.'

A TALE OF A LONELY PARISH.

By F. MARION CRAWFORD,

Author of 'Mr. Isaacs,' 'Dr. Claudius,' &c., &c.

12mo, $1.50. *March* 15.

THE STATESMAN'S YEAR-BOOK.

Statistical and Historical Annual of the States of the Civilized World for the Year 1886.

Edited by J. SCOTT KELTIE. Revised after Official Returns. 12mo, $3. *Immediately.*

THE PORTRAIT OF A HUMAN SOUL.

AMIEL'S JOURNAL.

The Journal Intime of Henri-Frédéric Amiel. Translated, with an Introduction and Notes, by Mrs. Humphry Ward. Crown 8vo, $2.50.

"A record of his intellectual attitudes—a minute and marvellous though unstudied chronicle of mental impressions, the publication of which was an event in the history of literature, and has insured his name an immortality that might have escaped the most finished conscious performance within the limit of his powers. . . . This marvellous and fascinating production."—*N. Y. Commercial Advertiser.*

"In this volume Mrs. Ward has executed admirably a very difficult task. If there were no other reason to wish it a wide circulation, its technical merit as a model of translation would in this age of schooling be reason sufficient. . . . It is only fair to add that, in our judgment, Mrs. Ward's English is worth having for itself, and that Amiel by her means has increased the literary wealth of two languages. . . . Mrs. Ward has, we hope, secured him plenty of English readers."—*Athenæum.*

Price, 15 Cents. Annual Subscription, $1.75.

The English Illustrated Magazine.

No. 30, - - - - - - - - MARCH.

CONTENTS:

The Nation.

NEW YORK, THURSDAY, MARCH 4, 1886.

The Week.

PRESIDENT CLEVELAND'S special message to the Senate on the subject of anti-Chinese outrages breathes the spirit of humanity and Christianity. It adds one new fact to what was previously known of the Rock Springs massacre — namely, that all the participants in that fiendish outrage were, like the Chinese themselves, unnaturalized foreigners. It had been reported unofficially that a large number, perhaps a majority, of these miscreants were aliens. We are now officially advised that they were all of this class. We venture to call the attention of the Knights of Labor to this circumstance, and to ask them how their condition is helped by lending countenance to the assaults of European "pauper laborers" upon those of Asiatic origin. If it be true that the Chinese only come here to make a little money and then go home, that ought to be an argument in their favor, from the trades-union standpoint, as against a class who come here equally impoverished and with the intention of remaining permanently. If it be true that the population of the Chinese Empire is such as to make the immigration of its subjects to this country an alarming matter, it is equally true that the populations of Italy, Hungary, Bohemia, and Poland, from whom the turbulent masses like the Rock Springs murderers are recruited, are large enough for all practical purposes. Moreover, the Chinese immigration has been stopped, while the Italian, Hungarian, etc., is a continuing stream. The logic of the situation is that if the Knights of Labor lend their sympathy to either class of foreigners, it ought rather to be extended to the Chinese, by way of encouraging them to kill off or drive out the Rock Springs and Seattle mobocrats.

The President's discussion of the Chinese Government's claim to indemnity for the Rock Springs outrage is incomplete and unsatisfactory. It makes no mention of our guarantee, in the new treaty of 1880, of protection to the Chinese laborers already here in all their rights—a guarantee which ought not to have been necessary in any case, but which was given in return for the Chinese Government's acceptance of the modifications of the old treaty; and it asserts, wrongly as we think, that there is no principle of international law requiring us to pay damages in such cases. Moreover, it is a well-known fact that in an exactly similar case we demanded a money indemnity from China and collected it. We not only collected pay for all the damage suffered, but several hundred thousand dollars more, which remained in the Treasury twenty years or more, and never was paid back until a swindling counter claim of an American citizen against China was trumped up, which made it worth while for the Washington lobby to take an interest in the matter, the Chinese Government having agreed to pay the claim out of its money wrongfully held in the United States Treasury. A history of this transaction, beginning with the Canton mob and reciting our demand for indemnity, would have been the fitting sequel to the narrative which the President gives of the Rock Springs massacre. It is not true that this is a matter for the "benevolent consideration" of Congress. Viewed in the light of our own precedents, it is a matter for the exercise of impartial justice. If there should be another mob in Canton, as is not unlikely, and if the lives and property of American citizens should be sacrificed, who would pay the damage in such case? Another fact worth considering is that China now has a naval force of very respectable proportions, and that a second attempt on our part to frighten her with a display of guns in her own waters would certainly miscarry.

Mr. Hamilton Lindsay, of San Francisco, has written a letter to Mr. Perry Belmont, Chairman of the House Committee on Foreign Affairs, touching our obligations in the matter of protecting the Chinese against violence, which it ought to be difficult for any American to read without a blush. We pursued the Chinese in 1844 for a treaty of commerce and amity, and got them to sign one guaranteeing the persons and property of Americans residing in China against mob violence. The Chinese did not ask for, and we did not offer, a reciprocal stipulation providing for the protection of Chinese residing in the United States. There were few or no Chinese here then, and even if there had been many, we should probably have considered it beneath the dignity of a civilized nation to make any such stipulation. Christian Powers nowadays consider protection for life and property for all dwellers within their borders one of the primary duties of Government. In 1858 we pursued the Chinese for another treaty, and got from them a concession of absolute freedom of emigration for Chinese subjects, and absolute freedom of entrance into China for Americans, both on the most-favored-nation footing. In 1870, however, we found, or thought we found, that there were too many Chinese coming to us, and pursued China again for a modification of the treaty restricting their numbers, which China agreed to, and we in return solemnly bound ourselves to give the Chinese resident in the United States all "the protection, rights, immunities, and exemptions to which they were entitled under the existing treaties." Moreover, the Commissioners, in asking for the modification, declared that the United States Government recognized it as a "duty to maintain them [the Chinese resident here] in the exercise of their treaty privileges against any opposition, whether it takes the shape of popular violence or of legislative enactment."

What followed is both shameful and instructive. In October, 1880, a fortnight before the conclusion of this last modification of the treaty, there was an anti-Chinese riot at Denver, Col., attended with murder and pillage. The Chinese Minister at Washington asked for satisfaction, and Mr. Evarts, then Secretary of State, pointed out to him that the United States were powerless in the matter, inasmuch as Colorado was a sovereign State, and the arrest and punishment of the guilty parties concerned exclusively the State authorities. As to indemnity, he said he "knew of no national obligation . . . which rendered it incumbent on the Government of the United States to make indemnity to the Chinese residents of Denver who suffered losses from the operations of the mob." This was pretty cool, or at least must have seemed so to the heathen Chinaman, but it was not as smart as the answer he got afterward from Mr. James G. Blaine. The complaint was renewed when this statesman became Secretary of State, and he dismissed the Chinaman promptly, with the observation that Chen Lan Pin "would perceive that in no part of the treaty is there any provision reciprocal with regard to subjects of China resident in the United States," and he added that he concurred with the learned Evarts touching the absence of all responsibility on the part of the United States for murder and robbery committed on Chinamen in any of the States. To poor Chen Lan Pin's observation that China had treated with the United States, and not with the separate States, neither of these illustrious men made any reply. Blaine's discovery, and his unblushing use of it, that there was no reciprocal obligation on the part of America in the treaty, was perhaps as characteristic as anything in his remarkable career, not excepting the speech about the Little Rock bonds. And yet every session of Congress is opened with a solemn prayer to Almighty God, and Blaine is the candidate of the more moral of the two parties for the Chief Magistracy.

The opposition to the Morrison Tariff Bill has thus far been rather perfunctory than real. There has been nothing like the hostility which was brought against the "horizontal" bill in the last Congress. The reason for the less excited state of feeling at the present time is partly in consequence of the fact that the reductions on manufactured goods are very slight, and not sufficient to cause any greater importation of such goods than under the present tariff. In part, also, it is because the protectionists themselves see that the tariff must be revised some time. Among the ceaseless changes in human affairs, the changes in industry are the most incessant, the most radical. A tariff suited to American industry according to the protectionist philosophy twenty years ago is necessarily out of gear to-day, and is growing more so every year. New implements and methods are coming into vogue all the time, both here and abroad, which render the Morrill tariff nugatory or worse. Consequently, there is a growing irritation, among those who cling to "our industrial defences," against the old lines of defence, and a disposition to

consent to some new arrangement, provided it be not adverse to their own particular interests. This element of discord among the protected classes will surely break down the Morrill tariff at no very distant day, although the time may not have been reached as yet.

Mr. Morrison's bill is important chiefly in its additions of raw materials to the free list. These are mainly lumber, ores, salt, and coal. The manufacturers are all interested in the cheapening of these articles, but they have hitherto opposed any reduction in the duties on them in order to preserve the appearance of consistency, and to avoid giving offence to the producers of those articles. Such motives may still be sufficiently powerful to keep the phalanx unbroken, but it is growing weaker every day. The disagreement between the wool-growers and the woollen manufacturers amounts almost to open war. The differences between the New England iron manufacturers and the coal producers of the Middle States cannot be smothered much longer. Still less can the conflicting interests of the salt boilers on the one hand, and the farmers and pork packers on the other. The stars in their courses are fighting against the existing tariff, if not against protective tariffs in general.

On the 29th ult. Senator Eustis of Louisiana informed a wondering Senate that the Sub-Treasury at New Orleans had refused to receive silver dollars on deposit and to issue certificates therefor, and that the consequences were extremely embarrassing to business men in the Southwest. So he introduced and the Senate passed a resolution inquiring into the matter. The answer returned by the Secretary of the Treasury showed that the banks in the country tributary to New Orleans were trying to induce the Assistant Treasurer of the United States at that city to make his office a sort of clearing-house for silver, sending him silver dollars, and asking him to pay over the corresponding certificates to other banks. He declined to act in this capacity, for the two-fold reason that he was not authorized by law to do so, and because he had not a sufficient number of clerks to undertake such an addition to his system of bookkeeping. In this refusal he was sustained by Treasurer Jordan. The correspondence with the State National Bank at New Orleans has a pathetic side. The cashier of that institution writes under date of January 2:

"I should thank you greatly if you could arrange some plan by which the country banks could be accommodated in this matter, as I fear, silver will, if non-convertible, drive both gold and greenbacks from circulation, and greatly impair the circulating medium of this section, at least."

And again under date January 11:

"We are being overflowed with silver dollars, and unless we can exchange them at the Treasury for silver certificates it looks as though silver would soon be our only circulating medium."

The answer returned to the cashier was that silver certificates would be delivered in exchange for silver dollars as rapidly as the dollars could be handled by the force employed at the Sub-Treasury, and that this would be done on the democratic principle of first come first served, but that a general banking business could not be carried on under existing laws or with the present number of clerks. The apprehensions felt in the Southwest lest silver should soon be the only circulating medium are hard to understand, when we consider the almost unappeasable appetite for that metal that is said to prevail there.

The interview between Senator Evarts and the Committee of Savings Bank Officers at his office on Saturday about silver must have been an affecting scene, but he remained obdurate. Not one word could they get out of him, we are told, touching his position on this great question. Indeed, he seems disposed to treat it as his private affair, like his religion. In these days of excessive publicity, however, there is something rather fine in the Senator's determination not to let the working of his mind on this subject be seen by every inquisitive loafer. He probably asks himself, and not without excuse, whether there is not something morbid in this widespread desire to know where he stands on the silver question, and whether sensible people ought not to fight against it and try to overcome it. But we must remind him that to the savings-bank depositors in this State it is a matter of business. It is all-important to them to know whether they are going to get back the full amount of their deposits or only 75 per cent. of them, and they are therefore of course reasonably anxious to learn what view their Senator takes of it.

Professor Ellis Thompson gave at New Haven last week the most profound explanation of the smallness of our trade with South America we have yet seen. He said: "We buy of South America twice as much as South America buys of us. Why? Not because our commodities are too dear, but because we have no ships. England carries the greater part of our goods for us, and manages to make our purchases of South America pay for her hardware." We had no idea that the wickedness of that dreadful old creature England went so far as this. We wish the Professor, while he was about it, had explained how it is we buy so much of South America. How do our purchases get here? Not surely on pack animals. If they come here by sea, they surely come in ships; and if it pays to bring them here, why do not the same ships take back our goods in exchange? Even if England takes what we buy to pay for her hardware, why can we not keep her hands off of what we have to sell? Could we not send goods down by night in the return ships, unbeknownst to England? The Chilians say—in fact, they told the great South American Commission the other day—that the reason they do not buy more of us is that our goods are too dear, or, in other words, that they do business on business principles. Is it possible that Professor Thompson knows more about the matter than the Chilians themselves?

Representative Henderson, of Iowa, dug up the bloody shirt and made another attempt to wave it in Congress on Thursday. He cited the fact that 64 out of the 66 votes against the bill which was recently passed increasing widows' pensions from $8 to $12 a month were cast by Southern Democrats, and virtually charged them with disloyalty for such action. Mr. Henderson and his kind might as well understand that the day for this sort of demagogism is gone, never to return. The South is just as much a part of the Union as the North, and a Representative from South Carolina or Mississippi has just as good a right to oppose any measure which does not commend itself to his judgment as a Representative from Wisconsin or New York, without having his patriotism called in question. Congressman Hewitt of New York and Congressman Bragg of Wisconsin, the latter the gallant commander of the "Iron Brigade" in the Union army, voted against the increase of widows' pensions, and nobody has any more right to "arraign" the sixty-four Southern members who stood with them than he has to charge either Mr. Hewitt or General Bragg with disloyalty. The increase of widows' pensions above $8, the rate before the war, now that the cost of living has sunk to the ante-war level, was unjustifiable, and it is only to be regretted that more Northern members had not, like Messrs. Hewitt and Bragg and their sixty-four associates from the South, enough independence to oppose a measure which increases taxes by more than $6,000,000 a year.

As things look now, the only hope of saving the Federal Treasury from bankruptcy, through the demands upon it threatened by the various pension jobs now pending, is in the opposition of the "Confederate Brigadiers." So many Northern Congressmen of both parties have entered the race to capture the "soldier vote" by favoring any scheme which has been diligently worked up to formidable proportions by the claim agents, that unless Southern Senators and Representatives stand firm against these dangerous projects, they are likely to be carried through. In other words, Northern Republicans must appeal to Southern Democrats to save them and the country from the disastrous consequences of a demagogism which conquers the majority of Northern Congressmen of both parties. For it must be understood that any bill to increase the running expenses of the Government—whether by marking up pension rates now paid, increasing the pension roll, appropriating money for schools, or guaranteeing $2,500,000 a year interest on a scheme like the Eads Ship Railway, just reported favorably—involves increased taxation. As Senator Plumb, of Kansas, well said, in opposing the Blair $77,000,000 Educational Bill:

"Who knows where this money is to come from? The Secretary of the Treasury, in his annual report, recently submitted to Congress, estimates that the requirements of the national Government, including the sinking fund, will this year exhaust the entire revenue of the Government. Will any one vote for this bill if by so doing he is required at the next moment of time to impose taxes whereby the money to be appropriated shall be levied from the people of the United States?"

This argument ought to be driven home whenever any pension job or other unjustifiable scheme for increasing the expenditures of the Government is broached in Congress. Let men like Mr. Hewitt every time propose amendments raising the additional money thus required by restoring the tax on tea and coffee, reviving the income tax, or putting internal-revenue taxes back to the old schedule, and the dema-

gogues will be checkmated. Meanwhile let all good citizens be thankful that Southern Congressmen are disposed to do their duty, if some Northern men are afraid to do so, in fighting pension jobs.

Mr. Blaine has now got the second volume of his "History" into the market, and has supplied the newspapers plentifully with extracts, and his supporters begin to display renewed activity in the press. This ought to warn the other candidates that they have no time to lose if they mean to have their histories or other compositions ready for the campaign of 1888. Logan is the only one as yet who has been able to give out any extracts, but his history is coming, and will soon be laid before the world complete. For style we think he surpasses Blaine, and he has more imagination, and, what is very important, a better memory.

It is a long time since the trunk-line railways, or any railways, have taken so indefensible and dangerous a position as that which they have assumed in reference to the transportation of beef from the West to the East. Of course there are criminations and recriminations among the parties most immediately affected. Charges of "monopoly" are made against the dressed-beef shippers, and these are met by accusations on the other side that the railway managers are privately interested in stock-yards and abattoirs. The public will not be able to distinguish the truth where so much dust is purposely kicked up. They should, therefore, not allow themselves to be diverted by charges and countercharges, but rather keep a steady view of the grounds assumed by the railway companies, through their authorized commissioner, Mr. Fink, for the recent advance in the rates of freight on dressed beef. The position assumed by Mr. Fink is, "that the cost of transportation on a pound of beef from Chicago to New York shall be the same, whether the cattle are slaughtered in Chicago or slaughtered in New York." We observe that Mr. Armour contends that the advance in rates is considerably more than sufficient to equalize the naked cost, and we presume that he is right, because all the presumptions must be against a combination which takes its stand on the doctrine that *it* has the right to fix the price of beef in New York. This is a most fantastic notion, and one which, we supposed, had been abandoned long ago. It is certainly a doctrine which cannot stand long in this country. It embodies all the heresies that gave birth to the anti-monopoly leagues and the granger organizations and the granger legislation. It is obnoxious to sound political economy and to the spirit of the age.

The obvious and patent facts are these: A new and cheaper method of bringing beef from the producer to the consumer has been found. The cheapness consists in conveying the beef without the offal—in conveying the product of the animal instead of the animal himself, dispensing with the need of feeding and caring for him en route and of curing him if he falls sick, as he is apt to do. The railroad companies throw themselves in the way of this notable boon to the public, and say that it shall not be. They have the assurance, the audacity—we can call it by no softer name—to say that progress in the useful arts shall stop at their bidding. They have the indiscretion and the want of tact to make this avowal at a time when the public mind is in an extremely sensitive state, and when Congress is considering measures to curb their pretensions. By such steps they put it out of the power of statesmen and journalists who would be glad to defend them against the attacks of demagogues, to render them any effective assistance. They give themselves away altogether. We have heard of cases where isolated railways in the mining regions have put the rates of transportation on silver so as to get as much money out of it, whether it was delivered to them in the form of raw ore, or of concentrated ore, or of bullion. Instances have been cited where railways have fixed their rates so as to require lumbermen to ship the whole log instead of sawing it up and leaving the slabs and bark behind. Indeed, a multitude of parallel cases might be found, but none cou'd be found more flagitious than the one that is now the subject of hot dispute between Mr. Armour and Mr. Fink.

The Typographical Union and the Trades Assembly of Newark have receded from their demand that the *Advertiser* should discharge certain printers who did not belong to the Union, and have removed the boycott ordered on that paper. The demand and the boycott were so obnoxious to all just conceptions of fairness and of the rights of men, that public opinion bore them down with an irresistible weight even in a city unusually exposed to the terrors of boycotting. Although the *Advertiser* has gained a victory, it would perhaps be rash to assume that the Typographical Union will abandon its intention of driving out all printers who do not belong to their society and submit to their rules. This is a phase of trades-unionism which has been with difficulty smothered in-doors in the past, and there is much reason to fear that it cannot be so smothered much longer. It is this phase which led to the closing of the great McCormick Reaper Works at Chicago. Seven men in the moulders' room did not belong to the Moulders' Union. They must be discharged under penalty of a general strike. These seven men must be driven to do something which they did not want to do, under the threat of closing up an establishment which disburses $3,000 a day in wages. Mr. McCormick saw that compliance with this demand was equivalent to handing over the entire property to the strikers, and he concluded that it might as well perish by rust as by being administered by a committee of the Trades Assembly. It is a wonder that Mr. McCormick has not been boycotted. It would be so easy to serve notice on all the farmers in the Northwest that if they bought McCormick's reapers the Knights of Labor would not buy their grain.

A party of striking miners, in France the other day, attacked one of the engineers of the company, named Watrin, in his own house, and threw him out of an upper story window to the mob outside, who kicked him to death as he lay on the ground. In a debate which followed in the Chamber on a motion to censure the Government for prosecuting the murderers, a M. Basly read a long speech justifying the murder, and 188 Radical deputies supported him by their votes. This is the most marked expression we have had yet of the new Socialist doctrine that the right of war, that is, the right to kill in order to accomplish your purpose, resides in any body of men, however small, or even in individuals. The Nihilists have long practised it, but nobody until now has produced it in a legislative assembly. But it is part and parcel of the gospel of anarchy. It is thought that the debate will damage the Republic with the peasantry, who do not take freely to these urban views.

The speech of Herr von Scholz, Prussian Minister of Finance, on the recent motion in the Landtag in favor of international bimetallism, is published in the last number of *Bradstreet's*. It is a singularly clear and impartial statement of the views entertained by the Government of Prussia, and therefore of Germany, both being under the leadership of Prince Bismarck. Herr von Scholz begins by stating that he is not a fanatical adherent of a gold currency, but that, looking backward over a period of twelve years, he cannot help felicitating all the German States on the wisdom displayed in seizing the opportunity, which occurred in 1872, to put their monetary system in harmony with the progress of the age. It was not, he said, an arbitrary step, but a wise endeavor to conform to the already existing fact that gold only was in request as international money. If any persons complained of this, he would remind them that under the law they could still pay their debts in silver both at home and abroad. So could the Frenchman, the Italian, and the Hollander. If they did not avail themselves of this privilege, it must be because they believed that their credit would be impaired by doing so. And so with their Governments. Neither law nor treaty prevents them from paying their interest in silver at home or abroad. They are restrained from doing so by "the natural coercion of general conviction which constrains everybody, even without a treaty." Referring to petitions which had been received in favor of international bimetallism, the speaker said:

"These petitions, most of them containing but three lines, requesting to have bimetallism or international currency introduced as soon as possible, speak of it as a well-known unalterable thing, just like speaking of introducing a general obligation to send children to school or general military service. As yet I have not been able to find anybody capable of giving me but an approximately satisfactory answer to the question, What is international double currency? Gentlemen, one of the most eager agitators for bimetallism in France, M. Cernuschi, at the beginning of the agitation, gave a sketch of a treaty, as he imagined it, between the states of the civilized world, embodying international bimetallism. The friends of the subject have closed the book at this page, and spoken no more about the treaty. The countrymen of Mr. Cernuschi himself have preserved the profoundest silence regarding it. I never heard that any one in real earnest dared to acknowledge himself an adherent of this project; and though there are doubtless very clever, diligent, and talented men among the German bimetallists, who daily write articles, books, and pamphlets on the subject, I have not met with anyone yet who dared to propose a bimetallist treaty as he imagined it, and as he thought it might be signed after an exact scrutiny by every lover of his country."

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, February 24, to TUESDAY, March 2, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND sent a long message to the Senate on Monday afternoon, clearly defining his position on the question of the Senate's right to demand papers from the Executive in regard to removals made by the President. It is impossible to summarize the argument in a brief paragraph. Among the points made are, that the Constitution gives to the President the sole right of removal or suspension, and that he is responsible to the people alone; that those sections of the Tenure of Office Act which directed the President to report to the Senate his reasons for suspensions have been repealed; and that the papers asked for are not official, but personal and private, and under the full authority of the President alone. In conclusion the President says: "There are no grounds for an allegation that the fear of being found false to my professions influences me in declining to submit to the demands of the Senate. I have not constantly refused to suspend officials, and thus incurred the displeasure of political friends, and yet wilfully broken faith with the people for the sake of being false to them. Neither the discontent of party friends nor the allurements constantly offered of confirmations of appointees, conditioned upon the avowal that suspensions have been made on party grounds alone, nor the threat proposed in the resolutions now before the Senate that no confirmations will be made unless the demands of that body be complied with, is sufficient to discourage or deter me from following in the way which I am convinced leads to better government for the people."

The message created great indignation in the Republican ranks and surprised the Democrats. The latter generally approve the message, but add that the usages of the Senate were not, perhaps, observed in sending in the message at that time. The amount of real regard for the good of the civil service that the Senate feels in its fight with the President, is shown by the fact that it has confirmed the nomination of I. Freeman Raisin to be Naval Officer at Baltimore, against whose appointment the civil-service reformers of Maryland made so vigorous a protest on the best grounds.

In the Senate on Monday Mr. Pugh (Dem., Ala.), representing the minority of the Committee on Judiciary, submitted the views of the minority on the resolution referred to that Committee concerning the office of the District-Attorney for the Southern District of Alabama, known as the Duskin case. The report is three or four times as long as the majority report. It embodies no resolutions. It says that when President Cleveland came into office he found about 95 per cent. of the offices filled by Republicans appointed as a reward for party services. The party to whom the President owed his nomination and election has been exiled from all participation in the civil administration of the Government for nearly a quarter of a century. Notwithstanding these facts, the 650 nominations sent to the Senate in the suspension cases had been allowed to remain before the committees without consideration and final disposition. Referring to the demand for papers, the report says the minority admits that any and every public document or record on the files of any department or in the possession of the President relating to any subject whatever over which either house of Congress has any power, jurisdiction or control under the Constitution, is subject to the call or inspection of either house for use within its Constitutional powers and under its jurisdiction. But if all the power granted in the Constitution over the subject-matter is vested in the President exclusively, the only rightful custodian of all such papers is the chief executive officer. The minority, after making as diligent a search as time and opportunity allowed, feel satisfied that from 1789 to 1867, a period of seventy-eight years, not a single case can be found in which the Senate in executive session directed the head of any department or requested the President to transmit to the Senate in executive session documents relating exclusively or materially to removals of Federal officers by the President during the recess or the sessions of the Senate, and such direction was obeyed by any head of department or the President.

President Cleveland on Tuesday sent a message to Congress on the Chinese question. He reviews the Rock Springs massacre and the treaty obligations of the United States, and concludes that "While the United States Government is under no obligation—whether by the express terms of its treaties with China or the principles of international law—to indemnify these Chinese subjects for losses caused by such means and under the admitted circumstances, yet that, in view of the palpable and discreditable failure of the authorities of Wyoming Territory to bring to justice the guilty parties, or to assure the sufferers an impartial forum in which to seek and obtain compensation for the losses which those subjects have incurred by lack of police protection; and considering, further, the entire absence of provocation or contribution on the part of the victims, the Executive may be induced to bring the matter to the benevolent consideration of the Congress, in order that that body, in its high discretion, may direct the bounty of the Government in aid of innocent and peaceful strangers whose maltreatment has brought discredit upon the country, with the distinct understanding that such action is in no wise to be held as a precedent, is wholly gratuitous, and is resorted to in a spirit of pure generosity toward those who are otherwise helpless."

On Thursday the House voted to discuss the coinage reports for ten days from March 2.

In answer to a request from a sub-committee of the Committee on Ways and Means for information concerning the workings of the reciprocity treaty with the Hawaiian Islands, John E. Searles, jr., one of the Government Commissioners who visited the islands, has made a statement of facts ascertained in connection with his visit. "The total of duties remitted during the nine years the treaty has been in operation," he says, "is $22,808,025, while the total value of our domestic exports for the same period is only $22,872,371, or, in other words, if we had made the islands a present of every dollar's worth of goods they bought from this country, and collected duties on their sugars, we should have made no loss." He says there has been an actual decadence of American influence, and under the scramble for the benefits of the treaty the islands have declined morally.

Mr. Morrison (Dem., Ill.), from the Committee on Rules, reported in the House on Friday a substitute for the Hanback and Pulitzer resolutions directing an inquiry into the Pan-Electric Telephone matter. The resolution provides for a select committee of nine to fully investigate the Government's expenditures in the telephone suits, the issuance of stock of the Pan-Electric Company to any persons connected with the Government, and any attempts to improperly influence official action by or through the press. After a brief but excited debate, during which Mr. Gibson (Dem., W. Va.) bitterly criticised Mr. Pulitzer, whom he accused of shrinking behind the columns of his newspaper to attack men instead of attacking them on the floor of the House, the resolution was adopted.

The Urgent Deficiency Appropriation Bill, as agreed upon by the Appropriations Committee of the House on Friday, appropriates $634,453 for the present fiscal year.

The Diplomatic and Consular Bill was submitted to the House on Tuesday. The appropriations are substantially the same as last year, with the exception of a number of items which have been ruled out by the new rules of the House, which do not admit of changes of existing law in appropriation bills.

The House Committee on Post-offices and Post-roads completed the Post-office appropriation bill on Wednesday. It appropriates for the postal service during the next fiscal year the sum of $54,326,588, an increase of $625,598 over the appropriation for the present fiscal year, and a decrease of $659,579 as compared with the Department's estimates. The estimated revenue for the next fiscal year is $47,142,252, and the estimated deficiency (indefinite) is $7,443,914.

The House Judiciary Committee has taken a vote which indicates that a majority of two or three in that Committee is opposed to the Lowell Bankrupt Bill. The only Democrat on the Committee who favors it is Mr. Collins.

The House Committee on Territories has directed an adverse report to be made on Representative Townshend's bill to organize the entire Indian Territory into the Territory of Oklahoma. The Committee still has under consideration Representative Weaver's bill to organize Oklahoma and the public land-strip into a Territory.

The Electoral Count Bill, reported back to the Senate from the Committee on Privileges and Elections, to which it had been recommitted, is amended. It now contains a provision requiring the transmission to the Secretary of State, immediately after the appointment of electors, of a certificate setting forth the names of the electors and the canvass of the number of votes given or cast for each. By this means Congress will be enabled to take cognizance at once of the result of the election, whereas now it has no cognizance of the matter until the day arrives for opening and counting the votes. The Secretary of State is also required to publish these certificates in full in such newspapers as he shall designate, and at the first meeting of Congress he is to transmit copies to each house of Congress.

The Senate Committee on Commerce has agreed to report favorably the Dingley Shipping Bill with amendments.

The Senate on Monday rejected the nominations of Mr. Pillsbury and Mr. Chase to be internal-revenue collectors.

It has been reported that the Consul-Generals at London and Liverpool would resign if the bill passed which deprives them of the notarial fees. The friends of Consul General Walker at Paris say that he has never accepted these fees, but that he has permitted the Vice-Consul, Mr. Hooper, to keep them. Under this system the position of Vice-Consul at Paris has been more lucrative than that of the Consul-General.

The national debt was reduced during February $2,702,153 31.

The Virginia Senate on Saturday rejected by an overwhelming vote a proposition to amend the Constitution, so as to repudiate all of the bonds not funded under the Riddleberger settlement in one year after the ratification by the people of this amendment to the Constitution.

The Virginia House of Delegates on Monday passed the bill introduced some days ago by ex-Congressman Fulkerson, providing for the issue by the commonwealth of scrip which is to be made receivable for all taxes except capitation. This is regarded as one of the most far-reaching measures for forcing the bondholders to fund under the Riddleberger settlement ever adopted by the Legislature. If it is sustained by the Federal courts, this scheme will force the coupons down so low that the creditors will have no recourse but to fund them.

In the New York Senate the Gas Committee presented its report on Monday night, accompanied by three bills. They provide for the appointment by the Governor of three gas commissioners for the State. No dividend shall be paid unless earned, and no dividend shall exceed 10 per cent. of the actual capital as de-

termined by the commissioners. The earnings in excess of 10 per cent. shall be accumulated as a reserve to be applied toward a reduction of the price of gas. The price of illuminating gas is fixed at a maximum of $1 25 per 1,000 feet, and $1 for cooking and heating gas.

In the State Senate on Thursday a bill was introduced annulling all the rights, privileges, and franchises acquired by the Broadway Surface Road in this city.

In the Assembly at Albany on Thursday a bill was passed repealing the anti-deer-hounding law of last winter.

The report of Willis S. Paine, Superintendent of the New York Banking Department, in relation to the savings banks of the State, shows that the resources increased $28,609,137 in the last year, and the number of depositors increased 42,898.

Nathan L. Baker, of Portland, Oregon, and "Al" White, of Oregon City, who led the mob which drove the Chinese out of Oregon City, were arrested on Wednesday on complaint of Wong Chung, a Chinese contractor, and taken before the United States Commissioner, charged with violating section 5519 of the United States statutes. This section, which was passed for the special protection of negroes against the Kuklux Klan in 1874, is said to cover the Chinese cases exactly, and the authorities are of the opinion that the men can be convicted.

A band of masked men visited three ranches near Wheatland, California, on Thursday morning, and compelled the Chinese workmen to leave. They were marched to Wheatland and allowed to go where they pleased.

General Crook and Geronimo, the renegade Apache chief, met on February 22 at Laug's ranch, seventy-eight miles southwest of Deming. The chief and five bucks held a consultation, and asked permission to return peaceably to the reservation. General Crook refused the request, demanding their unconditional surrender. Geronimo refused to give himself up, and after a consultation left for his camp, keeping the white flag flying for ten miles or more. Geronimo is reported to have with him ninety bucks, besides women and children. No attempt was made to follow him.

FOREIGN.

It is reaffirmed that the chief complication of the home-rule question is the attitude of Mr. Chamberlain. He is still working hard in private against Mr. Gladstone and Mr. Morley and home rule. Only a few days ago at the Devonshire Club, the Whig headquarters, he made a speech declaring that he must have one law and one State. He has a land bill all ready. He has been attempting to cultivate an alliance with a leading Parnellite.

The Liberal Government on Tuesday indicated through a Ministerial utterance that they expect to fall on the Irish question. Mr. Morley, Chief Secretary for Ireland, in an address at the conference of Liberal delegates, said: "The Government is now face to face with the Irish difficulty, and will probably be compelled to make an early appeal to the country."

The British Government will probably soon start relief works along the west coast of Ireland where the distress is very great.

Sir Henry James (Liberal), formerly Attorney-General, spoke on Monday evening at Lancashire in justification of his secession from Mr. Gladstone's party. The creation of an Irish Parliament, he said, would call into existence a power the fear of whose hostility to England would ever exist. Neither he nor Lord Hartington intended to form a new party, but both would loyally support Mr. Gladstone's general policy. "Mr. Gladstone," added Sir Henry, "generously offered me the Lord Chancellorship and afterward an important office in the House of Commons. I was compelled to decline both of those offers in the absence of pledges which the Government was unable to give."

The Cork Corporation, by a vote of 31 to 10, has adopted a resolution favoring an Irish Parliament in Dublin, and declaring that that concession would not involve the separation of Ireland from Great Britain.

The reports that the Parnellites possess compromising letters from Lord Randolph Churchill pledging him in favor of home rule, are declared to be untrue. Parnellites, however, assert that he had personal interviews with the Irish leaders and offered them home rule.

The Parnellites are irritated at Captain O'Shea's action in opposing Mr. Healy's position on the question of granting medals to the Canadian volunteers.

Queen Victoria and Prince and Princess Henry of Battenberg witnessed a performance of Gounod's oratorio, "Mors et Vita," at the Albert Hall in London on Friday. There were thousands of people outside, who lustily cheered the royal party. When the Queen entered the hall the whole audience, numbering 7,000, rose and stood during the playing of the national anthem.

Queen Victoria is rapidly becoming a common topic of discussion in London. An extraordinary editorial in the *Standard* on Friday has made a sensation. It said: "It is time to say publicly what everybody has been saying privately for many years, that the Queen and the country over which she rules have been too long separated; that the separation cannot be continued much longer without serious and lasting injury both to the throne and the community. There is no room in the English constitution for a sovereign who lives in almost complete seclusion." It will be remembered that the *Standard* is the organ of all that is most conservative and loyal. The evening papers followed suit. The working classes throughout the country consider, and rightly, that the Queen has treated Mr. Gladstone on several occasions recently with a distinct personal slight. This they resent.

Mrs. Phelps, wife of the United States Minister at the Court of St. James, was on Monday presented to Queen Victoria at Windsor Castle.

The Queen's Proctor has decided to intervene in the Dilke case.

Lord Salisbury has been ordered to go to the Continent to recruit his health.

The Rev. Hugh Stowell Brown, the celebrated Baptist preacher, of Liverpool, is dead at the age of sixty-three. He was a locomotive engineer in early life. He was appointed minister of a church in Liverpool, in January, 1848, and soon became one of the recognized leaders of the Baptist body throughout the country. His greatest success was as a lecturer, and every Sunday afternoon he collected audiences of 2,000 or 3,000 artisans. He has lectured in this country and Canada.

Mr. Henry Stevens, the American bibliographer, died at his home in London on Sunday, after a long illness. He was born in Stevensville, Vt., and was graduated from Yale College in 1843. A few years later he took up his residence in London. He has bought American books for the British Museum for many years, and compiled records for individuals and States in this country as well as made many catalogues. His books are 'Historical Nuggets,' 'Rare Books Relating to America,' in two volumes, 1862; a 'Catalogue of American Books in the British Museum,' 1859, and 'Notes on the Earliest Discoveries in America.' Mr. Stevens sold the United States Government its valuable collection of Franklin manuscripts.

A sensation was caused in the French Chamber of Deputies on Thursday afternoon. A strange man in one of the galleries arose excitedly, drew a revolver, fired it twice with downward aim, and then coolly threw a letter toward M. Clémenceau. The man was quickly seized and hurried out by the police. When the excitement had subsided a flattened bullet was found at the feet of the President of the Chamber. The prisoner said he was a soldier who had been so ill-treated by his superiors and ignored by the officers of justice that he resorted to the desperate expedient of creating the sensation in the Chamber of Deputies in order to secure attention to his grievances. He is probably insane.

The eighty-fourth anniversary of the birth of Victor Hugo was celebrated in Paris on Friday evening by a grand entertainment at the Théâtre Français. The audience was brilliant. Hugo's grandchildren were the guests of the audience. Scenes from "Le Roi s'amuse," and "Ruy Blas" and "Hernani" were enacted. Renan's "1802" was received with tumultuous applause.

Prince Kropotkin delivered a lecture in the Salle Levis, Paris, on Wednesday evening. He predicted a revolution at the end of the century which would sweep away governments, permanent armies, religion, and all abuses interfering with the liberty of subjects. He avoided political allusions. His speech was loudly applauded. He was followed by Louise Michel, who delivered a similar address.

The Paris *Journal des Débats* says that Lord Salisbury drew up a convention with the Porte for the cession of Crete to England, on the payment of £3,000,000 and a guarantee that Greece should be prevented from taking aggressive measures against Turkey. Mr. Gladstone, the *Journal* adds, hesitates to confirm the convention.

The Supreme Spanish Council of War has confirmed the sentence of the Minister of War imposed on Don Enrique de Bourbon, Duke of Seville, and Lieutenant-Colonel of the regiment of Albuera. This placed Don Enrique on the half-pay list. His offence was the utterance of disrespectful and abusive language against the Queen Regent, widow of the late King Alfonso, who was a cousin to the Don.

The marriage of the Archduchess Maria of Tuscany to the Archduke Carl Stephan, brother of the Queen Regent of Spain, was solemnized in Vienna on Sunday by the Archbishop of Vienna. The ceremony was very imposing, and was witnessed by the Emperor Francis Joseph and a host of members of the royal family.

Vienna is now suffering from a partial water famine, and is much agitated over the question of a supply. The monopoly of supply is at present held by the Municipal Council, and the water is all brought from the celebrated Hochquelle and Kaiserbrunn springs. The quality of the fluid is excellent, and the quantity was ample before the recent enormous growth of the city. It is now proposed to reserve the water from the springs for drinking purposes, and to draw upon the Danube for a supply for other needs.

The Italian Senate, by a vote of 91 to 6, has adopted a bill to equalize the land tax.

A treaty of peace between Servia and Bulgaria was finally signed at Bucharest on Tuesday.

All workmen of foreign birth have been discharged from employment in the Government dockyards at Berlin. This action has been taken because of the disclosures in the case of Captain Sarauw, recently convicted of having sold plans and information of German fortifications to Major Grizot, of the French General Staff.

There is a commercial crisis at Stockholm, Sweden.

The Canadian Parliament was opened in Ottawa on Thursday afternoon. The Governor-General's speech contains the following in reference to the fishery question: "Should negotiations between her Majesty's Government and that of the United States for the appointment of a joint commission to adjust what is known as the 'fishery question,' and to consider the best means of developing international commerce, fail to secure any satisfactory result, Parliament will be asked to make provision for the protection of inshore fisheries by the extension of the present system of marine police."

IMPRESSIVE WARNINGS.

Mr. Asbury Coward, Superintendent of Public Education in South Carolina, has borne very striking testimony, in his annual report for 1884, to the disastrous effect which the mere talk about Federal aid has exerted in that State. Mr. Coward, after citing other circumstances, like short crops, which had operated unfavorably to educational interests during the school year 1883–4, topped the list with this as the most important: "In addition to these drawbacks, the discussion of the policy of Federal aid for the suppression of illiteracy revived into active expression all the latent or hitherto silent opposition to the common-school system of the State." But there is even more startling evidence as to the bad influence which the bare prospect of receiving Federal aid has had in another Southern State. To careful observers of Georgia's wonderful material progress during the last few years, it has been a mystery that so prosperous a commonwealth did not do more to make her school system worthy of "the Empire State of the South." We have at last discovered the reason. It has been simply because her people had concluded that they were soon going to get liberal appropriations for this purpose from Washington, and consequently did not need to make greater efforts themselves to meet the necessities of the case. So long ago as November, 1882, Mr. Gustavus J. Orr, the State School Commissioner, in his report to the Legislature, condemned "the utter inadequacy of the sums which we are applying to the support of schools to the object to be accomplished"; pointed out "the urgent necessity of more liberal appropriations for school"; showed that a tax of only one-fifth of one per cent. upon the property of the State would keep the schools in operation six months, nearly twice the period that they were then open; met the former plea of poverty by the declaration that "the time has come when we can do better," and concluded: "*I am sure that we have reached a point where we can continue our schools in operation for six months* [nearly twice the period at that time] *without unduly burdening the people.*"

The Legislature failed to act upon Mr. Orr's recommendation. Why? The answer to this question is given in the following letter to the *Evening Post* from Mr. Woodrow Wilson, author of the work on 'Congressional Government' which has attracted so much attention, a native of the South who stoutly opposes the Blair bill, as do so many of the most clear-sighted Southerners:

"In the winter of 1882–83 I spent some time in Atlanta, Ga., while the Legislature was in session. The project of Federal aid to education was already then being pushed. One day I dropped into the gallery of the State Senate Chamber for an hour, and chanced to find a discussion in progress upon a proposal to increase the appropriation for education, as Mr. Orr had urged that the State was so abundantly able to do. Only a small minority favored the measure for heavier taxation. The majority supported a counter-resolution that the Senators and Representatives of the State in Congress be requested to do all in their power to secure the passage of a law giving aid from the Federal Treasury to education in the States. I heard one speech made in opposition to this begging resolution. It was a sturdy appeal to the self-respect and independence of Georgians, in view of what the speaker treated as the unquestioned ability of the State to support a school system worthy of so great and prosperous a commonwealth. No attempt was made by the majority to answer his argument, which, like Mr. Orr's plea, was indeed unanswerable. The majority kept silence, and contented themselves with passing the resolution appealing for outside help to do what by their very silence they confessed they were able to do themselves. It was evident that no increase in the State appropriation for public education would be voted so long as there was the least prospect of aid from Washington. The whole performance impressed me as a startling declaration, upon the part of a well-to-do community, of its deliberate determination to enjoy the easy position of a beneficiary of the national Government to the fullest possible extent, rather than to be independent and support a good school system by its own unaided efforts."

Last week there came to light two more strong proofs that the South does not need any educational appropriations from Washington. The annual report of the Superintendent of Public Instruction in North Carolina for the last school year shows that there had been an increase over the previous year in the school expenditures of $51,693, being nearly 10 per cent.; in the number of pupils enrolled, of 13,850; in the average attendance, of 12,583; in the number of schoolhouses, of 214; and in the length of the school year, of nearly a week. "Upon the whole," says the Superintendent, "our educational outlook is encouraging in every aspect except one," which is the annulling by the Supreme Court of two statutes relied upon to increase the school revenues, thus requiring an increase in taxation, which so thriving a State can easily stand. We have also just received the last annual report of the Superintendent of Public Instruction in Florida—a State where there are nearly as many negroes as whites, and consequently a heavy burden of black ignorance. The Superintendent reports that the public-school system is in a most prosperous condition, as will readily be believed when he proceeds to show that the number of schools increased during the last year from 1,504 to 1,724; and that "the number of school-children between the ages of six and twenty-one years (which is the school age by law), according to the school census taken in the year 1884, was 66,798, of whom, by the annual reports of the County Superintendents, there are enrolled for attendance upon the schools for the year ending September 30, 1885, 62,327, and in daily average attendance 45,850, *a percentage of enrolment and daily attendance equal to any State in the Union as reported from the educational departments.*" And we may add, much better than Mr. Blair's own State, since in New Hampshire out of 79,120 children between the ages of five and seventeen inclusive, shown by the census of 1880, Superintendent Patterson's last report shows that only 63,656 were enrolled in school, or less than 81 per cent. of all, against more than 93 per cent. in Florida, and the average attendance (45,159) was less than 71 per cent. of those enrolled, against more than 73 per cent. in Florida.

It is now going on four weeks since the Blair bill came before the Senate. The protraction of the debate has been in every way most fortunate. It has given ample opportunity for public opinion to crystallize in opposition to the ill-considered scheme, and the change in the attitude of the press is reflected in a similar change on the part of Senators. The *Tribune's* correspondent reports that the friends of the bill begin to feel that it is in danger. It is notorious that there would be no question of its defeat if it were before the Senate now for the first time, instead of having been hastily endorsed by a vote of 33 to 11 two years ago. Senator Plumb, of Kansas, told the exact truth when he said in his speech last week:

"Now I say, what every man knows, that I can count on the fingers of my two hands the members on this floor who are actually in favor of this measure, who will dare avow that they are for it as an original proposition, or as one that commends itself to their judgment. But one man says: 'I made incautiously somewhere a speech in favor of it, and at a time when I did not consider the surroundings'; and another man says: 'My Legislature say they want me to vote for it'; and so on all the way round. If there could be some way of voting upon this measure without meeting these conditions, it would have practically no support. I do not believe legislation thus enacted is likely to be wise."

Members of the United States Senate ought to be above voting for a measure which they now believe to be bad because they were carelessly drawn into approving it years ago. The country respects a man who says that sober second thought convinces him that his first opinion was wrong, but it can entertain only contempt for a man who privately condemns a measure and publicly votes for it to save his consistency.

VIRGINIA COUPON CASES.

The recent decisions of the Supreme Court in the Virginia coupon cases have already resulted in a special message from Governor Lee to the General Assembly of the State. He recommends the appointment of a commission "clothed with no other power, and to have no other duties to perform, but to urge the creditors to accept the settlement which Virginia has decreed," *i. e.*, the Riddleberger settlement of February 14, 1882. It is hardly to be expected that the creditors will accede to a settlement which is the very thing that they have been resisting ever since the act of 1882 was passed. But, although the position of the State nominally remains unchanged, and the Governor reiterates its determination never to abrogate the Riddleberger settlement, fortifying the need of repudiating a debt, once already scaled upon the same plea, with the time-worn statements of hardships undergone by Virginia during and immediately after the civil war, and leaning upon the broken reed of the dissenting opinion in the coupon cases of 1884; nevertheless, the creditors must derive some degree of comfort from the fact that "a people so jealous of their good faith, so sedulous to preserve their good name as the Virginians," condescend to persuade at all. "Château qui parle, et femme qui écoute, près de se rendre," says the old French proverb. Still it cannot be doubted that the bondholders would be ready to enter into any fair compromise, and it is to be hoped that the appointment of a commission, even with the limited powers which Governor Lee recommends, will be the beginning of a more reasonable and businesslike spirit in the State.

The position of affairs appears to be this: Matured coupons are outstanding to an amount in excess of the entire yearly revenue of the State. If any great number of them are used in payment of taxes, or to prevent the collection of taxes, the machinery of the State Gov-

ernment will be materially hindered if not blocked; or very likely the coupons will become a sort of depreciated currency like the notes issued in the days of "wild-cat" State banks. Certainly a very real detriment will ensue to the State. The creditors, on the other hand, will not be correspondingly benefited, as the coupons will be bought to tender in payment of taxes only at depreciated rates. The existing state of affairs, in short, injures both parties more than it benefits either. Common sense demands a compromise. By funding the debt, both coupons and principal, into a bond to run for a long term at a low rate of interest, a compromise would be attained which would relieve the State of a great burden and danger, and give the creditors a security of an assured and steady value.

It is absurd to suppose that the creditors will fund under the Riddleberger settlement of 1882. The debts funded under the acts can be repudiated principal and interest, since the bonds do not carry coupons which are receivable for taxes; and the creditors cannot be expected to give up rights secured them by the Constitution of the United States in return for bonds unsecured by anything except a popular will fond of exercising itself in repudiation. It is to be supposed, at the very least, that the creditors will require any new evidences of debt exchanged for the old to be stamped both upon the face of the bonds and the coupons with the words: "Receivable at and after maturity for all taxes, debts, and demands due the State."

The greatest obstacle to compromise is undoubtedly the firm belief among the repudiating element of Virginia that public sentiment is so united against using these coupons as tender in payment of taxes that patriotism and fear of odium alike will prevent such use. No doubt public sentiment is powerful in Virginia, and far more powerful than in the Northern States, where law is more respected. But it takes a good deal of sentiment to prevent a taxpayer from saving 50 cents on the dollar when he can get a chance. It is all very well to tell him he is unpatriotic and injuring himself by harming the Government under which he lives. The injury is remote, the gain immediate, and fifty cents on the dollar a sore temptation. In fact, public sentiment, even when its cause is noble, unless enforced by vigilance committees, as the anti-tea resolutions were in some of the colonies at least prior to the Revolution, is of little avail against individual gain. On the contrary, there is good reason to suppose that there is a strong minority, composed of the best in Virginia, which sympathizes with the creditors, and would be glad to enter into a fair compromise, and that if the taxpayers alone had the vote a real compromise would be offered. The taxpayers, it is true, have, with great reluctance, acquiesced in the decision of the majority to repudiate if possible, but reluctant acquiescence is not the material by which the fierce flame of resistance to law can be fed. It is significant that even last year coupons to the amount of $50,000 entered the Treasury, and how many more were used to prevent the collection of taxes it is impossible to say. The Virginia politician ought to put it fairly to himself whether emigrants from other States will bother themselves much about the patriotism of maintaining repudiation if they can pay business licenses in depreciated coupons, and whether in any business community, such as Virginia professes to be, there is not always a very considerable class who, provided they are protected from bodily harm, care very little for public opinion when they can make money by running counter to it.

One of the Virginia papers, the Charlottesville *Chronicle*, asks where is the victory which we spoke of in our last editorial on this subject, since the State can repudiate the principal of all its debts. The reply is, that, for the past five years or more, the State of Virginia has refused to accept these coupons as tender for taxes, and if now she turns to some other method of injuring her creditors, as the *Chronicle* suggests, it is an admission that the means which the State has hitherto used are useless. That a State should be driven by peaceable means from an unconstitutional position which she chose to take and maintain through a series of years by all forms of legal chicanery, is a great gain to constitutional government. If Virginia wishes to be dishonest now, she must be dishonest under the Constitution, not in spite of it. She would do well to ponder the noble words of John Jay in the case of Georgia vs. Chisholm, in which, prior to the Eleventh Amendment, the Supreme Court decided that an individual could sue a State. Objection was made that, if a State could be sued, why not the United States? Jay says the difference is this: "In all cases of actions against States or individual citizens the national courts are supported in all their legal and constitutional proceedings and judgments by the arm of the executive power of the United States; but in cases against the United States there is no power which the courts can call to their aid. *I wish the state of society was so far improved, and the science of government advanced to such a degree of perfection, as that the whole nation could, in the peaceable course of law, be compelled to do justice and be sued by individual citizens.*"*

SILVER IN FRANCE.

THERE has been a debate on the silver question in the French Chamber, on a resolution of M. Soubeyran, calling on the Government to open negotiations with a view to the reassembling of the Monetary Conference of 1881, in consideration of the sad condition of silver in France. On the 10th of February it stood, on the Paris Bourse, from 22 to 27¼ per cent. below the value in relation to gold put on it by French law. In other words, a five-franc piece is worth only about 3 francs 85 centimes—that is, has lost nearly one-quarter of its value. M. Soubeyran is a financier of good standing, with a great horror of theory, and maintains stoutly that money is not merchandise, but simply a measure of value which the Government can regulate as it pleases, and he holds that the existing depreciation of silver is due to its demonetization in Germany, and to the cessation of its coinage by the Latin Union. Get Germany to remonetize, and the Latin Union to begin coining again, he says, and all will be well.

M. de Freycinet, on behalf of the Ministry, maintained a neutral attitude in the debate, and asked for and carried the "order of the day pure and simple," which is equivalent in French parliamentary procedure to laying on the table, saying that this did not signify that the Government refused to open the negotiations asked for by M. de Soubeyran, but simply that his motion was couched in terms too imperative; that the time did not seem to have come for reopening the negotiations in question, but that the Ministry had not lost sight of the matter, and that at the proper moment they would take it up. So the order of the day was voted unanimously.

The general question of the relation of the Government to the currency was debated only between M. de Soubeyran and M. Passy. The two Ministers who spoke, M. Carnot and M. de Freycinet, confined themselves to combatting the notion that bimetallism was gaining ground with the European public. They said that it might be that Great Britain and Germany were making a dreadful mistake in sticking to the gold standard, but that it was pure sentimentalism to suppose that either of these Powers could now be induced to go back to the double standard. There is no sign of anything of the kind. The "brutal truth," as the French call it, is, as M. Leroy-Beaulieu points out in the *Économiste Français*, that England has no thought of adopting the double standard herself, but that a certain number of English bankers and economical writers are making a great effort to induce France to resume the coinage of silver. "The English," says he, "are faithful to their habitual policy of preaching to others the exact contrary of their own practice. They dissuade us, for instance, with sympathetic interest, from establishing colonies, while they themselves keep on seizing all the new territory they can get hold of. So, also, in their own home they remain firmly attached to the gold standard, but would be delighted to have France restore the double standard in all its vigor." He speaks with equal despondency about Germany and the United States, and says that the small commercial states of Europe, particularly Belgium and Switzerland, are much more resolute partisans of the single gold standard than they were five years ago. "It is no secret," he adds, "that there has been a great deal of difficulty in keeping Belgium and Switzerland in the Latin Union." A leading Belgian statesman, M. Cocquiel, has recently, in fact, concocted a scheme for restoring the gold standard in Belgium by the sale of $40,000,000 in five-franc pieces, which in London would bring in (say) $32,000,000. This he would put into English consols, the interest on which he would allow to accumulate for eight years, at the end of which it would amount to over $40,000,000 gold, or the total nominal value of the silver sold. The gap left by the sale of the silver he would fill during the eight years with legal-tender paper.

What makes the situation in France more hopeless for the bimetallists is, that the distance between the old sacred relation of 15½ to 1 between silver and gold has greatly increased and is increasing. In 1881 the proportion was 18 to 1; it was 19 to 1 in 1885, and it is 20 to 1 now. Moreover, in 1881 the stock of gold in the Bank of France had fallen to $108,000,000, and a large part of this was ten-

* Curtis, at p. 68.

franc pieces below weight and unfit for exportation, while the stock of silver was $266,000,000. Now, however, the stock of gold in the bank is $232,000,000, while the stock of silver has fallen to $217,000,000. In other words, the French are in a far better position to go back to the gold standard than they were five years ago.

The truth is, that it is not only England and Germany who wish other people to do what they have no intention of doing themselves in this matter of standards. Every individual bimetallist is in exactly the same state of mind. Not one of them, we venture to say, has the smallest intention of doing his own private business on a double standard, but each of them hopes his neighbors will, and would like to encourage them in so doing. In saying this we are casting no imputation on their honesty or sincerity. We simply mean that they are the victims of an immense delusion. No nation has ever yet used a double standard, for the simple reason that the human mind, as lodged in the ordinary human head, is not capable of doing so. The law has often ordained the use of a double *legal tender*, but the community has always used one standard only for large transactions. That is, each man thinks in one standard when fixing the price of what he has to sell, or making his plans for the future, although when he comes to pay a debt he will, if sharp, avail himself of the cheaper of two legal tenders.

PUBLIC FEELING IN IRELAND.

DUBLIN, February 13, 1886.

IN writing such letters as the present about Ireland, I feel a difficulty in keeping hold on leading principles so as to resist being unduly influenced by the passions of the moment—by the tone of the last speeches of those who sway public opinion, by the response of the people to sentiments expressed at public meetings, by the extent to which outrages prevail, and the attitude of the national press towards them. It would be easy to simply chronicle daily events, or to give a one-sided view of the subjects under consideration; but it is not easy to throw such a fair light upon the present Irish question as to help American readers in forming their own views and arriving at their own conclusions.

The return of Mr. Gladstone to power upon a distinctly home-rule policy is the most significant event in modern Irish politics. I trust it may prove to be the turning-point in our history. Its first result—the appointment of John Morley as Chief Secretary—is, to those who know his intelligent, wise, and daring sympathy with Ireland, almost bewildering. Knowing what the Castle system of government is; considering how it has changed some of those who were our best friends, such as Mr. Forster and Mr. Trevelyan; considering the sharp antagonism into which any would-be ruler of Ireland must, under the present system, inevitably be forced towards the representatives of national feelings, many of us fear we may now lose Mr. Morley. And strong though the Irish cause appears, we could not afford that loss. Several of his Irish friends appealed to him against his acceptance of the post. That he has accepted it under the circumstances is proof that he sees his way clearly to some great end. The majority by which Mr. Morley's acceptance of the chief-secretaryship has been affirmed by the electors of Newcastle, is significant of the spirit in which a portion at least of the English people are prepared to approach the home-rule question.

On the other hand, apropos of Valentine's Day, a capital colored supplement appears with to-day's weekly *Freeman*. Mr. Morley, kneeling with one hand on his heart, presents a valentine to Hibernia—an Irish peasant girl—who, sitting under a tree, sews at a flag inscribed "Legislative Independence." Gladstone, as a Cupid in the air, discharges his arrow at her. "No doubt," she says to Mr. Morley, "you are a very nice-spoken young man and mean what you say—but I've been so often deceived before"; the "Castle Mephistopheles" behind the tree adding, "Aye, and will again, if I have a word in the matter." Lord Aberdeen, as a puppet, hangs out of Mr. Morley's hat. The beaming countenance of Cupid with his high shirt collar is irresistibly ludicrous; while Mr. Morley's eager appealing and Hibernia's arch side-glance are admirably rendered.

Pending the vital propositions regarding the future of Ireland which are likely to be made within the next few weeks, let me endeavor to briefly sketch the state of public feeling here under these circumstances.

A strong though perhaps failing party of "No surrenders" are still prominent in Ireland, especially in the North. According to them the mailed hand is the only hand that can govern Ireland; the Irish are a hopelessly intractable race, incapable of self-government; and Catholic Emancipation was a mistake. Cromwell is their ideal in the past; Mr. Froude in the present. Then over a stratum of society that once belonged to this party a great change has come. They admit that the present state of things cannot continue, but, fearing for the connection with England, and dreading the Catholics, they, without much sentiment of any kind, look for peace in the abolition of the Viceroyalty; the establishment of county or provincial boards for the regulation of local matters; the retention of the police under Imperial control; guarantees for religious liberty; the abolition of primogeniture and entail and the removal of the difficulties regarding the sale and transfer of land. These changes, they maintain, must be final. Many high-minded, liberal, and thoughtful men hold such views.

The mass of the landowners are now only anxious that Government, whether British or Irish, should come to their relief, buy them out on any reasonable terms, and let them be quit of the whole miserable entanglement. They are making this great mistake: a portion of them are endeavoring to squeeze out of their tenants rents which, in the present depressed condition of the markets for agricultural stock and produce, cannot possibly be paid. They show no disposition whatever to meet the land reformers. Nor do they as an order show the slightest disposition to reprobate those among them who are pitilessly driving matters to extremity with their tenants; just as the National Leaguers make no attempt effectually to discountenance opposition to the payment of fair rents. There is something of the unscrupulousness of warfare on both sides.

The mercantile and commercial classes, except when directly depending upon the landlords or upon the Nationalists, are in a bewildered and distracted state of mind. They look upon themselves as the pawns on the chess-board. Their trade is hampered, credit is restricted, traffic on the railways has fallen off. There has been a decline in the value of all Irish stocks. Upon the whole they are more frightened than hurt. As yet there is no general fall in rents of the better class of houses, nor any alteration in the scale of living of the commercial community. They do not know what it is to suffer as Irish tenants were suffering before the present agitation. But if not injured they are terribly alarmed. Till within the last few months they bitterly abused the agitators, upon whom they laid all their woes; their cry being that if Mr. Parnell and a dozen others were hanged, the country would settle down and all would be well. But the language of these business men is now entirely altered. They see that there is something beyond these personalities standing between them and a settlement; and their only desire is for this settlement, whatever it is to be. They have their prejudices and their fears, but "the present state of things is intolerable—almost anything would be better."

Since the elections, there has been a decided change for the better in the general feeling of the country. With the sense of their power which followed the results of the elections, has come more quietness and a greater feeling of responsibility on the part of representative men; there has been an almost entire cessation of the fierce inflammatory language so prevalent a year ago.

Whatever may be said to the contrary, in certain parts of the country, notably in Kerry, a very barbarous and deplorable state of feeling exists regarding boycotting and outrages. And so far as this is not acknowledged and effectually discountenanced upon National platforms and in the National press, so far as we try to hoodwink the British public and you regarding the real facts of the case; and so far as we, like ostriches, endeavor to deceive ourselves in the matter, so far a very sad and deplorable state of feeling exists through Ireland generally. I lately had occasion to investigate on the spot a terrible case of murder and boycotting, unconnected with land, in a remote district, to sympathize with the family of the murdered man, to gauge the sentiments of the people; and well as I thought I understood the country, never before did I so thoroughly realize the utter demoralization, the utter contortion of judgment regarding what is right and wrong, noble and base, to which the past has brought some of our poor people. I saw police huts, police protection, a system of police sway and coercion, as far as present law will permit, in full swing. Never before did I so thoroughly realize its inefficiency for permanent good.

Upon the whole, I feel inclined to take a hopeful view of the situation. A certain weariness of this contest has perhaps come over both sides. If Mr. Gladstone and his party offer anything adequate, and such as will strike the imagination of the Irish people, Mr. Parnell and the leaders of public opinion here will hardly refuse to show an accommodating spirit. They are scarcely prepared for an interminable conflict, unless upon very clear grounds. There is a certain pathos in Mr. Parnell's words at Galway on Wednesday: "I will only add, in conclusion, my conviction that the day is very near at hand when we shall have gained for Ireland the right to make her own laws upon Irish soil. When that day comes, I shall regard my mission as fulfilled. I have not entered into this great struggle out of any motives or personal ambition, but it is my duty to stand by you until these great measures are completed and gained for you." If we show a proper spirit toward a reasonable and just arrangement, it matters little whether the British public are prepared to endorse such an arrangement at first or not. An amalgamation of the best British and most representative Irish views regarding a settlement, once effected, could not easily be dissolved. In the assurance of ultimate success, we could afford to bide in a very different temper from that in which we have hitherto awaited reform. If there were no reason for the desire of separation between the countries, there would be no difficulty in allaying fears of its occurrence. When the tendency of the whole world is in the direction of religious freedom, there should be no difficulty in remov-

ing the fears of those who dread in Ireland a return to the ideas and methods of the Middle Ages. The real difficulty will rest in Ireland with ourselves, as to how to allay and to keep in check the demoralized attitude of our people regarding "law," and the preposterous ideas regarding the possible influence of Government upon the progress and happiness of the masses, which the present agitation has tended to foster. Late events in England show that she also will have to deal with such difficulties; how much more so we here, where hitherto everything had been so much out of joint. We Nationalists in Ireland, united as we are on the whole, must recognize that such an opportunity as the present, if let pass, may not soon recur.

Embittered as we are, unjust as we have doubtless been at times toward British statesmen who meant well toward us through all the miserable history of the last few years, we are not so lost to noble feeling as to be insensible to the chivalry with which Mr. Gladstone has thrown himself into the breach. The desire to show his opponents that he has not made a mistake in taking up our course, may be a powerful factor in inducing us to accept a reasonable settlement, and to work it for the best of all parties when it is made. We have often had occasion to quarrel with *Punch*, but we must join in the good wishes expressed in his lines respecting Mr. Gladstone this week:

"How will he decide? One thing's evident, quite,
If he turn to the left, or diverge to the right,
A bad bit of road lies before him.
Here's wishing him luck, a sure seat, a stout soul,
And a safe finish up of a glorious goal,
Ere the shadows of night settle o'er him."

D. B.

THE DUCHESS OF PORTSMOUTH.

PARIS, February 11, 1886.

M. FORNERON has written, since 1878, three important historical books. His first was a study on the Dukes of Guise and their epoch, in two volumes; the second was more important, it was a life of Philip II., in four volumes. Lately M. Forneron has abandoned the sixteenth century. He first gave us a 'General History of the Émigrés during the French Revolution,' and now he has just published a volume on Louise de Kéroualle, the famous Duchess of Portsmouth. It is difficult to see how an historian who has been living as it were with the Lorraines, with the great men of the sixteenth century, with the stern and cruel Philip of Spain, could have been drawn towards the light and frivolous Frenchwoman who was one of the mistresses of Charles II. It can only be because he considers the little Bretonne, Louise de Kéroualle, as an instrument of the policy of Louis XIV.; and he says, indeed, "She helped us to get our Flanders, our 'Franche-Comté.' We ought to give everything to our country—all, except our honor; the Bretonne reserved nothing. Her memory is marked with infamy in England; the English cannot forgive her for having subjected their country during fifteen years to the policy of Louis XIV., and for having allowed the consolidation of our territorial unity." France on her side has not been grateful, and has almost forgotten the name of Louise de Kéroualle.

Many pamphlets were written in old times against her. The 'Secret History of the Duchess of Portsmouth' is the best known, but it is full of errors, and is a novel rather than an historical document. Louise de Kéroualle was of a very old family of Brittany. She belonged to one of the four great families of the Bishopric of Léon, to the Penhoëts. The children of one of the Penhoëts assumed the name of their mother, who was a Kéroualle. Louise de Kéroualle became one of the *filles d'honneur* of the Duchess of Orleans, Henrietta of England. Henrietta, the sister of Charles II. and the wife of the brother of Louis XIV., was admirably placed for uniting the two Kings of France and of England. Charles II. was inclined to the French alliance, but during the first nine years of his reign he had already twice abandoned Louis XIV. The interests of his people stood between him and a policy which tended to give to France the Scheldt and the Rhine. In December, 1669, however, a project of a treaty of alliance was made between the King of Great Britain and the King of France. Louis XIV. was allowed in this project to conquer and to keep for himself the Spanish provinces on condition of paying 200,000 pounds, and 800,000 monthly as long as the war lasted; moreover, he had to pay the English troops that might be employed. This project was the work of Arlington. Madame the Duchess of Orleans was sent to England as a negotiator, and took with her Louise de Kéroualle. The young French woman made a great impression on Charles, who was tired of the imperious Castlemain and of the vulgar Nell Gwynn. He remembered her, and after the sudden death of Madame, Louise de Kéroualle was sent to England, and was appointed lady-in-waiting of Catherine of Portugal. She had a mission; she was the agent of the French diplomacy, the ally of Louvois and of Louis XIV. himself.

"I have just seen this famous beauty," says Evelyn in his diary. He describes her as having an infantine, childlike face. This child had a terrible will, as the event proved. The Ambassador of France in London was Colbert de Croissy, a man, says Saint-Simon, of a wise if mediocre mind, who had much application and sense. He was an ex-*président à mortier*. We nevertheless see him go to Lady Arlington's house at Euston with Louise de Kéroualle, knowing that Charles II. would leave Newmarket and pay visits to the young lady, who so far had not yielded to the King's caprice. Charles came every two days for a month. It has been said in various pamphlets that Louise was dressed by Lady Sunderland and by Lady Arlington as a bride, and that they went through the mock ceremony of a marriage. The English ladies laughed at the bad English of the French girl (see Evelyn's 'Secret History of the Reigns of Charles II. and James II.,' etc.). One thing is certain, the son of Louise de Kéroualle was born nine months after the festivities of Euston. Madame de Sévigné writes to her daughter: "Kéroualle is in the family way. Is it not strange? Castlemain is in disgrace. That is what they do in that kingdom."

The object of Louis was threefold: he wanted an alliance with England, a Catholic profession of faith from Charles, a marriage of the Duke of York with a princess chosen by himself. The alliance was made against Holland, and Charles II. declared war on the States in March, 1672, six months after the visits to Euston. Colbert de Croissy was not quite tranquil. He knew that Charles could not be trusted, that he went from one thing to another; that if he was one day under the influence of the languid Frenchwoman, he returned the next day to the Duchess of Cleveland, or forgot himself with Nell Gywnn. Louise was intelligent; she soon understood that the King would be lost if he declared himself a Catholic, that the Duke of York was unwilling to marry the Duchess of Guise, as proposed by Louvois. She had her own candidate, a daughter of the Duchess of Elbœuf, who was handsome and poor. She afterwards rallied to the idea of a marriage with a Princess of Modena.

In 1672 she begged Pomponne to ask Louis XIV. to grant her permission to be naturalized an Englishwoman, so as to be able to profit by the presents which the King of England might make her. The permission was granted, and she became Countess of Farnham, Duchess of Pendennis, and almost immediately this last title was changed into the title of Duchess of Portsmouth. She received also the ducal estate of Aubigny in Berry (which had been erected into a duchy in 1422 by Charles VII. in favor of John Stuart); but Colbert, though he made her this donation, avoided making the Duchess of Portsmouth a French Duchess, which was her greatest ambition.

In the spring of 1674, a few weeks before the battle of Senef, Charles II. seemed to become colder toward France and the cause of Louis XIV. At the same moment the Duchess of Portsmouth became ill. We can read in the official despatches addressed by Rumigny, a Protestant, to Pomponne, a Jansenist, the real nature and the causes of this illness. It is enough to say here that Charles tried to console her with great presents. When she was well again she was alarmed at the arrival of a person who had once been almost promised to Charles, the handsomest woman in Europe, the triumphant Duchess of Mazarin. The Duchess of Mazarin, who had quarrelled with the French court, embarked in Holland, and had arrived in London in men's clothes, with two women, five men, and a little Moor. As Hortensia Mancini, she had made a great impression on Charles when he was in exile in France. She was one of the famous nieces of Mazarin: her life was a romance, a long series of adventures. She was well received by the Duke of York, and Charles sent his compliments to her. "She is handsomer," writes Rumigny, "than all there is in England She has entered the English court as Armida entered the camp of Godfrey." The Duchess of Cleveland left the court; Nelly Gwynn went into mourning; the Duchess of Portsmouth was ill—she had just miscarried. Charles seemed an easy prey for the bold and handsome Mazarin. The honest Rumigny lost his head in all the manœuvres of the English court; a shrewd "homme de robe" was sent to him in the person of the Sieur Courtin, who had been an intendant. Courtin saw that the Duchess of Mazarin was an unruly, ungovernable person, while the Duchess of Portsmouth was a safer ally. His diplomacy was therefore directed against the niece of Mazarin and Saint-Réal, who accompanied her and was her adviser. But the Duchess of Mazarin was her own worst enemy; she became only one of the favorites, she did not become *the* favorite. The Duchess of Portsmouth found, after a while, that she could accept her, as she had accepted others; she was not really dangerous. The despatches of Courtin on the subject of all these ladies are truly amusing and characteristic. After Courtin came Barrillon, whose accounts are surely the most important and extraordinary historical documents that can be imagined. The letters of the French Foreign Office show us how much each conscience was worth. Louis XIV. was obliged, in order to keep England quiet while he continued his great war, to buy King, mistresses, statesmen—whatever could be bought.

Charles was forced at times to give way to public sentiment, but he invariably returned to his natural political inclinations. He prorogued his Parliament as long as he could; he did all he could for France. His private life can also be summed up in a word: he was faithful in infidelity—he always returned in the end to his Frenchwoman. Barrillon once writes to the King (January 13, 1684) that Charles, after having taken him to his bedroom, said: "Madam of Portsmouth and the Duke of Richmond, her son, are, of all persons in the world, the ones I am most fond of." With all her enemies, the Duchess of Portsmouth was able to resist the storm of the great Papal plot denounced by Titus Oates. She found an ally in Sunderland, another in Godolphin. She pronounced in favor of the Prince of

Orange against Monmouth. She became intimate with the Duke of York, with Rochester. She sometimes alarmed Barrillon: she was a real diplomat, and she became the true sovereign. Louis XIV. ordered that the estate of Aubigny should become a French duchy, and sent her the letters-patent. He signed letters of naturalization for Charles Lennox, Duke of Richmond. Her court at Whitehall was sumptuous; she held a levée every day, like a queen. Charles often spent the evening in the great gallery, playing *bassette* with Madam of Portsmouth and Madame de Mazarin. On the evening of February 12, 1685, he got up, had a stroke, and fell. The Duchess of Portsmouth sends for Barrillon at once; she tells him that the King is Catholic at heart. Barrillon speaks to the Duke of York and to the Queen; a monk is introduced mysteriously near the King, who died five days after having been struck down by paralysis.

The new King, James II., made a visit to Madam of Portsmouth an hour after the death of his brother. He wished to keep the French subvention and the friendship of Louis XIV. The Duchess determined to go back to France. She had 130,000 francs income, besides great savings invested in France—furniture, jewels, 250,000 in gold which she had received immediately after the death of Charles, 50,000 francs of *rente* which had been promised to her son from the confiscated estates of Grey. She lived fifty years longer, survived all her contemporaries, and only died in the middle of the reign of Louis XV., in the midst of a new generation who hardly knew of her. Under the Regent, Saint-Simon speaks of her as "deeply converted and penitent, very much embarrassed in her affairs, obliged to live in the country." Her pensions had been suppressed in England, and she had creditors in France. Her son is thus described by Saint-Simon: he was "without religion, lost himself in wine and debauchery, and, from the handsomest creature imaginable, became the most hideous." The Duke of Richmond died first, in 1723. Two years afterward the Duchess of Portsmouth lost her sister Henrietta. She lived herself seven years later, chiefly at Aubigny; she founded there a convent of sisters. In October, 1734, she came to Paris to consult some doctors, and died November 14, at the age of eighty-five years.

Correspondence.

THE MARYLAND APPOINTMENTS.

To the Editor of The Nation:

Sir: Your New York letter from "Civil-Service-Reform Democrat," in reply to your Baltimore correspondent "O. L. D.," is a wise and timely reminder to the civil-service reformers of Maryland that the President of the United States has something else to think about and to do besides making appointments, and, he might have added, *Maryland* appointments at that. Civil-service reformers may be classed as political specialists, and, like all specialists, the price they pay for their peculiar qualifications to speak on that subject is but too often an ignorance of or indifference to other matters of at least equal importance. Who shall say that the President of this country must ignore the silver question, the tariff question, and the complex question of administrative reform, in order to determine with absolute certainty the personal character of applicants for appointments? And I say, without hesitation, that such is the price of that certainty.

But their reflections on the President are peculiarly unjust when we consider the political situation in Maryland. It is a well-known fact that easy access to the source of Federal patronage has made it a revered tradition at Washington that the Baltimorean in politics, whether for amusement in leisure hours, for patriotic motives, or professionally, is a nuisance; wherefore the judicious shun him, the good pity him, and the wicked use him or else laugh at him. The cause of this unfortunate state of things is not difficult to discover. The good Baltimorean is, in politics, eloquent, but weak and irresolute. His talk leads one to expect great things, but his performance is disappointing in the extreme. He is the Dimitri Roudine of politics, except that he is generally well-to-do and never dies on the barricades.

A sad illustration of this peculiarity was seen in the campaign of last fall. The good Baltimorean went to Washington, and, with an eloquence which would have been more effective had it not been for the tradition of which I have spoken, assured the President that Gorman was a wicked man whom the citizens of Baltimore abhorred, and whom they would consign to his political grave at the first opportunity. Gorman replied, and assured the President that the good Baltimorean was doing him a cruel injustice; that the good people of Baltimore loved him above all men; that he was their "favorite son." And Gorman called to witness great numbers of the most prominent business men of this city, who admiringly listened to the most shameless avowals by their favorite of his devotion to the spoils system, and heard him proclaim, amid the noisy applause of his horde of roughs and heelers, his *sole* responsibility for the appointment of Higgins and Thomas and Mahon, and distinctly divide with the rest of the Maryland delegation the credit of the best appointments from this State. And these representative men of Baltimore poured in the coffers of this same Gorman thousands of dollars, and elected him and his creatures as the only true representatives of the political opinion of Baltimore. Gorman and all that that implies was the one and only issue of last fall's campaign, as it was fought in this city. The speakers on both sides emphasized this personal element, and on that issue Gorman, with shame to us be it said, triumphed as he never triumphed before, electing a solid delegation from Baltimore. After that, not only Gorman but the public voice of this city pronounced for Higgins and Thomas and Rasin and Mahon and for all that may follow.

No, after that overwhelming disgrace, let us be silent, or, if we must talk, let it be in sackcloth and ashes and with a conspicuous modesty becoming our merits. And, above all, let us not open our lips to cast upon such a man as Grover Cleveland the responsibility of our own shameful shortcomings. The burdens of our wise and patriotic President are already sufficiently great. He will need all his strength to correct the folly of his own party, and to contend with success against the bitter hostility of enemies rendered furious by the success which they feel must attend his course. The duty of civil-service reformers at this time is clearly to uphold the hand of the one strong man upon whose wisdom and will depends the success of their cause for a long time to come, and to recognize in the mistakes of the President, in the matter of appointments, only fresh illustrations of the truth that competitive examinations will ever remain the sole remedy for the evils of which they complain, until we can elect Presidents miraculously endowed with a perfect knowledge of the character and qualifications of each and every applicant for office, even from Maryland.—Very respectfully,

Roger W. Cull.

Baltimore, February 27, 1886.

A MICHIGAN INDIAN RESERVATION.

To the Editor of The Nation:

Sir: In 1855 the United States made a treaty, which was in fact a trade, with several bands of Chippewas in Michigan. The whites coveted the lands which these Indians then possessed, and the United States helped them to gratify their greed. These Indians gave up their lands in all other parts of the State, and accepted in return two or three tracts far removed from the then frontier, the largest of which was 138,000 acres in one body in Isabella County. Besides this land, the Indians were to receive sundry sums of money, consisting of annuities, for twelve years, of agricultural funds, school funds, aid for building and running mills, shops, building houses, procuring teams, mechanics, teachers, and missionaries for a period of ten years—in all, something over $300,000. In 1856, and several years immediately following, about 1,500 Indians went upon the Isabella Reservation and settled there.

Now, although such was not the understanding, yet, in point of fact, this was from the first just such a movement as is contemplated now in the Senate bill of Mr. Dawes, in which it is proposed to patent their lands to the Indians and hold their patents in trust. Here, the Indians were to go upon the reservation and make selections as follows:

Each head of a family, husband or widow, 80 acres;

Each family of orphans of two or more, 80 acres;

Each single orphan under 21 years, 40 acres;

Each single person over 21 years, 40 acres.

Having made their selections, the Indian agent would forward the name of the person and the description of his land to the Department of the Interior, and the Secretary would issue to the Indian a certificate to the effect that his selection was recorded and his rights in the land acknowledged, and would be protected to him and his heirs forever, the United States being a perpetual trustee for the estate. The proposition now made is to limit the term of trusteeship to twenty-five years.

Well, the Indians went at their new mode of life with some hopefulness and a good deal of stolidity. They had already been in contact with a rapidly increasing white population for nearly half a century, and with the French and British for a much longer period. The wiser ones among them had learned that there was nothing to be hoped for from the whites, but the great mass were thoughtless, ignorant, governed by impulse, and ready to be cajoled by any white who had the courage to go among them for purposes of gain. The presence of a public crib always draws that class of animals that would rather steal a living than get it honestly, even if the one required no more labor than the other. This $300,000 which it was known would in ten years be paid out to and for these Isabella Indians drew to the reservation the usual crowd of whites, who went simply and solely for what money they could in one way and another capture from the Indians. Had the United States hung or shot every white man who went upon the reservation, and left the Indians entirely alone to lapse to savagery, the result would have been vastly better than it was.

Almost the first thing done was for the Indian agent to permit his brother-in-law to open a store on the reservation. The Indians were tempted in every way to buy. There was no need to pay. Accounts were kept, and when the agent brought money the store was paid first, and if anything was left it went to the Indians. The United States built a grist-mill there, and paid a man to run it; but when the Indians got to raising grain, the storekeeper apparently arranged with

the miller to keep out of the way and leave the mill idle. That forced the Indians to buy flour and meal of the store. The most extravagant prices were charged for everything, and the Indians were robbed as completely as if they had been "held up" periodically by highwaymen. Then, too, finding that they could not get grain ground, they quit trying to raise it. Government furnished them teams, but white men sneaked upon their reservations, made them drunk, and coaxed them into some foolish trade whereby they lost their teams. They had schools and teachers supported by the United States, but they got no practical knowledge. They had churches, but their religious culture did not make them moral or save them from terrible degradation, into which they were easily led by the white men among them. Instead of enabling them to understand the value of their property and the worth of money, and the importance of keeping them, their education seemed only to make them acquainted with the white man's vices. Yet some of them were doing well, in spite of these obstacles. Gradually the little patches of clearing grew around their homes, and a few were giving promise of success as farmers, and they were doing it, too, without help. Had they received the encouragement of practical farmers, who could have been sent among them as agricultural missionaries, their advance would have been much more rapid; but they were literally surrounded by enemies.

Their land was covered with white pine. White men wanted it. They set about getting it by fraud, and finally succeeded. As long as the title to the land remained vested in the United States, it was dangerous to steal this pine. Hence they must in some way get the title into the hands of the Indians. Then they teased the Indians into a state of unrest with the thought that the United States treated them like children and slaves, and made them believe that the reason the white man was better off than the Indian was because he owned his land himself and could sell it if he wanted to do so. They made the Indians themselves appeal for the ownership of their lands. This was backed up by a hypocritical pretence made by agents, missionaries, and the men who wanted the pine, that the Indians were civilized, Christian people, whose manhood ought to be recognized by making them feel that they were masters of their own destiny. The scheme succeeded, and the treaty of 1855 was amended in 1864. The Indians would be given their lands in severalty without encumbrance. They were, as a precaution adopted by the Administration at Washington, to be classified. All who were competent to take care of their property were to receive patents without limitation. Others would receive patents, but could not alienate them without the knowledge and consent of the Secretary of the Interior for the time being. But this safeguard of the Government amounted to nothing. Out of 1,700 who received patents in 1871-2 all but 48 were classed as competent to take care of their own property, and yet it had been virtually stolen from most of them even before the patents were issued, and it was but a short time until all but a very few of them were driven from the homes in which they had been protected nominally by the United States since 1856, and were doomed to pauperdom and a steadily approaching extermination.

They have been for years and are to-day, all save a very few of them, in a hopeless state of ruin, while, if the United States had increased instead of ending its term of trusteeship, and had compelled its agents to actually take care of the rights of these people, forcing the ravenous whites to move off and remain away, the Indians would have been worth millions through the sale of their pine alone, and there would have been no possible reason why they should not have been able to secure for themselves the benefits, not of a merest smattering, but of a thorough practical education; and the power which that would have given them would have been a greater protection than the whole United States army could give. The formation of any new policy will be unwise and unsafe that does not profit by this fatal experiment in Michigan.

CHARLES ELLIS.

EAST SAGINAW, MICHIGAN.

THE NEW ENGLISH DICTIONARY.

TO THE EDITOR OF THE NATION:

SIR: In the review of Part II of the 'New English Dictionary,' which appeared in your issue of the 4th inst, the writer has, I think, done injustice to the editor of that work in several instances, two of which I will now notice:

So far from its being true that the title of anti-slavery is not "explained in the 42 columns devoted to anti- and its compounds," on page 364, there are four successive quotations, each of which contains it; the last being from one of Wendell Phillips's speeches.

Then, the writer takes exception to the assertion that *approbate* in the sense of 'approve' is "often used in the United States"; and says: "We have never heard the word, or heard of any one employing it." But Worcester informs us in his dictionary, after mentioning the disuse of the word in England: "It is, however, employed by the American clergy as a sort of technical term in the sense of *to license*, or *to give license or approbation to preach*."

I am very much surprised at the reviewer's statement with regard to the omission of the special use of *author* in the sense of 'editor,' which, he says, was "a common employment of the word during a large part of the last century." That such a "common employment" should have been overlooked by more than 1,300 readers, as well as by many modern lexicographers, is not only one of the strangest, but one of the most inexcusable omissions of the 'New Dictionary.' I wish very much, therefore, that the writer of the review would favor the readers of the *Nation* with some quotations in proof of his assertion.

J. P.

February 24, 1886.

[Our correspondent's points will be taken up in the order in which they are made. In the case of *anti-slavery*, it is sufficient to say that a quotation illustrating the use of a word is not a definition of that word. Our notice specifically mentioned that *anti-slavery* occurred in the Dictionary; but that it might perhaps strike an American with surprise that no explanation of it as the name of a definite party existing at a definite period was to be found. No such explanation can be found. As a matter of fact, we did not insist that it ought to be found.

Our correspondent's remark about *approbate* does not even touch the point made, and, besides, gives a wrong impression of what we did say. In the Dictionary it is definitely asserted that *approbate* is "*often* used in the United States" in the general sense of "simply" 'approve.' This is quite another thing from the technical sense of 'license to preach,' as quoted by our correspondent from Worcester. Nor, again, did we in this case deny the fact of the word being used: we simply denied that it was *often* used. Nothing has been brought forward in the letter given above to impeach the correctness of this assertion.

In the case of *author*, we really cannot consent to the view implied in our correspondent's words, that any amount of ignorance, however astounding, on the part of modern lexicographers or the "1,300 readers" for this particular dictionary, can be fairly held to counterbalance any amount of knowledge on our part, however slight. Our knowledge on this point, moreover, is not slight. If our correspondent will examine the early volumes of the *Gentleman's Magazine*, begun in 1731, or of the *London Magazine*, begun in 1732, or of the *Scots Magazine*, begun in 1739, or of the *Universal Magazine*, begun in 1747, he will find that communications addressed to him whom we should now call the Editor were then addressed to the Author of the particular magazine. We mention these periodicals because the sets of them are very long, and because, with one exception, they survived into this century, and, as a consequence, are more likely than others that could be named to be found in public libraries. As our correspondent asks for specific references, however, that disposition of human nature to oblige people who at heart are not anxious to be obliged leads us to furnish a few. In the *London Magazine* for 1752 he will find on pages 31, 67, 69, 154, 184, 202, 227, 228, 247, 298, 311, 322, 323, 356, 360, 365, 367, 374, 375, 391, 417, 422, 454, 458, 463, 511, and 550, letters from correspondents addressed "to the author of the *London Magazine*." Illustrations from the *Gentleman's Magazine* could not be so readily furnished, for correspondents usually addressed the exalted being who presided over that periodical as "Mr. Urban"; but a sentence from the preface to the completed volume for this same year, 1752, may perhaps be of interest to our correspondent. "From another imitator," it is said, "we have had fairer treatment; the author of an Edinburgh magazine, as he copies our best pieces, sets before them or after them *Gent. Mag.*" It must not be supposed that this method of address was peculiar to this type of periodical publication. We have before us at this very moment of writing a volume containing the London newspaper entitled *The Saint James's Evening Post*, for the years 1748 and 1749. Every letter to the one we should now call the editor is addressed "to the author, etc." There is no need of multiplying instances; but our correspondent can rest assured that if it be deemed worth while, we can easily furnish a separate instance of this usage to each of his "1,300 readers." Later in the century the term *author* was abandoned; and to some extent certainly, if not universally, *printer* took its place. It was, for illustration, "to the printer of the *Public Advertiser*" that the letters of Junius were addressed. When the term *editor* came to be employed, we shall hope to know when the new dictionary reaches the letter E.

So far from intending to do injustice to the work reviewed, which we look upon as an indispensable requisite in English study and an honor to English scholarship, our words were very carefully weighed so as not even to do it unintentional injustice. Mistakes in details must inevitably be made, and it is neither fair to the public nor ultimately beneficial to the Dictionary to deny them or to overlook them. The subject of Americanisms, in particular, is

one of peculiar difficulty, because so constant is the communication between all parts of our country that terms and phrases strictly characteristic of one section are always liable to be transplanted, and to turn up occasionally in spots most remote from their place of origin or of general use. Our language was therefore in every instance cautiously guarded, and we have a right to ask that those who except to it shall base their criticism upon what we actually did say, and not upon the false impression they form from careless reading as to what we said. —Ed. Nation.]

CHALLENGE AND BANTER.

To the Editor of The Nation:

Sir: The common people in the eastern part of Nova Scotia use "banter" in the sense of "challenge." It is the word with them for the idea. Boys say, "I banter you for a race," "I banter you for a jump." They never use banter in the sense of raillery. John Fraser.

Boston, February 23, 1886.

To the Editor of The Nation:

Sir: As was stated by a correspondent in the *Nation* of February 18, the use of the word "banter" in the sense of "challenge" is quite common in parts of Ohio. If I am not mistaken, however, there is a marked difference in the use of the two words which is worthy of attention. So far as I have observed, the word "challenge" is almost invariably used when any element of formality is involved; but when this is lacking "banter" is very frequent indeed. To illustrate, the First Nine always *challenges* the Second Nine to a match game of ball, but Jack meets Jim along the road and "*banters* him for a race." When the word is used in this sense it is almost always followed by the preposition "for," as above. These distinctions would be obvious to any one in the localities covered by my observation. If they do not obtain elsewhere, will some one please let us know? W. H. J.

Ind. Univ., Muscogee, I. T.

To the Editor of The Nation:

Sir: I write to substantiate the statement made by a writer in the last number of the *Nation* relative to the use of the word "banter" in the Southwestern States. Being a resident of northern Ohio, where one never hears it used in the sense of challenge, but now visiting in Texas, the statement made impressed itself upon my mind. The very next day after reading the letter my eye fell upon the announcement in the local paper that "Mr. Blank, the noted Southern athlete, is in the city, and has made a *banter* [underscoring mine] to throw," etc., etc.; and as I sat down to write the above, a youngster rushed in, and, to the query of what he had been doing, said he "had been down in the hollow making banters." Upon inquiry, I learned he meant *challenges*.—Yours truly, John C. Sage.

Denison, Texas, February 25, 1886.

THE HENNEPIN CANAL.

To the Editor of The Nation:

Sir: In your editorial note in No. 1077 you speak in tones condemnatory of the Hennepin Canal, but do not attempt to show the hollowness of much of the pretence used by Murphy in his argument. He claims that the improvement is needed to enable the Western producer to get his wheat to market in competition with other countries contending for the foreign trade. This claim rests on ignorance and is built of misrepresentation. Let us see what the producer can do. Every mile of railroad in Iowa, Nebraska, Minnesota, and Dakota is either owned or controlled by a company with an outlet at Duluth or Chicago, and there is not one of these companies that would give a local rate to the Mississippi River that would allow a water route to transport it the rest of the distance. The present local rates of railroad companies per ton are:

	10 miles	50 miles	100 miles	150 miles	200 miles	250 miles	300 miles
In Iowa.....	$1.40	$2.20	$3.40	$4.00	$4.40	$5.00	$5.40
In Minnesota...	1.60	3 20	4.40	5.40	6.00	6.20	6.60

Rates from Cedar Rapids, Iowa, to Chicago are $4.00 per ton. Allowing that freight on the canal can be moved as cheaply as the workers in favor of this route claim, viz., 85 cents per ton from Davenport, Iowa, to Chicago, and basing our estimates on that, our figures will be something like this:

Cedar Rapids to Davenport by rail	$2.70
Transfer to barges	25
Canal to Chicago	85
	$3.80

Now let us try a Minnesota point:

Ramsay through to Chicago	$5.60
By rail to Meoregor, Iowa	$3.60
Transfer to barges	25
Water route to Chicago	1.40
	$5.25

In this last we have taken a pro-rata mileage for the distance travelled on the Mississippi River as on the canal. As will be seen, it affects Cedar Rapids rates 20 cents per ton, and the Minnesota rates 35 cents. In neither case will it affect wheat over one cent a bushel.

Now let us try points further West:

From Des Moines, Iowa, to Chicago, the railroad rates are	$5.20
By rail to Davenport	$4.20
Transfer to barges	25
Water to Chicago	85
	$5.30
Rates from Sioux City, Iowa, to Chicago are now	$6.00
Sioux City, Iowa, to Dubuque	$5.85
Transfer to barges	25
Water to Chicago	1.00
	$7.10
Rates from Watertown, Dakota, to Chicago are	$7.00
Watertown to Davenport	$6.60
Transfer to barges	25
Water to Chicago	85
	$7.70

When the canal assumes to help the farmer in the West it is not able to make the assumption good. It cannot affect rates from the region that is now clamoring for cheap transportation. And how will it affect rates from Dakota, where the Northern Pacific and Manitoba roads make a common rate to either Duluth or Minneapolis? No amount of fine words can make a change in these rates even when used in connection with a vile open sewer for the coming metropolis of the country.

As an owner of land and raiser of wheat in Dakota, I wish to protest against being used by the boomers of the grandest humbug we have yet seen. The Galveston Harbor might have been of some value when completed, but this ditch can never carry a bushel of our grain; the Chicago scalpers will never let our Minneapolis flour pass through their greedy claws without taking all the profit a canal might save as their inspection and warehouse charges. If Chicago wants a sewer, or if Moline manufacturers want the canal, we have no objection if they will buy in their own name, but we don't want the cost charged to our account. Give us a chance, and the wheat growers will get along without Mr. Murphy. Give us a little relief from the present war tariff and burdensome navigation laws, but don't treat us to a canal we don't want and then call us ungrateful. A. M. Van Auken.

Ojata, Grand Forks Co., Dak., February 22, 1886.

THE OHIO IMBROGLIO.

To the Editor of The Nation:

Sir: In an article entitled "The Ohio Imbroglio," published last week, the author, Mr. James Boyle, says: "The Constitution of Ohio, in explicit terms, defines the duties of the Lieutenant-Governor. It states that he shall preside over the Senate, order roll-calls, and announce results of votes, etc."

The Constitution of Ohio section 16, article iii., says: "The Lieutenant-Governor shall be President of the Senate, but shall vote only when the Senate is equally divided." That is all the Constitution says as to the duties of the Lieutenant-Governor. It does not "in explicit terms" define his duties, nor does it state that he shall order roll-calls and announce results of votes, etc. Lawyer.

Cincinnati, February 22, 1886.

THE REDEMPTION OF SILVER DOLLARS.

To the Editor of The Nation:

Sir: In recent issues of your valuable paper you state that "the Government is virtually redeeming its silver dollars in gold at the custom-houses." We do not understand how this is done. Will you kindly explain fully and clearly in what mode, manner, or process this redemption is performed? A Constant Reader.

Chillicothe, Mo., February 19, 1886.

[Prior to the passage of the silver-coinage act, all customs duties were payable in gold. The silver-coinage act made silver dollars receivable for customs duties the same as gold. Anybody who has silver dollars can therefore get gold value for them by using them to make payments at the custom-house, or by exchanging them with somebody who has to pay duties there. It is this process which we have described as "virtually redeeming silver dollars in gold at the custom-house." Some form of redemption must be going on to keep 80 cents' worth of silver equal to 100 cents' worth of gold. We conclude that it is this virtual redemption at the custom-house that performs the office, which would otherwise be a miracle.—Ed. Nation.]

A HOME THRUST AT SENATOR BLAIR.

To the Editor of The Nation:

Sir: The experience of New Hampshire with her "valued policy" law, referred to in the *Nation* of February 18, deserves a great deal of careful attention, at a time when the Government is being importuned, on every hand, to enter upon a wholesale assumption of the duties and responsibilities ordinarily considered as belonging to individuals or communities.

If a mere lack of facilities for insurance, by throwing the danger of loss upon the individual owner, has decreased the number of fires in New Hampshire more than one-half, the question may well be raised whether the total abolition of the insurance system would not be a positive gain to the country. Individuals or communities are not going to develop watchfulness and industry if the penalty of carelessness and indolence is to be borne by some one else. Perhaps it will not be straining a point unduly to suggest that this insurance law and its result may be a wise dispensation of Providence for the purpose of giving Senator Blair a good illustration, right at home, of the beneficent effects of throwing people upon their own resources. If the Senator's

constituents can take so much better care of their property when they themselves are responsible for it, ought he not to conclude that the people of the South will do more for education when responsible for the evil effects of illiteracy than when his pet scheme shall have placed that responsibility upon the nation at large?

The *Nation* speaks of the decrease of fires in New Hampshire as "curious and unexpected." Unexpected it doubtless is, but is it curious that property should be better cared for when the owners' self-interest in having it well cared for is largely increased? The good effects of *laissez-faire* have not had a better illustration for a long while than is given by the results of this much-ridiculed "valued policy" law of New Hampshire. W. H. JOHNSON.

FEBRUARY 23, 1886.

JOHN HARVARD: A DIFFICULTY SOLVED.

TO THE EDITOR OF THE NATION:

SIR: It appears to be clear that John Harvard was born in Surrey, at Southwark, and it is certain that when he went up to Cambridge in 1627 he was described at Emmanuel College as of Middlesex. This is the matter upon which I propose to offer some observations, with the view of removing an apparent discrepancy, for which some would account by the statement that in 1627 he was probably living in London with his mother and her husband. How far this is satisfactory will appear from what follows.

The first point of inquiry is in what manner in Harvard's time the questions addressed to a young man on entering college were put, and I think we are not without a guide which will lead us in a certain direction. When St. John's College published the first part of its Admission Register, which begins in 1629-30, it was an object of interest with me to identify, for my own information, some of the places which appear in it in a form truly grotesque. For reasons into which I need not here enter, I was led to rely mainly upon sound, and, having thus succeeded in overcoming difficulties which appeared almost insuperable, I arrived, upon independent grounds, at the same conclusion as the editor of the Register, namely, that the entries were made from statements taken down from the lips of the persons admitted; and there was no doubt uniformity of practice among the different colleges of the University.

The next point is, What was the nature of the questions? and this renders it necessary to speak of the object which they had in view. That object was not, as the man of to-day might suppose, the mere collection of useful statistics, but was to indicate for what scholarships and other advantages, restricted to those born in a certain district, the person admitted was eligible. It is ignorance of this leading fact which has led into error those who hitherto have attempted to explain the matter. The place at which the person was residing when he went up to the University, was foreign to the scope of the inquiry; the place of birth being alone material.

The chief question, then, which was put to John Harvard at Emmanuel College was, where he was born, and the entry of Middlesex leaves no doubt that his reply was "in London." It is stated that the precise locality of his birth was the High Street of Southwark, and the statement derives corroboration from that which proceeded from his own lips. The High Street of Southwark, which extended southward from London Bridge to the spot where stood St. Margaret's Hall, formed part of the City of London, being included in the City Ward of Bridge Without, so that a person born in that street properly described himself as born in London. Z.

CAMBRIDGE, ENGLAND, February 12, 1886.

Notes.

A TRANSLATION of Dr. Paul Radestock's 'Habit and Its Importance in Education,' with an introduction by Dr. Stanley Hall, is in the press of D. C. Heath & Co., Boston.

Cassell & Co. will publish early in the month the first volume of 'Actors and Actresses of Great Britain and the United States, from the days of David Garrick to the Present Time,' edited by Brander Matthews and Laurence Hutton. In scheme this is akin to both Ward's 'English Poets' and Mason's 'Personal Traits of British Authors,' as it will contain signed biographical sketches, like the one, and extracts, criticism, and anecdote, like the other. The first volume is devoted to the chief performers who were contemporary with Garrick; and it will contain brief biographies of Macklin and Tate Wilkinson, by Mr. William Archer; of Quin and Mossop, by Mr. Robert W. Lowe; of Barry and Henderson, by Mr. Walter Herries Pollock; of Mrs. Abington and Mrs. Bellamy, by Mr. Percy Fitzgerald; of Lewis Hallam, by Dr. Edward Eggleston; of Foote and the elder Sheridan, by Mr. Matthews; and of Garrick, Kitty Clive, and Peg Woffington, by Mr. Austin Dobson. There will be four more volumes, considering in chronological sequence the performers of the Kemble period, of the Kean-Booth and the Macready-Forrest periods, and of the present time. Among the other contributors will be Mr. Edwin Booth, Mr. Lawrence Barrett, Mr. W. J. Florence, Mr. Harry Edwards, Mrs. Agnes Ethel Tracy, Miss Kate Field, Mr. William Winter, Mr. Joseph N. Ireland, Mr. H. C. Bunner, Miss J. L. Gilder, Mr. W. M. Laffan, Dr. B. E. Martin, Mr. Clinton Stuart, Mr. Henry Norman, and Mr. Laurence Hutton.

A new edition, limited to 125 copies, is about to be published by J. W. Jarvis & Son in London (New York: Scribner & Welford) of Downe's 'Roscius Anglicanus,' the chief authority for the history of the English stage from 1660 to 1706. The new edition will be printed with notes by Garrick's biographer, Tom Davies, and with an historical preface by Mr. Joseph Knight, the dramatic critic of the *Athenæum* and editor of *Notes and Queries*.

The *Truth-Seeker* Company, of this city, will publish directly the recent discussion in the *Nineteenth Century* between Gladstone, Huxley, and others, under the title 'The Order of Creation: The Conflict between Genesis and Geology.'

A new edition of C. B. Vaux's 'Canoe Handling and Sailing' is announced by the *Forest and Stream* Publishing Company.

Mr. W. R. Jenkins, No. 850 Sixth Avenue, has added Louis Énault's 'Carine' to his series of "Contes Choisis." He announces that he shall make a venture in Italian reprints, beginning with 'Alberto,' by E. De Amicis, annotated in English.

The *English Magazine* will reproduce some of the latest drawings of the lamented Mr. Randolph Caldecott in connection with a paper from his own pen, "Fox Hunting, by a Man in a Round Hat." In no other class of designs were his skill and humor more eminent.

Like the *Harvard Advocate* recently, the *Yale Literary Magazine* celebrates an anniversary (semi-centennial) in its February issue by printing articles specially contributed by former editors, including Senator Evarts, one of its founders; Donald G. Mitchell; President White, of Cornell; President Gilman, of Johns Hopkins; Profs. E. R. Sill, T. R. Lounsbury, and C. A. Lyman; W. W. Crapo, and Charlton T. Lewis. This is a distinguished list, and the *Yale Lit.* can further say for itself that it is the oldest college periodical in the country, and indeed the oldest monthly of any kind in the United States.

A city which sustains two first-class operas may, perhaps, be expected to support two *North American Reviews*. Such would seem to be the opinion of Mr. L. S. Metcalf, who edits the new *Forum* (No. 97 Fifth Avenue). One thing is certain, that his long connection with the *North American* has thoroughly acquainted him with the secret of that publication. His first number does not indeed contain a "symposium," but that may come later. The list of contributors to the March issue — Professor Alexander Winchell, James Parton, E. P. Whipple, Rev. Dr. R. H. Newton, Rev. E. E. Hale, Bishop Coxe, Dr. W. A. Hammond, Rev. M. J. Savage, Chancellor Howard Crosby—shows that the plan of bespeaking essays from celebrities at a liberal price will be followed here as in the older magazine. It shows, too, what a very artificial *forum* Mr. Metcalf presides over; in appearance an English review, but in fact not the natural medium of the persons we have just named, nor one called for by the amount of thought and culture seeking expression in this country. Mr. Hale lets the cat out of the purveyor's bag in his article, "How I was Educated": "The editor of the *Forum* has thought that a series of papers in which different people shall describe the methods of their school education may be at least amusing, and perhaps profitable, if only by way of caution. He has, therefore, induced a good many men to pose on his platform as 'awful warnings,'" etc.

Mr. Rideing's pretty volume, 'Thackeray's London' (Boston: Cupples, Upham & Co.), with two good portraits of the novelist and some other interesting illustrations, is an extension of a magazine article previously published, and makes a convenient guide-book to the haunts and dwelling-places of the novelist and his characters. The slight localization of his scenes Mr. Rideing mentions as a characteristic of his art; and in consequence of this the volume is slight and sketchy, and somewhat padded with anecdote and sentimental criticism, the pages on the Charter-house and the Athenæum Club being the most substantial part.

To Mackenzie's 'Man of Feeling' (No. 5 in Cassell's National Library) the editor, Prof. Morley, prefixes an "index to tears (chokings, etc., not counted)," by way of preparation for this sentimental romance of the last century. Izaak Walton's 'Complete Angler,' we should have stated, is No. 4 in the same series.

One of the most delightful of misprints is to be found in the recent charming little sketch of 'Madame de Maintenon,' by Mr. J. Cotter Morison. Mme. de Maintenon was fond of being asked to go up higher, gratifying her pride by refusing the proffered honor, and Mr. Morison declares that "she belongs to the class of *glorieuses modestes*, as Sainte-Beuve says, with untranslatable felicity." And the English printer, with a felicity as great as the French critic's, has made it appear that the second wife of Louis XIV. "belongs to the class of *glorieuses modistes!*"

Mr. Frederick Locker, the lyrist of London, has one of the finest collections of rare and beautiful books in England; it abounds in scarce first editions and contains many curious MSS. Mr. Locker has at last been persuaded to print a catalogue of the Rowfant Library, and it will appear in March, only 150 copies being printed, a few of which will be for sale through Mr. Quaritch. Mr. Andrew Lang has written two poems to adorn the catalogue.

It may be noted that Mr. Lang is generally credited with the authorship of the clever mythological sketch in the current *Macmillan* on the "Gladstone Myth."

Dr. McCosh's recent critique of President Eliot's paper on college sectarianism has been printed as a pamphlet by A. C. Armstrong & Son. As nearly as we can make out, the Princeton President is averse to compulsory worship, but disposed to have the Christian evidences (*alias* Calvinism) taught as stringently as the classics or mathematics, allowing no difference between them as natural obligatory culture.

The report of the Commissioner of Education for 1883-84 has just emerged from the Government Printing Office. It contains the customary general review, with detailed statistics from every State in the Union, a glance abroad, and much other matter valuable for reference. A perennial interest attaches to the amount of gifts and legacies in behalf of education which private benevolence never ceases to pour out. From January 1, 1883, to July 1, 1884, it is estimated at upward of eleven million of dollars —nearly a million a month; the particulars are tabulated so far as known. Table XXIV. of "Publications, educational, historical, etc., for 1883-84, compiled from publishers' announcements," is of doubtful propriety, considering the range allowed it, and to be available ought to have been classified or alphabetized on a quite different scheme.

In contrast with the foregoing, a high degree of readability can be predicated of another Government publication, 'The Fisheries and Fishery Industries of the United States. Section I.—Natural History of Useful Aquatic Animals, with an atlas of 227 plates.' This work has been prepared under the direction of Mr. George Brown Goode, assistant director of the National Museum, with the aid of twenty associates. It is an outgrowth of the census of 1880, and will consist ultimately of thirteen parts, all, like the present section, being fairly to be called popular science and popular reading. The fisheries statistics proper are included in the census series. Whales and porpoises, seals and walruses; habits of the fur-seal; manatees and arctic sea-cow; alligator and crocodile, amphibians; a host of fishes; mollusks, and the oyster in particular; crustaceans, worms, radiates, and sponges—these are the subjects of the several chapters. Readers, old and young, will find in them a great deal that is new, fascinating, and instructive. The plates are in a volume by themselves, and offer still further attractions.

At least three of the leading articles in the *American Naturalist* for March will arrest attention. First in order is the Rev. J. Owen Dorsey's "Migrations of Siouan Tribes," illustrated by numerous maps. Mr. I. Lancaster's "Torture of the Fish-hawk [viz.: by the Frigate-bird]," is remarkable for its graphic description of bird life on the Florida Keys—almost painful in the sympathy which it evokes for the unfortunate victim of the aerial bandits. Finally, Mr. L. P. Gratacap briefly tells of some important recent discoveries of fish remains and tracks in the Triassic rocks at Weehawken, N. J., and pictures the scene and some of the remains.

We have on our table the Proceedings of the American Forestry Congress at its Boston meeting last September—a thin pamphlet, procurable of the Secretary, Mr. B. E. Fernow, 13 Burling Slip, N. Y.; and the Proceedings of the American Pomological Society at its twentieth session, also in September, 1885, at Grand Rapids, Mich. This is a generous quarto, full of practical information concerning not only apple culture, but also that of other fruits, large and small. It may be had of Mr. Charles W. Garfield, Secretary, at Grand Rapids.

The most striking thing in the March number of the *Book Buyer* is the portrait of Mr. Robert Louis Stevenson, from a private photograph by Sir Percy Shelley. It is what a picture-auctioneer would call "very characteristic": the face has a look of strange power. Mr. Laurence Hutton's interesting and gossiping series of papers on American book plates is continued with facsimiles of four specimens, among which is the famous Harvard College *detur*. For the rest, there are the usual reviews of new books, some illustrated, among which we may note one by Mr. J. B. Millet, of the forthcoming memorial to George Fuller.

Dr. Stillé's paper on "Religious Tests in Provincial Pennsylvania" is the most substantial and valuable feature of the *Pennsylvania Magazine of History and Biography* for January. It disposes of a prevalent notion that the colony was exempt from such tests, whereas, says Dr. Stillé, "its Quaker inhabitants did share the opinion of the whole world at that time, that an orthodox faith was an essential qualification for civil office."

Mr. Hamerton's further chapters on "Imagination in Landscape Painting" alone would make the February *Portfolio* attractive, but one can also enjoy Mr. F. G. Stephens's second paper on James Ward, the animal and allegorical painter, well illustrated, like Mr. Hamerton's; and there is begun a sketch of the late Hans Makart, by Mrs. M. G. Van Rensselaer. The frontispiece is an honest and effective etching after a character study by Norman Macbeth, whose son has handled the needle. A mezzotint engraving, from a landscape by Gainsborough, will ultimately adorn the book which the editor is now evolving month by month.

Parts 11-17 of the 'Allgemeine Naturkunde' (B. Westermann & Co.), are devoted largely to Africa, the people of the interior of the West Coast in especial; but also to a general anthropological discussion, and to the animal Man. The woodcuts continue most interesting and authentic, and represent racial types, weapons, implements, village architecture, etc. Several anatomical plates are beautifully colored.

Miss F. Helen Prideaux has died of diphtheria, contracted while holding the post of house surgeon at the Paddington Hospital for children. She was one of the most distinguished women who have graduated in medicine at the University of London. At the intermediate examination she obtained the first place in honors in anatomy together with the gold medal and scholarship; and in the final examination, in 1884, she was placed in the honors list in every subject.

An effort is making, and ought to succeed, to raise $1,000 in twenty subscriptions, to purchase for the National Museum the invaluable life casts of President Lincoln's face and hands, now temporarily deposited in the Museum at the Central Park They were taken, as readers of the *Century* will remember, by Mr. Leonard W. Volk, the sculptor, in June, 1860. The subscription of $50 will secure plaster replicas of the three pieces, and for $85 bronze replicas will be furnished (or $75 for the head alone in bronze, and the hands in plaster). There are certain conditions as to multiplying copies other than these. Subscriptions may be made to Mr. Augustus St. Gaudens, 148 West Thirty-sixth Street, or to Mr. R. W. Gilder, editor of the *Century Magazine*, 33 East Seventeenth Street.

Anything which makes the relations between Columbia College and the city closer, is to be welcomed, and we are glad to see announced six free public lectures by Prof. H. H. Boyesen, on the four Saturdays in March, and on April 3 and 16. The subjects are the French Novelists; French Poets and Critics; the German Novel; the English Novel; Russian Novelists and Nihilists; and Scandinavian Poets and Novelists. The hour is 11:30 A. M. to 12:30 P. M. Tickets can be had by addressing Professor Boyesen at the college.

— President Eliot's annual novelty might be described as a scholastic photograph album. In order to exhibit beyond cavil the workings of the elective system at Harvard, he has tabulated in his report the choice of work, during three years, of the two latest graduating classes, man by man, to the number of 350. Each *cadre* has a physiognomy of its own as real and as distinct as that of the student in the flesh, and affords a basis for much interesting deduction and speculation. Thus, in order to ascertain how far the new freedom tends to smattering, to dissipation of culture, to illogical and inharmonious education, these tables were separately subjected to the scrutiny of three experts, who found, all told, only twenty-one cases open to this reproach, though they agreed as to only six. This is a very remarkable showing, and bears directly on the question, which President Eliot discusses, whether the natural and artificial restraints of the existing system do not produce a satisfactory grouping of kindred studies, without the evils incident to a formal, inflexible grouping. On the other hand, specialization appears not to have been carried to excess, and it is equally certain that "soft" subjects are not unduly in request. President Eliot demonstrates the marked effect for good in many ways of the elective system on the intellectual life of the college, and finds a happy example of the value of a varied spontaneous discipline in the composition (according to the tables above mentioned) of "a well-known small literary society in which the members enjoy a close intellectual intimacy." He concludes, in answer to a question often asked, by stating that the degree of Bachelor of Arts means at Harvard "that all Bachelors of Arts have spent from seven to ten years, somewhere between the ages of twelve and twenty-three, in liberal studies." It should be added that President Eliot does not regard the present system as a finality, but as infinitely perfectible, holding fast to the fundamental law of freedom. We observe no flaw in his argument from experience, except what may lurk in the acknowledged defects of the marking system. It would, however, meet an objection occasionally heard if in some other report it should be shown how far cramming has been fostered by the new régime, can escape detection and secure rank or honors.

— We regret President Eliot's inadequate and unsympathetic allusion to the movement against compulsory prayers, even while recording on the same page the abandonment of control of the student's church-going on Sunday. The reports of the several departments are, as usual, full of instruction. The elective system has been hopefully introduced in the Divinity School, where also "politics in the pulpit" has been countenanced by systematic "recognition, as a part of training for the ministry, of the study of social reforms." Mr. Winsor, reporting the condition of the Library, utters a gentle protest against the natural tendency on the part of instructors to demand current periodical literature to such an extent as seriously to encroach on the funds available for the purchase of books. We observe that the number of German books bought in the past two years was about double the number of French; and it is a singular result of the regulation in regard to the Freshman study of modern languages that, French being the one most easily and therefore commonly acquired for admission, German becomes obligatory upon and is pursued by much the larger number. Mr. Agassiz rehearses the inspiring story of the development of the Museum founded by his father, originally as a State institution, and calls attention to the curious coincidence that this foundation "dates from the publication of the 'Origin of Species.'" Noting the revolution

in scientific thought produced by this work, he says:

"Should the synoptic, the systematic, the faunal, and the palæontological collections cease to bear the interpretation given to them by their founder, their interest and importance, even for the advocates of the new biology, would not be one whit lessened. If the anatomical, embryological, synthetic, and other series presented by the pupil of Cuvier from his point of view, are differently considered to-day by the followers of Darwin, they may for this very reason have gained a general interest they did not formerly possess."

—A new volume has just been published of 'Ersch und Gruber's Encyklopädie,' extending from *Kocher* to *Koeppen*. As usual in this work, much space is devoted to elaborate biographies of German men of learning who are but little known outside of their own country; but there is also a fair proportion of articles of general interest. The longest one in the volume, filling thirty two pages, is on coal, of which four are devoted to diamonds, as one of the forms of carbon. A statement is here made which will be new to most readers, viz, that in consequence of the more frequent occurrence in late years of large stones, the value of diamonds no longer increases with the square of the weight, but simply in direct proportion with the weight. The old rule is the one given in volume vii of the 'Britannica,' published in 1878. There is also an article of nine pages, by E. Kautsch, on Koheleth, or, as it is called in our English Bible, the Book of Ecclesiastes. This gives a summary of the contents of the book, an account of the various theories concerning its authorship and the period of its composition, and a very full bibliography, brought down to 1883. The article *Kongo* requires more than ten pages, and comes down to April 29, 1885. The editor apologizes for printing a second article on this subject, and pleads that the article Congo no longer represents the present state of knowledge. As the latter was published in 1829, the statement will be readily believed. Full justice is done to Stanley, the author of the article quoting as well earned the praise bestowed by Petermann as follows: "Stanley has done more than the whole scientific explorations of the interior of Africa had accomplished in thirty years; more than all European travellers who for a century had penetrated into the interior of Africa; more than all the hoary and classic ancients put together; he has collected more information than all the millions of natives possessed about their own country. There is no similar example in the entire history of discovery." The Congo Conference is treated in detail. Fourteen pages are devoted to Greek and to Roman Comedy, twenty to Constantinople, four to Comets. But perhaps the characteristics which distinguish this work from other encyclopedias can be best indicated by noting that it has an article of three pages on Theodor Kolokotronis (1770-1843), a leader in the Greek war of independence against Turkey; one of four pages on Koloman, a King of Hungary from 1095 to 1114; one of nearly four pages on the Kolarian languages, of which the Sántáli or Santhal and the Mundári are the only ones that have been reduced to grammatical treatment. The letter K being comparatively barren of subjects, this may be considered a remarkable exhibit.

—The Goethe-Gesellschaft at Weimar, constituted in June, 1885, has just issued, to members only, its first publication, 'Letters of Goethe's Mother to the Duchess Anna Amalia,' edited by C. A. H. Burkhardt. It forms a handsome, well-printed 12mo, containing Burkhardt's short introduction, forty-nine letters of "Frau Aja," correctly transcribed from the originals, preserving her orthography and punctuation (therein differing from previous publications of selections), and four letters of the Duchess to Goethe's mother, with twenty pages of notes and explanations and an index. Appended are the first report of the managing committee, a list of members at the close of 1885, and the statutes. The Grand-Duke of Saxe-Weimar is the society's patron, Dr. Simson, of Leipzig (Chief-Justice of the German Supreme Court and for many years presiding officer of the German Reichstag), is President. Baron von Loën at Weimar heads the managing committee. Twenty princes and princesses are members—Karl August's granddaughter, the German Empress; the German Crown Prince and Princess; and the Queen of Italy, granddaughter of the late King John of Saxony, among them. The list foots up 1,304, the United States being represented by six members. The annual dues are only ten marks (about $2.50), and entitle members to a copy of the *Goethe-Jahrbuch*, which will hereafter be the official organ of the society. They also have the privilege of buying at half-price the previously issued volumes of this important and valuable publication up to the close of the current year until the edition is exhausted. For the first year the letters of Goethe's mother are substituted for the *Jahrbuch*. Members will enjoy special rates in purchasing later publications, which will not generally be for sale. Hence our public libraries and all interested in the study of Goethe should become members and secure copies of these publications. Mr. E. Lemcke, of B. Westermann & Co., New York, offers to receive and forward the annual dues, and, if desired, the publications also, which our tariff, however, makes dutiable at 25 per cent. ad valorem, unless sent by mail, when they are appraised at the pleasure of the examiner stationed at the post-office.

—The Paris papers speak in glowing terms of the reception of M. Ludovic Halévy at the French Academy on the 4th of February. Never since the reception of the Duc d'Aumale has there been such a brilliant gathering and so much animation. The new member recounted in the simplest manner the life of his predecessor, Comte Othenin d'Haussonville, dwelling as much upon the political and benevolent part of his career as upon his literary and historical labors. The passages relating to the 'Histoire de la réunion de la Lorraine à la France' were particularly felicitous. There were perhaps too many allusions to the politics of the day, both in M. Halévy's discourse and in the reply to it, and some slightly malicious hits which were calculated to please the special public of the occasion. But the French Academy has never been very republican in its tone. M. Pailleron's answer was a series of bright flashes, witty, amusing, and as remote as possible from the conventional Academic oration. It was a rare pleasure to hear the author of "Le monde où l'on s'ennuie" extolling the art which has brought into the Academy both himself and the clever author of comedies whom he was receiving. After an eloquent tribute to the power of the stage, he passed on to the recent novels of the recipiendary without dwelling too much upon his rather light plays, almost all produced in collaboration with M. Meilhac. He insisted perhaps too strongly upon the merits of 'Monsieur et Madame Cardinal' and of 'L'Abbé Constantin,' praising the healthy cheerfulness of their author. If M. Pailleron is to be believed, French gayety has given place to a sickly pessimism and to sadness. But what better proof of the contrary than the very discourse in which he said this, and the satisfaction of the audience, whom both he and the newly received member charmed by their liveliness and grace? For the two obtained an unusually brilliant success. According to M. Francisque Sarcey, both read delightfully, and who is a better judge of this than M. Sarcey?

—M. G. de la Landelle, who died recently in Paris, aged 74 years, was a man of considerable merit and a writer of no little repute in years past. Entering the French navy as a midshipman, he served with distinction, and had risen to the rank of lieutenant on a first-class frigate, when, from political motives, he resigned his commission in 1839. He then devoted himself to literature. His first book, 'Les Français peints par eux-mêmes,' was received with much favor, and placed him at once among the popular writers of the time. It was in the halcyon days of the literature of fiction which followed the advent of Romanticism, when Balzac and Dumas were writing novel after novel with a rapidity unequalled since. De la Landelle chose for his especial line the maritime novel, for which eleven years' navigation in distant seas had supplied him with inexhaustible material. He became the French Marryat. A man of sound morals, with the strong religious opinions and the high breeding which distinguished the old French nobility, his books, like his life, were pure and free from everything coarse or vulgar, even though he described the rough manners and varied adventures of the seaman. His 'Gorgon' and his 'Nightwatches' are the best remembered of his fifty-odd works of fiction. He continued to write until his death, but his books could not find favor with a generation of readers who admire Zola and his school. M. de la Landelle's energy did not flag with the advent of old age. He took a lively interest in everything that would tend to improve the condition of man. He was truly progressive, and had an unwavering faith in the capabilities of modern science. One of the last problems to which he turned his attention was aerial navigation, in the final success of which he believed. His patriotism was sincere. When Paris was besieged by the Prussians, M. de la Landelle, then in his 60th year, donned his old lieutenant's uniform, and did good service at the head of a detachment of sailors. He was one of the oldest members of the *Société des Gens de Lettres* and an officer of the Legion of Honor. Strangely enough, M. de la Landelle has left an important posthumous work which is mainly of American interest. This work, to which he added the word "finis" only a few weeks before his death, is an historical novel called 'Robert Fulton and Steam Navigation.' M. de la Landelle had visited this country in years past, and this project of an American novel haunted his mind until last year, when, having gathered abundant material, he set to writing it. Before his book was finished he made arrangements with a friend in Baltimore to translate it, and it is expected that the English version will appear here almost simultaneously with the publication in Paris of the French original.

—Count Goblet D'Alviella, treating "Des préjugés qui entravent l'étude scientifique des religions," finds five. The first is the religious, which starts by regarding one religion as divine, and all the rest as inferior if not diabolical. The second, not less fatal to scientific investigation, is the anti-religious, which despises them all. The third is the philosophical, which seeks to find in the facts a confirmation of a preconceived theory. A fourth source of error is the tendency to hasty generalization. One man finds that priests have been strenuous in maintaining some decaying faiths, and concludes that all faiths were invented by priests. Another sees in all deities deified men. A third is sure that they are all personifications of natural forces. Another maintains that all mythology is misunderstood metaphor. Count Goblet D'Alviella thinks that there is some truth in all these theories — that one may apply to one nation, another to another, and that one must not apply one theory to all races, nor be too ready to affirm the

identity of religions widely separated by time and space. He is an eclectic. Mr. Maurice Vernes, whose specialty is Semitism, but who is interested in all religious history, goes further; he is an agnostic. He maintains not only that we are not in a condition yet to give any general theory of religions, but that we must not say anything about the origin (or origins) of religion at present. The science is in its earliest infancy—at that stage where it needs observers to collect facts and not theorizers to misinterpret them. We are always hearing such warnings in every science, but the crop of theories does not seem to diminish. Nor is it altogether to be regretted. Although the generalizations are hasty, and the one which is all-convincing to-day is laughed at to-morrow, yet they do good; for it is the interest which the theory inspires that leads to the collection of the facts which destroy it.

—All persons interested in the study of the topography of Ancient Rome will be glad to learn of the publication of a new volume of Jordan's 'Topographie der Stadt Rom im Alterthum' (Berlin: Weidmann). The new instalment is Part 2 of vol. i (vol. ii having been already published), and is a volume of 487 pages, containing five plates and a plan of the Forum. This volume is probably that portion of the work which will be of most general interest, as it is devoted to the Forum and some of the adjacent parts, and is prepared with the aid of the knowledge derived from the extensive excavations in this part of the city during the last few years. It contains four sections—the Capitolium, the ruins of the Forum and Sacred Way, the history of the Forum, etc., and the neighboring squares and market-places. The plan is very complete and detailed, giving the present condition of the Forum rather than its arrangement at any one historical epoch; so that it is necessary to consult the text in order to reconstruct it for the past. It will be enough here to call attention to two or three important points in regard to which this book shows the prevailing views to have been changed by the recent discoveries. First, it is now agreed that the Comitium lay upon the northern side of the western end of the Forum, a distinct place, separated from the Forum in later times by a street. On the line between the two the rostra originally stood, until moved by Cæsar to the spot where they are now to be seen. Secondly, the trapezoidal form of the Forum given by most plans is incorrect, and some consider its form to have been a parallelogram. Jordan, however, argues with great force that the northern side, after running parallel with the southern from the temple of Antoninus and Faustina to the cross-street (of late origin), from this point curved to the north, so that at the western extremity of the Forum it ran parallel with the front of the Curia—represented by the Church of San Adriano. Thirdly, it follows that the Sacred Way could not have run along the northern side of the Forum, as is usually assumed, but, after descending the Velia in front of the Basilica of Constantine, bent to the left, so as to reach the Forum at a point about opposite the Temples of Vesta and of Castor. From here a street (the one now uncovered) led directly along the south side of the Forum, leaving the Basilica Julia upon the left, and winding about the Temple of Saturn (the ruin with eight columns), joined the Clivus Capitolinus; but Jordan holds (in opposition, we think, to most authorities) that this continuation was not called Sacred Way.

—Sainte-Beuve said many years ago that Madame de Maintenon was "better than her reputation." This will not remain true after the many books that have been published of late upon her labors as an instructress of young girls. The excellent work of M. Gréard has done much to rehabilitate the memory of a woman whom the world has seen heretofore through the eyes of the not unprejudiced Saint-Simon. M. Émile Faguet has found something to add to the labors of his predecessors in his little volume, 'Madame de Maintenon Institutrice' (Paris: Oudin; Boston: Schoenhof). After an able and very interesting introduction on the life of Madame de Maintenon, he gives us long extracts from her letters, conversations, and several of her proverbs, all written for the school of Saint-Cyr, to which she devoted the latter part of her life. Viewed from this centre of her beneficent activity, the character of the companion and intimate adviser of the last thirty years of Louis XIV. may inspire, if not a warm sympathy, at least respect. Her reputation has everything to gain in not resting on what she did or did not do at court in the last sad years of her royal husband.

JOWETT'S POLITICS OF ARISTOTLE.

The Politics of Aristotle. Translated into English, with Introduction, Marginal Analysis, Essays, Notes, and Indexes. By B. Jowett. Vol. I., part 2, Vol. II. part 1. Oxford: At the Clarendon Press; New York: Macmillan. 1885.

THE translations of the Master of Balliol have passed into the list of the accepted classics of this sphere of English literature. Protest has not been wholly wanting, but the voices of the protesters have not been potential. The student of Thucydides who sees in the "tormented" style of that great author the impress of his age, with its consciousness and its contradictoriness, may resent an English Thucydides that runs trippingly from beginning to end. The lover of Plato may object to the smoothing and flattening process which reduces the high waves of the "great ocean of the beautiful" to a gentle ripple, may object to the bridging process which carries one dryshod over currents that must be battled with by the swimmer, if the power of that ocean is to be felt at all. But to most people Doctor Jowett's crisp, clear English has a charm that no countercharm can break. To have a Thucydides, a Plato that one can read as a pleasure is a great boon, and if the student does not repose his faith implicitly in Doctor Jowett's version, and does not undertake to argue from the translation as from an original, even the grim professional Hellenist may be content to let Doctor Jowett have all the praise that has attended his work in this line. Doctor Jowett has been for years a great power in Oxford, and behind the translation we feel the brilliant, fascinating, moulding master, with whom many would prefer to go wrong rather than to go right with a more painstaking fitter of idiom to idiom. With Aristotle, too, the case is different. Aristotle is not literature in the sense that Thucydides is literature and Plato is literature. When one has read one's self into him there is a certain hard pleasure in the notebook style, and occasionally there breaks out something that shows the possibility of the *flumen orationis aureum* of which Cicero speaks; but on the whole the average man will be content to get at Aristotle's thoughts—thoughts of inevitable importance—without too much trouble, and Doctor Jowett has made the way easy. Aristotle may have been "superior to Plato as a poet," "he may come much nearer to the true lyric cry" than Plato, as Mr. Benn declares, but the cry is too often a cry in the night, and one longs for such a candle as Doctor Jowett brings.

The first volume of Dr. Jowett's work consists of an introduction, which is a very full summary, or rather recasting, of the eight books of the 'Politics,' with running comments and parallels of the highest interest and the most manifold suggestiveness, in which emphatic agreement and loud dissent are repressed by a wise and large toleration. In the translation itself we must be prepared to find that the desire to make a lucid and attractive English has not only effaced much that is characteristic of the author and the nationality, but has prompted changes that involve the continuity of the thought. It is often well in translating Greek or German into English to break up one sentence into two, as it is often advisable in translating French into English to roll two sentences into one. But when we break up a sentence we must be sure not to destroy the nexus of the thought; when we roll two sentences into one we must be careful not to impose a nexus that does not exist in the original. Still, so imperfect is the condition in which Aristotle has come down to us that a certain amount of bridging is absolutely necessary, and Dr. Jowett does not seem to have gone further in this direction than Bernays has done in his admirable rendering. Of course no sensible man will object to the modern phraseology in a translation which is written, not for students of Greek, but for students of culture, and no one can fail to be entertained at finding the cant of our times in the pages of the Stagirite. Still, it may be well to remind those who think that they can dispense with the original, that any idiomatic rendering is fatal to atmosphere. The mere order of words means something. The Greek did not uniformly say "children and women"; that he had no law to force him to say "women and children" is of unmistakable significance. But as men will read Jowett's Plato and Thucydides and Aristotle who would never read either the originals or the ordinary translations, Hellenists, whose business is supposed to be threatened with extinction, will rejoice at a popularity that cannot fail to bring about a closer study of the Greek, whenever anything turns on the exactness of the rendering. The first part of vol. ii discusses many such points. The second part of the same volume, containing the Essays, is still in arrear.

"The half-understood words of Aristotle have become laws of thought to other ages," says Dr. Jowett; and in reading the 'Politics,' which reminds us so often of the fathers of the Constitution, and other theorists of the same stratification, one cannot help wondering at the effect which a perusal of this book would produce on a "worker," a "manager," a leader of the "boys," if by chance he should be forced to study the 'Politics,' which, as Dr. Jowett assures us, "continues to have a practical relation to our times," "Mugwumpery" and all. Imagine the disgust of such a one at the muddle that the so-called thinker has made of some of the simplest elements of political life, of rotation in office, of the province of the official, of the natural and sensible evolution of all office-holding. "When the state," he says in Dr. Jowett's version (iii, 6), "is framed upon the principle of equality and likeness, the citizens think that they ought to hold office by turns. In the order of nature every one would take his turn of service; and then again somebody else would look after his interest, just as he, while in office, had looked after theirs." This is almost as bad as considering a public office a public trust. But think of the ineffable innocence of a man whose sarcasm is as pointless as this: "But nowadays for the sake of the advantage which is to be gained from the public revenues and from office, men want to be always in office. One might imagine that the rulers, being sickly, were only kept in health while they continued in office; in that case we may be sure that they would be hunting after places."

But Dr. Jowett himself is little better than a "Mugwump," and we doubt very much whether he would have much sympathy with practical politicians. Still, it may be well to give, in clos-

ing this necessarily inadequate notice of an important book, a specimen of his reflections on the significance of the political thinkers of antiquity for the movements of our own times:

"The formula," he says (p. cxxi), "that the state is only 'a machine for the protection of life and property,' though rather worn out and discredited in our own day, had a great hold on the last generation of statesmen. When the pendulum has swayed long enough in the other direction, the world may return to the saws of political economy for the recovery of some truths as well as errors which are contained in them. At present we are living in an age which is averse to such formulas, which feels that more is needed; and the study of ancient political philosophy has helped to restore a more elevated conception of society. In Aristotle and Plato we have different types of ideal states—a perfect state on the ground, and a perfect state in the air, to which we may look as the form or example of a higher political life. Such ideas are apt to become unreal, and may even be injurious when they supersede the natural machinery of government, but, when rightly infused into the mass of human motives, they seem to be worth all the rest. They must be clothed in circumstances, and then they become to the state what the mind is to the body, what the higher thoughts of man are to mere habits and fashions."

LECHFORD'S NOTE-BOOK.

Note-Book Kept by Thomas Lechford, Esq., Lawyer, in Boston, Massachusetts Bay, from June 27, 1638, to July 29, 1641. Cambridge: University Press. 1885. 8vo, pp. 460.

In 1642 Thomas Lechford, "of Clements Inne in the County of Middlesex, Gent," published his 'Plain Dealing: or Newes from New England.' It was a sketch of the settlement in New England, made by one who had spent some three years there, and who was therefore competent to inform a public interested in the success of the enterprise. Lechford, who seems to have been an attorney by profession, was a Puritan, but of a peculiar pattern. He had suffered imprisonment and some kind of banishment for his opinions, and he sought New England as a haven of refuge, not improbably with the hope of also finding there recognition and prosperity. In this, however, he was mistaken. Boston was a good place for those who held with the majority, but those who held different views were neither wanted nor tolerated. It would be useless to attempt to expound Lechford's peculiar theological whimsies, but it is enough to say that when he propounded them to Thomas Dudley, they were not acceptable to the Deputy Governor. He found his hopes of professional success disappear, and a slight mistake "in going to the jury and pleading with them out of court," was justification for forbidding him to plead any other man's cause. He picked up a precarious living by copying records and drawing deeds and law-papers, consoled himself with theological disputes, and finally gave up the fight and returned to England. He was by no means a prominent actor in the early affairs of the Bay colony, though perhaps a typical one, and yet his name will always be remembered in Massachusetts history from the accident of his being an early eye-witness and recorder of events.

The little that is known of his life was carefully collected by J. Hammond Trumbull in his admirable reprint of Lechford's 'Plain Dealing,' issued in Boston in 1867. The volume under review, recently published by the American Antiquarian Society, will renew the interest in Lechford, and will give him fresh renown as an important authority on matters affecting the first settlers at Boston. During his residence here Lechford kept a memorandum book of his work as a lawyer. In it he entered copies, more or less extended, of the deeds he drew, the business letters he wrote, and the business papers which he prepared for his clients from 1638 to 1641. As this period antedates the date of the Book of Possessions for Boston, that census of owners in 1645, new facts are thus obtained. Moreover, in many cases Lechford prepared documents disposing of property in England for his clients, or in other ways gave a clue to their relationships in the land they had so recently left. Such indications are so provokingly rare in the early records that every new scrap of information is eagerly welcomed.

The manuscript volume, after unknown adventures, became the property of the late Samuel Jennison of Worcester, whose son has presented it to the Society. Twenty-eight years ago Mr. Jennison showed the book to Dr. Trumbull, and sought his coöperation in preparing it for the press. From various causes the publication has been delayed, and it has finally appeared under the editorial care of Edward E. Hale, jr. The preface, by Dr. Trumbull, is a summary of that prefixed by him to the 'Plain Dealing.' The contents can hardly be described in detail, as the memoranda follow each other chronologically and without regard to their nature. The genealogical items can be separated more easily, and we will proceed to do that portion.

1. Augustin Clement of Dorchester, N. E., leased land in Wockingham, co. Berks.

2. John Hood of Cambridge, N. E., leases land in Halsted, co. Essex.

3. Samson Shotton of Mt. Wollaston, N. E., son of Thomas S. of Cropston, co. Leicester, mentions brother Anthony S.

4. The will of John Newgate of Boston, N. E., mentions land in Horningerth, co. Suffolk.

5. William Wilson of Boston, N. E., sells land in Dunnington, co. Lincoln.

6. Katherine Coytmore of Charlestown, N. E., states that her husband was Thomas Grey of Harwich, co. Essex, and her daughters were Parnell, wife of Increase Nowell of Charlestown; Katherine, wife of Thomas Graves of Wapping; and Susanna, widow of —— Eaglesfield. She was daughter of Robert Myles of Sutton, co. Suffolk.

7. Rev. John Cotton of Boston, N. E., makes Robert Brown of Poynton or Horbling, co. Lincoln, his attorney.

8. Ralph Sprague of Charlestown, N. E., sometime of Fordington, co. Dorset, and wife Joan, daughter of Richard Warren of said F., make William Derby of Dorchester, co Dorset, their attorney.

9. John Graves of Roxbury, N. E., makes Robert Wood of Harlow and Nicholas Campe of Nasing, co. Essex, attornies to receive rents from his sister, the widow Lydia Ford of Nasing.

10. Elizabeth and Mary Woolcott, daughters of John W. of Glaston, co. Somerset, and late of Watertown, in N. E., appoint their uncles, Richard Vayle and Christopher Atkins of said G., attorneys. [Note in margin, write to Henry Woolcott of Windsor in N. E., and Edward W. of Axbridge, co. Somerset.]

11. James Cade of Northam, co. Devon, now of Boston in N. E., had father Christopher C., brother John, and sister Thomasine, wife of John Roe of Abbotsham, co. Devon.

12. Henry Grey of Boston had a brother who was a citizen of London.

13. Matthew Allyn of Connecticut sold land to Thomas Allyn of Barnstable, co. Devon.

14. Osmond Douch of Bridport, co. Dorset, had wife Grace and son Robert. He was afterwards of Gloucester in N. E.

15. Thomas Purches of Pagiscott in N. E. makes Daniel Adams, roper and citizen of Bristol, his attorney.

16. Edmund Brown and wife Anna, late widow of John Loverun of Watertown in N. E., appoint attorneys to collect her dower in lands in Ardley, co. Essex, or Aldham, co. Suffolk, in possession of William or George Loverun.

17. William Cole, late of Sutton in Chewmagna, co. Somerset, and [Elizabeth] his wife, a daughter of Francis Doughty of the city of Bristol, make brother John Cole of Farrington, co. Somerset, their attorney.

18. Thomas Foster of Boston, cannonier at the Castle, makes Richard Foster of Ipswich, his brother and others, attorneys to receive his legacy under will of father Thomas Foster, minister. His wife was Abigail, daughter of Matthew Wimes, of Ipswich, co. Suffolk.

19. John Iles of Dorchester in N. E. owed £28 to Adam Hurden of Barnstaple, co. Devon.

20. Joseph Hills of Charlestown states that he came in the *Susan and Ellen*, and that in that vessel were goods of Joseph Loomis, late of Brayntree, co. Essex.

21. Thomas Rucke of Charlestown makes Thomas Rucke of London and Thomas Plum of Malden, co. Essex, his attorneys to collect debts.

22. Edmund Hubbard of Hingham in N. E. married Sarah, widow of Rev. John Lyford, who had children Rev. Obadiah and Mordecai L. The last-named made Hubbard his guardian, who appointed William Bladen, Alderman of Dublin, and John Fisher of the same place, attorneys to sell a lease at Leballeglish, co. Ardmagh. Elsewhere Lyford is called the minister at Levelegkish near Laughgaid, co. Ardmagh.

23. John Cogan of Boston in N. E. makes Isaac Northcot of Hunniton, co. Devon, his attorney to receive any legacy under the will of his mother, Elianor Cogan of Tiverton, co. Devon, widow, deceased.

24. John Cogan appoints his friend John Stoning, citizen and haberdasher of London, to sue one John Harrison, late of Boston in N. E., for £26 he owes said Cogan.

25. John Faber of London, cooper, sells to Christopher Stanley of Boston in N. E. his house there.

26. John Cogan of Boston appoints Nicholas Carwithye, citizen and grocer of Exeter, his attorney to collect of the executors of Ignatius Jordan, of said Exeter, £66 due him by bond, and also all legacies from I. J. to C. or his wife or children.

27. Anne Coleman of Watertown in N. E., spinster, aged 16, and Samuel Hosier of the same, her guardian, appoint Jeffery Coleman of Colchester, co. Essex, and James Wade of the same, attorneys to receive a legacy for her under the will of her father, William Coleman of said Colchester.

28. Francis Godsome of Lynn in N. E. is to sell his house to John Fuller of Boston, if Edward Fuller of Olney, co. Bucks, pays £60 unto said F. G.

29. John Crabtree of Boston, joyner, takes as apprentice Solomon, son of John Greene of Hadley, co. Suffolk. Mary Greene, sister of Solomon, was to be taken by William Hudson, the younger, fisherman. Elizabeth Leger, mother of Solomon Greene, was to pay Crabtree annually £5.10, and the boy was to get £20 at the end of his apprenticeship.

30. Edward Wood assigns his apprentice Thomas, son of Henry Cooper of Little Bowden, co. Northampton, to Leonard Buttolpe, of Boston in N. E.

31. Thomas Mayhew of Watertown in N. E. and Jane his wife, widow of Thomas Payne of London, as guardian of Thomas Payne, aged seven years, appoint Richard Payne of Abingdon, co. Berks, and others, attorneys to lease lands in Whittlebury, co. Northampton, descending to said child.

32. David Offley of Boston and wife Elizabeth appoint Edward and Henry Woolcott, Richard Payne, and Christopher Atkins attorneys to sell their lands in Glaston. (See No. 10 *ante*.)

33. Katherine Earwing, widow, of Dorchester, makes Anthony E. of London her attorney.

34. Josiah Stanborough of Lynn in N. E. and

wife Frances, one of seven daughters of Henry Gransden of Tunbridge, co. Kent, appoint Richard Young of London their attorney to obtain their part of his lands.

35. Michael Williamson and wife Anne make Anthony Stapley of Patcham, co. Sussex, their attorney to receive of Elizabeth Geere, widow, of Lewes, co. Sussex, executrix of Dennis Geere, late of Saugus, a legacy of £50 given to said Anne by the name of Anne Panckhurst.

36. Thomas Nichols of Hingham had a brother who was the executor of Walter Nichols of Coggeshall, co. Essex.

37. Joseph Cooke of Cambridge in N. E., son of Thomas Cooke of Great Yeldham, co. Essex, makes his brother Thomas C. of Wormingfold in Essex his attorney.

38. William Sergeant of Charlestown in N. E. was formerly of Northampton, hatter, and his wife Sarah was the widow of William Minshall of Whitchurch, co. Salop.

39. Lt. Robert Feke of Watertown in N. E., gent., and William Palmer of Yarmouth and Judith his wife, and Tobias Feke, aged 17, son and daughter of James Feke, late of London, goldsmith, deceased, make Tobias Dixon of London their attorney.

40. Agreement between Edward Heale of Bristol and William Pester of Salem in N. E.

41. Thomas Scudamore of Cambridge in N. E. was from Westerley, co. Gloucester.

42. Edward Hall of Duxbury in N. E. was son of Francis Hall of Henborough, co. Gloucester.

43. Samuel Freeman of Watertown in N. E. was from Mawlyn, co. Kent.

44. Thomas Matson of Braintree in N. E. and wife Anne draw for £20 in favor of George Hussey of London, on his sister-in-law Mrs. Chambers of London, widow of Thomas C., citizen and clothworker of London, for part of their legacy.

45. John Coltman of Wethersfield in N. E. was son of Thomas C. of Newton Harcoate in Weston, co. Leicester.

46 Richard Betscombe of Hingham in N. E., late of Bridport, co. Dorset, in behalf of daughters Mary and Martha, appoints his brothers Andrew, Robert, and Christopher to receive two legacies given said daughters by Philip Strong of the Devizes, co. Wilts.

47. Isaac Sterne of Watertown in N. E., late of Stoke Nayland, co. Suffolk, and wife Mary, daughter of John Barker of the same, appoint Thomas Gilson of Sudbury, co. Suff., to collect £5 of one Munnings of Gaynes Colne, co. Essex, due on a bond given by M. before his marriage with Margaret Barker, mother of said Mary.

48. John Bent of Sudbury in N. E. was from Wayhill, co Southampton, and his brother-in-law was William Baker of New Sarum, co. Wilts.

49. William Talmage of Boston in N. E. had brothers Robert and Thomas, and sister Jane, wife of Richard Walker; they were children of Thomas T., who was the brother of John Talmage of Newton Stacey, co. Southampton.

50. William Longley of Lynn in N. E., son of John L. of Frisby, co. Lincoln, makes Thomas Meeke of Waynflete St. Mary, co. Linc., his attorney.

51. John Mayo of Towne Marroling, co Kent, deceased, had by wife Rebecca, son Thomas (who had died leaving a son John and widow Elizabeth remarried to Robert Gamlyn of Roxbury in N. E.), daughters Mary of Dorchester, N. E., and Frances, wife of Steven England of Sandwich, co. Kent.

52. John and Daniel Prior of Scituate in N. E. were sons of John P. late of Watford, co. Hertford.

53. Abraham Harding of Boston in N. E. was son of John H., late of Boram, co. Essex, whose widow was Agnes Greene of Tarling, co. Essex.

54. John Floyd of London and wife Anne had put their son Thomas in charge of Arthur Howland of Duxbury in N. E.

55. Thomas Odingsell of Salem draws a bill on his father John O., of Epperston, co. Notts.

56. William Pester of Salem draws a bill on his uncle William P. in Thames St., London.

57. Ralph Sprague of Charlestown, N. E., and wife Joan, appoint John Holland of Tinnckleton, co. Dorset, to receive of John and Elizabeth Cox of Bowlington a legacy from Richard Warren to said Joan and her six children.

58. William Rix of Boston, N. E., was one of the sons of Robert R. of Kenninghall, co. Norfolk. His sister was Elizabeth Waters of K., and he mentions also Henry Rix of Pagrave, co. Suffolk.

59. Thomas Grubb of Boston, N. E., was son-in-law of Jeffrey Salter of King's Lynn, co. Norfolk.

60. Benjamin and Nathaniel Bosworth draw bills on Joseph B. of Coventry, co. Warwick.

61. John Clerk of Newbury in N. E., late citizen and chirurgeon of London, was one of the executors of widow Anne Ward of Stratford, co. Suff.

62. Owen Williams son of Mark W. of St. John's parish, co. Cardiff, apprentices himself to William Withington of Portsmouth in N. E.

63. Edward Bridges was second son of E. B., late of Raynham, co. Somerset, Esquire.

64. Nathaniel Patten was late of Crewkerne, co. Somerset.

65. Edward Howell of Lynn, in N. E., gent, was late of Marsh Gibbon, co. Bucks. He had lands in Wotton Underwood, co. Bucks, and £100 in the hands of Richard Francis, of Marsh Gibbon.

66. Henry Russell of Weymouth in N. E., deceased, left widow Jane and daughter Elizabeth. He was the son of Thomas R. of Chalfont St. Giles, co. Bucks.

67. Thomas Nichols of Hingham, N. E., makes John Cockerell of Cockshall his attorney to receive, of Geo. N., a legacy given him by his father Walter N.

68. William James of Boston in N. E. was son of Albon James, citizen and mercer of London. He had an uncle George Strange, gent.

69. John Bibble had a wife Sibyl at Shadwell in Stepney parish.

70. Elizabeth Freestone of Boston in N. E., spinster, was late of Alford, co. Linc. She was daughter of Richard F. of Horncastle, co. Linc. Mary F. of Thimbleby, co. Linc., was widow of her uncle Robert F., who was executor of her grandfather Robert F. Her father and sister Mary were dead. Her grandmother was Mary Cuthbert, whose executor was Nathaniel C. of Warmington, co. Northampton.

71. Samuel Haskell seems to be the grandson of George Cooke, innkeeper at the White Horse in Algate, who died 13 years since.

72. Abraham Shaw of Dedham in N. E., deceased, was from Halifax, co. York, and left his oldest son Joseph S. and son-in-law Nicholas Biram, his executors.

73. Anne Stratton of Salem, N. E., was widow of John S. of Shotley, co. Suff., gent, whose brother Joseph S. was of Harwich, co. Essex, and now of James City in Virginia. She had a son William S. of Ardley, co. Essex, deceased, son John S. of Dedham, co. Essex, and daughters Elizabeth, wife of John Thorndike of Salem, and Dorothy. Her own mother was Mary Dearhaugh of Barringham, co. Suff.

74. John Pollard was late of Belcham, co. Essex.

75. Robert Hempenstall of Boston in N. E. was son of Thomas H. of Southold, co. Suff.

76. George Crispe of Plymouth in N. E. had a brother Robert C. of Southwark, co. Surrey, an uncle George C. of Blackwall in Stibenheath, co. Mid., and land in the parish of Word, near Sandwich, co. Kent.

77. George Denison of Roxbury in N. E. had wife Bridget, who was daughter of John Thompson late of Preston, co. Northamp., gent, and Mrs. Alice T. now of Roxbury. They claimed their legacy from Spencer Clarke, parson of Scaldwell parish, co. Northampton.

78. Thomas Allen of Barnstable in N. E., had a brother, Richard A. of Branton, co. Essex, and father-in-law, John Marke of the same place.

79. Samuel Nash of Weymouth in N. E. was from Burrough Green, co. Cambridge.

80. John Bartoll of Marblehead, N. E., was son of John B. of Crewkerne, co. Somerset.

81. Robert Wing of Boston, N. E., had a cousin Wing of Lomford, dwelling in the Lady's place, by Dedham.

We have thus gleaned the major part of the items, omitting such as relate to the Winthrops, Hutchinsons, Saltonstalls, and other well-known colonists. The book will be for years a source of information to genealogists, because in many cases these references will lead to a knowledge of other colonists. Our only regret is, that the record is so brief, and we wish that Lechford had stayed for a decade at least.

As to the editing of the volume, the less said the better. The index is based on the pagination of the original, a lazy method worthy of severe condemnation. The notes are of no value, excepting a few supplied by Dr. Trumbull. The editor seems to have done nothing but consult Savage and, in a few instances, other equally well-known authorities. Most of the notes are, in fact, an unnecessary statement of his ignorance of the person named in the text, with occasionally dreary attempts at a joke thereon. Not a sign is visible of any original research, even where such care was sure of reward. A great opportunity has been lost, and the real value of the record will remain obscured until it is reissued, or a proper abstract of its contents, with good notes, is prepared.

RECENT FICTION.

Dosia's Daughter. By Henry Gréville. Translated by Clara Erskine Clement. Boston: Ticknor & Co.

Cleopatra. By Henry Gréville. Boston: Ticknor & Co.

The Strange Case of Dr. Jekyll and Mr. Hyde. By Robert Louis Stevenson. Charles Scribner's Sons.

Cradle and Spade. By William Sime. Harper's Franklin Square Library.

Mrs. Dymond. By Miss Thackeray (Mrs. Anne Thackeray Ritchie). Harper's Handy Series.

Fiammetta. A Summer Idyl. By William Wetmore Story. Boston: Houghton, Mifflin & Co.

Jacob Schuyler's Millions. D. Appleton & Co.

THE dedication to American friends which Mme. Gréville prefixed to 'Dosia's Daughter' has at once raised the question, Does she think this the kind of thing Americans like, or does she offer it because she thinks they ought to like it? On the one supposition, we must be fond of the inane; on the other, she must think milk and water a good diet. What of story there is in the book is as follows: The daughter, Agnes, is a small *femme incomprise* of eighteen, who, on the possibility of difficulties at home, runs away and finds a place as governess. After a fortnight, in which nothing more remarkable happens than that she must eat roast beef seven days in the week, and the half-imbecile son of the house makes uncouth love to her, she grows homesick and starts to return. At the first railway station, she meets the *ami d'enfance* who is in search of her. The con-

sequence is a wedding within a year. There are but few incidents, and they are neither fresh nor striking. The story could not entertain any one beyond her 'teens; and after the many bright, healthful pictures of young life, like Miss Yonge's 'Two Guardians,' or Mrs. Whitney's 'Leslie Goldthwaite,' with which our girls are familiar, they will find this dull.

The work of the translator is very good, so good that it ought to have been expended on better material. Not so in 'Cleopatra,' where it is as bad as bad can be. Whole sentences and even paragraphs from it might be inserted in the 'Portuguese Guide' without detection. It is a graver fault, if that were possible, that the translator knows so little English, or has so little command of it, as to put the speech of a servant into the mouths of the grand ladies, and generally to degrade the whole style.

Outside judgments of local color have but a limited value. It is more to the point that the Russians themselves insist that Mme. Gréville's pictures of Russian life are not true. They do not object to them as unjust, they even admit that much is intended for flattery; but they say they are unreal. She has seen only the surface. Her characters, be they good or bad, are the merest conventions, such as have been accepted in Europe for the last forty years. A week's travel would show as much of the country as she has described. As to incidents, the reader can try for himself how slight, how unessential, would be the changes which would transfer the scene either to Germany or France.

Upon the plot and purpose of 'Cleopatra' we have a serious criticism to offer. The heroine is a beautiful girl, noble by birth, but very poor. The only home she has is in the household of her sister, who has made a successful marriage. Such a position, always trying, becomes unbearable by the unkindness of the sister. She is rescued from it by an offer of marriage from an old general, a man of fortune and of rank sufficient to place her in the brilliant surroundings she considers her due. He conceals his love from her so completely that she never suspects it, and gives to her the protection and the indulgence of a devoted father to his daughter. For four years her ambition and her selfishness are satisfied. Then she meets in church, of all places, a handsome youth. In a few days they exchange passionate declarations of love. To this point the story is only too familiar to novel-readers. Hitherto there have been but two alternatives in the case, the one the triumph of passion over duty, the other the renunciation of self and self-pleasing for the sake of adherence to the right. Mme. Gréville has imagined a combination of the two with an ingenuity to which might be forgiven her ignoring of probability, were it not for a confusion of the ideas of right and wrong which is nothing less than monstrous. The handsome youth Ulric has been "religiously brought up," so he at once urges upon Cleopatra a divorce. "I will carry you to my home as respected as you are to-day." Cleopatra must open the subject to her husband. One spark of gratitude makes her say, "It would be a dastardly act." But before many days "a delicious torpor," "the magnetism of the dear presence," overcomes her. She will propose the divorce. "Give me strength, O God!" is her prayer. "I have not the courage to strike with a steady hand. O God help me!" She enters "the apartment of her husband with emotions similar to those felt by Christians in former times when they entered the arena." Naturally the husband objects, but at last "his old heart throbbed with pride and joy at the thought that he could perform one more good deed before leaving this world." He consents. The Church makes difficulties, so, as Cleopatra and Ulric, "just and God-fearing souls, reject all that is not legitimate," she appeals personally to the Empress. It is a vain appeal, and "all the religious fervor of Ulric's early education and his unhappy love boiled up within him." The husband himself must appeal to the Emperor through his special friend, a Grand Duke, who, by the way, had been the object of Cleopatra's first ambition. Apparently, even Mme. Gréville, when it came to the point, could not imagine the outrageous spectacle of a husband begging for a divorce for his own wife that she may marry again; so he is made lame, and Cleopatra goes herself. The Grand Duke asks her, "Why did you not patiently wait until God called your husband hence?" (Such a question were a moral insult if a woman in Cleopatra's position were not too low for an insult.) She replies, "Do you not see between love and duty I am dying?" So he promises to intercede for her. In no long time all difficulties disappear and Ulric and Cleopatra are married. The old general sends as a wedding present a basket of white flowers such as are selected only for young maidens. Underneath lies a picture of the Virgin, round which he has caused to be set all the jewels of his family. They start upon their wedding journey, the picture on the front seat of the carriage, that "the young wife" may be "surrounded with sweet and salutary impressions." The same evening she dies suddenly an ecstatic death. Some readers will recognize the catastrophe as a trick that has been tried before. The sophistry that has convinced the average mind that an early death is in itself an atonement has provided a convenient resource for the novelist.

The cold, hard facts of this consummate selfishness are repulsive enough; but to hide them under a veil of piety, to disguise them as devotion to Christian duty, is revolting. Such a book does more harm to morals, does more to weaken the sense of the purity and the sanctity of wedded love, than downright coarseness. Mme. Gréville's early books were accepted with a readiness beyond their deserts, because they were better in tone than worse ones. It is time to recognize the fact that such merit is at best only negative. 'Cleopatra' is not the sole proof that her standard of morals is not our standard: that there is not even that artistic sense of truth and of fitness which has sometimes been a guide when the moral vision was blinded.

Mr. Stevenson is a true wonder-worker, a wizard. For his marvels, space and time are as naught. No bounding line of circumstance refuses to yield to his bidding. Yet it is by the simplest of straightforward truth-telling that he brings us under his spell. His readers all know the houses, the streets he describes, the solemn butler, the tidy maid. They met the gentleman yesterday whose conversation he now repeats. The lady whom he presents, they saw step from her carriage this morning. Each detail verifies the fact that all the story happened, if not in the next square, then in one that everybody knows. So frank, so accurate a narrator, we think, will never ask anything of his imagination or of our own; and, with no suspicion wakened, we fall completely into his power, to be carried out of the world of sense through the most fantastic dramas—how far we know not—till the play is played, and we find ourselves, at the end, rubbing our eyes like half-wakened children. His present purpose, however, is far beyond an Arabian Nights' adventure or the clever satire of 'The Dynamiter.' He has chosen the oldest of all themes, the strife between good and evil. There is no abstract discussion, no argument of philosophy or of theology; but he sets before us incarnate the two elements in a man's nature, and lets them fight it out before our eyes. Incarnate, we say, because there is always enough of that feeling left in the mind which would have accepted the Elixir of Life or the Philosopher's Stone, to make us yield to the power of the supernatural and believe in incarnations, when the supernatural is handled with the fearless decision that characterizes Mr. Stevenson. In this respect he resembles Hawthorne. It is no concern of his to account for anything. It happened so, and that is enough. This unfaltering belief in one's own story goes further to impress its truth than any comment or explanation. Mr. Stevenson has, too, like Hawthorne, the perfect sense of proportion which never permits an exaggeration or a distortion How much this means can only be realized by reflecting that the whole fabric of his story is based on the impossible. 'The Strange Case' interprets itself as it is developed. In form it is but a simple tale of magical transformations, yet few sermons could pronounce more awful warning against a sinful life. "Evil, be thou my good," was the man's deliberate choice. "Myself am hell," sums up his dying confession.

'Cradle and Spade' were for gold digging in the unpromising soil of a Scottish dale, and less directly to bring upon the scene an old miner who shall recognize in the portrait at the great house his old chum in Australia. Wandering noblemen and lost heirs are nothing new, and Mr. Sime hardly puts that quality into his story which can sometimes make even the oldest plot fresh. The practised reader will recognize the various sources from which come many of the incidents. There is not downright copying, but a great deal is like an echo of a familiar sound. Still, the search for a lost heir is always attractive to one kind of reader, and he will perhaps be compensated for the want of clearness and vividness in the working out of the plot by the discovery of not one but three lost heirs.

'Mrs. Dymond' is already known to a wide circle through *Macmillan's* and *Littell's*, and Mrs. Thackeray Ritchie never needs to be commended. Her style has always the same graceful flow, and it has not lost one shade of its delicate refinement. In the midst of fiction so often painful, so often positively disagreeable, to open one of her books is like turning from a dusty highway to a quiet garden softly lighted and sweet in perfume. There is life to be lived in the garden as well as in the dingy street, and it is good for us that once in a while some one is glad to portray it. Not that Mrs. Dymond always walked in flowery paths. She had her sorrows, and shared the sorrows of others, in a life not so different from the most in its experience as to make it worth the telling for the sake of its incidents alone. It is what she was in it that gives to it its charm. Her power was only that gentle power of a sweet and truthful spirit to impart its own quality to those about it. Under its influence injustice relents, the unwilling yield, the selfish are ashamed. This tender appeal for sympathy to all the higher, more refined side of our mental and moral nature, which is always found in Mrs. Ritchie's stories, more than makes up for any lack in boldness of conception or in strength of grasp. Her descriptions have always had a unique value. Of mere word-painting there has long been an excess in fiction. Her description is even more than a fit and fine setting for her personages. It opens our eyes to the life of inanimate things and the part they play in our human drama, sometimes only the part of sympathy taking on for our sakes the colors of the spirit. Or if they defy us, defeat us, they win us and help us again by their calm, their friendliness of long companionship. She has drawn many pictures that no one forgets, and in this story there are many to remember with those in the 'Village on the Cliff.' It is France again, but France in the sad days of the defeat, of the siege of Paris, of the Commune. They are not pic-

tures of battle-fields, not of blood or of flame, but of what the women saw as they sat with the children shivering on the edge of the storm. They are fine enough to rank with Daudet's sketches of the same time, and, in a way, they even supplement and complete them.

The point of view will make all the difference in the judgment of Mr. Story's book. Upon the theory that every tale of love should be a vivid description of ardent passion—that, as against expediency, convention, obligation, the one phrase, Love is enough, makes a sufficient answer—it will be found cold and tame. But readers who have shrunk from brilliant illustrations of this theory in which the only fault was their exceeding exactness, will insist that this simple sketch of an artist's holiday, low-colored and restrained as it is, is not less beautiful, not less impressive, because of its quiet tones. So far as the heroine is concerned, the story is but another variant of that of Mignon. This is no reflection upon Mr. Story's originality, for he has worked it out in wholly fresh scenes and combinations. Far more than this, he does not give to his hero the unconscious, passive part of Wilhelm. Marco has to struggle against the double temptation of his own love for the girl and of her innocent frankness of affection. Upon him is laid that hardest of all duties, the duty not to do a second wrong in the hope of setting a first one right. The moral purpose of the tale will be interpreted as differently as its quality will be judged. Mr. Story gives no hint of it. *On ne badine pas avec l'amour*, may be one rendering. In style, the book is what would have been beforehand expected of Mr. Story—very clear, very light of touch, and graceful. Only once a note is harsh: Thekla's lament sounds rough after Fiammetta's songs. The soft accents of her own tongue would have told her sorrow better.

There is very little of artist life, but one conversation contains what may not unfairly be taken as Mr. Story's own view of the much-discussed relation of real and ideal—

"certain artists of our day, whose only desire seems to be to startle and surprise, even by the sacrifice of all beauty; and who go so far as to preach loudly the gospel of the ugly and the common, and to cry out wildly that, as nature is ugly—often very ugly—so art should be; that perfection exists nowhere, and ought not to be sought for; that the real is never ideal; and that what art has to do is to copy nature just as it happens to be, even though ugly and deformed. My notion is absolutely the contrary. Art, in my opinion, is no slave to nature, and no art is worth anything except in so far as it is ideal—that is, that it uses nature as a language and means to express an idea, a conception, a creation of the imagination. . . . It is not the subject, it is the mode in which it is rendered, which makes it prosaic or poetic. It is not that a thought is grammatically expressed that makes it a poem, and it is not literal imitation of nature that makes a work of art enchanting. Yes, enchanting is the word. Artists must enchant as poets do; and nature is never good in art until it is enchanted by the soul of the artist."

The writer of the anonymous novel 'Jacob Schuyler's Millions' has told a not uninteresting story, using the old material of a missing will. For a change, however, the possible heirs, instead of plotting to get all of the money they can, barely escape a quarrel in insisting on the most equitable division that can be made from such a knowledge of Jacob Schuyler's intention as they can ascertain. The will is, of course, found at last, but this is not allowed to break up the kind feelings of the family group. The scene is laid in Bergen County, New Jersey, in the year 1850, and free use is made of the old Dutch family names of that locality. But no offence is given in so doing, for to speak of a Bogert or a Terhune in Bergen County is to generalize as much as to mention a Smith or a Jones in other localities. The author forgets his dates when he speaks of the "crowd and rush of Newport," and "the vulgarity of Long Branch," in the days of 1830, and he betrays the novice in fiction writing when he introduces a German noble simply to give occasion for a discourse on the American form of government.

Three Years of Arctic Service: an account of the Lady Franklin Bay Expedition of 1881-84 and the attainment of the farthest North. By Adolphus W. Greely, Lieutenant U. S. Army, Commanding the Expedition. 2 vols., 8vo. xxvi, 428 and xii, 444 pp., illustrated. Chas. Scribner's Sons. 1886.

THE anticipation that little new or interesting could remain to be said, after the books of Schley and Lanman, on the work and sufferings of the party engaged in the Greely expedition, is happily unverified by the result. The magazines and especially the newspapers of 1884 were flooded with more or less inaccurate and exaggerated accounts of the horrors of slow starvation at Cape Sabine, in which the heroism and endurance of those dreadful days were swamped in a mass of sensational and unauthentic details; in large part growing out of the foolish, if well-meant, endeavor of the rescuers to hide certain facts sufficiently shocking, but by no means unparalleled in the history of Arctic adventure. Had the plain truth been made public at the time, not only would much that is untrue have remained unuttered, but the public would have had presented the lights with the shadows; the good with the evil; the abnegation, devotion to duty, and charity which illumine the dark clouds of desperation, insanity, and petty discord that settled over that unhappy band. From Lieutenant Greely's second volume, those who would form a just idea of the conduct and condition of the party while at Cape Sabine may gather indispensable data. Few will read it, we think, without a higher opinion of human nature, of the average kind, under unspeakable trials. That the mind of any survived the strain seems almost miraculous. That the mental and physical degeneration, consequent on starvation, impaired so little the sense of discipline, the consideration for each other, and their tenderness for the hopeless cripple dying in the midst of them, is scarcely less wonderful. Let those who have been put to the test cast the first stone.

We gladly turn from this phase of the subject, referred to first as being that of which inquiry would naturally first be made, to the record of work accomplished and conclusions reached. Previous explorations in Smith Sound are briefly touched upon. The history of the international circumpolar stations; the unpropitious circumstances under which the expedition was equipped, due chiefly to the extraordinary and far from creditable attitude of the then Secretary of War; the voyage; the impressions of Greenland; and the trip to Discovery Harbor, form the preliminaries. The remainder of the first volume relates the work of the expedition up to the beginning of the second winter. The attainment by Lockwood and Brainard of the furthest north, the important geographical discoveries in Grinnell Land, have been frequently summarized and need not be recapitulated here. The second volume carries the narrative through the second winter and summer, the further explorations of Grinnell Land, the retreat and the stay at Cape Sabine. Appendices contain means of observations made at Fort Conger and by the parties at other international stations; reports on ethnology, zoology, botany, and geology; on sound experiments, auroras, and lists of game obtained. We note the curious fact that more than half a ton (1,155 lbs.) of the small gammaroid shrimps were obtained while at Camp Clay, a circumstance to which the survivors doubtless owe their preservation.

The style of the narrative is excellent, easy, and unpretentious. The story of the two seasons at Fort Conger is only second in interest, among recent Arctic voyages, to Payer's admirable 'Voyage of the *Tegethoff*.' The discussion of the causes which led to the misfortunes of the party is brief, and, in all essentials, is in harmony with the views which have heretofore appeared in these columns, and which are generally entertained by Arctic experts who have a knowledge of the facts. To those who knew the temper of a certain late high official the following paragraph will not be a surprise, shameful as the facts are:

"No man of the party has received promotion except such temporary advancement as my personal urging could secure. Two men with broken health have adventured their private fortunes; and one, a most self-sacrificing, soldierly, temperate, and loyal man, lies, as these lines are penned, helpless in a city hospital, aided by private charity, his pension not even awarded. Even the meagre allowances originally promised for Arctic service have not been fully paid, and the widows of the dead are generally as yet unrecognized."

The publishers have done their part handsomely: the illustrations are of the best class; the get-up of the volumes is in every way satisfactory and complete.

A History of Farmington, Franklin Co., Maine. 1776-1885. By Francis Gould Butler. Farmington: Knowlton, McLeary & Co. 1885.

THE general harmony that marks the annals of this rural settlement upon the Sandy River is reflected in its physical environment. There is no waste land in its very considerable territory. "Every lot as originally surveyed is cultivated as a farm. No mountain, no pond, no bog, no swamp, no extent of ledge, is to be found within the township." But to other causes we must ascribe the absence of the familiar incidents of New England town histories—trouble with the Indians, endless squabbles about the location of the meeting-house, failure to give the minister the maintenance agreed upon, etc. The close of the eighteenth century was very different from the middle or end of the seventeenth. The first settlers of Farmington reckoned five denominations among them, but they did not concern themselves about a minister, nor did they have a meeting-house till five years after the town's incorporation in 1794, and that was sustained chiefly by Methodists. In 1826 they erected a Union meeting-house. Finally, they got leave to sell the lots set aside in the beginning for the minister, and amicably divided the proceeds among the several sects. Politics were enlivened rather than embittered by trials of strength between the emigrants from Dunstable, Mass., mostly Universalists, and those from Martha's Vineyard, mostly Baptists. Moreover, the pioneers were a picked body of men. "There is not known to have been an illiterate person" among them, "and it is doubtful whether at any time in the history of the town an adult native-born citizen could be found, unable to read the Constitution and to write his name." Running over the genealogical portion of this painstaking work, one is struck with the number of prominent Massachusetts surnames — Adams, Bradford, Lowell, Perkins, Prescott, Sewall, Wendell, Whittier, in a list we could make four or five times as long. Descendants of Standish and Alden occur side by side as in so many other places; and indeed the origin of Farmington goes back to the Plymouth Grant, of which the Kennebec portion was sold in 1661 to Thomas Brattle, John Winslow, and others, and descended ultimately to James Bowdoin, John Hancock, and others. Farmington, however, would hardly be

a part of New England if it did not now exhibit an admixture of French Canadians, contesting their inheritance with the sons of the Puritans. In this instance they appear to be of exceptionally good quality, and apt to take advantage of and be moulded by the educational institutions, which leave nothing to be desired except a public library.

Farmington does not rank among the great manufacturing towns, though water power abounds. It is famous for its carriages, its fishing-rods, and its ear-protectors; but unquestionably its most celebrated product is the Rollo books which the Rev. Jacob Abbott composed there, in the house since become the seat of a well-known private school bearing his name. His brother, too, the Napoleonic historian, was for a time a pastor in Farmington, and these two men have a national reputation above any others who figure in these pages. The town is also distinguished for a railroad whose gauge, when built, was equalled in narrowness only by one in Wales, and which has been entirely successful, the interest on its bonds having been promptly paid. Unhappily, the municipality itself is involved in still pending litigation for default on its own bonds for the extension of another railroad undertaken in 1870.

The literary execution of this history is of uncommon excellence, and the volume is highly creditable to the state of the typographic art in Farmington. Some well-devised blank leaves, for births and marriages, as if we had here a Family Bible, are appended to very full, careful, and readable genealogical records, on which the labor must have been immense. Novel are the summary accounts of the origin of the several families, introductory to the particular branch under consideration in each case. The portrait illustrations are numerous, many of them of earliest date, and all interesting. We have seldom seen a more typical collection of New England physiognomies.

China and the Roman Orient. By F. Hirsh, Ph.D. Leipsic and Hong Kong. 1885.

THERE has been a long dispute among those learned in Chinese lore as to the correct interpretation of the term *Ta-Ts'in*, applied by writers of Chinese history to some region in the West, bordering on Antioch in Syria, or Constantinople. Dr. Edkins and others refer the term to the "Roman Empire," including Syria, Persia, and the further East. Dr. Hirsh thinks that the authorities he quotes and produces justify him in confining the limits of the territory indicated to Syria and the region of Petra and the Nile.

It must be noticed, however, that the texts quoted cover a range of seventeen centuries, viz., "the period extending from the Former Han dynasty up to that of the Ming, *i. e.*, between the first and seventeenth centuries A. D." (Introduction, p. 27.) It would be contrary to experience to suppose that the geographical terms used in these texts indicate the same locality, or region, during all these ages. Accordingly we find that at first Ta-Ts'in pointed to the region Li-Kan, *i. e.*, Hyrcania, the region bordering on the Great Sea, which we cannot doubt (*pace* Dr. Hirsh) was the Mare Hyrcanum of Strabo (p. 507). But gradually, as the empires fell and rose, the limits of the Seleucid territory narrowed toward Antioch or the Orontes, and the term Ta-Ts'in was applied to that region only.

With respect to the origin of the term Ta-Ts'in it is strange that (so far as we know) nobody has referred to the expression Máchin or Chînistân, the land of Samarkand, formerly called Chin, which is the same as the country of the Sênî alluded to by Persian writers (Tabari's 'Chronicle,' quoted in Ouseley's 'Oriental Geography,' p. 298). We cannot doubt that this term was appropriated from motives of vanity by Chinese historians to indicate the powerful empire of the Seleucids, extending to Baktria and the Oxus, and this is indicated by passages such as we find on p. 44 of our author. Gradually the term was restricted to the narrowed empire of the successors of Seleucus, and finally to the region about Antioch.

The translations of Dr. Hirsh are good and courageous. We think, however, he ought to extend more sympathy to those dilettanti (as he calls them) who cannot in their Chinese studies produce their original texts without large expense. If the Sinologues in China would bear this fact in mind, their criticisms and inuendos would be less frequently inconsiderate. There are several inaccuracies we might easily point out in Dr. Hirsh's translations, but it would be ungracious to do so in the presence of so much that is good. The only remark we make is in reference to the version of N. 16. Surely the term Mi-lê-fou cannot represent Melek-Fat; it must be the old expression for Mâitreya Buddha, constantly met with in Buddhist books, and the meaning is simply that the head of the King was mistaken for that of Mâitreya, as we may easily suppose from an examination of Wilson's 'Ariana Antiqua,' Pl. xvi., xvii. We may also state that the translation (*l. c.*) "which is the King's name" does not seem to be a judicious one. The sentence would naturally run somewhat like this: "They employ (fuse) silver and gold to make coins, but without holes; on the face they punch a likeness of Mâitreya Buddha. All (the coins) have on them the King's name, and it is forbidden to coin them privately (*i. e.*, except in the public mint)."

We can only find space to refer Dr. Hirsh to an authority hitherto unknown in reference to Ta-Ts'in; we mean the Buddhist work numbered 1,358 in Mr. Nanjio's catalogue. In this book, p. 6 b (Kiouen I.) he will see that Ta-Ts'in is referred to a northern region of India, of which Sâgala was the capital. This was, in the time of Menander (to which period the narrative refers), a portion of the Græco-Syrian empire in Central Asia; and to this empire, we doubt not, the term Ta-Ts'in was, in the early ages, solely applied.

Eugène Delacroix, par lui-même. Paris: J. Rouam. 1885.

THIS biography of a celebrated painter is one of many books upon art subjects issued during the last few years by the enterprising French publisher of *L'Art*, M. J. Rouam. It claims to be "neither a critical work, nor a simple biography, but a résumé of the life, manners, tendencies, impressions, joys, failures, efforts and general sentiments" of one whom the author calls "*the greatest painter of our time*, one of the chiefs of the modern school, an admirable poet; in short, a man of genius whose radiant personality illumines the first part of this century." In the letters to his friends selected by M. Dargenty from the many previously published by M. Burty, Delacroix paints himself as a melancholy, suffering hypochondriac, who passed from a state of undue depression to one of equally undue elation, and found solace for the real or fancied ills of life in music, in occasional intercourse or correspondence with his friends, and in painting. Jealous of interruption at all times, he trembled at the sound of the door-bell, although none could approach him without the permission of his housekeeper, Jenny Leguillon, a female Cerberus, in whose hands, says his biographer, he was a sort of obedient and timid child. Those who were allowed to enter, had the doubtful satisfaction of knowing that Jenny was listening from a convenient hiding place, where she had been instructed to place herself that she might save her master the trouble of telling her what passed between him and his visitors. This systematic "espionage" was but one of the many services rendered to Delacroix by his housekeeper. Another, and perhaps the most important, was that of setting his palette, an operation which she performed with great skill.

The life of Delacroix was marked by no striking events. Born at Charenton, near Paris, April 26, 1799, he entered Guérin's atelier at the age of seventeen, after long hesitating whether he should not adopt music as a profession. In 1822 he first attracted attention by a picture of Dante and Virgil, but it was not until ten years later, on his return from Morocco and Algiers, that he established his reputation as a leading colorist of the day by three pictures of "Moorish Women," "A Jewish Marriage," and the "Epileptics of Tangiers," the last of which was sold in 1880, sixteen years after his death, for 95,000 francs. Among the innumerable easel pictures which he subsequently painted are the "Massacre of Scio," the "Death of Marino Faliero," for which Sir Richard Wallace paid £4,000, and the "Two Foscari," which was bought at the Oppenheim sale in 1855 for 70,500 francs. In these and many other pictures, which are equally notable for brilliant and effective color and vivid conception, Delacroix shows to much better advantage than in the great mural paintings, with which he decorated the Chamber of Deputies, the Library of the Church of St. Sulpice, and the ceiling of the Gallery of Apollo at the Louvre. Though effective, they want the high qualities of thought and style without which works of their kind must be classed as decorative rather than as monumental art. M. Lassalle-Borde, to whom Delacroix talked very freely about himself, says that when he was about to paint a picture, he first stimulated his imagination by looking over prints of pictures by painters of all schools, stored in his numerous portfolios, and, taking from them figures and whole groups suited to his subject, transformed them so as to render his thefts unrecognizable. He excused this unscrupulous proceeding by saying that Raphael and many other painters appropriated antiquity after the same fashion. After Delacroix's death, August 13, 1863, his works rose generally in public esteem, and when, in February of the following year, his pictures, drawings, and water-colors were sold at the Hôtel Drouot, they produced the very considerable sum of 337,226 francs. According to directions given in his will, he was buried at Père Lachaise in a tomb architecturally of pseudo-classic (Vignola or Palladio) design, without emblem, bust, or statue.

Introductory Studies in Greek Art. By Jane E. Harrison, author of 'Myths of the Odyssey in Art and Literature.' With maps and illustrations. Scribner & Welford.

THE dedication in Greek to Mr. C. T. Newton of Miss Harrison's book contains an amount of idiom quite disproportionate to the ideas which it embodies, and so is in a way symbolic of the voluble pages which follow. These pages, winnowed of superfluous quotation and inapposite detail, and condensed into a couple of well-considered chapters, might have given us in satisfactory form all that the author has here to say of the origin and history of Greek sculpture. The book has the ring of boarding-school lectures—Miss Harrison has lectured in the British Museum, we are told; but her own schooling has apparently been good, her general view is intelligent, and main facts right, allowing for some carelessness in statement of detail, as when she says that it is 150 miles across from Sicily to Africa, or sets the ancient Gades in the valley of the Guadalquivir, or ascribes to Pausanias all that both he and Pliny tell us of the Athene

Parthenos of Phidias. The chief faults of her book are rhetorical—a habit of merciless emphasis, and a tiresome flow of eloquence which sometimes forgets the boundary between knowledge and conjecture, and which, when it touches artistic criticism, sinks into twaddle. The quiet precincts of archæology have hitherto been reasonably free from gush: it is better that they should so continue.

Hans Holbein. Par Jean Rousseau. Paris: J. Rouam.

M. ROUSSEAU'S 'Hans Holbein' is the first volume of the series called "Bibliothèque d'Art Ancien," and consists of papers published in *L'Art* in 1884, together with a few illustrations from Mr. Gennevay's papers of 1875. It is a small quarto of seventy pages, of which twenty-seven are occupied with "process" prints as large as the page will allow; rough, to be sure, but preserving fairly well the essential character—the expression of face, the freedom of gesture and pose, the minute accuracy of costume of the Holbein drawings at Bâle, in the Louvre, or at Windsor. Several facsimiles of the little prints of the "Simulacres de la Mort" and other small designs are included in the text. All these reproductions, if not faultless, are about as good, one with another, as those in the handsome folio by M. Paul Mantz published six years ago by Quantin (we do not speak of the etchings by M. Lièvre in that book, of course), while Mr. Wornum's book, with its two or three already half-faded photographs, offers no comparison. And the price of this very agreeable little work is just a half dollar—in Paris. It is Paris that has the secret of cheap books!

As to the value of the treatise itself, it is only a magazine article, and written in that pleasant Parisian style which allows of no excess of chronological or analytical or any other method; and it starts off with a most unhappy preamble about the Germanic races marching to the assault of the Latin world—a march and an assault of which Holbein is assumed to be a leader. But the little book is well worth reading, and will be found full of just characterizations.

Applied Geology: A treatise on the industrial relations of geological structure, and on the nature, occurrence, and uses of substances derived from geological sources. By Samuel G. Williams, Professor of General and Economic Geology in Cornell University. D. Appleton & Co. 1886. 12mo, pp. 386.

THERE has long been a need of a short account of the essential facts in economic geology, suited to the use of American students. Whitney's 'Metallic Wealth of the United States,' though an admirable work in its day, is now out of date, and the European books of this nature derive their illustrations from foreign fields. Professor Williams has, in the main, done a very fair part of his task: his book is well planned; his method of presentation is very clear, and, on the whole, his statements will meet with the approval of those who know the subject. It is only in matters of detail that the work is open to serious criticism. The most important defects appear in a certain lack of proportion in the space allotted to the various important metals. Thus the subject of iron ores is dismissed in six pages, while copper occupies ten pages of the text, and lead and zinc twelve. In the chapter on iron no mention is made of the very important ores of the Oriskany period in the Southern States, nor are the singular ilmenite deposits of Rhode Island referred to. So, too, the author fails to note the existence of the bog ores, the interesting history of their formation, or the light they throw on the history of many important deposits of iron. The replacement of lime carbonate by iron is not noticed, though this is perhaps the most important fact in the geology of iron ores. The student will get from his statements the idea that phosporus is necessarily an "injurious accessory" in iron ore, while in fact there is a very large market for phosphatic ores, and the "neutral iron" which they produce gives them a special value for foundry irons. These, and many other defects, have doubtless arisen from the need of brevity; but the result is that the student receives a most inadequate impression of the geological and economic history of the most important metal.

All the other chapters of the book are similarly, though not to the same extent, open to criticism. The book suffers also from a want of sufficient illustrations; nineteen woodcuts in a work devoted to a subject which requires an ample graphic presentation, is quite insufficient for the student's needs. Despite these considerable shortcomings, the many good qualities of Professor Williams's little book entitle it to a place in the student's library.

England, as Seen by an American Banker: Notes of a Pedestrian Tour. Boston: D. Lothrop & Co.

THIS is the most entertaining and instructive volume upon English life which has appeared since Mr. Richard Grant White's papers on the same subject, and in some respects is more useful. The volume is truly a book of "notes"—of passages upon single topics, having no chapter divisions and but slight connection except on the subject of English business, particularly banking. The author is a very observant man, and he has what one may call an American interest in the things seen. He bestowed his attention principally on the material aspects of the country, its resources, its trade and manufactures, its actual life in the broader phases of the laboring and lower middle classes, its methods of transacting business, its charities, schools, public morals, recreations, and the like matters, of all of which he usually gives an individual illustration. He walked over a considerable portion of the ground, and seems desirous of presenting a wayside view of rural England, but city life also receives very general treatment. In nooks and corners he came upon odd things, as when he found the rector also the keeper of the public house, and discovered that he paid his organist out of the profits on beer; and his conclusions are frequently novel, but well supported. According to his observation, not more than one-tenth of the people attend church, and he instances Archdeacon Denison's cricket-club between services as a curious attempt to attract worshippers. But we have no space even for the more striking of his notes. The style is very simple, unpretentious, straight-to-the-point; in all respects one may say it is a typical American book of the best sort by an unliterary hand. The knowledge it will impart about things which practical people wish to know of, is very great, and it is to be commended especially to all libraries and to business men.

BOOKS OF THE WEEK.

Abbott, Dr. C. C. Upland and Meadow: A Poaetquissings Chronicle. Harper & Brothers.
Allen, G. For Maimie's Sake: A Tale of Love and Dynamite. D. Appleton & Co. 25 cents.
Ballou, M. M. Edge-Tools of Speech, Selected. Boston: Ticknor & Co. $3.50.
Bancroft, G. A Plea for the Constitution of the United States of America, Wounded in the House of its Guardians. Harper's Handy Series. 25 cents.
Bastian, A. Die Seele indischer und hellenischer Philosophie in den Gespenstern moderner Geisterseherei. Berlin: Weidmann.
Beecher, H. W. Evolution and Religion. Part II. Fords, Howard & Hulbert. $1.

GINN & COMPANY

HAVE RECENTLY PUBLISHED:

*OUTLINES OF MEDIÆVAL AND MO*dern History. By P. V. N. Myers, A.M., President of Belmont College, O., and author of 'Ancient History' and 'Remains of Lost Empires.' 12mo, xii.x740 pp. With colored maps. Half morocco; Mailing price, $1.65; for introduction, $1.50.

This work aims to blend into a brief, clear, and attractive narrative the story of civilization since the meeting in the fifth century of Latin and Teuton upon the soil of the western Roman Empire.

Prof. W. F. Allen, *of the University of Wisconsin*, says: "Mr. Myer's proposed book seems to me a work of high excellence, and to give a remarkably clear and vivid picture of mediæval history."

THE LEADING FACTS OF ENGLISH History. By D. H. Montgomery. 12mo, cloth, xxxiv. x254 pp., with map. By mail, $1.10; for introduction, $1.00.

Designed to present very briefly, yet clearly and accurately, the broad, vital facts of English History in their connection with the great laws of national growth.

From Professor P. V. N. Myers, *Belmont College, O.*— "The author knows how to seize upon the salient points of his subject and how to throw the best light upon the features he selects to exhibit."

FIRST STEPS IN LATIN. By R. F. Leighton, Ph.D. (Lips.), Principal of the High School, Brooklyn, N. Y., author of 'Latin Lessons,' 'Greek Lessons,' 'History of Rome,' etc. Mailing price, $1.22; introduction price, $1.12.

An introductory Latin book suitable for those who begin at an early age and with imperfect knowledge of English Grammar; lessening the bewilderment of such pupils, when thrown into a complete Latin Grammar, by selecting the portions to be learned instead of giving references: and, by one year's study, preparing the pupil for the intelligent reading of Cæsar or any of the less difficult authors.

EXAMPLES IN DIFFERENTIAL Equations, with Rules for their Solution. By Geo. A. Osborne, S.B., Prof. Mathematics, Massachusetts Institute of Technology. 12mo, cloth, viii.x50 pp. Mailing price, 60 cents; for introduction, 50 cents.

Essays by Herman Grimm.

CUPPLES, UPHAM & CO., Boston,

ISSUE THIS DAY:

SARAH HOLLAND ADAMS'S translation of HERMAN GRIMM'S delightful critical studies, under the general title of

LITERATURE.

COMPRISING:

Ralph Waldo Emerson; France and Voltaire; Voltaire and Frederick the Great; Frederick the Great and Macaulay; Albert Durer; The Brothers Grimm; Bettina Von Arnim; Dante.

"Herman Grimm is a very cultivated man, and Miss Adams is a painstaking translator. . . . Her long and loving familiarity with his writings especially fits her for the work. An essayist is to be esteemed happy who has so faithful a translator. She will have the thanks of many lovers of Emerson. It is a great pleasure to get those essays in English dress."—*The Christian Register.*

5TH CATALOGUE OF ENGLISH AND American, German and French Books, in all Departments of Learning, especially *MEDIÆVAL and CHURCH HISTORY, CHESS*, etc., rare and standard works, at low prices, now ready and sent on application. B. WESTERMANN & CO., 838 Broadway, New York.

THREE BRILLIANT NOVELS.

ON BOTH SIDES.

By Miss Fanny Courtenay Baylor. Containing "The Perfect Treasure" and "On This Side," the whole forming a complete story. 12mo, extra cloth, $1.25.

"No such faithful, candid, kindly, brilliant, and incisive presentation of English and American types has before been achieved. The wit of the story is considerable. It is written brilliantly, yet not flimsily. It is the best international novel that either side has hitherto produced. It is written by an American woman who really knows both countries, and who has shown that she possesses powers which ought to put her in the front rank of fiction."—*New York Tribune.*

"For a number of months past the readers of *Lippincott's Magazine* have been delighted by the instalments of one of the most charming stories that have yet been written by an American girl, and the wonder was that the story did not excite a wider interest. 'On Both Sides' has now been published in book form, and proves to be a positive surprise to the literary world. There is neither an Englishman nor an American writer on this side or that who might not be proud to have written this international novel. It will be one of the most popular books of the season—one that will be read, criticised, and talked about in all the circles of intelligent society."—*New Orleans Picayune.*

"In Miss Baylor's work we have a novel entertaining from beginning to end, with brightness that never falls flat; that always suggests something beyond the mere amusement; that will be most enjoyed by those of most cultivation; that is clever, keen, and intellectual enough to be recognized as genuine wit, and yet good-natured and amiable enough to be accepted as the most delightful humor. It is not fun, but intelligent wit; it is not mere comicality, but charming humor; it is not a collection of bright sayings of clever people, but a reproduction of ways of thought and types of manner infinitely entertaining to the reader, while not in the least funny to the actor, or intended by him to appear funny. It is inimitably good as a rendering of the peculiarities of British and of American nature and training, while it is so perfectly free from anything like ridicule that the victims would be the first to smile."—*The Critic.*

AURORA.

A NOVEL.

By Mary Agnes Tincker, author of 'The Jewel in the Lotus,' etc. Illustrated. 12mo, extra cloth, $1.25.

"It is a story so delicately wrought, so artistically perfect, that one reads it with a delight that deepens into fervor and enthusiasm. It is a story of Italian life—of love, of intrigue, of despair, of aspiration. It is full of dramatic situations, and of subtle, pervasive power."—*Boston Evening Traveller.*

"'Aurora,' by Mary Agnes Tincker, is a novel of extraordinary power and interest, in which the author of 'Signor Monaldini's Niece' has even surpassed the high mark made in that remarkable story. Its plot is original; its varieties of character are portrayed with consummate skill; the different scenes—in Granada, in Sassoviso, at Ischia, and in Venice—are like pictures in vividness; indeed, the entire presentation is that of imagination to imagination."—*Hartford Courant.*

"Everything which Miss Tincker writes bears the stamp of a refined mind, a poetic temperament, and unmistakable genius. The story glows with Southern warmth, and sparkles with good things, and is very complete in every way."—*London Whitehall Review.*

ONE OF THE DUANES.

By Alice King Hamilton. 12mo, extra cloth, $1.25.

"Bonny Duane, the centre of interest, is a delightful young lady, but seems more Philadelphian than of New York in her beliefs and customs. The other characters, the gossips and the military men, are well considered, and the hero is as perfect as one would like both in beauty and in disposition. But the merit of the book lies not in characters which are rather conventional, but in the scenes and the swift movement of a striking plot. The author knows how to tell a story."—*Boston Journal.*

"This clever story of an artillery post is based upon a dramatic incident of military life. A keen eye for the humorous side, and an adequate appreciation of dramatic effects, make it decidedly agreeable reading."—*Philadelphia Ledger.*

"This is a tale of Florida life, full of adventure and thrilling with interest. It is written in Mrs. Hamilton's best style, and deals with the social customs of military life, varied by the adventures incident to the camp. There are interwoven with the thread of the story many bits of description of the scenery of the country where the plot is laid."—*Baltimore Herald.*

J. B. LIPPINCOTT COMPANY,

PUBLISHERS,

Nos. 715 and 717 Market Street, Philadelphia.

Scribner & Welford's

NEW BOOKS.

Important Work on the History of Music.

A History of Music.

From the Earliest Times to the Present.

By W. S. ROCKSTRO,

Author of the 'Life of Handel,' 'The Life of Mendelssohn,' etc., etc.

In one Volume 8vo, of about 450 pp., Cloth, $6 00.

SYNOPSIS OF CONTENTS.—Section I. Music in the Early Ages. Section II. Music in the Middle Ages. Section III. Music in the Seventeenth Century. Section IV. Music in the Eighteenth Century. Section V. Modern Music. Section VI. Future Prospects.

In a book written expressly for English readers it seems indispensable that great prominence should be given to the progress of Music in England. Scarcely any notice of this has been taken in any modern works on the subject. Hullah, indeed, touches upon it in some lectures, printed some years ago on Special Epochs; and Ambros, in his famous History, devotes a chapter to it, but merely repeats at second hand the statements made by Burney and Hawkins in the eighteenth century. In the present History it is proposed to treat this part of the subject as fully and as fairly as that which concerns the development of Music on the Continent.

The work will be accompanied by a copious Index and Chronological Table.

WHIST.

WHIST DEVELOPMENTS: AMERICAN LEADS AND THE PLAIN-SUIT ECHO. By "CAVENDISH," author of 'The Laws and Principles of Whist,' etc. Now ready, 8vo, handsomely printed in red and black, cloth gilt, extra, $2.

MOLIERE'S DRAMATIC Works. A New Translation in English Prose, by C. H Wall. With a short Life and a Portrait. 3 vols. $4.20.

Popular New Books.

OCEANA; or, England and Her Colo- nies. By JAMES ANTHONY FROUDE, M. A. Illustrated. 1 vol., crown 8vo, $2.50.

"Mr. Froude made it his business to learn what are the really practicable links by which some sort of Imperial Federation may be loosely yet indissolubly knotted together. There, as we say, is the grave political value of the volume. But, though serious, it is anything rather than heavy reading. . . . He gives a succession of vivid descriptions of semi-tropical scenes and colonial life and manners."—*London Times.*

LETTERS TO DEAD AUTHORS. By ANDREW LANG. 1 vol., Elzevir 12mo, gilt top, $1.

A collection of the brightest, wittiest, and most thoughtful literary criticisms of recent years.

THE HISTORY OF GERMAN Literature. By Professor WILLIAM SCHERER. Translated under the supervision of Professor Max Müller. 2 vols., 12mo, $3.50.

"A history of German literature which is as full of entertainment as it is of instruction, and comprises within a convenient space all that is important to know of German literature."—*Prof. H. H. Boyesen.*

WHAT DOES HISTORY TEACH? By JOHN STUART BLACKIE. 1 vol., 16mo, cloth, 75 cents.

"A small volume, but one that is packed with treasure. . . . A bright, brave, inspiring book, we heartily commend it to our readers."—*Hartford Courant.*

THE FIGHT FOR MISSOURI in 1861. From the Inauguration of Jackson to the Death of Lyon. By Colonel THOMAS L. SNEAD. 1 vol., 12mo, cloth, $1.50.

DOMESTICUS: A Tale of the Im- perial City. By WILLIAM ALLEN BUTLER, author of 'Nothing to Wear.' 1 vol., 12mo, $1.25.

It is the brightest, most fascinating, and thoroughly enjoyable book in lighter literature that has been published for a long time.

VALENTINO. By WILLIAM WALDORF ASTOR. 1 vol., 12mo, handsomely bound, $2.

"The details of workmanship are excellent. Mr. Astor writes apparently out of a full mind and a thorough interest in his subjects."—*Atlantic Monthly.*

STRANGE CASE OF DR. JEKYLL and Mr. Hyde. By ROBERT LOUIS STEVENSON, author of 'The New Arabian Nights,' 'Treasure Island,' etc. Library Edition, $1; paper, 25 cents.

"A work of incontestable genius. . . . What is worth mentioning, because otherwise many people will miss it, is that a noble moral underlies the marvellous tale."—*James Payn in the Independent.*

HOW TO BE HAPPY THOUGH Married. Being a Handbook to Marriage. By a Graduate in the University of Matrimony. 1 vol., 12mo, $1.25.

"One of the brightest, wittiest, most sensible and wholesome books on the subject or matrimony that we have seen. . . . It is brimming over with the best advice, but the dose is so happily commingled with bright sayings, apt quotations, and pleasant anecdotes that the reader takes it all before he realizes the exact nature of the compound."—*New York Observer.*

AN APACHE CAMPAIGN IN the Sierra Madre. An Account of the Expedition in Pursuit of the Hostile Chiricahua in the Spring of 1883. By Capt. JOHN G. BOURKE, author of 'The Moquis Indians.' 1 vol. 12mo, illustrated, cloth, $1; paper, 50 cents.

A thrilling and absorbing narrative which affords an extremely interesting picture of Indian life.

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

A HISTORY
OF
GERMAN LITERATURE.

By WILHELM SCHERER,

Professor in the University of Berlin.

Translated from the Third German Edition by Mrs. F. C. Conybeare. Edited by F. Max Müller.

Two Volumes. 12mo. $3.50.

A FEW AUTHORITATIVE ENDORSEMENTS.

From a Letter by William D. Whitney, Professor of Comparative Philology, etc., in Yale College.

"Scherer is a scholar of the *first class*, and this book ought to find a large sale among students of German in this country, who are now a large body, and aspiring to higher things than a score of years ago. No other work of the same authority and interest has been laid before them."

From H. H. Boyesen, Professor of German in Columbia College.

"Professor Scherer has written a history of German literature which is as full of entertainment as it is of instruction, and comprises within a convenient space all that is important to know of German literature."

From a Letter by W. T. Hewett, Professor of German Language and Literature in Cornell University.

"[illegible]er's history is the best guide to a clear and comprehensive knowledge of German literature. Joined to an amount of scholarship, Professor Scherer possesses a style which for clearness and beauty has never been equalled in the service of German literary history. No other scholar of Germany is equally at home and has an equal authority in Early and Modern German, and for interpretative and suggestive criticism this work is not surpassed."

From a Letter by E. L. Walter, Professor of Modern Languages in Ann Arbor University.

"It cannot fail to be far superior to any history of German literature accessible to the general public in this country, and, indeed, in some respects it is superior to any similar book in Germany itself. Even when we do not agree with the author's judgments, we are compelled to acknowledge his wide learning, his candor, and his independence. I shall recommend the book to my classes."

From the London Spectator.

"Professor Scherer's History of German Literature has obtained deserved popularity in Germany, where it is regarded as the most lucid and accurate survey of the national literature that has yet appeared. . . . In conclusion, we would commend the work of Professor Scherer very cordially to our readers. His account of writers and their works is accurate and lucid, and where he allows himself space for criticism, his criticism is just and sensible."

From the London Athenæun.

"We have nothing to say of Professor Scherer but what is favorable. There is certainly no other living man who possesses in an equal degree the 'combination of opposite qualities,' which is desirable in an historian of German literature. He is at once a philologist of the school of Müllenhoff and a literary critic of the school of Gervinus, and has at the same time a gift of attractive popular exposition which neither of those distinguished men possessed. . . . Notwithstanding its moderate size the work is, within its chronological limits, wonderfully complete, nearly every known German writer being noticed at greater or less length. . . . We cordially welcome the appearance of this valuable work in an English dress."

From the Baltimore Sun.

"This work will take its place as the best history of German literature that we have in English. . . . A work of this thorough and practical kind was much needed, and it is a gratification to be given at last a history which supplies a deficiency so authoritatively and fitly."

NEW JERSEY, New Brunswick, 13 Livingston Ave.

THE MISSES ANABLE'S ENGLISH, French, and German Boarding and Day School will reopen September 23.

NEW YORK CITY, 27 East 44th St.

STERN'S SCHOOL OF LANGUAGES of New York City. Classes and private instruction for ladies and gentlemen in GERMAN, FRENCH, SPANISH, and ITALIAN. To teach the modern languages with a pure pronunciation, in a manner as thorough and agreeable as practical, has been the aim of this institution. More than seven hundred students, ladies and gentlemen, have received instruction during the past year, and a like number the year before. Only a few were attracted by the advertisements of the journals; the majority came through the recommendations of the students, who knew the school, its work, its professors, its text-books, and its method. This institution recommends itself because it tolerates but one method of teaching the languages—*the Natural Method*, in small classes, and by competent professors. This institution recommends itself because the text-books for the students were especially prepared for them, and were found of such value generally that, according to the publisher's account, more than thirty thousand copies of them were in use throughout the country during the past few years. It is a recommendation for this institution that many other schools of languages in this city and in other cities have been established and formed after its plans and principles, and that men prominent in the various walks of life have lent their names to promote the welfare of this school, of its method and books. Every one studying a foreign language should visit Stern's School of Languages, of New York City. Prospectus will be sent on application. Programme of the Saratoga Summer School will be ready in 10 days.

NEW YORK, Canandaigua.

FORT HILL SCHOOL (for Boys).—Second year. Enlarged accommodations. $600. Rev. JAMES HATTRICK LEE, Head Master.

NEW YORK, New Hartford.

MRS. A. M. COLLIER'S COUNTRY Home and Boarding School for Young Girls from 6 to 16. Motherless children, and those whose parents are abroad, tenderly cared for.

NEW YORK, Suspension Bridge.

DE VEAUX COLLEGE.—A Military Boarding School for Boys. $350 per annum. WILFRED H. MUNRO, A.M., President.

NEW YORK, Utica.

MRS. PIATT'S SCHOOL for YOUNG Ladies.—The next school year begins Thursday, Sept. 17, 1885. Applications should be made early.

PENNSYLVANIA, Germantown, 5128 Germantown Avenue, Phila.

FRANKLIN SCHOOL.—AN ENGLISH and Classical School for Boys. Six resident pupils. Prospectus sent on application. GEORGE A. PERRY, A.M., Head-Master.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S SCHOOL for Young Ladies will reopen Sept. 23, 1885.

NEW BOOKS.—*Just Ready.*

New Vol. Ainger's Edition of Lamb's Works.

Mrs. Leicester's School,

And Other Writings in Prose and Verse. By Charles Lamb. With an Introduction and Notes by Alfred Ainger. Crown 8vo, cloth, gilt top, $1.50.

London Saturday Review says: "Mr. Ainger continues a congenial task, with all his wonted taste in editing 'Mrs. Leicester's School,' etc. The Notes are as valuable and pertinent, the editing as judicious as in Mr. Ainger's previous volumes."

Religion in a College.

What Place It Should Have. An examination of Presdt. Eliot's Paper read before the 19th Century Club. By Presdt. McCosh. Pamphlet, 25 cents.

Introduction by Dr. Wm. H. Green.

Mosaic Origin of the Pentateuchal Codes.

By Rev. Geerhardus Vos. 12mo, cloth, $1.50.

"This is a work of very extraordinary merit. It discusses the Mosaic origin of the laws of the Pentateuch, which is a prime factor in the determination of the age of the Pentateuch itself, and is the quarter in which the most radical school of recent critics have made their most vehement assaults. Their arguments are carefully and dispassionately examined and their positions successfully refuted in this volume, which presents in a clear and distinct form, and in the briefest possible compass, the state of the question and the grounds respectively urged on either side."—Rev. W. H. Green, D.D.

New (Vol.) 7th of Clerical Library.

Platform and Pulpit Aids.

This new volume is intended to assist the clergy, Christian laity, and Christian workers generally in a department of their daily labor. It consists of speeches etc., delivered during recent years by distinguished pulpit orators on such subjects as the Bible, Missions, Sunday Schools, Temperance, etc. To this is added a selection of pithy and striking anecdotes. Crown 8vo, cloth, $1.50.

Moments on the Mount.

A Series of Devotional Meditations. By Rev. G. Matheson, D.D. (From 2d English Edition.) 12mo, cloth, $1.25.

"In this book we are brought into contact with a writer whose whole soul is saturated with divine ideas, and to whom Scriptural images are the exponents and symbols of spiritual conceptions."

Forewarned—Forearmed.

By J. Thain Davidson. Uniform with 'Talks with Young Men.' 12mo, cloth, $1.25.

"The favor accorded to the 'Talks with Young Men,' and the pleasing testimony to its usefulness which I am constantly receiving, have induced me to yield to the request to issue another series of these homely addresses."
—Preface.

NEW BOOKS:

The Works of Thomas Middleton.

Edited by A. H. Bullen, B.A. In eight volumes, 8vo. Vols. 5 to 8 now ready. The 4 vols. cloth, $12.00; large-paper edition, $16.00 net. The complete set, 8 vols., cloth, $24.00; large paper, $32.00 net.

"We must all give glad and grateful welcome to a new edition of a noble poet who has never yet received his full meed of praise and justice."—*A. C. Swinburne.*

RIVERSIDE ALDINE SERIES.

Backlog Studies.

By Charles Dudley Warner. 16mo, $1.00. Limited number of First Edition, red cloth, paper label, uncut edges, $1.50.

Verses: Translations and Hymns.

By W. H. Furness, D. D. $1.25.

Snow-Bound at Eagle's.

A New Story, by Bret Harte. $1.00.

Progressive Orthodoxy.

A Contribution to the Christian Interpretation of Christian Doctrines. By the Editors of the Andover Review. $1.00.

A Mortal Antipathy.

The First Opening of the New Portfolio. By Oliver Wendell Holmes. 12mo, gilt top, $1.50.

Bonnyborough.

A New Story, by Mrs. A. D. T. Whitney, author of 'Faith Gartney's Girlhood,' 'The Gayworthys,' etc. $1.50.

Ten Great Religions.

Parts I and II. By James Freeman Clarke, D. D. New Edition. 2 vols, crown 8vo, price reduced from $3.00 to $2.00 each.

*** For sale by all booksellers. Sent by mail, postpaid, on receipt of price, by the Publishers,*

The Nation.

NEW YORK, THURSDAY, MARCH 11, 1886.

The Week.

THE Republican Senators showed their true character again last week by confirming without dissent the appointment of Mr. Hedden to the Collectorship of this port. Both New York Senators, Evarts and Miller, urged his confirmation. In view of the Republican outcry against Mr. Hedden at the time of his appointment, and the grave reasons for questioning his fitness for the position which his conduct in the appointment of Sterling gave rise to, there was ample ground for a Republican Senate, devoted solely to the public good, to make a "fight" on his nomination. But they confirmed it, as they confirmed that of the disgracefully unfit Rasin, without hesitation. The meaning of their action is plain enough. They know that their confirmation of a bad appointment does not remove from the President one particle of the responsibility for making it. They are not using their confirming powers to keep unfit men out of the service, but are trying to use them to gain a petty partisan advantage of the President. If they could force him to do all that they wish, they would still refuse to share any of the responsibility for those very acts in which they demand a right to participate.

We print elsewhere a suggestion from a well-informed correspondent, that the true remedy for Senatorial irresponsibility in the matter of suspensions and removals is to have the vote on nominations public, while keeping the discussion of them secret as at present. His main argument in favor of this is, that sensitive men would shrink from having their character openly canvassed by critics who, in many cases, would be hostile or malicious. He thinks that through the open vote "the responsibility of Senators for unfit confirmations would be ascertained, and all bargaining for confirmations and for the division and control of patronage could easily be detected, and would be remorselessly exposed. If Mr. Senator —— secured the confirmation of a characterless politician whose nomination he had procured, the open vote would show from whom he got his support." It would, if the vote were taken by yeas and nays, show from whom he got his support; but it would not show that he was a characterless politician. Our correspondent's plan might possibly work if there were no four years' term and everybody held office during good behavior, so that appointments were few and far between. As things now are, it would be futile. What is needed to fix responsibility, both on the President and Senate, is more knowledge of the vast swarm of new men they select for office in each Presidential term. This the public does not now possess and has no means of getting. It therefore does not know in most cases when the Senate confirms a man, whether it confirms him because he is a great rascal or because he is a model of all the virtues. One is nearly as likely as the other, and in no way can it get this knowledge except from open discussion of the candidates' qualifications.

Mr. Edmunds's discussion of the dispute between the Senate and the President about the official papers was no doubt able, but it was what is called "academical"—that is, has not and cannot have any practical end in view. Nothing can come of it, because the Senate is unable to tell the public what it would do with the papers if it got them. If the Senate could say it was going to use them in order to see that the President put none but good men in office, and turned none but bad men out of office, it would rouse public interest and expectation to the highest degree. But there is no pretence even that it has any such end in view. There is no pretence that it would not, after getting "the papers," confirm as many bad nominations as the President chooses to send in. This is all very unfortunate because Americans are a practical people, and care very little about contests over barren rights, and care very little who has "papers" which are of no value to anybody—not even to the owner.

The daily hearings before the Ways and Means Committee on the new tariff bill are very impressive. Every group of producers wants a little more tariff, and generally wants it in the interest of labor. Occasionally Mr. Hewitt brings a blush to the cheeks of these sturdy beggars by asking them whether they are in the habit of paying higher wages when they get higher prices for their products, and whether they employ newly-arrived Hungarian and Italian laborers when they have difficulties with the Knights, etc., etc. But seldom does anybody appear before the Committee to represent the fifty or sixty million consumers of the articles taxed. On Monday the rice-growers had their day in court. They were represented by Mr. Trenholm, of South Carolina, who avowed himself a free-trader in principle, but insisted that if protection was the "going thing" the rice-growers ought to be protected against the pauper labor of the East Indies, and especially against the deleterious practice that has grown up in this country of entering broken rice under the head of "granulated" at 20 per cent. duty. The brewers, who use this broken rice, were represented at the hearing, and they made a vigorous protest against any increase in the duty or change in the classification. And so it goes on from day to day, showing how the law is invoked on this side and that to take money from one class or calling and give it to another. The Knights of Labor may be trusted to keep a close watch and make notes on the proceedings, to be used when it comes their turn to make the laws and divide up the national earnings according to everybody's deserts.

A fresh illustration of the ingeniously bad effect of our revenue laws upon the commerce of the country was afforded by the recent arguments of a committee of merchants of this city before the Ways and Means Committee at Washington, in the discussion of Mr. Hewitt's bill, by which it is proposed to amend sections 2970 and 2983 of the Revised Statutes. The proposed amendment allows merchandise to remain in bonded warehouses for three years, instead of only for one year, as at present, and provides that the duties shall be assessed on the *quantity* withdrawn. The depreciation in quantity or weight of some goods, and particularly of sugar, on storage, is very great, but under the existing revenue laws the duty must be paid on the weight which went into store—in other words, duty must be paid on something which does not exist. The evil worked by such a state of the laws is that comparatively very little unrefined sugar is kept in store here, merchants preferring to find warehouses for it in some foreign port. It would seem to be enough to require importers to pay duty on what they possess, without placing a tax on their losses. Such a law, in fact, drives commerce from our doors. By lengthening the time allowed for goods to remain in bond our warehouses and insurance companies will be benefited, and the increased quantity of goods on storage will make a more stable market price.

The last number of *Bradstreet's* continues the narrative of the great struggle over the tariff on dirt. Pursuing their appeal to the Assistant Secretary of the Treasury, Messrs. Newlin and Sanders, representing the American Wool Growers' Association, put in a brief representing that washed wool is the article as it comes from the sheep's back, after the animal has been soused in the river, and before the fleece has received any cleansing with hot water. Hot water "starts the grease," and that is the very thing that the tariff was intended to prevent. It was shown by incontestable evidence that, after the grease was started, the Donskoi wool was "taken to a raft and beaten with sticks to loosen the dung-balls and other impurities," and that after this fraudulent treatment it was "again put into the river and then hung up to dry in the sun." This, Messrs. Newlin and Saunders contend, "is confessedly not washed wool." It is more than washed, and must therefore be classed as scoured, and taxed 7½ cents per pound. The Donskoi wool men, on the other hand, insisted that scoured wool was an article which had been treated with soap, or chemicals, or machinery, and that merely "starting the grease" could not be considered scouring. Testimony was introduced to show that American wools were classed as washed, tub-washed, and scoured—washed wool being the article as partially cleansed on the sheep's back, tub-washed being treated with hot water in order to start the grease, and scoured being treated with chemicals. The weight of testimony seems to be strongly against the position taken by the American Wool Growers' Association.

Upon the whole, it seems to be necessary to have more stringent legislation to secure an adequate importation of dirt. If anybody had anticipated the practice now disclosed as of daily occurrence in the valley of the Don of starting the grease and loosening the impurities before shipping wool to this country, stringent measures would have been taken to prevent such frauds.

The great strike on the "Gould Southwestern system" began in the Texas Pacific, a bankrupt concern, which is in the hands of a receiver—that is, in the care and custody of the courts of the United States. It has extended to the other Gould roads, but whether there were grievances on those other roads or whether the extension of the strike was in the nature of a boycott, we are unable to discover. At first the strike on the Texas Pacific was supposed to have some relation to the Mallory boycott at Galveston, but the connection between the two is not plain. What is clear is that 9,000 or 10,000 men have voluntarily ceased work, that 6,000 miles of railway are idle, and that all traffic except the carrying of the mails is suspended in the country served by these roads. Of course, such a condition of things cannot last. The men who have thrown themselves out of work cannot subsist long without wages. The treasury of the Knights of Labor cannot stand such a drain. On the other hand, steps must be taken to put the trains in motion either by employing other hands or by acceding to the demands of the strikers. Mr. Hoxie, the General Manager of the Gould Southwestern System, is a man of much resolution, and is weather-beaten in all sorts of rough-and-tumble work on the frontier. If he is allowed to have his way, he will probably fight the strike to the bitter end. A sufficient number of men can be collected to take the places of the strikers if they can be protected in the performance of their work. Whether they can be protected will depend much upon the state of public opinion along the lines affected, and this again will depend much upon the causes of the strike, which are as yet very indistinct.

So great an upheaval of labor difficulties would naturally produce quakings all over the country. The most significant echo of all perhaps is that which comes from the interior of Illinois, where the local assembly of the Knights of Labor have resolved to form a separate National Labor Party and have done with the old parties altogether. This, we think, is greatly to be desired. The awful spectacle now presented to us of Republican and Democratic newspapers, like the *Tribune* and *Sun* of this city, tumbling over each other in their haste to endorse everything that is denominated labor, and to support any kind of outlawry if it bears the brand of a trade union, would be speedily withdrawn if the Knights and their affiliated societies should form a party of their own. It is the logic of their position that they should do so. What they are aiming at is to govern the country, and this they can never do until they become a political party, for, under existing conditions, neither party will do all that they ask. Both will cheat them more or less.

The passage of the Blair Education Bill by a large majority in the Senate, and the favorable report in the House on the Eads Mexican Ship Railway Bill, the growing rage for pensions, and the continued purchase and coinage of silver at the rate of $2,000,000 per month—all these things coming upon the Treasury without any tax bill to provide the means for them—suggest the inquiry whether the Knights of Labor, if vested with supreme legislative powers, could do anything worse. They could do no worse than empty the Treasury, destroy the public credit, and produce national bankruptcy, temporary or permanent. This is the drift of things at Washington now, and the main reliance of the public against these evils rests in the Executive veto, and in the hope that something more than one-third of the members of one or the other house may sustain the veto power when it comes to be exercised.

The bloody-shirt organs at the North are just well started on a chorus of indignant outcries against a "Confederate Brigadier" from Kentucky, Wolford by name, who has announced his purpose to introduce in Congress a bill giving to every Confederate soldier who lost a leg or arm in the war an artificial leg or arm at the expense of the Government. It seems a pity to spoil the fun of the organs, but regard for truth compels us to state that General Wolford served with distinction in the Union army as Colonel of the First Kentucky Cavalry, and fought gallantly to put down the rebellion. Besides, the bloody-shirt organs ought not to forget that assistance from the Treasury to disabled Confederates is good Republican doctrine now, since the Republican party in Virginia last year declared in favor of pensions for ex-rebel soldiers, and the chief Republican organ in Virginia appealed for popular support on the ground that the Democrats could not be trusted to make appropriations for this purpose.

We are glad to see that the Southern Congressmen have learned the true way to dispose of the bloody-shirt shriekers, which is simply to make fun of them. Mr. Norwood, of Georgia, last week applied this process to Mr. Henderson, of Iowa, who had discharged a lot of rant against his countrymen in the South, and he set the whole House laughing at that victim of "a disease common to public men, known ordinarily as '*vox populi*' on the diaphragm, but, when it becomes acute, called cerebro elephantiasis." Mr. Breckinridge, of Kentucky, followed Mr. Norwood's humorous disposition of the bloody-shirt clap-trap with a serious exposure of the demagogy which seeks popularity by supporting huge pension jobs, putting the case with admirable force when he plainly told the House that, in increasing the pensions of widows and orphans of soldiers, it ought not to forget that every dollar appropriated for public purposes was taken from the people by the tax-gatherer; that every dollar was coined in the sweat of labor; that there could not be any such thing as the surplus that was so much talked about when finances were discussed, so long as every city and town in the country was burdened with debt; and that in adding 50 per cent. to the pensions of widows and orphans of soldiers, just so much must be taken from all the widows and orphans who do not benefit by the bill. Between Mr. Norwood's raillery and Mr. Breckinridge's seriousness the Northern demagogues were pretty thoroughly exposed.

In view of the recent reductions in postal rates, it is a surprise to find that Senator Wilson, of Iowa, has introduced a bill doubling the postal charge on "fourth-class matter" after the first of July next. This class covers what may be termed miscellaneous mail matter, consisting mostly of small samples of dry goods, seeds, plants, bulbs, and scions. The present postal charge is one cent an ounce, and the cheap and efficient delivery of packages through the mail has been a great boon, especially to the scattered population of farmers, florists, and agriculturists generally throughout the country, the practice of using the mail for such articles having grown largely within the past few years. The apparent reason for this is, that in the first place it is cheaper than to send by express, and in the second place the express offices are fewer, and often at much greater distance from the farmer or country resident, than the post-offices. It is very probable that the express companies feel that this use of the mails is taking away a part of what they consider their business, and it is intimated that these companies are endeavoring to promote the proposed change in the law. It is almost superfluous to urge that no change for the benefit of private corporations should be allowed in our postal laws, which exist for the greatest good of the greatest number of citizens. Without complete statistics of the mail service throughout the whole country, it is difficult to say what proportion the postage received on fourth-class matter bears to the cost of transportation. If on careful investigation it should appear that the mails are used for transporting ordinary merchandise at a considerable loss to the revenue, it would be easy to modify the law by way of making rational distinctions without doubling the rate on all "fourth-class matter."

The appointment of Col. William Ludlow, of the United States Army, as Engineer Commissioner of the District of Columbia, is a pointed rebuke by the Democratic President to the Republican City Council of Philadelphia. Colonel Ludlow is the officer who has been for three years past the Chief Engineer of the Philadelphia Water Department, having secured leave of absence from the army without pay, in 1883, to fill that position, and who was recently refused a reëlection by the Republican Councilmen, nominally because he is personally a Democrat in political faith, but really, as the leading Republican organ of the city was forced to confess, because he had kept politics entirely out of the department,

and had administered it "strictly on business principles." What is Philadelphia's loss, through the openly avowed purpose of the Republican ring to get rid of a good officer, in the words of the *Press*, "because he *is* a good officer," and because the spoilsmen were resolved to substitute a man who would give them "the cake" of patronage, is thus Washington's gain, thanks to Mr. Cleveland.

The Western Union Telegraph Company has submitted to the inevitable, and has paid without further protest the $135,000 of tax still due the State for the year 1881. It will be remembered that when the law of 1881 was passed, taxing the entire capital stock of all corporations, the Western Union raised the point that only a part of its entire capital was employed or situated in New York, that it paid heavy taxes to other States on its property situated therein, and that it could not in justice be asked to pay to New York a tax on more than that portion of its capital represented by property within the State. In 1885 the Legislature recognized the justice of this plea by amending the law of 1881 so as to tax only the property within the State for 1882, 1883, and 1884, and thereafter, but did not include the year 1881. This was an obvious injustice, because if it was not right to assess the tax on the entire capital for those years, it was not right so to assess it for 1881. The Western Union carried its plea against paying on the entire capital in 1881 to the Court of Appeals, but the Court decided that the law must be obeyed. The Comptroller had no other course to follow than to obey the law, and he has been pressing the company rigorously for payment. He has induced the Legislature to pass an amendment to the Code of Civil Procedure, enabling him to collect tax-money from a corporation precisely as he would from an individual, and this has been signed by the Governor. When the Western Union heard of the Governor's signature it gave up the struggle and paid the money. Nevertheless, the company has been in the right in the controversy, and we cannot regard the success of the State in the matter as anything less than a triumph of injustice for which the Legislature of 1885 is solely responsible.

The chapter of history furnished by General H. V. Boynton to the Cincinnati *Commercial Gazette* on the origin and meaning of the Sherman-Johnston Convention of April, 1865, is, we think, entirely new, and is certainly important. General Boynton has had much to do with the controversies of the war period, and has never, we believe, stated anything as a fact which did not turn out to be such. He says that the idea of arranging terms for the final surrender of the Confederate armies which should lay the foundation for a conservative reaction, was conceived by Montgomery Blair, and by him communicated to the leading officers of General Sherman's army. General Frank P. Blair was one of these officers, and he would naturally have been the medium of communication if there was such a political scheme on foot. The idea, General Boynton says, was approved by some of these officers and disapproved by others, and was accepted by General Sherman himself and embodied in the terms of the surrender of Johnston's army, which included in its scope all the remaining armed forces of the Confederacy. This is a rational explanation of that mysterious affair—mysterious because it was an attempt on the part of a subordinate officer to make terms different from those fixed in a parallel case by his chief. The affair ceases to be a mystery if we assume that General Boynton's account of it is correct, viz.: that it was the culmination of a political plot originating outside of the army to reconstruct the Union on what was called a "conservative basis." If this is the correct history of the affair, the checkmate given to it by Secretary Stanton was none too prompt or vigorous.

The series of letters that passed between Generals Grant and Halleck during the war, furnished by General Boynton to the *North American Review*, put a new face on the actual relations between those officers, and turn into consummate foolishness the efforts of certain persons to make out a state of suspicion, jealousy, mistrust, and hostility between them. More than this, they obviously leave something to be explained regarding the tone of the first volume of General Grant's Memoirs toward General Halleck. This tone is expressive not so much of hostility toward Halleck as of contempt for his judgment—a contempt which General Grant certainly did not entertain either at the time when Halleck was Grant's commanding officer, or when their positions were reversed. If General Grant had left no personal memoirs, but somebody else had written the book which bears his name, it would be easy to prove from these letters that General Halleck had been hardly dealt with. Much as we cherish General Grant's memory, we are bound to set the truth on a higher pinnacle than any man's impressions and recollections of long-past events.

The most curious thing about the Holland trial was not so much his acquittal as his high standing in his own State, Texas. He had in court a great bundle of testimonials from leading citizens of that community, all of which the Court refused to have read, but one from the Governor was read. One gets from them a very odd impression of Texan society even now. We should have supposed that a man starting from Texas, in order to bilk a dealer in counterfeit money in New York, and to kill him if necessary in the attempt, would have had to go back fifty years at least in order to carry with him in his enterprise the loving admiration and anxiety of his brother Texans. But it seems that even now, in 1886, he is a hero in the eyes of his fellow-citizens, and they are looking for his return with tear-dimmed eyes. The Legislature will probably take notice of it when he comes. He may become a lecturer with diagrams.

The Catholics have begun, in a somewhat promising way, the foundation of a Catholic university. They want $800,000 and they have got $600,000, and the balance seems to be within reach. The object is, as explained by Bishop Kean, at a meeting held last Thursday, to supply Catholic youth with a higher education, without exposing them to the scepticism with which all the existing universities are infected. "The universities and secular colleges," he said, "were turning out accomplished scholars who were tainted with unbelief." "There was no institution for the highest learning," he added, "either in England or in this country, where a Catholic young man could receive an education without danger to that priceless treasure, his faith." There are doubtless a good many strong reasons why Catholics should have a university of their own, but surely the failure of all denominational colleges thus far to save their students from the agnostic infection—a failure which Bishop Kean himself points out—ought to make people hesitate about starting another as a bulwark of faith. The Catholic universities on the European Continent have not prevented the bulk of the young men from becoming sceptics; why should an American university fare any better? No university will ever succeed, or has ever succeeded, in implanting in young men's minds ideas about the unseen world which are sure to last. In truth, it is, judging from experience, questionable whether universities under theological management are not more dangerous to faith than secular ones, for the simple reason that the very attempt to furnish a young man under twenty-one with a fixed set of opinions on subjects not capable of scientific treatment, is very apt to produce a reaction on his first exposure to unfavorable influences.

The queer errors into which even historians and literary men, and professed publicists, like Mr. Froude, sometimes fall in very simple matters, is well illustrated in an interview with him which the *Herald* prints. He is all for stern *action* against the Irish (politicians of his school are generally "sick of mere talk"), but what he wants in the meantime is something American in the treatment of Ireland. "Look," says he, "at what the Supreme Court did at Washington the other day. It ordered Virginia to pay her debts in an honest way." We have no doubt that he really believes that this is what happened, and that the Supreme Court has power to order State Legislatures to vote money for specific purposes, and thinks that a similar tribunal, if one could be set up in England, might keep the Irish Parliament in order. Another gem of misinformation is to be found in the sentence: "If Ireland were governed as the South was governed by the North after your civil war, with a firm and steady hand, there would be peace, and then any industry and prosperity there might be would have an opportunity of emerging and of telling on the condition of the country, and there would be no opposition." As a description of the carpet-bag period of reconstruction at the South, this is of course very amusing. This talk is worth reproducing as an illustration of the equipment, both intellectual and moral, of a considerable number of Englishmen whose dogmatizing about Ireland has an important share in forming the opinion by which that unhappy country has been so long governed.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, March 3, to TUESDAY, March 9, 1886, inclusive.]

DOMESTIC.

THE Senate on Wednesday confirmed the nomination of Collector Hedden. In the debate on the Blair Education Bill the following amendment by Mr. Edmunds was adopted: "And in each State and Territory in which there shall be separate schools for white and colored children, the money paid in such State and Territory shall be apportioned and paid out for the support of such white and colored schools, respectively, in the proportion that the white and colored children between the ages of ten and twenty-one years in such State or Territory bear to each other, as shown by the census of 1880. The foregoing provision shall not affect the application of the proper proportion of said money to the support of all common schools wherein no distinction of race or color shall exist."

In the Senate on Thursday Mr. Logan's amendment to the Education Bill, increasing the appropriation to $136,000,000, was lost; yeas 12, nays 30. Mr. Logan then moved another amendment, appropriating $2,000,000 to aid in building school-houses in communities of sparse population, among people who would find it comparatively difficult to erect school-houses. This was adopted.

The Senate passed the Blair Education Bill on Friday by a vote of 36 to 11, the nays being Coke and Cockrell (Dems., Tex.), Gray (Dem., Del.), Harris (Dem., Tenn.), Maxey (Dem., Tex.), Wilson (Dem., Md.), Frye, Hale, Ingalls, Jones, and Plumb (Reps.). The House, by a vote of 229 to 20, passed a deficiency bill appropriating $634,452 to meet unforeseen expenditures.

The bill reported by Senator Van Wyck to provide for the taxation of railroad-grant lands provides that no such lands shall be exempt from local taxation by States, Territories, and other municipal corporations on account of the lien of the United States thereon for the cost of surveying, etc., or because no patent has been issued therefor.

The House Committee on Commerce on Friday agreed, by a vote of 9 to 4, to report favorably with amendments the Reagan Inter-State Commerce Bill.

The House Committee on Naval Affairs has completed a report, which says: "It is the unanimous opinion of your Committee that the Government of the United States ought not longer to permit the lives and property of American citizens to be thus manifestly held at the mercy of so many foreign nations. Forts of iron and steel cannot, within any reasonable limit of cost, be erected so as to give protection wherever it is needed. This it is only practicable to do by means of a navy which can follow an enemy to every point of attack."

There are reports that there is to be considerable opposition in the Ways and Means Committee to the Morrison Tariff Bill. The Republican members of the Committee think that the Democrats on the Committee will not sustain Mr. Morrison, and that the bill will be very much altered before it is reported.

Speaker Carlisle has announced as the Special Committee "to investigate the facts concerning the ownership of Pan-Electric telephone stock by certain public officers": Messrs. Boyle of Pennsylvania, Oates of Alabama, Eden of Illinois, Hall of Iowa, Hale of Missouri, Millard of New York (Dems.), and Hanback of Kansas, Moffat of Michigan, and Ranney of Massachusetts (Reps.). The House on Thursday passed the Pension Appropriation Bill.

Secretary Whitney has sent to the House the reply of Commodore Truxtun, commandant at the Norfolk Navy-yard, to Mr. Boutelle's resolution of January 22, alleging the obliteration of honorable inscriptions from cannon and from the dry dock at Norfolk, and the unnecessary and partisan discharge of employees. As to the inscriptions on guns, said to have been purposely destroyed, he replies that none were destroyed by his order, while some inscriptions that had been partly obliterated by exposure were renewed by his order in June last. The dry dock was never destroyed. "The officers in charge of this yard," he says, "having all been engaged upon the side of the Union in the war, have in no way discriminated against Union sailors and soldiers. All their sympathies are with them, and all the rights and benefits belonging to them by law and from their services to their country have been carefully guarded and freely given to them. I think there are more Union soldiers and sailors employed in this yard to-day than there were on the day the present Administration came into power."

The death of Senator Miller makes vacant the Chairmanship of the Committee on Foreign Affairs. Some of the friends of Mr. Sherman, who is the acting Chairman of the Committee, say that he would resign the office of President pro tempore of the Senate to be made Chairman of that Committee. Mr. Sherman has never been satisfied with his committee positions since he returned to the Senate after having been Secretary of the Treasury.

President Cleveland on Thursday nominated James C. Matthews, of Albany, N. Y., to be Recorder of Deeds for the District of Columbia, to succeed Frederick Douglass. Mr. Matthews is a well-known colored lawyer and a Democrat. He won prizes in an Albany school for boys, and was graduated with honor from the Albany Law School.

The President on Monday appointed Major William Ludlow, of the Corps of Engineers, U. S. A., to be Engineer Commissioner of the District of Columbia, vice-Major Garrett J. Lydecker. Mr. Ludlow has an excellent record as an engineer officer, and has had charge of important public improvements in various parts of the country.

The President has not been able to find a suitable person to fill the position of Civil-Service Commissioner to succeed Mr. Eaton. He finds it difficult to induce a competent person to accept the place for the salary.

Brigadier-General A. H. Terry, who stormed Fort Fisher, has been promoted to fill the vacancy caused by the death of Major-General Hancock.

A great strike of 10,000 Knights of Labor on the Gould system of railroads in the Southwest was ordered on Saturday. It grew out of the Mallory boycott at Galveston. Freight traffic is entirely suspended.

The action of the Knights of Labor of the Decatur, Ill., section in forming a new political party is attracting much attention. They declare in their platform, "We have formed a new national political party, to be known as the United Labor Party of America, for the purpose of organizing and directing the great political power of the industrial masses as a political organization; and we will cast our ballots for no one who will not pledge himself to stand firmly by our principles."

Master Workman Powderly, upon being shown the statement that the Knights of Labor of Illinois had formed a political party under the auspices of the order, declared it untrue, and said that if such a thing is attempted by any district or local or State Assembly of the Knights of Labor, the charter of the body taking such action will be recalled. The order cannot be turned into a political party.

A prominent member of the Knights of Labor in Washington says that this order is making arrangements to organize the police forces of cities into branches of their society. He claimed that there was nothing improper in this, as policemen were only wage-workers like laborers and mechanics. He also expressed his confidence that the scheme would be carried out successfully.

An extensive strike of the coal miners of Federation No. 3, comprising the soft coal districts of the East, was begun on Monday for the uniform scale of wages which was adopted at the Convention at Cumberland, Md., of February 19. About 10,000 men quit work, 5,000 of whom were in Maryland mines.

All the street-car lines in this city and several in Brooklyn stopped running cars on Friday morning, owing to the refusal of certain companies to yield the demands of their employees. The difficulty was finally referred to Railroad Commissioner O'Donnell, and the cars started at two o'clock in the afternoon.

The New York Senate Committee on Railroads, which has been investigating the Broadway Railroad affair in this city, made a preliminary report on Tuesday. After reviewing the circumstances surrounding the grant of the franchise by the Aldermen, the report says: "Of the means which procured this action on the part of the Aldermen, your Committee have but one opinion, and that opinion is that it was done by bribery and corruption. In every avenue leading up to this conspiracy are seen the footprints of fraud and deception—in the appointment and proceedings of the commissioners who authorized the location and construction of the road; in the dealings with the agents and attorneys of the taxpayers, who conscientiously sought to defeat the project or secure justice to the city; and in the concealments and deceptions practised upon the trustees of the mortgages put upon the property, like that which secured the name of President Palmer, of the Broadway Bank, to the second-mortgage bonds of the company in ignorance of the fact that already a prior mortgage of $1,500,000 had been placed upon the property. All progress was made by unusual and secret methods unknown to legitimate business. It is unpleasant to know, and painful to relate, that commissioners appointed by the court to determine upon the right to build the road are not entirely free from suspicion. The city lost a property which the evidence adduced before the Committee shows would yield a net interest of 5 per cent. on $10,000,000. The results of this successful brigandage, if allowed to go unchallenged, are far-reaching and productive of danger—first, to the city and its taxpayers, and second, and not much more remotely, to honest government and social progress." The report was accompanied with a report recommending the passage of four bills: the first annuls the charter of the Broadway Surface Railroad Co.; the second provides legal machinery to wind up corporations dissolved by the Legislature; the third provides that no local authorities shall have power to pass a street-railroad franchise over a Mayor's veto without the consent of one-half the property-owners on the street affected; the fourth bill provides that the repeal of the franchise to a street-railroad corporation shall not act as the annulment of the franchise, but simply of the corporation. The franchise shall be sold at public auction to the highest bidder.

The Civil-Service Reform Association of this city has passed resolutions favoring "the abandonment by the Senate of the United States and by the State Senates of the practice of discussing and acting upon nominations for office in secret session"; also, "the enactment of laws making it the duty of public officers intrusted with the power of appointment and removal to put upon public record in every case of suspension or of removal the reasons therefor, or, in the absence of such legislation, the introduction of the practice of regularly recording the reasons for the suspensions or removals made." The Association furthermore has declared in favor of a law prohibiting members of Congress from taking part in solicitations for public office.

The Massachusetts Reform Club (of Independents), at its dinner in Boston on Thursday night, sent the following despatch to President Cleveland: "The Massachusetts Reform Club, assembled on this the anniversary of your inauguration, congratulate you upon the success of your Administration, and desire to express their warm appreciation of your courageous efforts for reform and better government for the people."

The Harvard Conference Committee has adopted a recommendation of Professor C. C. Langdell, the Dean of the Law School, that the members of the Senior Class be allowed to take one of the regular courses in the Law School, and have this counted as a quarter of their last year's work for the degree of A. B. The Faculty has to pass on this.

The sale of 240 paintings belonging to the collection of the late Mrs. Mary J. Morgan was held in this city during the week. The aggregate realized was $885,300.

Mrs. Harriet Ward Foote, wife of Senator Joseph R. Hawley, of Connecticut, died in Washington on Wednesday evening. Mrs. Hawley spent three years during the war in the military hospitals, nursing the patients and teaching the art of nursing to others.

The widow of ex-Governor Horatio Seymour died in Utica on Monday. She was a daughter of John R. Bleecker, of Albany.

United States Senator John P. Miller, of California, died in Washington on Monday, in his fifty-third year. His term would have expired in 1887.

Mrs. Benjamin Harris Brewster, wife of ex-Attorney-General Brewster, died in Philadelphia on Tuesday. Mrs. Brewster was the daughter of Robert J. Walker, at one time Secretary of the Treasury.

Ex-Senator Jerome B. Chaffee, of Colorado, died near this city on Tuesday aged sixty-one. He had amassed a large fortune, part of which was swallowed up in the Grant & Ward failure.

Colonel William S. Clark died in Amherst, Mass., on Tuesday, at the age of sixty. He was graduated at Amher t College and received the degree of Ph.D. at Göttingen. During the war he was Major and Colonel of the Twenty-first Massachusetts regiment. Later he was Professor of Chemistry and President of the Amherst Agricultural College. He resigned in 1879. In 1877 he organized an agricultural college in Japan. A few years ago he engaged in mining enterprises which were disastrous.

FOREIGN.

Lord Salisbury, speaking at a Conservative banquet in London on Wednesday night, denied the assertion of Sir Henry James that he had ever encouraged the "home-rule delusion" in the slightest manner.

The Parnellites on Thursday decided to array themselves against the Tories in their attempt to force the Government to show their hand on their policy during the debate on the civil-service estimates. The Conservatives had arranged to have Mr. Hugh Holmes, Conservative member for Dublin University and lately Attorney-General for Ireland, interrupt the Government's proposition to go into Committee on the Civil-Service Estimates, by an amendment declaring that the House was unwilling to entertain estimates for the civil establishments in Ireland, before being placed in possession of the policy which the Government intended to pursue for the "restoration and maintenance of social order in the country." It was calculated that if this amendment was carried, the Government would be either blocked or compelled to divulge their intentions. Mr. Parnell, however, resolved to go to Mr. Gladstone's rescue.

In the House of Commons on Thursday afternoon Mr. Holmes offered the amendment about the Government's Irish policy of which notice had been given. Mr. Gladstone chaffingly declined to fall into the trap set for him. He said that he was not such a simpleton as to yield to the artful allurements of his opponents. He had already stated that the Government was considering the question of social order in Ireland, the land question, and the question of the future government of Ireland. These subjects were inextricably associated. The Government was really entitled to three months' time for the preparation of Irish measures. Referring to sneering allusions to Mr. Davitt's and the League's denunciation of outrages, Mr. Gladstone said he was glad to hear that Mr. Davitt was preaching order, and delighted that the League was mending its manners. Lord Randolph Churchill justified the motion on the ground that there was danger that Mr. Gladstone would lull the country to torpor. A motion to adjourn the debate was rejected by a vote of 364 to 160. Sir Michael Hicks-Beach remarked that in view of the silence of the Ministers the Conservatives were satisfied with the result of the protest that had been made, and would not call for a division. The Parnellites express themselves as highly satisfied with Mr. Gladstone's speech. It was authoritatively announced on Friday that Mr. Gladstone had neither directly nor indirectly consulted with Mr. Parnell on the subject of home-rule for Ireland.

In the House of Commons on Friday evening Mr. Labouchere's motion, that a hereditary chamber of legislation "is inconsistent with the principles of representative government," was rejected by a vote of 202 to 166, the Radicals and Parnellites forming the minority. Many Liberals abstained from voting. The majority was mainly Conservatives and prominent members of the Government.

In the House of Commons on Tuesday evening Mr. Dillwyn (Liberal) moved to disestablish the Church of Wales. Mr. Grey (Liberal) moved to reform instead of to disestablish the Church of Wales. Mr. Grey's amendment was first adopted by a vote of 241 to 229, and then, as a substitute for Mr. Dillwyn's motion, was rejected by a vote of 346 to 49. In the first division the minority consisted of Liberals and Parnellites. In the second division the Parnellites left the House in a body. Messrs. Gladstone, Chamberlain, Morley, and Trevelyan abstained from voting altogether.

Mr. John Morley, Chief Secretary for Ireland, announced in the House of Commons on Monday afternoon that an agent had started for the islands on the western coast of Ireland with a little money and a quantity of seed potatoes. He added that the Government would take other measures to relieve the distress, which, he said, was "terrible."

Mr. Gladstone has made such progress with the landlords' expropriation scheme as to require the services of Sir Henry Thring, the Parliamentary Counsel to the Government, to draft the details of the bill. He proposes an ascending scale of rates of purchase on the ratio of the extent and value of tenants' holdings. It was announced on Monday that Mr. Gladstone was suffering from a severe cold. He is recovering.

Lord Hartington, in a speech in London on Friday evening, insisted that it was necessary to obtain a clear statement of the Irish demands, and an assurance that any proposal by the responsible Government would be accepted by Mr. Parnell and his followers on the authority of the Irish people.

Earl Rosebery, Foreign Secretary, has instructed Sir Henry Drummond Wolff, the British Commissioner in Egypt, to reject the demand of Mukhtar Pasha, the Turkish Commissioner, that an Egyptian army be organized with a large Turkish element. The English occupation of Egypt will continue until the questions of the fellaheen's tenure of land and civil, military, and financial reforms have been settled.

Mr. Charles Russell, the British Attorney-General, went to Buckingham Palace on Friday to be knighted. After waiting an hour he received word from the Queen that she was fatigued by the duties of the "drawing-room" and must postpone the ceremony of knighting him. Mr. Russell withdrew from the palace in indignation. He was knighted, however, on Monday. It is believed that the Queen is irritated at his pronounced home-rule views.

Eight men who have been convicted of taking prominent part in the recent Trafalgar Square and Hyde Park riots, London, were on Friday sentenced at the Middlesex Sessions to penal servitude for terms ranging from one to five years.

In the French Chamber of Deputies on Thursday afternoon, amid great excitement, a motion for the immediate expulsion of the French princes from France was made and vigorously supported by M. Clémenceau and opposed by Prime Minister de Freycinet. The motion was rejected by 345 to 176. A vote of confidence in the Government was adopted by 353 to 112.

M. de Freycinet, it is reported, has demanded an explanation from the Belgian Government as to why the latter did not send a commission to meet the French Commission and delimit the boundary line between the Congo State and French territory. Negotiations for a Congo loan have been broken off in Paris.

Louise Michel and a companion were pelted with stones and snowballs at Versailles on Monday evening while addressing a meeting on socialism.

M. de Lesseps and party sailed on Wednesday from Colon for France.

The Paris *Gaulois* states that a serious difference of opinion between France and China has arrested the progress of the negotiations for a settlement of the Tonquin frontier question and the establishment of a commercial treaty between the two countries.

Rumelia has agreed to abolish duties on goods which have already paid a customs tax on entering Turkey. Objection to this Rumelian duty was the reason assigned by France for withholding her adherence to the Turco-Bulgarian treaty appointing Prince Alexander military ruler of Eastern Rumelia.

All the Powers have given their assent to the Rumelian agreement as modified by Russia. The clause relating to a military alliance between Bulgaria and Turkey has been eliminated.

Greece continues her war preparations, and has been warned by the Powers that if she persists in her intention of violating the peace she will be left to suffer punishment at the hands of Turkey.

The marriage in Madrid of the Infanta Eulalia, youngest daughter of ex-Queen Isabella, with Prince Antonio, son of the Duc du Montpensier and brother of the Comtesse de Paris, was a brilliant spectacle. Ex-Queen Isabella and Don Francisco gave proof of their reconciliation by jointly giving away their daughter. The dower of the Infanta Eulalia is $700,000, besides $30,000 annually from the civil list. The Duc de Montpensier has settled $12,500 annually on her, and $25,000 on his son. The value of the presents is $200,000.

The Spanish elections have been fixed for April 4.

A town in Burmah garrisoned by 300 British troops is besieged by 9,000 rebels. General Prendergast has started to relieve the place, and a battle is expected.

THE GREAT AMERICAN REMEDY.

THE game of "Charles I. and the Long Parliament," with which the Republican Senators apparently propose to amuse themselves during the next few weeks, has really very little interest for the public. The object of it, in so far as it is not intended to while away time which apparently hangs heavily on their hands, is of course to discredit the President and his supporters, so that, in 1888, he may be made to look like a failure, and they like dupes, and the election of some highly objectionable Republican made easier than it was in 1884.

All attempts to make the President produce *all* letters or papers he may receive relating to suspensions or appointments, must, in the nature of things, prove futile. Congress may define as much as it pleases what documents "on file" shall be considered public property, but it cannot prevent the President from deciding what portion of his private correspondence he shall place on file and what not. Whenever, as in the present case, the majority of the Senate belonged to the opposing political party, he would put nothing of the kind on file at all. When, on the other hand, the President and the majority belonged to the same political party, papers relating to removals and appointments, except in rare cases, would not be called for. So that in either case, the public would be left just where it is now—in the dark with regard to the influences and agencies which operate both in the White House and in the Senate, in the filling of vacancies in the Federal service. In other words, in the pending quarrel between the President and Senate, as carried on, the public has really no interest. There is not the smallest reason for believing that, if the Senate won, it would use its victory in any way for the maintenance or promotion of reform. In truth, in the very midst of the controversy, it confirmed the nomination of Freeman Rasin, one of Baltimore's political scamps, the acceptance of whom, at the hands of the Maryland delegation, in so many cases has brought so much discredit on the Administration. No; the Republican Senators do not seek to keep bad men out of office. They have not barred the entrance of a single one under this Administration except Pillsbury and Chase, and they did this for partisan reasons solely, and because Messrs. Hale and Frye made their rejection a personal matter. They make their fight on the suspensions, and not on the nominations, although they have no power to restore a suspended officer to his place, and therefore discussion about suspensions can have no practical result beyond furnishing campaign thunder two years hence.

There is only one way of securing the presentation to the Senate of all the papers and documents which influence the President in making either removals or appointments, and that is a very simple way, and one wholly within the reach of the Senators. They have only to alter their rules, and make executive sessions as public as legislative sessions, in order to drive the President not only into making no nominations for which he cannot give creditable reasons, but into furnishing every creditable reason for the nomination which he may have in his possession. If the discussion of every nomination were public, the Senate would be able to show to the whole country either that no reasons for making it had been furnished, or that the reasons which had been furnished were poor. In either case the President would suffer in the only way, short of impeachment, in which an elected officer can, under our system, be made really to suffer—that is, by popular condemnation. That he suffers with the people by being called "Charles I.," or being assailed with elaborate reports on "precedents," is a Senatorial chimera. The public does not care about precedents in matters of business, and is absolutely indifferent to Senatorial prerogatives. What it wants to know about all this hubbub is whether it is going to improve the administration of the Government. If every nomination were submitted to it through the Senate, the President would be compelled to justify the nomination, because he cannot make bargains with the people, as he can with Senators, so as to dispense with the necessity of explanation. If he refused to offer any explanation of it, he would suffer in just the same way as a plaintiff or defendant suffers in a law-suit or legislative investigation, who refuses to answer questions, or says he does not remember important transactions.

Moreover, unless we are greatly mistaken, the American people have now got so far along the road of administrative reform as to believe that the time has come when no man should apply for any position in their service, important enough to be passed on by the Senate, who shrank from having his fitness discussed before any audience, however large. In truth, the fact that a man does not wish to have his fitness publicly debated, ought now to be considered a primâ-facie disqualification. It is said, in defence of the present secrecy, that innocent men are thus spared the pain of having unfounded charges against them openly examined. But, in the first place, unfounded charges are now frequently made because the privacy of the examination saves those who make them from the shame of exposure when the slander is disproved. In the second place, no man who is so sensitive that he cannot bear to have a false accusation against him publicly refuted by a competent tribunal, ought to seek public office. Private life is the place for him. The Federal service ought to be manned exclusively by persons who are robust enough in their moral fibre to defy informers and calumniators. The truth is, that secrecy is practically intended for the benefit of candidates who are a little scaly, and who have passages in their lives which will not bear examination, or which have interfered with their success in private pursuits, but who are nevertheless successful in getting themselves handsomely endorsed for political services, and have an "influence" among the Senators. The Federal service swarms with such men. They cannot all be got rid of, but we want to keep any more from getting in, and the way to keep them out is to ask them to clear up the cloudy parts of their history before full galleries and an attentive press. We could mention half-a-dozen nominations, made by the present Administration, which never would have been sent in, or, if sent in, never confirmed by an open Senate, after public discussion. Their "papers" would not have borne public examination, and therefore would never have been furnished, either as "private memoranda" or "public records." Consequently we trust that our Senatorial youths will soon get through with their "Charles I. and Long Parliament" play, and settle down to American business.

A STRANGE DOCTRINE INDEED.

THE doctrine which Mr. Evarts appears to have started, and which Mr. Blaine, his successor, adopted, and of which President Cleveland seems to acknowledge the validity, that the United States is under no obligation of international law to protect Chinese residents in this country against outrages committed on them as a class, in default of protection from the State courts or police, might, startling as it is, have passed unnoticed before the war. But if there be any principle which the war established clearly and beyond all peradventure, it was the principle that the United States are to all the rest of the world a nation, and not a confederacy simply. If there be any one result of the war to which more than another the people cling strenuously and fondly, it is this principle. It was for this, more than aught else, that the blood was shed and the money spent. There is nothing on which Americans are to-day more sensitive than any insinuation, or suggestion, or assumption, that our Government speaks to foreigners with less authority and with less command of the resources of the community in men, and money, and devotion, than any other Government in the world. It is only the other day that the Supreme Court decided in the Legal-Tender cases not only that the United States are a "sovereign nation," but that they are so completely a sovereign nation and differ so little from any sovereign nation which has ever existed in Europe, that they are competent, even under our Constitution, to perpetrate that monster abuse of some of the worst of European governments, the making of their own depreciated paper a legal tender in the settlement of private contracts. Now, can it be possible that they are sovereign enough to permit debtors to cheat their creditors, and are not sovereign enough to protect helpless and peaceable foreigners within their borders from murder and pillage?

Here is what President Cleveland in his recent message says has happened to the Chinese in the United States Territories, and things still worse have happened and are happening in some of the States: "The facts show the murder of Chinese subjects, the wounding of others, and the spoliation of the property of all when the unhappy survivors had been driven from their habitations. The law-abiding disposition of these people was the pretext for the attack upon them." He says, also, that "the proceedings taken in the name of justice for the ascertainment of the crime and fixing the responsibility therefor were a ghastly mockery of justice."

Now, is it true, can it be true, will the American people allow it to be true, that a sovereign nation is not responsible to the victims of such outrages? International law

gives no color of sanction to any such view. Wheaton (Boyd's edition, p. 207) says:

"The American citizen who goes into a foreign country is entitled to the protection of our Government, and if without the violation of any municipal law he should be unjustly oppressed, he would have a right to claim protection of his Government, and the interference of the American Government in his favor would be considered a justifiable interference."

This is from Halleck (p. 276):

"If a state should neglect to enact the requisite laws to restrain its subjects and citizens from systematic and repeated aggressions upon the rights of others, and to enforce such laws when made, it not only exposes itself to the just hostility of the parties aggrieved, but virtually becomes an outlaw from the society of nations, and, by the well-established principles of international jurisprudence, is liable to be attacked and punished by all."

This is from another American authority, Woolsey (p. 62):

"Foreigners admitted into a country are subject to its laws. They are, again, entitled to protection, and failure to secure this or any act of oppression may be a ground of complaint, of retorsion, or even of war, on the part of the native country."

Vattel states the principle thus (Lib. 2, chap 6):

"If a nation should refuse or fail to pass the laws necessary to restrain its citizens from aggression upon other states, or upon their citizens; or if, such laws being enacted, the officers of the state neglect to enforce them, and such aggressions by individuals result therefrom, the state is unquestionably responsible for the injury."

Hall, a recent writer in England, says (p. 178):

"*Prima facie* a state is of course responsible for all acts or omissions taking place within its territory by which another state or the subjects of the latter are injuriously affected. . . . If the acts done are undisguisedly open or of common notoriety, the state is obviously responsible for not using proper means to repress them. As obviously it becomes responsible by way of complicity after the act if it does not inflict punishment to the extent if its legal powers."

Phillimore says: (vol. 2, chap. 2).

"The state to which the foreigner belongs may interfere for his protection when he has received positive maltreatment, or when he has been denied ordinary justice in the foreign country. The state of the foreigner may insist upon reparation immediately in the former case. In the latter the state must be satisfied that its citizen has exhausted the means of legal redress afforded by the tribunals of the country in which he has been injured. If those tribunals are unable or unwilling to entertain and adjudicate upon his grievance, the ground for interference is fairly laid. But it behooves the interfering state to take the utmost care, first, that the commission of the wrong be clearly established; secondly, that the denials of the local tribunals to decide the question at issue be no less clearly established. It is only after these propositions have been irrefragably proved that the state of the foreigner can demand reparation, and it is not until after the executive as well as the judicial authorities have refused redress that recourse can be had to reprisals, much less to war."

As to the defence that our municipal legislation, including the reserved powers of the States in the matter of criminal justice, exempts the National Government from liability to foreigners for the failure of the local authorities to afford protection, we shall make no citations. We take it for granted that it is still fresh in the memory of all our readers over twenty-five years of age, that this defence was set up by England in the *Alabama* case; that it was fiercely and successfully contested by the United States, both in the diplomatic correspondence and before the Geneva Tribunal, and that not a shred of it was left. It was settled then once more, on our demand, both as good law and common sense, that it is the duty of every sovereign state either to provide the necessary legal machinery for the fulfilment of its international obligations, or else to make good the damage which any foreigner may have sustained through its failure to do so. The Chinese, in claiming damages for this great national disgrace, stand as firmly on the law as they stand on abstract justice. We hope they will push their claims with their accustomed tenacity, and we believe they will. It will be the duty of the American people to see that they are not foiled by the quirks and quibbles of ambitious and tricky politicians. The Chinese officials and Government will not lose sight of the claims which are being created on the Pacific side. It is an orderly Government and its officers are trained to their duties. We may not acknowledge our responsibility this year or next, but year after year the claims will be presented patiently but forcibly, until we make up our minds that neither Secretary Evarts, nor Secretary Blaine, nor Secretary Bayard, nor President Cleveland has been right, and we pay the account, as England paid the *Alabama* claims, making merit in our own eyes for the act of justice to which the Orientals have constrained us. Nor is it likely that these claims will be small in amount. A correspondent of *The Evening Post* at San Francisco states that a prominent lawyer had told him that "the suits which will soon be brought will make the taxpayers of the State open their eyes." Among the hundreds of Chinese who have been routed out, or worse, and their property despoiled or destroyed, a large account will be made up.

A VICIOUS WAY OF LEGISLATING.

Two years ago next month, while public attention was concentrated upon the engrossing canvass for the then fast approaching Presidential conventions of the two parties, the Senate passed what came to be known as the Blair bill, appropriating $77,000,000 from the Federal Treasury to be distributed among the States on the basis of illiteracy during a period of eight years. A plausible argument was made for the measure on the ground that the South was too poor, unaided, properly to educate her children, especially the children of the former slaves, and some impressive figures were presented by the Northern philanthropists who advocated the project, which, without being subjected to critical analysis, were generally accepted as sustaining the claim of Southern incapacity. The bill was opposed chiefly by a few Southern Senators on the ground of its unconstitutionality, but this plea made no great impression upon the public mind. Without giving much thought to the matter, people generally concluded that the scheme was a good one. The prevailing feeling was fairly expressed by the New York *Times* when it said, on the morning after the Senate passed the bill, April 9, 1884:

"It is by no means a perfect measure, but it is in the right direction, and if passed it will do good. These are not very strong arguments for the bill in the House, but they are strong with the people, and the House will neglect them at its peril."

The House fortunately did neglect the arguments, and the bill failed to become a law during the Forty-eighth Congress. Promptly upon the opening of the present session Senator Blair reintroduced it, and speedily secured a unanimous report in favor of its passage from the Committee on Education and Labor, supported by the old figures and arguments of the Rev. Mr. Mayo and its other former supporters. Two months ago Mr. Blair confidently counted upon the Senate's soon taking up the bill and passing it again, with the popular endorsement again. It was at this time that, disregarding entirely the question of its constitutionality, we challenged the measure on the ground that the South did not need outside help for her schools, and that educational subsidies would do her more harm than good. This involved a detailed examination of the present condition of the public-school system in the South, and a comparison with the state of things in Northern States no more thickly settled, with a study of the effects of similar bounties upon other States in the past, and an inquiry as to the influence which the prospect of the Blair subsidy had exerted upon the cause of education in the South.

The bill proposed to tax the people of the United States heavily for the purpose of helping to educate colored children in the sixteen old slave States, which were represented as too poor to do the work themselves. The only possible way of giving the bill a thin cloak of constitutionality was to distribute the $77,000,000 among the thirty-eight States and Territories, according to the number of their illiterates respectively, without any regard to whether they needed such a subsidy or not. It was therefore necessary to frame a measure which would give $18,571,468 to States and Territories in which slavery never existed, New York being allotted $2,721,066, or considerably more than the $2,503,170 allotted Arkansas; Pennsylvania, $2,825,324, or almost two-thirds as much as South Carolina's $4,582,792; Ohio, $1,633,718, or not far short of half Louisiana's $3,945,051; and Massachusetts, $1,152,116, or nearly $160,000 more than Florida's $993,548. Missouri, which had so few slaves that there is now only one negro out of every fifteen people in the State, was assigned $2,586,674; and West Virginia, with only one negro out of every twenty-five people, $1,057,895. A more circuitous way of reaching the ostensible end, of educating colored children where the States could not do it, it is impossible to imagine.

It was easy to show that the claim of Southern incapacity to maintain a decent school system was untenable, being based upon exaggerated representations of that section's poverty and backwardness in a period from which she has now emerged. Missouri, for instance, which was to receive over $2,500,000 on the ground of her poverty, already keeps her schools open, on the average, 113 days in the year, against 114 days in Maine, and only 99½ in New Hampshire, and expends $8 13 upon each pupil enrolled, against only $9 65 in New Hampshire, and but $7 95 in Maine, while the proportion of all children of the school age enrolled in school (527,452 out of 778,578) is 67.7 against 68.5 in Maine (145,438 out of 212,390). Florida, a State with a large negro element (47 out of every 100 souls), which was to get nearly a million dollars, is a State whose school superintendent was able to say in his last report that the number of children of the school age was 66,798, of whom there were

enrolled in school 62,327, whose daily average attendance was 45,850—"a percentage of enrolment and daily attendance equal to any State in the Union as reported from the educational departments," and far superior to the record of Maine, New Hampshire, or Vermont. Georgia, which was to receive the largest slice of all—$6,448,442—is the richest State in the South, and her Legislature was plainly told by the Commissioner of Schools three years ago that the moderate tax of only one-fifth of one per cent., which could be imposed "without unduly burdening the people," would keep the schools in operation for six months, against only about four and a-half months in Maine and four in New Hampshire. Even South Carolina, whose case is most desperate by reason of her great negro population, already has more than 63 per cent. of her children of school age (178,023 out of 281,664) enrolled in school, while in Vermont between 1860 and 1865 the corresponding proportion (68,525 out of 87,836) was only about 78 per cent., and the average length of the school year (75 days) is about two-thirds the average of 119 days in Vermont a quarter of a century ago.

The bad effect of school subsidies in the past was shown by the experience of Connecticut with her Western Reserve Fund, which Mr. C. D. Hine, Secretary of the State Board of Education, informed us had caused "a very striking deterioration" in the character of the schools by dwarfing local effort, so that the length of schools in many places was actually reduced to the short time which the fund would pay for, and he rejoiced to say that, by reason of the growth of population and the consequent diminution of the income for each child, "the danger from this direction is passed and cannot return." The disastrous consequences which the mere agitation of the Blair bill has produced in the South were shown by the official testimony of Superintendent Coward, of South Carolina, in his annual report for 1884, where he testifies that, in addition to other drawbacks to public education during the year, "the discussion of the policy of Federal aid for the suppression of illiteracy revived into active expression all the latent or hitherto silent opposition to the common-school system of the State"; and still more impressively by the experience of Georgia, where Mr. Woodrow Wilson has described his hearing a discussion in which the Legislature was asked to pass a law imposing the tax recommended by the School Commissioner, and instead adopted a resolution urging the State's Congressmen to support the Blair bill, under which Georgia would receive the first year from the nation $586,225, or almost exactly the sum which the tax that could have been imposed "without unduly burdening the people" would have added to the present school fund.

The presentation of these facts and figures has produced a complete change in the attitude of the country toward this measure, which ex-Governor Chamberlain, of South Carolina, the other day pronounced now "fatally discredited in the public mind." Instead of the general endorsement which the bill received from the press two years ago, there are now barely half-a-dozen journals of standing which longer support it. The revolution of sentiment is well illustrated in the attitude of the New York *Times*, which said on Saturday:

> "In the debate which had been going on for some days the opponents of the bill had decidedly the best of the argument, but many Senators were committed upon it by their votes in a former Congress, when it was not so fully considered. There will be no such obstacle to independent judgment in the House. . . . There has been a great change of sentiment on the subject since it was first broached, and the feeling seems to be spreading that the Southern States, where illiteracy is most prevalent, will be able to provide for the education of their own people, and will be more likely to do so if left to themselves."

There has been an equal change in the honest sentiment of Senators regarding the measure. Mr. Plumb, of Kansas, declared last week—and nobody dared to question the truth of his statement—that he could count on the fingers of his two hands the Senators who were actually in favor of the measure, who would "dare avow that they are for it as an original proposition, or as one that commends itself to their judgment." But the great majority had committed themselves to its support in the past, and though they would privately admit that it was a bad bill, which ought to be defeated, they insisted upon keeping a record for consistency in publicly voting for it, and passed it on Friday, 36 to 11, being substantially the same as the vote in 1884. The majority of the Republicans recorded themselves thus because they had become satisfied that the measure would be defeated in the House, and thought it would look better for them to vote the same way as they had done before and leave the Representatives to defeat the bill, than to be honest and confess that they made a mistake in supporting it two years ago. As the Washington correspondent of the Springfield *Republican* put it a few days ago: "The bill will pass because the Republican Senators believe it will fail in the House, and they prefer to have that body take the responsibility of it to doing it themselves."

This is a peculiarly striking case of a vicious way of legislating, which too often disgraces our law-making bodies. New York may well be ashamed of her representation, Mr. Miller voting for the bill to "save his record," and Mr. Evarts because Republicans generally were on that side. It is a relief to turn from such a showing to the manly course adopted by Mr. Frye of Maine, who voted for the bill hastily two years ago, and, upon sober second thought, against it on Friday, being joined in his opposition by his brother Senator from Maine, Ingalls and Plumb from Kansas, and Jones from Nevada, while Hawley and Platt of Connecticut, and several other Republican Senators, would have voted the same way if they had not been absent or paired.

THE CONDITION OF THE COAST SURVEY.

RECENT despatches to the daily press remind us that the management of the Coast Survey is among the unsettled questions with which the Administration is confronted, and show that the present state of that bureau calls loudly for action. The events of last summer are so well known to our readers that only a brief outline of their course is necessary. For several years it was painfully evident to all intimately acquainted with the circumstances that the physical and mental conditions of the responsible head of the bureau were such as to unfit him for his important trust. When an investigation was at last ordered, the only wonder to well-informed persons was that it had not been undertaken a year earlier. The speedy suspension and resignation or dismissal of the Superintendent were among its natural and inevitable results, and, in the regular course of things, the vacancy would have been soon filled by appointing a Superintendent in whose ability and integrity the appointing power had entire confidence.

But things did not go on in their regular course. A general impression seems to have pervaded Administration circles that faults so serious as those of the late Superintendent indicated widespread corruption in the service which he conducted; and it was suspected that this same corruption extended to other bureaus, notably to the Geological Survey. To ferret out such evil, if it existed, was an obvious public duty, to the performance of which the efforts of the Treasury Department were directed. The complete vindication of Major Powell's management of the Geological Survey is a matter of history which we mention in passing, because the two surveys were associated in both the official and the public mind. To facilitate the investigation of the Coast Survey the Chairman of the Investigating Committee was appointed Superintendent in place of the man removed on his report, not, it would seem, on account of his qualifications for the place, but to tide over the emergency and to enable him to continue his investigations.

It is an open secret that Mr. Thorne's searching inquiries have failed to justify the charge of general or widespread corruption in the Coast Survey. The numerous stories of fraud and mismanagement which were so widely circulated in the newspapers all resolved themselves into misstatements or fabrications when searched into. Some acts of doubtful legality had been performed by order of the Superintendent, but none were of so flagrant a nature that the assistants who obeyed the orders of their superior could be condemned for so doing. The few cases of inefficiency in the performance of duty were of the kind that are always found in a Government office with a long list of employees. It is now reported that even in these few cases the report of the Committee has been found to be severe rather than just, so far, at least, as the clerical and scientific force are concerned.

The most serious financial question which has been encountered concerns the pay and allowances of assistants. Until 1883 the salaries of assistants, instead of being fixed by law, were left to the discretion of the Superintendent. The regulations of the office provided that the assistants should have one salary when on duty and a diminished one when waiting orders, thus modelling the service after that of the navy. The law of 1883 provided only one salary for each assistant, and this was made to conform as closely as practicable to the salary prescribed for duty by the old regulations. The Superintendent held that this law did away with the regulations, and entitled each assistant to his full salary even when waiting orders. This view has been contested by the accounting officers of the

Treasury, but we are not aware that a final decision has been reached. However the question may be decided, there is no ground for impugning the integrity of the men who drew their salaries. The question is one on which opinions might well differ, and there can be no ground for claiming that the assistants should have gone behind the decision of the authorities for the time being by refusing to accept the proffered salaries.

The Washington despatches to which we have alluded, partake so largely of the character of personal complaints that we should have passed them without notice but for the demoralized condition which they indicate. The circumstances under which Mr. Thorne has been holding the position of Superintendent are such as could hardly lead to any other result. Appointed to discover weak points of the Survey, he is in no way identified either with its work or its interests. His position and authority are not respected either by his subordinates or by the Treasury officials. He assumed the position of chief investigator under the direction of the First Auditor of the Treasury, and it would seem from all accounts that Mr. Chenowith has never ceased to look upon him as one of his lieutenants. Gossip has it that the Second Comptroller, who has officially nothing to do with the matter, is really as powerful as Mr. Thorne in deciding the policy of the survey, and, like Mr. Chenowith, occupies himself in listening to the stories of its dissatisfied employees. The result is that the institution, instead of being guided, is drifting along without reference to the rocks and shoals which surround it.

It is quite certain that no bureau can go on in this way with three or four heads trying to run it, not one of whom is held responsible for it, without a speedy loss of its *esprit de corps* and a complete subversion of all discipline. The only reason yet assigned for allowing such a state of affairs to continue more than six months is, that no man really fit for the office of Superintendent would be willing to accept it under such conditions. Very likely this is true, but, if so, it only emphasizes the necessity of changing the conditions as speedily as possible.

GERMAN OPERA.

Last week the musical season reached the highest tide ever known. The first performance in America of Wagner's "Parsifal" and Delibes's "Lakmé," besides "Rienzi," "Tannhäuser," "Walküre," "Queen of Sheba," "Orpheus and Eurydice," two Thomas concerts, the public rehearsal and concert of the Symphony Society, not to mention a number of miscellaneous concerts, operettas, etc., all in one week—surely neither New York nor any other city has ever been visited by such a flood of musical entertainments. And inasmuch as most of them are well attended, it would seem as if New York were ambitious to become the world's musical metropolis, as Paris was formerly, and Vienna now is. The foreign artists who are with us at present are amazed at the prolificness and prosperity of our musical season, which, they declare, is without a parallel abroad.

This week, however, ebb-tide has set in. The German Opera Company at the Metropolitan is the first to retire from the field—not, indeed, for the reason that caused Mr. Mapleson to retire from the contest with his Italian Opera Company, but because the regular season of thirteen weeks has come to an end. From the combined artistic and financial points of view it has been beyond comparison the most successful opera season ever given in New York. In the days of exaggerated prima-donna worship there may have been managers whose receipts were as large as Mr. Stanton's this year; and not a few operas have been produced heretofore in an excellent manner. But never before have works of the highest musical merit been received with so much favor or so well interpreted; and this is what Mr. Stanton may place to his credit, besides the remarkable fact that not a single substitution has been made, during the whole season, for the operas advertised. Great as was the success of last year's German opera season, the results are much more favorable this year, and would have been still more so had it not been for an untimely visit to Philadelphia.

The Metropolitan opera, fortunately, is not intended to be a money-making institution. The stockholders are satisfied if they clear expenses; and should there be a deficit they are willing to pay it, as long as they have their amusement. This happy arrangement is a great advantage to the manager, who, like the managers of foreign state-supported opera-houses, is thereby enabled to spend a sum of money on a single opera which a manager who stands on his own feet would never dare to risk. At the same time the stockholders are obliged to pay some deference to the public's tastes and desires, if they do not wish to make too great inroads on their own purses. Not a few of them, it is well known, go to the opera to be seen and heard rather than to hear; and this contingent probably did not think favorably of several of the operas given this year, notably the "Meistersinger." But as the public came to these performances in great and increasing crowds, they felt bound to let it have its way and to submit patiently to no fewer than eight performances of this masterwork.

The company which Mr. Stanton and Mr. Damrosch brought over from Europe this winter has proved itself in most respects superior to last year's, except that the superb dramatic art of Frau Materna and Herr Scl.ott has been frequently missed. With the exception of these two vocalists and Frau Schroeder-Hanfstängl, the best artists of last year have been retained. Among the new-comers Frl. Lehmann and Herr Fischer have won special favor, and will return next year. In their sphere they are almost as perfect as Patti is in hers. But their sphere is a much higher one than Patti's. They have done a great deal towards dispelling the superstition that Wagner's vocal method sacrifices beauty of tone and smoothness of execution to distinct enunciation. Herr Fischer's *Hans Sachs* and Frl. Lehmann's *Venus*, for instance, will long be remembered as impersonations in which a great histrionic talent is combined with a rich resonant voice, elegant vocal method, distinct pronunciation of the words, and an appreciation of their meaning and emotional import rarely shown on the operatic stage. The acquisition of Herr Seidl as conductor, and his reëngagement for at least three years more, was another clever stroke of Mr. Stanton's managerial policy. No better man for the place could possibly have been secured—not even Hans Richter, who, being older, would not perhaps have worked for the good of the cause with all the zeal that Herr Seidl has displayed. Herr Seidl resembles Hans Richter not only in being a Wagnerian specialist, but in being, besides, thoroughly at home in classical and non-German music, as he showed in his Bayreuth concert, and by his magnificent and absolutely flawless conducting of "Carmen" and "Faust" in strictest accordance with the best Parisian traditions, as we know from personal experience. In "Carmen" Herr Seidl showed to especial advantage, for he is a Hungarian, and therefore familiar from his infancy with the exotic gypsy rhythms similar to those that give "Carmen" its special flavor. The concert which Herr Seidl gave in behalf of the Bayreuth funds showed him to possess such a deep insight into the poetic qualities of the great symphonist, that the announcement will be hailed with pleasure that next year he will give a series of symphony concerts.

To Herr Seidl's special ability, perhaps more even than to the able work of the soloists at the Metropolitan, is due the fact that the repertory has become more Wagnerian even than it was last year, when 28 out of 58 performances were devoted to his works. This year Wagner got 28 out of 52 performances—"Die Meistersinger" having been given 8 times, "Rienzi" 7, "Lohengrin" 5, "Tannhäuser" 4, "Walküre" 4. Of course it was impossible to give the latter three operas as often as last year, for in that case only twelve performances would have remained for all other composers, which would have been a very one-sided and unsatisfactory arrangement. The greatest financial success of the year has been Goldmark's "Queen of Sheba," which has had fifteen representations, a success quite out of proportion to its intrinsic musical merits, and due to a very large extent to the unprecedented splendor of its scenic outfit. "Rienzi" also owed much of its popularity to its scenic effects. It would be unwise, however, to attach too much importance to these considerations, for experience proves that works which chiefly owe their popularity to the *mise-en-scène* the first season, generally fall flat the next season. The "Prophète," for example, which was so highly commended for its scenic attire, had nine performances last year and only three this year. In the long run those works will be found to pay best which have the most dramatic music and plots, and for this reason the success of the "Meistersinger" is much more significant than the success of "Rienzi" or the "Queen of Sheba," for it will be more lasting. Nevertheless, scenic splendor is of great importance in the modern opera, and it is well worth noting that the predominance of Wagner at the Metropolitan is the more remarkable inasmuch as none of his operas has been placed on the stage with anything like the scenic splendor that has been lavished on the "Queen of Sheba" and on "Faust," though no operas are so available for

the scene-painter as Wagner's. The comparatively shabby *mise-en-scène* of "Tannhäuser" and "Lohengrin" may be pardoned in view of the fact that they were prepared last year, before the success of German opera was assured; but the cramped and crowded scene in the last act of the "Meistersinger" could and should have been immensely improved upon. If there is one thing certain in operatic matters, it is that every dollar spent in realizing Wagner's exact scenic as well as poetic and musical intentions will bear a hundred-fold interest.

In behalf of the chorus and orchestra it must be said that they were an improvement on last year's. Though generally satisfactory and often excellent, there is room for further improvement; and Herr Seidl, who goes abroad in May to assist at the Bayreuth festival, and who is thoroughly at home at all the German opera-houses, will no doubt see that such shortcomings as were perceptible this year will not recur. The greatest task before Herr Seidl and Mr. Stanton is the engagement of suitable dramatic and lyric tenors. It is one of the most curious of physiological problems why in these days, when hundreds of thousands of men are at their wit's end what to do for a living, there should be only five or six available tenors on the operatic stage, well paid as they are. Of the two tenors heard this year at the Metropolitan both had their merits, but neither is a great enough artist for the place. Of the German tenors that have been mentioned as likely to visit us, Winkelmann, Goetz, Vogl, and Niemann have been named, but nothing is certain as yet. It is understood that they all are willing to come, for America still remains the Eldorado for singers. As regards German singers in general, it is worth noting that they are finding favor at present not only in this country, but in southern Europe. Frau Kupfer, of Vienna, has made such a success in Spain that the managers of the Grand Opéra in Paris are endeavoring to secure her services. Spain, in fact, is becoming quite German in its musical tastes, notwithstanding recent political difficulties, the Spanish being apparently more sensible than the French in this matter. Wagner's operas have been sung in all Spanish cities this winter. At Madrid "Lohengrin" has been given twenty times, and arrangements are in progress for a complete Wagner cyclus next year.

On the other hand, Patti's recent fiasco in Paris shows that the lyric "star" business is in its last stages of decadence. And this is, after all, the most important consideration regarding our present opera season, including the performances of the American Opera Company. Opera is no longer art for the artist's sake, but art for art's sake. A few years ago people said: "Patti is going to sing to-night" — no matter what; now they say, "The opera to-night is 'Tannhäuser,' or 'Lakmé.'" And experience in European cities proves that when once this stage is reached, when once grand opera has been given with a grand ensemble, there is no danger of a relapse into the Italian star system. The announcement that German opera is to be continued for three years longer at the Metropolitan, therefore, very probably means a great many more than three years.

PARLIAMENT AND CONVOCATION.

LONDON, February 23, 1886.

PARLIAMENT met again on Thursday last, and settled down to the routine of a working session more steadily than might have been expected in the present condition of parties. The House of Commons is still hampered in its movements by the new members, who crowd into the galleries and the space behind the bar, and swell the cry for a more commodious chamber, in which they might all find seats on the floor. Committee of Supply has a marked effect in moderating the enthusiasm of inexperienced legislators, and before the estimates are out of hand the House may turn out to be large enough. For the present, the Government is getting its money easily; the masters of obstruction hold their hands till they see what is to befall them. There are some possibilities of delay in this evening's debate, which turns on the rights and wrongs of Ireland in the matter of imperial taxation. The Government will no doubt endeavor to treat the question as a part of the general problem of home rule, to promise inquiry and examination, and to postpone definite action till after the statement which the Prime Minister has undertaken to lay before Parliament about the beginning of April. In the meantime, some measures of secondary political importance will have some chance of making progress. Mr. Trevelyan comes first with his Crofters' Bill—a more radical bill than the one introduced in the last session of the late Parliament, and dropped on Lord Salisbury's accession to office. The present bill will encounter little opposition in the House of Commons, unless, it may be, from the Crofters' friends, who think that it does not go far enough. As for the Lords, they will think twice before they reject or seriously modify the provisions of a Crofters' Bill at the present moment. Affairs look serious in the Highlands; and the landlords have virtually admitted their inability to resist the demands of the peasantry, enforced by the new power of the franchise. The Marquis of Stafford is heir to the vast estates of the Duke of Sutherland, but he could not secure his election as member of his own county without adopting the entire Crofter programme. Now, in the character of Crofters' friend, he runs a neck-and-neck race with Dr. Clark, M. P.—"lord of his learning and no land beside"—a gentleman whom some tolerably advanced Scotch Liberals used to regard as a revolutionary of the school of Henry George.

When the immediate claims of the Crofters are satisfied, we shall have Mr. Chamberlain's measure for the reform of social government. It must not be supposed that the energies of Mr. Chamberlain are entirely absorbed in the rearrangement of areas and rates. He is frequently absent from the Treasury bench; but he never was more active in making his personal influence felt among all the sections of his own party. He takes no pains to conceal his opinion that Mr. Gladstone's third administration will be a short one; he anticipates the possible reconstruction of the party at no distant date. As yet, Mr. Chamberlain is by no means strong enough to pose as the inevitable successor of Mr. Gladstone. His practical ability and debating powers are unquestionably first-rate; and those who know him best have perfect confidence in the rectitude of his intentions. But he has frightened many sober people by the headstrong levity of his judgment, and the eagerness which he displays to act as a judge and a divider between property and poverty. Perhaps Mr. Chamberlain's best chance lies in the absence of any conspicuously better man. Lord Hartington inspires confidence among all kinds of Liberals; but if he finds his back seat comfortable, he may refuse to descend again into the arena. Among the rest of Mr. Gladstone's colleagues and ex-colleagues, it may be doubted whether there is one who would really like to lead the House of Commons with Mr. Chamberlain sitting beside him.

A year ago almost any Radical would tell you that the future leadership lay between Mr. Chamberlain and Sir Charles Dilke, and many were inclined to put their faith in Sir Charles as the safer, though perhaps the less brilliant, of the two. Sir Charles is exiled from public life for the time being, by the deplorable scandal which led to the proceedings in Crawford vs. Crawford and Dilke. The judgment in the case was no doubt perfectly good in point of law; but the public cannot very well understand it. A lady is divorced from her husband on the ground of misconduct with a certain person; at the same time it is held that there is so little evidence against that person that he is not even called upon to deny the charge made against him. So long as the matter remains where it is, the moral judgment of society remains suspended. If it be asked whether Sir Charles Dilke will return to public life, the answer is that he may do so if he can give good evidence to show that Mrs. Crawford's story is untrue. This he may perhaps manage by inducing the Queen's Proctor to intervene, in order to prevent Mr. Justice Butt's decree from being made absolute. I do not believe that anything short of a legal inquiry, resulting in his exculpation, would enable Sir Charles to resume his old position in the Liberal party. Even in the time of Lord Melbourne it was thought that a scandal of this kind ought to damage the reputation of a statesman. English society has become more moral in some respects since then, and Mrs. Crawford's story is ten times worse than anything that was ever alleged against Lord Melbourne.

When the Conservatives are in opposition they allow the bonds of party discipline to be indefinitely relaxed. The benches assigned to them are apt to exhibit empty spaces, which afford room for an overflow from the Liberal side; and their leaders wearily refrain from leading, with the exception of Lord Randolph Churchill, who is, like the British army, always ready to "go anywhere and do anything." Sir Michael Hicks-Beach is more and more effaced, and would probably not be prepared to give any very large sum for his chance of leading the Commons once more. At the present moment Lord Randolph is in Ulster, stirring up the Orangemen to resist Mr. Gladstone's supposed design to destroy the legislative union between Great Britain and Ireland. One quality required by the "coming leader" of a large party is audacious inconsistency; and this Lord Randolph possesses in perfection. A few months ago, when he was a candidate for Birmingham and wanted the Irish vote, he leaned toward home rule, decried coercion, and exchanged compliments with Mr. Parnell. When he came into office, he threw in his lot with those members of Lord Salisbury's Cabinet who wanted to "dish the Whigs" by offering large concessions to Irish opinion. At the present moment the Conservatives have nothing to expect from the Parnellites; but they do expect to upset Mr. Gladstone by exciting English opinion against him if he tampers, or seems to tamper, with the Union. Therefore Lord Randolph has taken the shamrock out of his cap, gone to Belfast, and invited Ulster to charge with all her chivalry in defence of the Constitution. What will the Parnellites say to this? Less, perhaps, than some may suppose. Lord Randolph is so perfectly frank, he "turns his back on himself" so promptly and openly, that nobody has the heart to be severe with him. At the same time it is matter for deep regret that Ireland at this moment should be the cockpit for English parties to fight in. The state of the country is

most deplorable; the sense of insecurity pervades every department of commercial and social life, and one knows not what can be done by merely political means to put an end to anarchy and ill-feeling. Irish politicians seem to have no suggestion to offer; Mr. Parnell does not think it necessary to appear in the House of Commons; his followers sit there in rows, looking as dull as so many Liverpool cotton brokers suffering from the depression of trade. Even Captain O Shea's spirits must have sunk a little when he was introduced last night. His countrymen observed a stony silence, and the two gentlemen who introduced him left a space on each side of him as they marched up to the table, indicating thereby that they were not to be held personally responsible for the "Whig" protégés of the Nationalist leader.

Students of our Constitution are aware that England is happy enough to possess two sets of representative institutions. While Parliament is sitting in Westminster Palace, the clergy, who still form a separate estate of the realm, are represented in the Convocation of the Province of Canterbury, now sitting in the precincts of Westminster Abbey. This ancient body has, indeed, lost much of its former importance. It can do nothing without license from the Crown; and the advisers of the Crown are accustomed, as Lord Westbury said, "when Convocation is harmlessly employed, to let it alone; when it proceeds to actual business, to dissolve it without delay." The powers of Convocation have not been extended, but it has succeeded in adding to itself a new House of Laymen, which may advise the bishops and clergy how most effectively to promote the work of church reform. The points now under discussion are the abuses of ecclesiastical patronage, the necessity for taking some steps to remove incompetent and superannuated clergymen, and the possibility of forming lay parochial boards to assist in the government of the Church. Bills dealing with these points will be presented to Parliament before long.

This movement for the reform of the Episcopalian Church of England runs parallel with the movement for the "reconstruction" of the Presbyterian Church of Scotland. In both countries the adherents of the established churches found themselves stronger in voting power than they expected to be in the last general election. They hope, by timely concessions and reforms, to popularize the national establishments, and so to render them safe against the attacks of the Liberation Society. The Liberationists, on their side, are watching these new movements with the keenest vigilance. They think, not without reason, that they are themselves the original cause of this new-born zeal for reform; and when the "reconstruction" policy comes before Parliament, they will have an opportunity of criticising it from their own political point of view. Looking at it merely as a party question, it will be interesting to note the course of Liberal statesmanship in relation to this subject. The Church Reformer, on the one side, says: "We mean to make disestablishment too hot for any Liberal statesman to take it up." The Liberationist, on the other hand, says: "We mean to show the Liberal leaders that our support is not to be had for nothing. Mr. Gladstone has told us that the Dissenters are the backbone of his party; some day soon we shall ask him to choose between taking up our policy and dispensing with his backbone." Hitherto the weakness of the Liberationist party has been this—that the political Dissenters are, as a rule, advanced Liberals, who would never dream of voting for a Conservative. The political Churchmen are, as a rule, moderate Liberals, who will vote Conservative if they are alarmed about the Church. It remains to be seen whether the defenders of the Church have done wisely to put their schemes of reform into such a shape that they must come up for Parliamentary discussion. There are always incidents in the ecclesiastical debates of the House of Commons which cause even moderate men to doubt the wisdom of preserving a system that makes Parliament responsible for the doctrine and worship of the Church. R.

THE CONQUEST OF UPPER BURMAH.

LONDON, February 18, 1886.

INCLUDING this last expedition, it has needed three wars to effect the incorporation of all Burmah with the British dominions in India. The first Burmese war occurred so far back as 1824-26, when Lord Amherst was Governor-General of India. This was one of the costliest wars ever waged in India. More than twenty thousand of our soldiers—the majority being English—perished, mainly from fever contracted in the malarious forests upon either bank of the Irrawaddy, and the expenditure, as acknowledged by the Indian Government, amounted to fifteen millions, the real cost being, in all probability, much greater. The war, however, was ultimately successful. Amarapura, the Burmese capital, lay at our mercy when the Burmese monarch consented to obtain peace by the sacrifice of the provinces of Arakan and Tenasserim.

The second Burmese war occurred in 1853, when Lord Dalhousie was Governor-General. This, though not marked by the blunders, delays, and disasters of the first war, was by no means an easy or an expeditious affair. The Burmese opposed a stout resistance to the advance of the English army, and our losses were considerable. Our success was at the same time decisive, and had Lord Dalhousie desired to do so, he might have deposed without difficulty the native dynasty and annexed the whole of Burmah. But he shrank from a step which, for a distance of four hundred miles, would have aligned the frontier of our Indian Empire with that of China. This was in itself a wise scruple, but unluckily, as I believe, for both India and England, it only prevailed so far upon the mind of Lord Dalhousie as to cause him to adopt a policy which postponed but did not avert the result which he feared. He did not dethrone the King of Burmah; he merely cut his dominions in two, by an arbitrary line, incorporating one half with India and leaving the poorer half in his possession. It was impossible for such an artificial arrangement to endure, and that it has lasted so long has been due solely to the accident of the great Indian insurrection of 1857 following so closely upon the heels of the last Burmese war. That great convulsion, caused as it so largely was by the annexations of Lord Dalhousie, gave a check to all schemes of territorial expansion, from which they are only now beginning to recover.

Lord Lawrence was the last of our great Indian Governors whose dealings with independent native states bore the impress of that equity and moderation which the ordeal of 1857 had burned, so to speak, into the minds of those who had passed through it. The revival of a policy of aggression was simultaneous with his withdrawal from public life. Lord Lytton's invasion of Afghanistan was the first tentative experiment in the new direction. The annexation of Burmah marks the formal return to a policy expressly repudiated in the Royal Proclamation addressed to the people of India after the suppression of the mutiny. This fact it is which gives to the conquest of Burmah a special significance which has not been missed by the native princes of India, who have been taught to regard the National Proclamation of 1858, with its emphatic renunciation of all lust for territory, as the Magna Charta of their rights and liberties.

Various pretexts have been assigned in justification of our invasion of Upper Burmah, but none of them will bear a moment's examination. It has been alleged, for example, that the French were intriguing to establish themselves in virtual possession of the country, and were at the very point of success. There is not a shadow of truth in this, and those who circulated the report were well aware that it could not be true. No Power could exist in Burmah without our permission. Not only are the mouths of the Irrawaddy in our possession, precluding, alike, both egress and ingress from Upper Burmah, but the population are dependent for two essential articles of their diet upon the salt and rice imported from British Burmah. Again, it has been alleged that King Theebaw was a drunken savage, who spent his time in massacring his subjects, and that humanity called upon us to extend the blessings of British rule to his subjects. In reply to this, it may be stated that King Theebaw is not a *drunken* savage; he is, on the contrary, a total abstainer; and though he cannot be acquitted of cruelty, he is not, even in this respect, to be compared to the Amir of Afghanistan, to whom we pay a quarter of a million a year and whom we have pledged ourselves to protect against all his enemies. Then it has been pretended that, owing to the misrule of King Theebaw, British trade with Upper Burmah has well-nigh suffered eclipse. This is altogether false. Trade with Upper Burmah has been steadily on the increase since Theebaw ascended the throne, and never at any previous time was it so large as immediately before the declaration of war. No; the true efficient cause of the deposition of Theebaw and the destruction of Burmese independence is the commercial depression in Great Britain. In India itself, among the English community, war and conquest constitute a policy which is always and invariably popular. It is a break in the profound monotony of Indian life. It means to the official classes honor, distinctions, pecuniary gains, new offices. In the case of Upper Burmah, these inducements were recruited by the presence in Rangoon of a mercantile community who had long fretted against the impediments to commerce imposed by a semi-barbarous Government such as existed at Mandalay. But so long as there was no pressure from home, the Government of India had resisted the pressure brought to bear upon it both by its own officials and the Rangoon merchants. It succumbed instantly when the mercantile community at home joined hands with the mercantile community of Rangoon. The long-continued commercial depression has caused the manufacturers and traders of Lancashire to hunger for a "new market," like as the hart desireth the water-brooks; and the conquest of Upper Burmah promised the opening up of a "new market" which would be none the less acceptable because the entire cost of its acquisition would be defrayed by the opulent Indian peasantry.

To prepare the way for conquest the usual fables were diligently spread abroad in the press. Our "prestige" among our Indian subjects was declared to be wounded almost past recovery in consequence of the unpunished insolence of King Theebaw. The people of Upper Burmah were depicted as coming down to the frontier in large crowds, entreating the English officials to come over and help them. The Chinese, it was boldly asserted, were only awaiting our arrival upon their frontier in order to abandon their traditional exclusiveness, and enter into commercial relations in the free and equitable spirit of Richard Cobden. Under the influence of these pleasant hallucinations we entered into the war with a light heart. We experienced no difficulty in deposing King Theebaw, in occupying his capital, and in issuing a proclamation declaring

Upper Burmah to be from henceforth a province of British India. And now, as is our wont in these little wars, we find ourselves compelled to take account of the disagreeable realities of the situation. The war is profoundly distasteful to the people of India. It is so for a double reason. In the independent States, both among the princes and peoples, it has kindled the alarm and distrust which the Royal Proclamation of 1858 was intended to set at rest forever. They cannot but see that the reasons assigned in justification of the conquest of Upper Burmah are identical with those which formed the stock arguments of Lord Dalhousie whenever he desired to extinguish an independent native principality, and may at any moment be directed with equal effect against their own existence. But what alarms them most is the fear that the National Proclamation has lost its virtue—that it can no longer be appealed to as a true expression of the policy of England as distinct from that of the Indian Bureaucracy. Those who remember how largely similar feelings were at work in 1857 will not undervalue the significance of this revival. But it is among the people of British India properly so called that the war has evoked the loudest expressions of resentment, and not without cause. Burmah, it must be remembered, is no part of India. Its people differ from the people of India in language, in appearance, in manners, in religion. Whatever advantages may accrue to British traders from the new conquest, none whatever can accrue to the people of India. They neither trade with Burmah nor do they ever go to the country; yet upon their shoulders has been laid the entire cost of the acquisition of this new province. The two wars of 1826 and 1853 added about seventeen millions to the Indian debt, and this last expedition, before it is completed, will, in all probability, swell the amount to twenty millions. Nor is this all. Before the commencement of the war all the "experts" were confident, as they always are, that the new territory would not only pay the costs of its administration, but render a handsome surplus for the benefit of India generally. There is, of course, not a possibility of any such thing. Upper Burmah, for many a long year, will not be self-supporting—or nearly so. The Indian army will have to be increased in order to provide troops for the defence of the new frontier, and it is difficult to see how the money is to be obtained without the imposition of additional taxation—this, moreover, at a time when terror at the approach of Russia to Herat has just raised the military budget from seventeen to nineteen millions annually, and compelled the Indian Government to have recourse to that most oppressive of imposts in India—an income tax—in order to meet this heavy charge.

The element, however, in the new situation which excites the greatest misgiving is unquestionably the attitude taken up by China. The bait which allured the commercial classes in Great Britain to give their approval to the invasion of Upper Burmah was the prospect of a large and lucrative trade to be opened up with the Chinese province of Yunnan. It is now admitted that, even if all else went well, there is no chance of this prospect being realized. Yunnan was the theatre of the great Panthay insurrection, which for many years defeated every effort of the Chinese Government for its suppression. When at last it yielded to the persistency of the Pekin authorities, the latter inflicted a frightful retaliation upon the rebellious province. The populations of city after city were massacred wholesale. The province may be said to have been left desolate and without inhabitants, and a century at least of peace and quiet will be needed to restore its former prosperity. But in addition to this, between Yunnan and Upper Burmah rise range upon range of lofty, inaccessible hills, sparsely peopled by mountain tribes, and possessing neither the roads nor the food needed for the passage of an extensive commerce. Even if there existed on the part of the Chinese authorities a genuine desire to establish free commercial relations with the "foreign devils" in Upper Burmah, it would not be practicable until the hill country had been pacified and trade routes constructed. But there exists no such desire. Twice within the last fifteen years has the Indian Government sent missions up the Irrawaddy to establish a trade between Upper Burmah and China, and on both occasions were the missions forced to turn and seek safety in flight from the hostility of the Chinese officials. The last attempt brought about the murder of young Margary, which very nearly involved England in a war with China.

At present, however, the Chinese are not content with passive obstruction. They have set up a claim for substantial "compensation." The Pekin Government pretends to have had rights of suzerainty over Upper Burmah, and demands, as compensation for the injury done to these rights by the deposition of King Theebaw, the cession of the upper reaches of the Irrawaddy, including the town of Bhamo, which, in the event of a trade being developed, would constitute the chief commercial centre. China, in a word, is playing with the English in Upper Burmah precisely the same game which she played with such harassing consequences with the French in Tonquin. It is impossible for the Indian Government, by yielding to the Chinese demands, to make practical acknowledgment of a weakness which China could never extort from the weakest of the Burmese monarchs; and this it is which makes the situation so serious. Upper Burmah, although occupied by our troops, is far from being pacified. The introduction of British rule into a native state, whatever may be its advantages to the great body of the population, means utter ruin and dishonor to the powerful, the ambitious, and the able. It means the forfeiture, not merely of their political and social influence, but the deprivation of their means of livelihood. They are literally reduced to beggary. This is the meaning of "the Dacoity" which is at present troubling the military authorities at Mandalay. These outlaws, or rather their chiefs, are men whom the cast-iron system of British administration has driven into outlawry; and the character of the country in Upper Burmah furnishes extraordinary facilities for this species of bush fighting. Roads there are none in the country. The population is almost wholly settled upon the banks of the Irrawaddy, and the rest of the country consists either of high mountains or is covered with primeval forest and impenetrable undergrowth. Troops can only move in small columns, and must carry all their provisions with them. The circumstances are such that the Chinese authorities, by secretly assisting those who are in arms against the British, might, without compromising themselves, render our situation an intolerable one. Great Britain, it must be remembered, is no longer politically an island severed by its streak of silver sea from the other nations of the world. It has to defend an impracticable frontier in Egypt; another altogether untenable one in Afghanistan; and now by the occupation of Upper Burmah it has added to these a third frontier, as difficult to make good as those in Egypt and Afghanistan, and even more remote from its base of supply.

R. D. Osborn, Lieutenant-Colonel.

Correspondence.

THE MARYLAND APPOINTMENTS AGAIN.

To the Editor of The Nation:

Sir: Your correspondent, signing himself "Civil-Service Reform Democrat," evidently does not understand the political situation in Maryland. He thinks we are like the "man who called on Hercules instead of putting his own shoulder to the wheel," and counsels us to emulate Tilden, whose first service to reform was the forensic effort which secured to Azariah Flagg the office of which the "Rasins" and "Higginses" of his day sought to deprive him by fraudulent returns.

Let me tell your correspondent *some* of the things we are doing, and then see whether we can be charged with not trying to help ourselves, or with unfair criticism of the President's action in reference to the Maryland appointments.

1. The Reform League, through its Committee on Elections, has secured indictments against twelve persons for violating the Election Laws, and among these are five of the city registers. The Committee are prosecuting their investigations with thoroughness, and expect to procure testimony sufficient to indict at least half of the twenty registers of voters in this city. The mass of evidence already in hand against the indicted registers and their co-conspirators is overwhelming, and ought to render their conviction certain, but every lawyer knows how difficult it is to convict a political offender who is supported by the holders of all the State and municipal offices of a large city like Baltimore. It becomes especially difficult under a jury system which allows a score of peremptory challenges to each accused. Our task of thus emulating Mr. Tilden is not rendered easier by President Cleveland's appointing to office the very parties who engineered a fraudulent registration that deprives thousands of men in this city of their votes.

In four wards, 1,497 names were stricken from the list of voters by the indicted registers, and in only fifty-five cases was the law complied with. In the Twelfth Ward, among those stricken from the list, in violation of law, are the names of 221 persons, with the entry of "Lost residence," or "Lost his residence," opposite these names, and, strange to say, *all these with that entry are colored voters*, and a large proportion of them, at the time of the registration, had been living for years at the same place and had been legal voters at the preceding election. The registration book of this ward for the term of the indicted register shows six different handwritings therein, although the register is not by law allowed a clerk. Need I add that this registration book, of which the register under the law was the sole custodian, was every evening during the registration regularly carried to the house of Morris A. Thomas, President Cleveland's appointee as Indian Inspector, and kept in his house over night? We are doing our best to send these obliging friends of Mr. Thomas to the penitentiary, and if, for reasons I have given, we do not convict on the first indictment, we are prepared to indict again and again.

All this work, except, of course, drawing the indictments, has been done, and the evidence obtained and classified, at private expense, without the aid of a single State or city officer, and with no help from the detective agencies employed by the State and city to ferret out crimes. So much for court action, whose efforts as a reform political agency your correspondent so highly appreciates.

2. The Reform League, through its Committee on Legislation, has prepared and submitted to the Legislature the best Registration and Election

Law ever presented to the Legislature of a State. They have improved upon the New York and Chicago laws, each of which is a model and evidently the work of a master hand. The "bosses," however, have given the word to defeat this law, and the man who will secure this result is I. Freeman Rasin, the lately appointed Naval Officer of Baltimore.

3. The Reform League, through its Committee on Officers, has gathered and submitted to the Senate of the United States the facts concerning some of the more notorious Federal appointments, and is now engaged in collecting the facts with reference to some of the recent ones.

4. By the courage of some good men in the State Senate, three iniquitous schemes concocted by Rasin and Gorman have been defeated. There could be no more striking illustration of the character of the ring we have to contend with than these bills. To one unacquainted with Maryland politics they would appear to be measures having no political significance at all. There is a bill for the calling of a constitutional convention. The acknowledged purpose of this is to get rid of the independent judiciary in the city. Mr. Rasin has always been able to guarantee his subordinates immunity in the courts; but in 1883 we succeeded in driving from their places the judges that had allowed their courts to be so used. We then elected a judiciary that has given great satisfaction. This has made it more difficult, though not impossible, for Mr. Rasin's men to secure acquittal, and the avowed purpose of the constitutional convention is to remove these judges. Another bill, part of the same scheme, would take away from the city judges the selection of the grand and petit juries and put it into the hands of the Sheriff, the purpose being the same—to secure safety in the Criminal Court. Supplementary to these bills, and part of the same plan, is a bill doing away with our present Police Board, they having refused at the last election to allow the police force to be used by Mr. Rasin in the election, and prevented the Marshal of Police from holding his office while running for Clerk of Court.

Our ring, you will thus see, is not an easy one to fight, and, when necessary for its uses, not only makes the statutes, but is now grasping after the organic law of the State. These bills seem for the present to have been beaten in the Senate, the plan being too palpable, but it has been done by the delegations from the counties, the city delegation voting for them unanimously.

5. By private subscription, a newspaper, the *Civil-Service Reformer*, has been established to advocate the cause of reform. Its vigorous articles are the gratuitous contributions of writers who have only a public interest in securing decent political methods.

These instances will illustrate a few of the ways in which we are "putting our own shoulders to the wheel." Now for the criticism of the President. I, as an Independent Democrat, agree with your correspondent that no President has ever given closer or more conscientious attention to the discharge of his responsible duties, including the making of appointments, than Cleveland. But he has made mistakes—grave mistakes in Maryland. And what did we do? Not, what your correspondent intimates, "blame" the President for every appointment that was unfit to be made. Take the first case, that of Higgins. After his appointment by Mr. Manning, we laid before the President and the Secretary the facts as to Higgins's character and deeds, and stated publicly that we did *not* blame either for this bad appointment, and that we knew that Senator Gorman had deceived them both. I presume that neither Mr. Manning nor the President can now have much doubt that Higgins burned our ballots in 1875, altered the Poll and Registration books in 1879, and in 1880 commended the notorious burglar, "Billy Forrester," to a Philadelphia judge as "an honest man that followed the sea." Notwithstanding this, the Secretary appointed another equally disreputable person, "Sonny Mahon," to a position in the Custom-house. Again we believed the Secretary had been deceived, though we thought the Higgins lesson should have taught him not to honor all of Gorman's drafts at sight.

Next came the President's appointment of Thomas as Indian Inspector. We did not "blame" the President for this appointment. On the contrary, we told him he had been deceived again by Gorman, and proved before the Interior Department, by the witnesses who caught him at it, that Thomas, while an officer of election, had stuffed the ballot-box, and that he was a fraudulent bankrupt.

In the Independent campaign last fall every speaker on the reform side exonerated Cleveland, and we took particular pains to show that he had been deceived by our own representative in the Senate of the United States. There are no more enthusiastic supporters of Cleveland's policy than the people who entered into that campaign, nor any who believe more absolutely in his sincerity of purpose. What lent special bitterness to that campaign was the humiliation felt by the respectable people in this State at knowing that, when better political methods and a policy of reform were being inaugurated by Cleveland in other parts of the country, Maryland alone should be given over to the spoils system, and that our senior Senator at Washington, himself a product of that system, should be its most unblushing advocate by his acts and his utterances. We have believed in Cleveland, and still do. We have a guarantee of his purpose in his action elsewhere, and we know, better even than people outside, how difficult it must be for him to deal with a Senator with whom office-broking has been a life-work. What we have tried to do has been to give to Cleveland all possible light that we could upon the state of things here and the people who were abusing his confidence. Our position has been a hard one, and the whole story of Mr. Gorman's appointments has not been told. There have been numerous minor appointments by the heads of departments at Washington, attracting no notice, unknown to the President, unknown even to the heads of departments. Many of these appointments are made from the criminal class of this city. The indictments against them are still found on our court dockets. Their offences are known to the whole community.

But other mistakes of this kind sink into insignificance when compared with the appointment of Mr. I. Freeman Rasin as Naval Officer. It is impossible to give an outsider an idea of the shock that this produced among decent people here. It is impossible for Mr. Cleveland to have any idea of the man he was selecting. I. Freeman Rasin (or "Free" Rasin, as he is better known) is a notorious lobbyist. It has been his custom to send for any one who had a matter pending before the City Council, and notify him of the price at which the measure could get through. If the price was paid, it went through, otherwise not. There has been no secret about his method, and witnesses are readily forthcoming. In the matter of election frauds, Mr. Rasin has been accustomed to tell, with great freedom, how these frauds have been done by his people, and to give minute details. Abundant testimony can be procured as to this also. But it is not in either of these rôles that Mr. Rasin has made his great reputation. So far as organization is possible among the criminal classes of this city, Mr. Freeman Rasin is the leader and responsible head of our criminal class. At one time before the war, this city was known as "Mob Town," because of the violence at elections. Shooting and stabbing affrays at the polls always occurred. Mr. Rasin was the President and Manager of the "Ashland Club," whose members called themselves and were known in the city as the "Bloodtubs." It was by these gentlemen that the violence that I have spoken of was committed. The assassination of a man named Kyle by these men at an election in 1858 was characterized by such evident premeditation, and was so cold-blooded in its execution, that it aroused the whole city, and enabled the same gentlemen who are now prominent in the reform movement here to drive Mr. Rasin from power. Can any one be surprised that we object to such an appointment?

What the city is most anxious about now, however, is the appointment of United States Marshal, which Mr. Rasin is anxious to secure, through Mr. Gorman, for some one of his men. We certainly think that this, being a semi-judicial office, is one where the sentiment of the bar of this city should be consulted. Our bar is practically unanimous in favor of the reform movement here, and are nearly all members of the Reform League. About a dozen lawyers, good and bad, but all badly "ring streaked," are all that remain with the regular party. We certainly hope that President Cleveland will not put the office of United States Marshal, with its important duties and high responsibilities, in the hands of a creature of Mr. Rasin.

Certainly, in using every effort to prevent such a calamity, we do not wish to antagonize Mr. Cleveland. In fact, the feeling that the Reform party in Maryland has had for Mr. Cleveland through all this trying period, can be best expressed by the text so aptly quoted by Russell Lowell: "Though he slay us, yet will we trust in him." We hope, however, that he will not slay us, and that our confidence in him may soon be relieved from the strain to which it has been subjected.

BALTIMORE CIVIL-SERVICE REFORM DEMOCRAT.
March 2, 1886.

THE EXECUTIVE SESSIONS OF THE SENATE.

TO THE EDITOR OF THE NATION:

SIR: In the discussion of the issue now made between the President and the Senate with respect to the requests of that body for papers and information in relation to suspensions and removals from office, one weak point always noticed in the Senate's position is the fact that it proposes to act in secret, and without any fixed responsibility, on matters for which the President is directly responsible to the people. If it be true, as is contended, that the suspension of an official by a reform President necessarily involves a reflection on the character or competency of the person suspended, so would the reversal by the Senate in secret session of the action taken, especially if such reversal were presumptively based on a consideration of the Executive's reasons or grounds of action, be a reflection on the conduct of the President. The remedy generally proposed by those who desire better government is to throw open the doors of the Senate, and to bring the force of public opinion to bear on the consideration of executive business.

The objections to this course are worthy of the most careful consideration; and before suggesting any other remedy it will be well briefly to state them.

When the Senate sits to consider nominations for office its functions are not legislative, but executive. It forms to that extent a part of the Executive Department of the Government. It sits to execute the laws, not to make them; its duty is to act, not to debate. The consideration of appointments to office involves, it is true, more

or less of discussion; but it is a different sort of discussion from that required for the performance of legislative acts. All who have had anything to do with legislation can appreciate how essential it is to intelligent action to obtain the views and suggestions of many minds as to the probable operation of almost any public measure that may be proposed. But the questions involved in the treatment of nominations are simple. Morality, practical morality, is a very simple thing. And it is not only simple, but it is *personal*. Should candidates for offices not immediately within the control of the people, or to be bestowed by the people, be compelled to submit to a public discussion of their character? And would publicity be favorable to the proper discussion of character?

Whether it would be so or not, the fact is that it is never the custom to require of the executive department of Government, State or national, any statement of reasons for such an act as an appointment to office, or, what would be strange indeed, any public expression of views as to the character and qualifications of the persons appointed. It is deemed a sufficient safeguard that the appointing power is *responsible* for its *acts* to the people.

In our national Government, however, we have under the present practice the anomalous spectacle of responsibility and irresponsibility at different stages in the performance of one complete act. The President's responsibility is fixed when a nomination is announced. But the Senate, which completes the appointment, acts with closed doors, and nobody is responsible for what it does. The remedy for this would be to require all *votes* on nominations to be taken in *public session*. There need be no public dissection of private character, in which a few Senators might enjoy indulging, but from which sensitive men would naturally shrink. But the responsibility of Senators for unfit confirmations would be ascertained. And all bargaining for confirmations and for the division and control of patronage could easily be detected and would be remorselessly exposed. If Mr. Senator—— secured the confirmation of a characterless politician whose nomination he had procured, the open vote would show from whom he got his support. And it is believed that this would go a long way toward the correction of abuses which have flourished for a long time because individual responsibility for them could not be determined.

J. B. M.

Washington, March 5.

TENURE OF OFFICE.

To the Editor of The Nation:

Sir: Both the President and the Senate, in their existing contest concerning removals from office, have taken positions antagonistic to the principle that public officers should be secure in their places during efficiency. If the President's claim, that he has the right to remove all officers of the United States without assigning reasons or in any manner accounting for his action, be well founded, no officer, so far as he is a public officer, can be said to live under a government of laws and not of men. His tenure is limited by the irresponsible will of one man, not by his own duly ascertained efficiency. The military service has been supposed to be the most arbitrary, but in that service no officer can be cashiered in time of peace without trial. The Senate is understood to be ready to withdraw all opposition to the President's action if he will avow that he has removed officers from an improper motive, namely, because they are not members of his political party. The establishment of the position of either party would be deplorable.

Tenure in office during efficiency can be secured by the enactment of a statute providing that public officers shall be removed from office only for cause, to be ascertained by a tribunal, for the organization of which our courts-martial supply a convenient model. Such a statute would be constitutional. The President's right to remove officers rests upon the People's grant of power to him by the words, "The executive power shall be vested in a President of the United States of America" (Const., Art. 2, sec. 1). The reasonable interpretation of these words is that the President is given power *to execute* the laws, not to override them. The President properly makes removals as part of his duty to execute the laws of the land, but he does so subject to statutory regulation. Russell H. Curtis.

Chicago, March 4, 1886.

THE TWO SYSTEMS.

To the Editor of The Nation:

Sir: If the English system of individual and responsible leadership is a good thing, the dependence of the Ministry upon Parliament is a very bad thing. The only executive power consists of a number of members of Parliament who agree to work together so long as they can command a majority upon every question. It is what is called in physics a condition of unstable equilibrium. They must hold each other up, and all their energies must first of all be spent in keeping their majorities It seems, at first sight, wholly inexplicable that enough Tories do not vote with the Liberals, or enough Liberals with the Tories, to teach Mr. Parnell that he cannot, with his handful of followers, rule the British Parliament. But inasmuch as strict party discipline is the only way of getting a Ministry into power, the party traditions are too strong to admit of temporary independence. Englishmen are mortally afraid, and with good reason, of the "groups" which work so much mischief on the Continent. But this effect of the "groups" results from the fact that the parliamentary systems of the Continent, at least as regards France and Italy, are based upon the English model. As long as there are no stable party majorities, there can be no stable ministries.

In this country the case is entirely different. It is the only one (of those which we need to consider) where a single ruler is elected by a practically direct vote of the whole nation, and is therefore wholly independent of Congress. The Cabinet are his lieutenants, not mere voluntary associates tempted by an agreement of mutual support, but subject to his directions. There is no reason why they should resign upon an adverse vote of Congress, or why, if any one of them resigned, all should do so. The houses have passed resolutions of inquiry of Mr. Manning and Mr. Whitney, and those gentlemen have made response to the committees. For reasons which have been pointed out *ad nauseam*, and which indeed are obvious enough, it would be infinitely more effective if this work were all done in public session; and there is no more reason why the Cabinet should resign upon political differences then than now. As party majorities could not turn out the Cabinet, party discipline would not be the first object, and an independent vote would not be regarded as equal to high treason. Policies, instead of being subject, as in England, to the chance of a moment, and that of each department to every other, would have a fair degree of permanence, and while Congress would not dare to refuse the means of carrying on the Government, it could by protests and speeches educate the people to any desired change.

It is said that the improved position of the Cabinet would detract from that of the President. But the Cabinet, not being responsible to Congress, would still be responsible to him and through him to the nation. He could support them while he thought best, or, if he found any of them seriously out of harmony with Congress or public opinion, could ask for his resignation. His position would be one of the most dignified in the world.

We have taught Europe many things, and, in spite of their sneers at our Presidential system, it may well be that in this respect also we can show them more than is dreamed of in their philosophy. G. B.

Boston, February 22, 1886.

THE ACTING SPEAKER OF THE REICHSTAG.

To the Editor of The Nation:

Sir: The writer of the interesting paragraphs upon the procedure of the German Reichstag (*Nation*, No. 1074, p. 79) says very justly that "at almost every point the procedure contrasts with that to which we are accustomed," and this strangeness of the system he was examining may easily account for a slight error into which he has fallen. I refer to the qualifications of the acting Speaker, "the oldest member of the House," who presides over a newly elected Parliament until an organization has been effected. The error consists in the conjecture that "oldest" is to be interpreted as meaning "the oldest in service." On the contrary, the word is to be taken literally: this honorable office falls to the oldest in years. It may be reasonably assumed that such a rule as this would hardly have been invented fifteen years ago for the brand-new Imperial Parliament; as a matter of fact, it was found ready to hand in the procedure of existing legislative bodies in Germany. A brief extract from a newspaper report of the first sitting—on January 14—of the recently organized Prussian Landtag may be of interest:

"Immediately after the close of the opening ceremonies in the White Saloon of the royal palace the representatives gathered in the legislative chamber (*Sitzungssaal*). The attendance was unusually large, so that the House was competent to transact business. At twenty minutes before two o'clock the oldest member of the House, Landrath von Lessing, took the chair (*besteigt den Präsidentenstuhl*) and declared that he was born on November 14, 1809. No one announcing himself as having been born at an earlier date, Representative von Lessing assumed control of the House as President by seniority (*Alterspräsident*) in the following words. . . ."

His speech was commendably brief; after four short sentences, he called for cheers for the Emperor and King: "Er lebe hoch!" Three times the assembly shouted *Hoch!*

It will be noted that the opening of the Landtag by the King in person took place in the royal palace, while the English sovereign is received by the Lords and Commons in the Parliament House. But instead of attempting to attach any deep political significance to this difference, it may be enough to say that the building in which the Landtag sits is hardly suitable to the splendors of such a ceremony. G. H. Harrower.

Berlin, February, 1886.

THE PROHIBITION ARGUMENT EXTENDED.

To the Editor of The Nation:

Sir: Will you oblige a reader of the articles "Indemnity for Prohibition" and "The Prohibition Fallacy," by continuing the argument used to answer to the illustrations of "gas companies," "tariff," and "butchers," so that it will apply to "the Emancipation Proclamation," "opium dens," and "lotteries"?—Respectfully,

Inquirer.

Bordentown, N. J.

[With pleasure. The Emancipation Procla-

mation was avowedly a "war measure," and therefore compensation was no more due under it to the owners of slaves than to the surviving relatives of slain Confederate soldiers. But compulsory emancipation in time of peace without compensation would have been confiscation—a fact recognized in the British abolition of slavery in the West Indies. The consumption of opium has never obtained the general recognition or approval of any civilized community, as that of wine and whiskey has. That is, even the moderate use of opium is in all civilized countries regarded as a vice. Lotteries have been forbidden as a form of gambling, which has also everywhere been regarded as a vice, although sometimes resorted to by individuals for love of excitement, or governments when very hard up. The pretence that lotteries have ever occupied the position in the civilized world, as an occupation or industry, that the production and sale of intoxicating drinks have, is, in fact, to us one of those painful quibbles which seem to have an undying attraction for the Prohibitionist mind.—Ed. Nation.]

OUR FUTURE INDIAN POLICY.

To the Editor of The Nation:

Sir: Among the various plans proposed for use in making up the Indian policy of the present Administration, the most important are those of General Sheridan, Mr. Holman, and Mr. Dawes.

General Sheridan would give to each Indian family a half section of land, condemn the remainder of the reservation, and sell it to the United States at $1.25 per acre. The proceeds of the sale he would invest in Government securities to be deposited in the Treasury of the United States, the income to be used for the education and support of the Indians unto whom the land belonged, the sale of which created the fund. The General has shown that such a policy would create larger incomes for the various tribes, as a rule, than they now receive from the United States in annuities and other ways, and that the support of the Indians by this method would come really from their own property, instead of, as now, from the United States. His plan would, therefore, result in the saving of the several millions of dollars which now go annually to the support of the Indians. Besides, the adoption of this plan would, as he says, throw the greater part of the lands now held as reservations into the market, and open it up to settlers, and so improve the country.

Mr. Holman's plan has not at the present writing been so far made public as to show what it will be in full. But on one point he is reported to have announced himself as having convictions and courage. He would gather up the scattered bands and remnants of tribes and mass them on the large reservations, sell the abandoned reservations, and use the proceeds for the benefit of the Indians.

Mr. Dawes's Senate bill provides, among other things, that the United States shall patent the various reservations to the Indians now occupying them, but shall hold the patents in trust for twenty-five years; that when the President thinks it advisable he can have the reservations, or portions of them, allotted to the Indians in severalty, each person receiving 160 or 80 acres; that the United States shall issue to the individual Indians patents for their land, but shall retain them in trust for twenty-five years, at the end of which period the Indians shall receive patents therefor in fee discharged of the trust; that after the allotment has been made, the United States, with the consent of the Indians, may purchase the lands not allotted, paying therefor $1.25 per acre, which price shall be deposited in the Treasury on interest at 5 per cent. per annum, the income to be expended for the education and other needs of the Indians, and that every Indian born in the territorial limits of the United States, to whom an allotment has been made under this act, "is hereby declared to be a citizen of the United States, and is entitled to all the rights, privileges, and immunities of such citizens."

Looking at these several plans, one must admit a thorough sincereness of purpose to do the best thing possible for the Indian in them all. But while General Sheridan's method, if carried out, would make every Indian a gentleman or lady of leisure for the entire term of his and her natural life, it would certainly be the very worst possible thing for the Indians. To plant a family on a half-section which is to be its home as long as the family remain tenants of the earth, is to put them in jail. Besides, if the Indians are to become self-supporting farmers and stock-raisers, a half-section to a family is only a chicken-pen or a hog-yard. There must be room allowed for increase of population in the family, and there must be land enough to afford farms for all until the Indians have become so far like whites in their knowledge and skill that there will no longer be any need of lines of protection, and until whites and Indians, mingling together by natural desire, shall have solved the Indian problem by the laws of nature and the method of miscegenation, for wherever the Indians get a fair chance to obtain the advantages of education they will remove every particle of prejudice against intermarriage. I could name many men and women to-day in Michigan who are the descendants of Indian mothers, and who are among the most successful and honored families of the State. Within twenty-five years numbers of men and women came from the cities of Detroit and Saginaw to the Isabella Indian Reservation and proved themselves Chippewa Indians, and drew annuities and obtained patents for lands from the United States, who had been for years moving among the best families of those places.

But now General Sheridan's plan would make the Indians dependent upon their moneys or bonds invested in the United States Treasury. It would virtually make them paupers subsisted on public charity, for though they should be rich yet their riches would be forever withheld from them, and they would be fed like charity patients from a Government table. It would remove all need of efforts at self-support, and so would put an end to all possibility of making them self-supporting.

Besides, the worst evil the Indians have had to endure has been the presence of bad white men among them or sneaking about them, as wolves hang around a sheepfold. The chief reason why the Isabella Indians in Michigan are not to-day prosperous farmers and rich men is, that they were harassed and ruined by white scoundrels. Let it be known that the Indians of any tribe are henceforth to become the recipients of lands or moneys in their own right to any considerable extent, and there will at once gather around them a gang of white men whose actions and conduct would not be tolerated in any honestly civilized community in the world. Such men, the jackals and hyenas of humanity, are always on the watch for an opportunity to rob some one, and as the Indians are by far the easiest victims to be found on this continent, and especially as they are the recipients of moneys justly due them from the United States for lands that they have from time to time ceded thereto, it follows that these men look upon the Indians as their best source of income. To carry out General Sheridan's plan would put more money into the hands of the Indians and thereby increase the temptations for the white thief, and so augment the dangers of the Indians and hurry their ultimate ruin and extermination. What the Indian needs is not money, but what money will bring him as long as his money is safe. That is, it should not be placed in his hands until he has first learned what it is and the proper use it serves in the world. To teach an Indian how to raise cattle and convert them into money, how to raise grain and convert it into money, is to save him. To support him in idleness is to lose him, soul and body and race. Anything that will make him work and work understandingly will be a good. Anything that will bring him into contact with evil-minded white men will help to ruin him. The less money, then, the better. Give him honest, practical farmers and mechanics to show him how to work, and equally honest, common-sense teachers to instruct him in his schools; make his surroundings moral throughout; let his religious training enforce upon him the great importance of honesty, truthfulness, industry, and chastity, and above all compel white rascals to keep away from him, and his success is just as certain as it is that he belongs to the human race.

For these reasons I do not think General Sheridan's plan a good one. Of Mr. Holman's plan, as far as known, to mass the remnants of tribes and scattered bands, I think well. Here in Michigan the Isabella reservation was ceded to Chippewa Indians only, but white men, anxious to increase the number of Indians receiving lands in severalty, sent half-breeds all over the State and into Canada to get other Indians to come upon this reservation and claim lands. It was the same game that the Cherokee Roberts is said to have been playing in Canada the present winter to get more Indians in the Indian Territory preparatory to an allotment of those lands in severalty. Well, the result of the work was that there are here now representatives of half-a-dozen different tribes all welded together by consanguinity and living in harmony. The same thing would result, in my opinion, were the scattered bands and small tribes brought together further west; and when Indians have learned to be harmonious among themselves they have come a long way toward learning that it is best for them to live in harmony with the whites also. Such a plan would, for instance, come as a savior to this remnant of starving, pauperized Indians on this Isabella reservation in Michigan. They can do nothing for themselves, and if left here will in a few years be exterminated. But they have yet about 10,000 acres of land, all of which the whites there are waiting to steal as soon as it is allotted to them in severalty. That land is worth $5, much of it $10, per acre. If sold for the benefit of these Indians, the proceeds would go far toward giving them a new start in the world in a land where they could forget the wrongs they have suffered in Michigan. I think, therefore, that this plan should be added to the many careful provisions of Mr. Dawes's bill.

The Senate bill is certainly a strong one as a protection for the Indians. But if it were to make the period of trusteeship fifty years instead of twenty-five, I think it would be fully 100 times as good as it now is. The thing to be accomplished is to civilize the Indians and make them self-supporting, self-protecting citizens, who shall take their place among citizens in general and be absorbed by the conglomerate citizenship which has come to us from all parts of the world. What are the chief obstacles to the accomplishment of such a purpose? The inherited race customs of life and the dishonesty of the white men who come in contact with the Indians. Secretary Lamar says the Indian must make his final stand where he is, and either adapt himself to civilization or be annihilated. But

his environment is not white civilization, but the scum and vice of civilization. The whites who hang upon the Indians where there is anything to steal from them are men who would not be tolerated among respectable people, and it is this terrible evil to which the Indian must adapt himself or be exterminated. That is, he must learn how to protect himself against it; and until he has learned that lesson he must be protected. Whether it takes 25, 50, or 100 years makes no difference in the duty that is laid upon the United States. It was this evil power of the mean and scoundrel whites who gathered about the Chippewas on the Isabella Reservation in Michigan twenty-five years ago that made the honest effort of the United States to help those Indians of no avail. But in twenty-five years the character of the men who still watch these Indians for opportunities to rob them has not changed. They are bad men still, though out of their ill-gotten gains several of them have tried to buy a good name and bribe God Almighty by building and supporting churches! The Indians will be surrounded by human wolves and jackals twenty-five years hence out West just as they were here twenty-five years ago, and they will not be safe until the civilization to which we would have them adapt themselves in order to prevent their extermination has itself been civilized, until from the Lakes to the Gulf, from Cape Cod to California, no man shall dare to wrong another, when race and color prejudices shall have been lost in the grander recognition of the rights of man, and man shall mean all mankind.

EAST SAGINAW, MICHIGAN.

THE DEPRECIATION OF THE GOLD DOLLAR.

TO THE EDITOR OF THE NATION:

SIR: It seems a little remarkable, in view of former acts of Congress upon the subject, that a suggestion has not yet been made to adjust the relative values of gold and silver coin by depreciating the gold dollar.

The Act of April 2, 1792, provided that the relative values of silver and gold should be as 15 to 1, and that both should circulate as money when coined by the Government in conformity with this standard.

In 1823 the Secretary of the Treasury called the attention of Congress to the fact that gold had appreciated in value so that an ounce of it was worth 16 ounces in silver (Cong. Debates, February 6, 1823, p. 859), and that this appreciation of gold had resulted in the very evils that are now apprehended, to wit, the silver had driven the gold out of circulation. It was publicly asserted, in fact, that in 1834 there was hardly a gold piece to be found in the whole United States (Cong. Debates, June, 1834, p. 4654).

To meet this evil the standard was corrected by making the legal value of gold and silver conform to their actual value in the markets of the world. *This result was accomplished, however, by depreciating the value of the gold dollar* (Act June 28, 1834), and not, as is now proposed, by raising the value of silver coins—out of regard, presumably, for the debtor class (Cong. Debates, June 21, 1834, p. 4650, *et seq.*). And after the discovery of gold in California, the relative values of gold and silver were again disturbed by the depreciation of gold. It was again proposed to adjust the matter by diminishing the weight of a silver dollar. And the fractional currency was actually depreciated (Oct., 1851), although to a very slight extent. The disastrous consequences of such a policy are, of course, easily apparent. If, in the event of fluctuation in the value of either of the precious metals, the more valuable be depreciated, ultimately a dollar will be worth nothing. But I think it is equally absurd to attempt to correct inevitable variations by increasing the weight of the cheaper. Some other course must be adopted so long as both gold and silver are retained in circulation.

Respectfully yours,

I. H. LIONBERGER.

ST. LOUIS, March 2, 1886.

AN OVER-PRAISED TRANSLATOR.

TO THE EDITOR OF THE NATION:

SIR: What can Mr. Evelyn Abbott mean by praising as he does Miss Alleyne's translations from Zeller's great work on Greek Philosophy? In the preface to the recently published English edition of Zeller's small compendium on the same subject, the 'Outlines of the History of Greek Philosophy,' Mr. Abbott says: "She [Miss Alleyne] knew the value of accuracy, and was at great pains to secure it. She had also a keen sense of literary style, and would turn a sentence three or four times before she could be satisfied with it. Hence the excellence of her work as a translator."

I have recently read a good deal of her translation in two volumes of the first division of Zeller's larger work ('The Pre-Socratic Philosophy'). These volumes were published in 1881, five years after she had brought out, in conjunction with Prof. Alfred Goodwin, an English version of the second division ('Plato and the Older Academy'). She was therefore no novice at the time. The measure of her success may be judged by a few specimens culled from the pages I have last read, viz., vol. ii, pp. 407-445. Besides minor inaccuracies, such as "copied" for *abstrahirt*, and "ancient philosophers" for *ältere Philosophen*, I have noticed in these pages the following extraordinary blunders:

Im übrigen ist uns von seinem Leben nichts bekannt (p. 946).	Of his doctrine nothing is known to us (p. 411).
die Aussicht . . . ist es vor allem, was sie der Jugend ihrer Zeit als unentbehrliche Führer erscheinen lässt (p. 975).	it is the prospect . . . which they, as indispensable guides, hold out before everything else to the youth of the period (p. 441).
so haben sich die bedeutendsten Sophisten auch ausdrücklich darüber erklärt, und die übrigen haben es wenigstens durch ihr ganzes Verfahren an den Tag gelegt, dass sie sich von der älteren Philosophie lossagen (p. 977).	yet the most important of the Sophists never expressly declared, and the rest only implied by their general procedure, that they had broken with the previous philosophy (p. 444).

If it were worth while, I could produce from other parts of the book still more remarkable mistakes, but *ex pede Herculem*. The truth is, this translation is about as bad as such work usually is. One who attempts to read it comes every now and then upon some senseless passage which proves, on reference to the original, to turn the author's meaning topsy-turvy. A reader who does not know German, or who has not the original at hand, must often get into a sad muddle.

FRANK B. TARBELL.

YALE COLLEGE, NEW HAVEN, CONN., February 23, 1886.

MR. FITZEDWARD HALL AND THE NEW ENGLISH DICTIONARY.

TO THE EDITOR OF THE NATION:

SIR: The reviewer of the English Philological Society's Dictionary, at page 103, *ante*, after acknowledging that he is "generally impressed with the accuracy of the work" as regards its "treatment of American usage," goes on to say: "We shall probably not be far out of the way in supposing that this state of things must be due largely to the supervision of" myself. And then follow some rather severe strictures. For the shortcomings which the reviewer points out I am not, however, responsible in any manner or degree, his conjecture as to my "supervision" being wholly gratuitous. I have not supplied Dr. Murray, for the entire alphabet, with matter equal to that of one of your columns bearing on Americanisms. In reading the proof-sheets of the Dictionary, I have, further, paid next to no attention to anything distinguished by the letters U. S. The subject of Americanisms is one by which, as a whole, I am much more repelled than attracted, and with which I have none but the most superficial acquaintance. It could not well be otherwise, seeing that I have been forty years away from home and that I know very little of American literature.

Your obedient servant, F. HALL.

MARLESFORD, ENGLAND, February 16, 1886.

[Our reference to Dr. Hall was intended to be entirely complimentary, as the context shows. It implied (mistakenly, as now appears) rather that he had saved the work from all but a small measure of inaccuracy, than that he was responsible for the shortcomings which we pointed out, and which unavoidably in the review took on proportions greater by far than they have in the work itself.—ED. NATION.]

MR. PAGE ON YALE.

TO THE EDITOR OF THE NATION:

SIR: For the benefit of such readers of the *Nation* as are not familiar with the matter, I should like to call attention to one or two misleading statements in Mr. Page's recent letters. In his first table he compares the academical departments of Yale and Harvard. This seems fair at first sight, but, since Harvard has practically united the Lawrence Scientific School to the college proper by throwing open most of the courses to the academic students, this comparison gives her an undue advantage. Students will attend the College for a scientific education to gain the other benefits which the College offers, to say nothing of the éclat of a degree of B.A. Under these circumstances it is hardly fair to omit mention of the flourishing Sheffield Scientific School, which contains about ten times as many students as the Lawrence School at Harvard.

The same point deserves attention in presenting the courses offered in the two institutions. Harvard has thrown open to her undergraduates many of the courses of the Divinity School, besides those of the Scientific School above mentioned. In Mr. Page's tables, then, we have the teaching force of three Harvard departments pitted against that of one department in Yale. It is true that the Harvard undergraduate has these additional advantages, which was Mr. Page's point; yet at the same time it gives an unfair notion of the resources of Yale to make such a comparison. If Mr. Page is so earnest a Yale man, it seems as if he should not have neglected to caution his readers against misjudgment. Tables comparing the amount of the instruction given by Yale's Academic, Scientific, and Theological faculties with Mr. Page's figures for Harvard would present a much better appearance and be a fairer exhibition of her powers.

Mr. Page is of opinion that Yale has advantages of situation over Harvard, because she is not so near a "great and wicked city." But can it not be said that Harvard has a great advantage over Yale in being near a great literary centre, a city proverbial for the devotion of its inhabitants to literature?

Mr. Page gives two great reasons for the expansion of Harvard—that she is governed by her alumni, and that she has completely adopted the optional system. Mr. Page distinctly implies that the Harvard Overseers correspond to the Yale Corporation. Such is the natural interpretation.

What are the facts? Harvard is governed by a far closer corporation than is Yale. The Yale Corporation is composed of the President, the Governor of Connecticut, ten self-elected clergymen of the State, and six graduates, elected by the alumni. Harvard is governed by a self-electing corporation of seven—the President, the Treasurer, and five other gentlemen. A quorum for the transaction of business is made by the President and three of the Fellows, provided the others have been warned of the meeting. The college property is held and managed entirely by the Corporation. The Overseers ordinarily have no voice in the investment or disposition of funds, but their consent is necessary in matters relating to the statutes, regulations, appointments, and internal administration of the College. The graduates have no direct hand in the management of the funds. Harvard College, in short, is governed by a small self-electing body, held responsible to the Board of Overseers elected by the graduates. It will be seen that the graduates of Yale have a much larger direct share in the government of their alma mater than the Harvard graduates have. These facts are found in the opening pages of the Harvard Catalogue.

In respect to elective studies, says Mr. Page:

"Yale stood till five or six years ago just where she stood in the eighteenth century, and stands to-day almost exactly where Harvard stood in 1841. Of course, the opportunities of choice are far greater at Yale to-day than they could be at any American college forty-five years ago; but they are still far inferior to the advantages which Cambridge now affords."

It would be difficult to combine more misrepresentation in so short a space. In the first place, Mr. Page seems entirely ignorant that two extensions of the optional system have recently been made at Yale. In 1876 four hours a week of elective work were allowed juniors and seniors; in September, 1884, the first trial was made of the present system, which allows the juniors to choose eight-fifteenths and the seniors twelve-fifteenths of their work. But let us see what Harvard had in 1841, which Mr. Page says was almost exactly what Yale has now. The Harvard Catalogue of 1841 mentions certain electives without particulars, but in 1844 we find electives offered. The choice, however, was not given to the student, but to his parent or guardian; and if they failed to exercise it, the Faculty laid out a course as their own judgment dictated. As late as 1871 the Harvard seniors had five and a half hours of required work, against three hours now required at Yale. Mr. Page, for a Yale graduate, is commendably generous to the Harvard of forty-five years ago. His remark, "If elective studies are good, why were they not adopted years ago?" applies equally to Harvard if we go back fifteen years. Yale had the germ of the elective system as far back, at least, as 1821, the date of the earliest programme of studies that I know of, when for one term the juniors could choose between fluxions, Greek, and Hebrew. French was added to this list in 1825–6, Spanish in 1826–7, German in 1841–2, and Italian in 1845–6. At this time the seniors had a similar limited choice. The policy of the College has varied somewhat in this respect. Mr. Page should have informed himself on these matters before assuming that the optional system was unknown at Yale till five or six years ago.

To conclude with Mr. Page, it seems to me that he measures the two colleges too much by numbers, especially by the numbers of students that attend them. Is not that somewhat parallel to judging two authors by the number of readers they attract? The judgment may be correct and it may not. The popular patronage of a college proves much or little, however advantageous it may be, according to the popular standards of culture. Inasmuch as American standards are too often sadly utilitarian, the popular judgment of a theory of education may easily be somewhat untrustworthy. Oberlin has twice or three times as many students as Amherst. Is Oberlin better? It may be and may not be; only, numbers are not the final criterion. The graduate department at Johns Hopkins contains twice as many students as the Harvard department, though it is hardly ten years old. Is it that much better?

It seems to me that a very simple reason for the expansion at Harvard may be given in addition to the common ones. By relaxing all restrictions requiring fixed courses of study, she has taken a position filled by no other institution. Here is the oldest and most celebrated university in the land changing its character, offering opportunities of specialization hitherto out of the reach of the American student. Harvard stands in her new position practically without a competitor, while Yale, still preserving a curriculum somewhat like that of Amherst, Princeton, and others of our best colleges, competes with them. Obviously we should expect immense expansion at Harvard and only moderate growth at Yale. Yale has grown as rapidly as her sister institutions of her own kind. Suppose Yale to adopt the Harvard system, then Harvard would have one competitor and probably grow less rapidly. Yale could never reap as much as Harvard, since Harvard secured the first fruits. Whether it would be wise for Yale to attempt to follow Harvard in this respect is very much doubted. It is a grand thing to have Harvard offer the immense advantages she does, but it would be mischievous if she should be imitated by all the institutions in the land.

Another cause for Yale's slower growth deserves a word. She draws some sixty per cent. of her students from outside the State, a large proportion from the West. Now of late the Western colleges have been improving rapidly, and are competing with Yale more and more for this Western contingent. Harvard does not feel this competition so heavily because of her unique character. The fact that some ten per cent. of her undergraduates are special students, not studying for a degree, illustrates how her growth has been accelerated by entering a new field.

There are other points about the comparison instituted by Mr. Page which might be touched upon, but I believe enough has been said to show that his conclusions need to be taken with some allowance if one desires to form a fair estimate of the present position of Harvard and Yale.

EDWARD G. BOURNE.

NEW HAVEN, March 8, 1886.

Notes.

A FORTNIGHT ago we announced the undertaking of the Faculty of Political Science of Columbia College which will shortly be embodied in the *Political Science Quarterly*. A recent gift of $15,000 by Mr. John E. Thayer to Harvard University, to establish a publication fund in political economy, is, we learn, soon to be utilized after the foregoing example. The University will, at the opening of the next academic year, begin to publish at regular intervals a series of contributions to political and economic science. They will neither be limited as regards authorship to the work of members of the University, nor represent any particular economic school, or method, or set of ideas. Rather, according to its capacity, the series will be made a repository for anything in the way of discussion, investigation, or criticism which is believed likely to promote the study of the science and its literature. At this time we are unable to give any further details, except that what is contemplated is not a series of monographs. In other words, the publications of this kind at Johns Hopkins, Columbia, and Harvard will supplement, not rival, each other. Together they mark an epoch in the political education of the American people, and have a high and cheering significance.

Cupples, Upham & Co., Boston, will publish a limited parchment-bound edition of Mr. Rideing's 'Thackeray's London'; 'The Log of the *Ariel*'; and a new work from the German on 'Electric Lighting.'

D. C. Heath & Co. announce 'Systems of Education,' by Professor John Gill, of the Normal College, Cheltenham, England.

Johnson's 'Rasselas' and Lamb's 'Ulysses' will be added to their "Children's Classics" by Ginn & Co.

'Mrs. Peixada,' a new novel by "Sidney Luska," is announced for early publication by Cassell & Co., who have also in press 'No. XIII: The Story of the Lost Vestal,' by Emma Marshall.

The Chicago *University*, which has already absorbed three periodicals, is about to add to itself another, and will henceforth be known as *Unity and the University*.

Outing for March is the first issue under the direction of Mr. Poultney Bigelow and in New York. Mr. Bigelow's travels about the globe have well qualified him for the charge of this wholesome organ of outdoor life and sports. The present number is fully up to its high standard of literary and artistic excellence. We remark the usual instalment of Mr. Thomas Stevens's record of his extraordinary bicycling trip around the world.

The second (March) number of the *Academy* (Syracuse, N. Y.: George A. Bacon) confirms the impressions we derived from No. 1. Mr. Bacon manifests a strong editorial sense, a clear head, a modest and undogmatic spirit. It is already manifest, too, that this periodical meets a want, and has touched a responsive chord in those who are engaged in secondary instruction. Nor do we know of any other publication which would have been as fitting and natural a medium for the recent address, by President Adams, of Cornell, on "The Educational System of Germany," printed in full in the issue before us.

General Buell's paper on Shiloh in the current *Century* is reinforced by one on the same battle by Gen. W. F. Smith in the March number of the *Magazine of American History*. It stops short of the first day's fighting, and will doubtless have a sequel.

The February *Antiquary* (New York: D. G. Francis) is on the whole a light number, but none the less readable. It opens with "Stories of Noodledom," by W. A. Clouston—Gotham being apparently a principal town of Noodledom. "Quaint Conceits in Pottery," by Llewellyn Jewett, contains amusing cuts of "Sussex Pigs" and "Toby Fillpot." Other entertaining illustrations are found in a notice of Mr. Ashton's 'Dawn of the Nineteenth Century.' "The Black Assize at Oxford in 1577," by Dr. Frederick Pollard, is a valuable contribution to medical history. "Black Assize" is the name given to a session of court at which an epidemic of fever breaks out, caused by the filth and confinement of the jails. Dr. Pollard examines one of the most famous of these, with the aid of a plan of the locality. Mr. H. B. Wheatley commences a series of papers upon "Precious Stones" with an account of Pearls. Mr. Richard Davey has the opening article of a series on Beatrice Cenci, in which he makes use of the newly-discovered evidence in regard to her and her family. The present paper is devoted to showing the bad character, as well as inferior origin, of her father

Francesco Cenci. Mr. A. Folkard, on "The Antiquity of Surnames," proves that surnames were in use in the Anglo-Saxon times. This, too, is to be continued. Other short papers are on "The Lord Mayor's Show in 1590," "Lewisham Wells," and "Newly-Discovered Fresco Paintings in an Old Danish Church."

Two substantial but likewise entertaining articles occupy the forefront of *Le Livre* for February. L. Derôme recites the origin and career of the first *Revue de Paris* (1829-1845), founded by the versatile Dr. Véron, whose *article de début*, written by Sainte-Beuve, was an attack on Boileau of which the writer grew less proud as he grew older. In the files of this Review one may see other beginnings equally instructive, and there is much evidence lurking in them concerning the literary history of the most famous Romanticists—Victor Hugo, Mérimée, Charles Nodier, etc., with Delacroix, Rossini, and Tony Johannot. M. de Saint-Heraye, on the other hand, treats of the first bibliographical journal, the *Annales Typographiques, ou Notice du progrès des Connoissances humaines* (Paris, 1759). In connection with a short-lived though really earlier periodical, the *Bibliothèque annuelle et universelle* of Burtin and the Abbé Ladvocat (1751-1753), M. de Saint-Heraye alludes to these editors as "les auteurs," apparently after the usage we lately pointed out as once prevalent in England, of addressing the Editor as the Author. We seem to see the same thing in a contemporary reference by the editor of *L'Année littéraire* (1759) to the plan of "l'auteur *des Annales typographiques*," where one might, to be sure, interpret *auteur* by 'founder'; and again, thus, "M. Morin (c'est le nom de l'auteur des *Annales typographiques*) a certainement beaucoup d'érudition. Il rapproche les ouvrages publiés sur la même matière," etc., where the editorial function is uppermost in the writer's mind. However, Littré does not record any such meaning under *auteur*. In the "Chronique du *Livre*" are printed some inedited verses by Alfred de Musset.

A list of 376 rivers, large and small, of all countries, with length, distance of mouth from source, and watershed areas, approximately estimated, is given in No. 120 of the Berlin Geographical Society's Journal. The Nile ranks first in length, the Mississippi second.

Mr. M. M. Ballou's 'Edge-Tools of Speech' (Ticknor & Co.) is a thick volume of nearly 600 pages, full of "elegant extracts," which will delight those who think the free use of them a mark of culture or of thought. Prose predominates, we should say, but the poetry is disguised by being printed as prose. Foreign authors are cited in translation. The compiler's range includes at one extreme Josh Billings, whose aphorisms are quite as good as those of more literary characters, and better than platitudes like this from William Howitt: "Whoever has not ascended mountains knows little of the beauties of Nature"; or this ordinary remark from Emerson: "We are disgusted with gossip"; or this stimulating "edge-tool of speech" from Cowley: "Merab's long hair was glossy chestnut brown." Mr. Howells is one of the latest laid under contribution, in this from 'Silas Lapham'—"It is certain that our manners and customs go for more in life than our qualities." The classification is sometimes forced, as when we find under Flirtation, "Who is it can read a woman?" It is often incomplete, as, after disposing of Originality, Mr. Ballou puts the same kind of texts under Plagiarism, with no cross-reference. The heading Woman, it would be safe to say, includes less than a quarter of the quotations in which the word occurs. To gather these together there is no index, nor is there any index of authors, though a useless list is given.

Beyond some half-dozen corrections in the ascriptions of poems, and the bringing down of biographical dates to 1884, and more tasteful typography and binding, we perceive nothing to remark in the new edition of Schaff and Gilman's 'Library of Religious Poetry' (Funk & Wagnalls), first published in 1880. It is a good and comprehensive collection, though the term "religious" is construed somewhat narrowly, as if a hymnology had been contemplated.

A very attractive book has been made by rendering into English Froebel's 'Mutter- und Kose-Lieder' ('Mother's Songs, Games, and Stories,' London: William Rice). The ladies, Frances and Emily Lord, who have done this, have of course preserved the pictures which are the basis of Froebel's object-lessons, though with a reduction in scale which somewhat impairs their usefulness; and they have rearranged the music for children's voices, with pianoforte accompaniment. The translators lay stress on the fact that this work, unlike others on the theory of education, puts a "distinctly prepared means" into the hands of those who have not a knack of inventing. That its value lies more in its suggestiveness than its "means" can be interred from such rhymes as these, which a dime-novel could not surpass in unreality, though their motive is apparent and respectable:

"Though black the Charcoal Burners are in face,
Though grimy are their shirts, ill-shod their feet,
Their hearts are kind and warm, *and always beat*
For what is blameless, good, and right, in every place."

'Holly and Mistletoe, or Songs across the Snow, written and illustrated by E. T. G.' (Baltimore: Glass & Co.), is a seasonable production, especially as to the second part of the title. The illustrations, with their winter sparkle, and the whole getting up of the letter-press, are in taste and refined execution far above the usual holiday gift-books—if books they may be called that books are none, but rather a cross between Christmas cards and a portfolio. If we had leisure to read the songs—twenty-five in number, ten of them illustrated—we might judge whether "E. T. G." writes as well as she paints. Our trial with "Golden Rod," which we took by way of sample, was fairly encouraging.

Mr. B. F. Harding, teacher of Greek in St. Paul's School, Concord, N. H., is the author of a little book of forty-four pages on 'Greek Inflection' (Boston: Ginn & Co.). It has various objects in view, among them to "furnish a large number of words for ready use as paradigms," to "suggest a systematic and scientific treatment of the noun and verb," to be used "for parallel work with the grammar, . . . by the beginner as well as by the more advanced scholar or teacher," to "collect in small compass the latest developments of philology," on the subjects of case-endings, terminations, person-endings, and the inflection of the noun and verb generally, and "to form a stepping-stone between the school and comparative grammars." We shall leave our readers to judge of the success of an attempt to accomplish all this within the limits of about forty pages. The book is really an attempt to teach the inflection of the Greek noun and verb according to the "stem theory," by a new method which presents many points of originality and ingenuity. That the "stem theory" is destined to supplant all others in teaching Latin and Greek we have no doubt; but we do not think the manner in which it is here presented is the best. The book is, however, suggestive, and well worth the perusal of teachers, even though they may not adopt it for use in the class-room.

"Twenty-second thousand" must be inscribed on the new edition of the late Stephen S. Foster's famous anti-slavery tract, 'The Brotherhood of Thieves; or, a True Picture of the American Church and Clergy,' about to be issued by Mr. Parker Pillsbury of Concord, N. H.; the prior edition having been exhausted. We have before called attention to Mr. Pillsbury's inexpensive series of reprints, which includes also J. G. Birney's 'The American Churches the Bulwarks of American Slavery,' and Mr. Pillsbury's own 'The Church as It Is; or, the Forlorn Hope of Slavery'—all a part of the anti-slavery warfare of the forties, and a repository of irrefragable testimony as to the pro-slavery subserviency of churches and ministers of almost every denomination. Every public and every theological library should have them, and every student of the abolition agitation. A larger and recent work by Mr. Pillsbury, 'Acts of the Anti-Slavery Apostles,' whose field of retrospect is principally New Hampshire, and which has taken its place among the important memoirs of the period to which it relates, is likewise procurable of the author-publisher.

From the Government Printing-office we have Vol. 13 of the Census, being the Statistics and Technology of the Precious Metals, prepared, under the direction of Clarence King, by S. F. Emmons and G. F. Becker.

It is a pleasure to be able to declare that a book about a game of cards—most of which are a weariness to the flesh and a provocation to assault and battery—accomplishes exactly what it intends; and this can be declared of 'A Handbook of Whist and Ready Reference Manual of the Modern Scientific Game,' by "Major Tenace" (New York: G. P. Putnam's Sons). It is a successful attempt to set forth dogmatically the proper play at any given condition of the game, leaving explanation and discussion to other works, which the genuine student of whist may be supposed to have in his possession.

Mr. Edward Roth, 1135 Pine Street, Philadelphia, makes slow but steady work with his index to *Littell's Living Age*. The biographical section ends in No. 8 at Lord John Russell.

The first report of the Art Students' League of New York, by the President, Mr. Frank Waller, is on our table. Its encouraging retrospect covers a period of ten years.

Mr. Christern has received the catalogue of the eighth exhibition of the French Water Color Society. Its illustrations are made to ornament the pages very effectively.

We have had occasion more than once to commend the admirably edited and neatly printed 'Nouvelle Bibliothèque Classique' of M. Jouaust, the latest issues of which are a four-volume Rabelais and a three-volume Bossuet. The new quarterly Bulletin of the Librairie des Bibliophiles now announces that there will soon be added Montaigne's Essays and a selection from the interminable writings of Voltaire. Another announcement from the same Bulletin is that M. Jouaust has now for sale most of the original drawings from which the etchings were made that have adorned the many beautiful books he has published in the past ten or twenty years.

One of the chief points in which Waitz's view of the development of the feudal system has heretofore failed of general acceptance has been his assertion that gifts of land by the Merovingian kings created only a limited and not a full right of property. This view has been received with general scepticism, especially by jurists, who have been unable to find any support for it in the legal ideas of the time. An important paper on the subject from the distinguished historian of law, Professor Brunner, has just appeared in the Transactions of the Berlin Academy (for December 17, 1885). He asserts that the reason given by Waitz for the inability of the jurists to accept his views, that they demand a doctrine to be fully developed before they can recognize its existence, is not the true one, but rather that the early adoption of the principles of the Roman law in regard to gifts of this sort has

induced jurists to overlook the scattered traces of earlier German ideas. He then proceeds to a study of the subject worthy to rank in some respects with the celebrated studies of Sickel in the Transactions of the Vienna Academy on the related subject of the Immunities. In this he attempts to recover from the usages of other Germanic nations, and from the scattered notices in Frankish diplomas, the standpoint of the early German law in regard to such gifts, and decides that the only satisfactory conclusion is that gifts of land from the Merovingian kings created only a limited right of property unless a full right is expressly granted. This is the more noteworthy as Brunner has heretofore maintained the opposite view, as in Holtzendorff's 'Encyclopädie,' 1882.

Halliwell-Phillipps writes to an American correspondent: "I am well aware of the two great defects in my 'Outlines' to which you allude, the want of a good index and of an account of the engravings. I had made considerable progress with both of them last spring when I was almost suddenly prostrated; and, feeling from what the doctor said that a long and absolute rest was a necessity, I preferred issuing the volume without them to deferring its publication for an indefinite period. As it was, though pretty well in general health, I was unable to do book-work all the summer, the examination of the records of two towns being pretty much all that I managed to get through with during upward of six months. If I have better luck this spring, these blemishes will, I hope, be removed. What I have left of literary ambition has been abundantly satisfied by the kind reception my book has met with in every direction, especially among American students—a reception that is stimulating me to do my best to add to its utility."

At Reykjavik, on January 21, died suddenly Bergur Thorberg, Governor-General of Iceland; or, as the Icelanders themselves style their highest official, "Landshöfdingi," or "Head of the Land." He was born at Hvanneyri, in the extreme north of the island, January 23, 1829, was educated at the University of Copenhagen, became a judge, and then Governor of the southern and western provinces; he was made acting Governor-General May 1, 1883, and received a year later the permanent appointment. He was the first native Icelander who, for many generations, filled the office, his immediate predecessor, Hilmar Finsen, being by birth a Dane, though a descendant of an Icelandic family. Governor Thorberg was a man of marked courtesy, of great honesty of purpose, and of ready eloquence. Those who have visited his library and seen his table covered with the principal reviews and literary journals of Scandinavia, Germany, and France, will bear testimony to his broad culture. His widow is a daughter of the island's venerable bishop, Dr. Pètur Pètursson. It is worthy of note that, two days after the decease of Governor Thorberg, news reached Reykjavik of the death at Copenhagen of the ex-Governor-General Finsen, who was at the head of the Icelandic Administration from 1865 to 1883, and who, after his resignation, became a member of the Danish Cabinet.

— *Lippincott's* for March is very agreeable reading. Fiction occupies the leading place, and Mr. Brander Matthews's short story, "Perchance to Dream," is very bright, ingenious, and pleasing, with just enough of dramatic compression and interaction to give relief and vivacity to the tale itself. One suspects that the author's study in French comedy was the most fortunate training a novelist of his cosmopolitan "machinery" could have, and perhaps tyros in the art might profitably take a hint from this. The attractive article of the number is Mr. Laurence Hutton's historical résumé of "The American Play," by which he means drama American in theme as well as in authorship. He displays the most detailed knowledge of his subject, as was to be expected, and though our dramatic literature turns out to be very ephemeral and insignificant, both intrinsically and by comparison, the story is made entertaining. The magazine's symposium, which it calls "Our Monthly Gossip," has received its share of the fresh life infused into the whole body, under the new management, and two of the participants, at least, write cleverly. One of them brings the discussion of "Our Literary Centre" to a *reductio ad absurdum*, perhaps unintentionally, by pointing out that if the test is the output of published matter, Washington is more than the rival of New York, and if it is original quality and excellence, then the Southwest, or, to choose a locality, Murfreesboro', Tenn., is the omphalos of our literary republic. Further than this the discussion can hardly go. We expect now that some one of these minor chatterers, who have a corner reserved for them in nearly all the magazines, will suggest the location of our "National Westminster Abbey" in the Yellowstone Park.

— The *Century* for March, besides its usual assortment of fiction, has one of Mr. Benjamin's interesting papers upon Persia, another chapter on our recent architecture, with examples, and a sketch of "Italy from a Tricycle," of which the character is sufficiently indicated by its title. Mr. Washington Gladden contributes the serious public article, and adds one more to his persistent efforts to invigorate our social life with a catholic Christian spirit. He discusses the "Strength and Weakness of Socialism," and criticises in particular Gronlund's recent work on the 'Coöperative Commonwealth.' The subject naturally falls into the two divisions of grievances and remedies, or the critical and constructive aspects of the movement now demanding wide attention for itself; and Mr. Gladden seems to accept the validity of the criticism while he rejects the proposed reconstruction. It is scarcely necessary to add that he is of that group who hold that a revival of the religious spirit on the side of philanthropy—or, as he might prefer to put it, the Christianization of our economical system—is the one thing needful; not the elimination of the motive of self-interest and the method of competition altogether, but their limitation by a humane public spirit and the coöperative system in the industrial groups. The paper is suggestive of the advance of opinion, and helps to state the social problem in clearer terms for popular apprehension. Every such article is a gain.

—General Buell's paper on the battle of Shiloh is one of the most important that have yet been published. Its chief interest, of course, lies in the fact that it is his response, as Commander of the Army of Ohio at the time, to General Grant's statements of the character of that engagement and the results of the first day's fighting. The subject has been one about which much bitter feeling and prejudice has gathered, and opposite opinions are almost fiercely held by the surviving officers and men of the two great army organizations of the Tennessee and the Cumberland. General Buell's paper, although certainly guarded in expression, is really a determined attack upon the military reputation of both Grant and Sherman as connected with that campaign. It is unfortunate that it conveys the impression that it is written from the enemy's point of view (in the military sense), and that, if its reasoning is correct, the Confederates had nothing to do in the late afternoon of April 6 but to capture the remnant of Grant's army almost without resistance. That this is an exaggerated view is sufficiently clear from the simple fact that such a capture was not made before Buell's divisions could cross the Tennessee. To thus put Grant's command quite *hors de combat* was logically necessary in order to show that what General Buell calls the second battle of Shiloh was the victorious work of the Army of Ohio alone, or substantially alone. A very significant counterpart to this article is found in the "Memoranda," where, from a respectable Confederate source, is clear confirmation of the fact that Beauregard's order withdrawing his troops was being executed at the Confederate left and centre before the final attack by their extreme right at dusk; thus showing that Grant was correct in saying that the "*furor* of the attack was exhausted" before that time. There was glory enough on the two days for both the national organizations and for the brave Confederates to boot, and the unprejudiced reader will not sympathize with an army *esprit de corps* which seeks victory over its comrades more than over the common foe. This paper has valuable additions to the views from photographs of the field and the river at Pittsburgh Landing, and excellent portraits of Generals Crittenden, Wood, McCook, and Terrill.

—The *Southern Bivouac* for March has a valuable contribution to the history of the "Kentucky Resolutions of 1798 and 1799." This consists in part of a facsimile of Thomas Jefferson's letter of December 11, 1821, to J. Cabell Breckenridge, in which he avows the authorship of the Resolutions. There is also a facsimile of a printed copy of the Resolutions as they passed the Legislature, of which the author of the article says it is "an original copy now in the possession of the writer." The reproduction of the letter, with the address, frank, and postmark, conclusively settles the disputed point as to the person to whom the letter was addressed. The face of the letter had no address upon it, and the executor of Mr. Jefferson, finding a copy among the deceased statesman's papers, was misled by its phraseology into supposing it was addressed to a son of Wilson C. Nicholas, of Kentucky, and so endorsed it. From this the error has passed into general history. An inspection of the facsimile shows how naturally this occurred in the absence of the proper address. Mr. Jefferson accidentally omitted a comma in his sentence mentioning the trio of gentlemen who consulted over the matter at Monticello. The letter reads: "your father Col. W. C. Nicholas and myself happening to be together," making apparently a conference of but two persons. The restoration of the outer address of the letter proves that "your father" and "Col. W. C. Nicholas" were different persons, the former being John Breckenridge. As to the second document (the facsimile of the printed copy of the Resolutions) the evidence is less conclusive. It is known that varying versions of the Resolutions got early into print with every apparent mark of authenticity. Attention was formerly called to this matter in the *Nation* (vol. 37, pp. 330, 392, 414). A facsimile of an old printed copy therefore proves nothing unless it be established when, where, and by what authority the printed copy was made. For the authenticity of the present one nothing is offered but the assertion of the author of the article; an omission which would indicate that he was not aware of the precise form the discussion has taken. The original archives of Kentucky of that date were lost in an accidental burning of the State House many years ago. The Governor of the State had been authorized to send copies of the Resolutions to the other States, and some of these official transcripts should be in existence. Till they are found, it would seem premature to assume that the official text is restored—certainly not without full evidence of superior authenticity of the copy produced. The effect of any al-

leged modifications by Mr. Breckenridge in Jefferson's original draft would be a question still further on.

—Henry Stevens, who died at his house in London on the last day of winter, had lived there forty years, but was by birth a Vermonter. His father, a farmer far up the Connecticut, when the boy had learned "small Latin and less Greek" from the village minister, gave him a colt and told him he must work his passage through college. The youngster rode to Middlebury, entered the freshman class in 1838, sold his horse to pay for books and board, and eked out his income by teaching penmanship. After a year or two, obtaining a committee clerkship in Washington, he became acquainted with Peter Force. Thanks to a few old Revolutionary papers sent to the young clerk by his father, he obtained from Mr. Force and others funds enough for his support while completing his collegiate course at Yale. Being a bibliomaniac, both by heredity and habit, he was eager to see a library worthy of the name. Obtaining a loan of eight hundred dollars, half from Mr. Force and half from Francis Parkman, he crossed the ocean in 1846. Before he had rambled very long in the British Museum he detected some of its weak points. In an interview with one of its managers he pointed out its lack of certain American books it could not afford to dispense with. In this exposure he showed such intelligence that he received a commission to supply the deficiency. Faithful in little, he was gradually commissioned to do much. In 1884 he told an American visitor that he had furnished the Museum library with a hundred thousand books or pamphlets. He showed him one thin volume for which he was paid two hundred and fifty pounds. He had supplied the greatest of British libraries with the larger part of its American books. In turning over its catalogue for an illustration, he opened to the name of Joshua Bates, once President of Middlebury College, and read the titles of twenty-eight of his publications garnered up there by Mr. Stevens. One of his early enterprises was buying up the books of Washington from the proprietor of Mount Vernon, and forcing the solid men of Boston to pay well for those of them that were retained in America. Another of his exploits was gleaning and gathering so many papers of Dr. Franklin that Congress paid thirty thousand dollars to secure them. Mr. Stevens was followed abroad by brothers, and trained up a son to take his place as a literary and pre-eminently an historical intermediary between the New World and the Old. His book-store lately showed more than fifteen thousand curious and rare pamphlets relating to America, each bound up as a separate volume, and his last labors were in preparing a catalogue of this unique collection. On the whole, while cosmopolitan in his relations, he always turned fondly to his mother State. He named his house Vermont Cottage. G. M. B., meaning 'Green Mountain Boy,' was the only title he would affix to his name. When a freshman at Middlebury he had advertised his wish to be a writing-master by writing his proposals, in a superb hand, on a sheet of paper which he stuck up on the bulletin-board. That sheet he carried to London and hung it in a frame in a conspicuous place on the wall of his store. No doubt it hangs there still.

—A writer in St. Petersburg, reviewing a translation into Turkish of Griboyedoff's famous comedy, "Woe from Wit," gives some curious details about the stage on the shores of the Bosphorus. Within ten years not a few plays have been written in verse by Turkish authors. Thanks to them, the close-drawn curtains of the harem become more than transparent. They show the women not jealously veiled, but in their ordinary home dress, in the midst of an exact reproduction of the furniture and decorations of the harem. Even their soft, musical speech, almost a dialect of itself, is reproduced. The subjects are chosen sometimes to present the comedy of manners, and sometimes the tragedies of which that life is full. The writer further notes the change that has been rather rapidly going on in the last few years, from a kind of blind aping of western manners in certain respects to an intelligent study and understanding of western civilization, especially of its literature. An interesting list is given of books translated into Turkish since the beginning of the reign of Abdul-Aziz. The most important are Chateaubriand's 'Atala'; Victor Hugo's 'Les Misérables,' "Ernani"; Dumas's "La Dame aux Camélias," and his father's 'Monte Christo'; Sue's 'Les Mystères de Paris,' Octave Feuillet's 'Le Roman d'un jeune homme pauvre,' Lamartine's 'Graziella,' X. de Maistre's 'Les Prisonniers du Caucase,' Volney's 'Ruines,' Silvio Pellico's 'Le mie Prigioni.' 'Robinson Crusoe'; "The Winter's Tale," "Othello," "The Merchant of Venice"; Molière's "Le Bourgeois gentilhomme," "Le Mariage forcé," "Le Médecin malgré lui," "Tartufe"; Émile de Girardin's "Cléopâtre," selections from Voltaire, La Fontaine, and Fénelon—of 'Télémaque' there are two translations. It may be added that all these books are regularly for sale by the leading bookseller of Constantinople, who, by the way, is an Armenian.

TWO RECENT BOOKS UPON CALIFORNIA HISTORY.

History of California. By Theodore H. Hittell. Volume i. San Francisco: Pacific Press Publishing House. 1885.

History of the Pacific States of North America. By Hubert Howe Bancroft. Vols. xiv and xv. California, vols. ii (1801-24) and iii (1825-40). San Francisco: A. L. Bancroft & Co.

THE Territorial history of California was until very recently an obscure and, in many parts, a quite unknown field. Lawyers, toiling over the great land cases, had indeed produced and printed a few very valuable historical briefs, such as Dwinelle's 'Colonial History of San Francisco.' The life of Junípero Serra, by his friend Palou, together with a few travellers' books, had also been made the basis of many tales about the early mission life. But nearly all the rest of the history of the Territory of California, before the conquest in 1846, had remained a mystery, concerning which we were ready to believe almost any story that an apparently well-informed person might repeat. Of a sudden, however, this blank ignorance has passed away, and all things are become new. Mr. Hubert Howe Bancroft's elaborate history has reached, with the volumes before us, the year 1840, and now comes Mr. Theodore Hittell with the first of his two volumes, wherein he reaches the end of the Spanish rule in California, and begins the history of the Territory under Mexican government. The second and closing volume of Mr. Hittell's work is to bring his history to the admission of the State of California in 1850, while the fourth and fifth volumes of Mr. Bancroft's history are expected to cover the years from 1840 to 1846, the conquest by the Americans in 1846-47, and the remaining Territorial history as far as to the gold discovery in 1848. Thus, in a very short time, we may expect to have two elaborate and independent accounts of the whole life of California before 1849.

Two questions occur at once to the general reader's mind when he sees these bulky volumes, whose contents are so very largely made up from previously inaccessible manuscript sources, and whose methods of treatment are, in both cases, so space-consuming, and, in form at least, so thoroughgoing. Why, one first asks, has our previous knowledge of Territorial California been so meagre, so inaccurate, often so legendary? For these books contain on nearly every page information never before in print, and very frequently correct errors of many years' standing and of wide prevalence in previous literature. And why, on the other hand, one again asks, has it been found necessary, now that the truth has at last been studied, for both Mr. Bancroft and Mr. Hittell to state it at such length? The paradox of this sudden transformation, whereby one of the most ill-treated of our Territorial histories becomes of a sudden one of the most elaborately and minutely investigated of all, deserves explanation. The answer to both our questions lies no doubt partly in the singular love of the modern Californian for colossal undertakings. Either the Californian must utterly neglect and despise the colonial history of his province, or else he must endeavor, so to speak, to provide means for a careful cataloguing of every bullock whose hide was ever exported from Mexican California: such seems the inevitable expression in this direction of the fine energy and the somewhat extensive ambitions of a community whose youth was passed in dreams of gold, and whose later years have been devoted to vast industrial and commercial undertakings. The wealthy Californian of mark and intelligence undertakes some such task as founding his own private university, producing his own private school of literature, or leaving as his monument the greatest observatory on earth, just as the wealthy Californian of mark but not of intelligence is contented with building a bigger house than his fellow-millionaire, or with owning more acres of land than his rival. Such sorts of magnificence extend themselves very readily to the methods of scholarly work. Mr. Bancroft is a wealthy Californian of a certainly uncommon intelligence and power for work, and Mr. Hittell's ability and energy are also undoubted. Mr. Bancroft's book is on a far larger scale than Mr. Hittell's, but both books agree in a scrutiny of the early history of California such as shows an ardent desire to produce not only serviceable, but also monumental books.

But in another way, also, our questions may receive a partial answer. This minute scrutiny of the old California life expresses not only the private ambitions of authors, but the late and now fruitless repentance of the American as he remembers the little world of life that his cruel progress in California has destroyed. If there was any purpose strong in our American mind in the early golden days of California, it was to neglect, to despise, or to ignore everything peculiar to the natives of the land that we had so rudely seized. For years we set our faces against the customs and the rights of the former inhabitants. Only the strong necessities of land litigation could force us to begin the study of the older history; but this study, vivified after a good many years by the warmth of poetic sentiment, has now, under the influence of the personal ambitions aforesaid, suddenly assumed the imposing proportions of these works. We who came to contemn have remained to study most lovingly and devoutly.

As to the relative merits of these two books as they stand, a considerable examination has convinced us that not only in bulk, but also in scholarly completeness and in accuracy of detail, the work of Mr. Bancroft and his collaborators is greatly superior to Mr. Hittell's work. In readableness, however, Mr. Hittell's book stands on the whole a little higher. In fairness toward the people described, in good sense, in sound judgment of the meaning of facts once fully ascertained, both books seem, so far as we can now decide, nearly equal—a fact which cannot fail to be of great value to any future student of the subject. As the case stands, then, one cannot be

sure of the details of Mr. Hittell's story, in any of its more complex or obscure portions, without comparing it with Mr. Bancroft's account. But it is easier to read Mr. Hittell's book, chapter after chapter; and his opinion about the significance of the once correctly narrated story is always worthy of consideration. Were Mr. Hittell's book alone, one would think of it very highly indeed. So long as it is not alone, but has for its rival an undertaking that began to appear in the field some years earlier, and that is founded upon a far richer collection of original material, we can only regret that Mr. Hittell did not either publish his work five or ten years ago, or else postpone publication until he could appear as Mr. Bancroft's best equipped and ablest critic. For the moment, however, Mr. Hittell says nothing of the existence of the larger work, and the two undertakings lack all evidence of that friendly and critical coöperation and rivalry with each other wherein lies the very life of progressive scholarship. Mr. Bancroft's volumes have had, to be sure, no opportunity to mention or to criticise Mr. Hittell's book, which appears later than they.

Our opinion as to the comparative accuracy of the two books is indeed, we must confess, necessarily dependent almost wholly upon a comparative study of their own pages, since, save the authors, no man has had the opportunity to deal elaborately with the manuscript sources upon which nearly all this early California history rests. But where the work done is so elaborate, a comparison is sufficiently fruitful of results to make such a judgment as we have formed at least a possible one. Both writers mention their chief sources, and in Mr. Bancroft's book these sources are in all doubtful cases elaborately cited and compared, so that the reader is able to form in some measure his own opinion. Mr. Bancroft's work also cites numberless and, for us, of course, quite inaccessible minor authorities, whose actual presence in mind, as determining factors in the attainment of the results set forth, is at least presumable. Mr. Hittell's citations are briefer, and his principle of selection among the authorities that he has used is seldom if ever confessed. But, in any case, a fair comparison of the work done in the two books is, on the basis of these quotations and citations, not out of the question. One sees, in the first place, the advantage given to Mr. Bancroft by the far greater wealth of his material. Wherever, for instance, the Russian colony at Ross is under discussion, Mr. Bancroft's collaborators have at hand original Russian documents of great importance for the purpose, while Mr. Hittell is confined to the printed accounts and to the Spanish archives. Mr. Bancroft's Mission documents, again, are vastly more numerous, and his collections of private letters, written by Californians of all periods from the beginning down, are very helpful to him. Mr. Hittell uses, among manuscript sources, for the most part only the public archives, and has the advantage of only a very few private manuscripts. In this respect, then, he is at some distance behind his bulky competitor.

But the result of this, for the accuracy of the work done, is considerable. If the history of an outlying and impecunious Mexican province, such as California was before 1846, is to be told at all, especially in such large volumes, it might as well be accurately told. And where Mr. Bancroft gives elaborate citations to prove what he relates in great detail, while Mr. Hittell, passing over the same point more hastily, and citing either no authorities at all or less important authorities, makes statements in direct or indirect opposition to the results of the rival work, the general reader must have, at least provisionally, more confidence in the historian whose witnesses are the more numerous and the more carefully cross-questioned. Examples of such conflicts are not hard to find. Where dates are concerned, the formality of Mr. Bancroft's story, with its strictly chronological statement of the general history of the Territory for each successive year, generally assures us of his greater care in this respect. Thus, on page 501 of his volume, Mr. Hittell says that Señan "seems to have held" the two offices of president and prefect of the missions from 1823 to 1825; while Mr. Bancroft, using mission archives that Mr. Hittell does not cite, knows (vol. ii, p. 489, *seqq.*) that Señan died in August, 1823, and that thenceforth, until April, 1825, Sarría was mission president. The offices in question were of course important, if anything in California in those days can be called important. There are a number of instances of this sort in Mr. Hittell's record of the mission life, so that one could not venture to found any conclusions on his dates of minor events.

More important, however, are the differences between the two historians as to the policy of the Californian authorities in certain cases. Mr. Hittell knows (p. 494 and p. 642) that the San Rafael Mission was founded in 1817 as "a kind of bulwark or barrier" against the Russians in the north. This opinion he seems to found on one or two authorities only; but Mr. Bancroft's book, in a discussion founded on an elaborate study of the whole correspondence of the time, concludes (vol. ii, pp. 316 and 329) that "there is nothing to indicate such a purpose," and shows us that commercial intercourse between San Rafael and the Ross Colony was from the first "almost continuous." In case of the earlier affair of Rezánoff's visit to San Francisco in 1806, the relations of that officer both to the Californian authorities and to the fair Concepcion Argüello, whose romantic tale Mr. Bret Harte has made so famous, appear in Mr. Bancroft's account for the first time in their true light, since Rezánoff's official reports to his Government contain facts about the policy and conduct of the officials which the Spanish authorities could not well record in their archives, and some facts about his own intentions that even Doña Concepcion herself never learned. Rezánoff, namely, although he tried to conceal the fact, had come to buy supplies for the starving Russian colony at Sitka. The Californian officials had no legal right to trade with him, and for a time refused. Thereupon Rezánoff, to carry his point, made love to the commandante's daughter at San Francisco, and, when he had won her heart, her good father permitted their betrothal. Thenceforth Rezánoff, as he says, "managed this port of his Catholic Majesty" in the interest of his own undertaking. Soon the supplies were obtained, by an illegal compromise with the officials, and thereafter Rezánoff spread his sails, and, having promised an early return to his beloved, disappeared through the Gate into the sea. His death soon after concealed his to-day obvious infidelity, and left Doña Concepcion a faithful mourner for the rest of her life. All this affair Mr. Hittell has read of only in the old and much-distorted printed narratives. His entire account of it is therefore untrustworthy. The incident itself is important, as being the first in the history of the Russian activity in California. Utterly ungrounded appears to be Mr. Hittell's assertion (p. 626) that the Russian Government ever gained permission from the Spanish Court to found an establishment on the Californian coast for the purpose of fur hunting. The settlement at Ross was made without any sort of Spanish permission (Bancroft, vol. ii, p. 82, p. 299, note, and p. 304, note). Mr. Hittell's assertion is apparently founded only on Kotzebue's, while Mr. Bancroft's is, as usual, the outcome of the study of many cited authorities.

Especially subject to error Mr. Hittell seems further to be wherever he follows the manuscript of very imperfect reminiscences which Alvarado, sometime Mexican Governor of California, prepared in his old age, and of which Mr. Bancroft also possesses and frequently cites a copy. Upon this manuscript is founded Mr. Hittell's account of the transition of California from Spanish rule to the Mexican Imperial Regency of Iturbide in 1822; and here, in consequence, his story of the change is as dramatic as it is unreal and even absurd. The locally important events of months, painfully detailed in Mr. Bancroft's account of this period, are by Mr. Hittell treated as non-existent, and the events of entirely different years are crowded into one scene. The result is an extreme of misstatement that can only be appreciated by comparing the accounts of the two historians at this point; and Mr. Bancroft's relative accuracy is plain from the fact that he could not well have invented the months full of events which he here carefully details, and which Mr. Hittell's account, were it true, would render impossible. Mr. Hittell here makes, in fact, statements as far from the historical truth as would be the assertion that our Declaration of Independence was signed on the day of the battle of Lexington.

While, therefore, Mr. Hittell's accuracy, never perfect, is at some points intolerably wanting, his general knowledge, so far as, with his relatively imperfect sources and with his rather summary method, he could be expected to attain it, is for the greater part of this volume indubitable; and so, properly checked by reference to Mr. Bancroft, his book will be of no small use to students of his topic. His style is simple, unadorned, and not unpleasant; and his reflections are always worthy of respectful notice.

Of volumes ii and iii of Mr. Bancroft's 'California,' considered in themselves, one must surely say that their method is obviously conscientious, and has aimed to secure exhaustive accuracy. Whether the end has been fully attained, we can in no wise judge. For if Mr. Bancroft frequently gives us positive data whereby we may with fair assurance correct Mr. Hittell, the latter, so far, has given us no such help with respect to his rival, and a perfectly intelligent and thorough-going criticism of Mr. Bancroft's results would require long researches among the documents that fill his own immense library. What we can say here must be confined to a more external criticism of his book. That these volumes are unreadable is already a common assertion of popular criticism; and they are surely not exactly a great work of historic art as art. But we find in them many admirable literary qualities. To whom in particular these are due is indeed not revealed, since Mr. Bancroft confessedly and willingly shares with his devoted anonymous collaborators the honors of his colossal literary undertaking. At all events, however, we do find in these volumes one quality that some critics have missed in other volumes of the "Pacific Coast History," namely, a certain unity, both of workmanship and of judgment, which we must highly admire in view of the number of hands that are supposed to have been at work in preparing the manuscript. Mr. Bancroft and his collaborators have here somehow joined themselves in an exceptionally close personal union, so that they for this time actually work as one man, whose character and general literary style are equally admirable: an unrhetorical, thoroughly sensible man, with an unwearied diligence, a suppressed but plainly intense scholarly enthusiasm, a quiet humor, and an excellent facility for summarizing, in few words, characters and situations. As Mr. Bancroft's use of many subordinates is too often supposed to give to all the labor done in his library a composite and disunited character, which his own work in rewriting the manuscript is gene-

rally insufficient to remove, we take pleasure in pointing out the well-defined personal unity manifest throughout the 'California,' and in congratulating Mr. Bancroft, as the presumed master workman, that here at least is a book which reads like the almost undisturbed product of a single devoted and enthusiastic mind. May his revision and final alteration of the work of his collaborators always affect their industry in just the same fashion as here, and with just as happy results.

What we do object to in this book, therefore, is not the style, which is simple, manly, and earnest, nor the immensity of detail, which is the result of the original plan, but rather that defect of method which has forced the worker to distinguish so sharply secular annals from mission annals, both of these from commercial annals and from foreign affairs, and all these together from the local annals of each district. It is this sharp division which gives the best foundation to the charge that this book is unreadable. Personal unity, as we have said, is present throughout these two volumes—unity of purpose, of judgment, of enthusiasm, and of knowledge. But an artistic unity of the many currents of the narrative into one great stream has not been quite reached. If the same hand that has given the personal unity to the work could only once more rewrite it, the higher unity of historical workmanship could now perhaps be attained. But it is not given us to live our lives twice.

The third volume of the 'California' is full of the complex political struggles of the republican era, and closes, with 1840, in the midst of the Alvarado administration. We await with great curiosity and interest the fourth and fifth volumes, which will embrace, as we have said, the exciting story of the American conquest. Meanwhile we wish for this whole California history, the most carefully prepared of all Mr. Bancroft's great series, the fullest attention and best criticism of all historical students interested in the topic. For here, whatever else may be said about the matter, is a very remarkable and permanently valuable book.

An Apache Campaign in the Sierra Madre: An account of the expedition in pursuit of the hostile Chiricahua Apaches in the spring of 1883. By John G. Bourke, Captain Third Cavalry, U. S. Army, author of 'The Snake Dance of the Moquis.' Illustrated. Charles Scribner's Sons. 1886. 112 pp.

THIS little volume is handsomely bound, the print is good and large, but the illustrations are insignificant. Whoever has read Captain Bourke's excellent book on the Snake Dance must regret that he has not done better by his present highly interesting subject—General Crook's Sonora expedition, of which he was the acting Adjutant-General. His failure, however, is mostly ascribable to the fact that the text is composed of magazine articles, which originally appeared in *Outing*.

Captain Bourke always writes well and pleasantly for the general and superficial reader, but in this instance the public had a right to ask for positive geographical information, for an historical introduction explaining the real causes of the Chiricahua troubles, and, above all, for much greater impartiality. Our author says truly: "Within the compass of this volume it is impossible to furnish a complete dissertation upon the Apache Indians or the causes which led up to the expedition about to be described." But there was absolutely no need for a volume of such limited compass, and as to the geographical data, we insist on them, first, because nobody in the present century has described the regions traversed, and because geography is, according to Count Moltke, one-half of military science, and to pretend explaining Indian warfare without resorting to it is futile. Capt. Bourke has many clever descriptions of local scenery, and scattered allusions to vegetation and rock-formations, but what we miss is a clear and comprehensive topographical statement. A single page would have sufficed for that purpose, but the book has not even names of mountain chains in it; that of "Sierra Madre" excepted.

The Chiricahuas are not at all to be confounded with the rest of the Apaches, and Captain Bourke ought to have dispelled a common error which imputes to the whole tribe the acts of only a small fraction of desperadoes, with whom that tribe disclaims, and disclaimed in 1883, any communion. The history of the Chiricahuas can be gathered from *printed* sources; it goes as far back as 1684, but might have been summed up in half a page. Captain Bourke does well to shield the Apaches from numberless distorted and slanderous statements. His excellent description of their physical appearance and of their character stands in happy contrast with Mr. H. H. Bancroft's incorrect appreciation. It is, however, in bad taste for an officer of the United States army to lean so strongly to the Apache side at the expense of the Mexican people and army. Mexicans, more particularly in the mountain districts of Sonora and Chihuahua, were always at a great disadvantage. Fire-arms, until lately, were scarce and of very old patterns. The Apache was far better provided. Regular troops hardly came into play, being needed to head off "revolutions" and unable to protect the Sierra Madre; and yet the Mexicans have not done so very badly after all. Of course, the affair at Tres Castillos, when Victorio, after outgeneralling and whipping everybody in New Mexico, was wiped out by the Chihuahua militia, does not count. But the Alisos fight on the 30th of April, 1882, is sadly misrepresented by Captain Bourke, following Apache statements. It is true that a great majority of Indians killed were women and children, but as to the Chiricahuas' claim "that when the main body of their warriors reached the scene of the engagement, the Mexicans evinced no anxiety to come out from the rifle pits they hastily dug," just the opposite occurred. A number of Apaches hid in a sinkhole and were exterminated there at the point of the bayonet. Mexicans have been surprised time and again; so have our troops, even during the last campaign. As to killing the Mexicans with rocks only, Captain Bourke should have known that it was an Indian boast in allusion to an affair at Taraysitos in the Sierra Madre. There they did indeed hurl rocks upon the troops and wounded some; but when the "cowardly" Mexicans scaled the almost vertical cliffs, the "brave" Apaches vanished.

The book contains a number of covert slurs and flings at the army and people of our neighbor republic. As far as the army is concerned they are mostly concealed behind Apache utterances; still, their tendency is to bias and prejudice the reader's mind. In regard to the people he is more outspoken, so much so that even buildings do not escape his wrath. He speaks of churches as "in the last stages of dilapidation," and includes the temple at Babispe, a noble structure, built after the plan of San Javier del Bac, only much larger, of masonry and not with an "adobe exterior." Careless statements abound. The "Estancia" is called a "hamlet" like Huachinera, whereas it is only a *hacienda* belonging to Don Antonio Samaniego. No clue is given to the locality where General Crook met the Apache camp, no names of mountain chains surrounding it. For the benefit of the acting adjutant-general we will state that it is called Los Metates, and lies between the Sierra de Huachinera and the Sierra de los Parapetos, almost north of Nacori. The cañon which they moved up "in an easterly direction" is called Cajon de Bamochi, and the Apaches had camped in its upper parts for some time previous, as every child at Huachinera well knew. The Opata-Indian name for the range at whose feet the *rancheria* was surprised, is Quéva-ué-richi. Of the Opatas, who still form the bulk of population along the upper Yaqui (called Babispe) River, not a word is said, yet they are a most interesting people.

Like carelessness is evinced even in matters pertaining to the so-called "campaign" proper. In the first place, it was no "campaign"—rather an armed peace mission, and General Crook was actuated by motives which forever commend him to sincere admiration. He would have carried it out exclusively on that plan had it not been for the cowardly rashness of his own scouts. At Los Metates they fired prematurely, against the positive orders of Captain Emmet Crawford, and it is very doubtful if more than two of the renegades were killed (Captain Bourke says nine). The fourteen or fifteen Apaches who were in the rancheria afterwards defied all of the scouts boldly and openly from the tops of the cliffs, but the others did not dare to attack; they were and always have been mortally afraid of the Chiricahuas. These scouts were the weak element in General Crook's force; they came very near upsetting all his plans and bringing him and his troops to the verge of utter ruin. It was in the negotiations which followed, and in the fact that General Crook remained quietly where he was without pursuing or retreating, that he showed his genius and ability. Thus he secured the women and children, and saved himself from a surprise at daybreak that Gerónimo had planned. There is much more romance about this Sonora dash than Captain Bourke has intimated, and its commander has claims upon more respect, admiration, and gratitude than this book would entitle him to. The subject is worthy of careful treatment, such as the 'Moqui Snake Dance' has shown Captain Bourke capable of undertaking and accomplishing.

Lord Beaconsfield's Correspondence with his Sister. 1832–1852. Harper & Bros. 1886.

THESE letters are the merest notes, dashed off wherever the writer happened to be, only to give the news of the moment, literary, social, or political. They cover the opening of his London career both as an author and a politician, and afford a singularly effective proof of the completeness of Disraeli's absorption in his worldly success. It is not that he speaks of himself, for that was the subject his sister wished to hear of; but the tone of the whole is that of the worldling. Besides this, there are only a few *mots* and characterizations to interest posterity. Most interesting is his account of his "failure" in his first speech, which seems to have been by no means what it has been represented. He says he gets on "easily in the highest set, where there is no envy, malice, etc., and where they like to admire and be amused," while he is "hated by the second-rate men"; and in his first Parliamentary years we find him ascribing his popularity "to the smoking-room." He evidently cultivated the art of being agreeable in the right quarters with forethought and effort, and always had his eye on the effect. There are maxims of Rochefoucauld prudence and fulness of meaning here. He was frank in describing men. Washington Irving he thought "vulgar and stupid"; Webster, he believes, "considered a very refined and *spirituel* Yankee, but seemed to me a complete Brother Jonathan—a remarkable twang"; "chattering Milnes" (Lord Houghton) kept him at a dull dinner from "the consolation of a silent stuff";

Gladstone (in 1845) "may have an *avenir*, but I hardly think it"; "a Guizot or a Thiers, a professor and a *rédacteur*"; and again, "that rascal Thiers, a thorough representative of the *gaminerie* of Paris"; and so on. Very characteristic is this on the French aristocracy: "What names, but where are their territories? There are only one hundred men in France who have 10,000*l.* per annum. Henry Hope and De Rothschild could buy them all!" His family attachment seems the only part of his nature not touched with the calculating spirit.

Three Americans and Three Englishmen: Lectures read before the students of Trinity College, Hartford. By Charles F. Johnson, A.M. Thomas Whittaker. 1886.

Prof. Johnson's book is a characteristic product of American literary culture. It exhibits wide and intelligent reading, a frank indebtedness to others, a modest deference to established critical authority, a tendency to philosophy, an admirable working style, shrewdness, incisiveness, and definiteness of thought; and within its department is altogether creditable. We say this with no idea that any one will expect to find in these college lectures on Coleridge, Wordsworth, and Shelley, Hawthorne, Emerson, and Longfellow, anything startlingly novel in the way of criticism, and in spite of the fact that more than one paragraph is merely traditional, narrow, not to be justified—as, for example, the denial of the sense of moral responsibility to Shelley against which so slight a fragment as his four lines on "Consequence" is final evidence. But the general tone and level of the work are signs of a mind cultivated in the best sense. One very striking feature of the whole, for it would be superfluous to speak of such essays individually, is the lament over the present decadence, as it seems, of literature into something which may be art but surely is not wisdom, and the incessant praise of the idealistic temper and imaginative sight which made the dying age as memorable as the Elizabethan, saving only Shakspere's name. It is something that the youth who hear such teaching as this may thank heaven for, to have one over them who is so sure of the exceeding worth of the spiritual interpretation of life, and can read it to them from such masters of it as five at least of these six men were. Prof. Johnson's words go home with an edge, too, and are not lost in any mere cloud of ethereal eulogy; they are of the kind that educate, both by their enlightening power when used for praise, and their discriminating power when employed for censure—just such work, we should say, as college boys need, but perhaps too closely adapted to that audience to have their full effect in the world.

History of Ireland for Schools. By William F. Collier, LL. D. Marcus Ward & Co.

Apart from intrinsic merit, this work deserves notice as the first 'History of Ireland,' so far as we know, recognized by any British governmental department for study in Irish schools. It has lately been placed upon the list of books for the use of children who are annually examined before the Intermediate Education Board. Even to this day no Irish history is taught in the national schools and very little in private (especially Protestant) academies. We heard an Irish boarding-school lad remark, on first seeing a copy of this book, "I didn't know there was any history of Ireland." We have here clear type and arrangement and plenty of wood-cut sketches of things and places, antiquities, dress, weapons, portraits, besides a colored map of Ireland. There could scarcely be a better companion to a traveller's hand-book. Upon the whole it is more suited for advanced than junior pupils. There is much in it that will perhaps be new even to many who consider they have a fair knowledge of the subject, or that will revive their recollections. Written for common use in a country where there is as yet no common national life, it is necessarily guarded and unemotional. There is every effort to be fair. That test period of the real opinions of an Irish historian—1641—is moderately treated. But upon the whole the Nationalists have more reason to complain than their opponents. The inspiring spirit of Swift's later writings regarding Ireland—protest against the subjection to England—is hardly even referred to, and more justice might be done to the aims and intentions of the United Irishmen and Young Irelanders.

This book must appear to children dry and depressing compared with the histories of successful countries. Irish history is made interesting and inspiring only when vivified by the lives and characters and intentions of the constant succession of men who, on behalf of Ireland, have exhibited devoted and unflinching self-sacrifice. That would be difficult in such a work as the present. The introduction in the early part of the book of the original names of persons and places in the Irish character is not suited to the readers for whom the book is primarily intended, although perhaps it may pique curiosity regarding the ancient language. The use of this history in Irish schools will doubtless have the effect of increasing the interest of numbers of the youth of Ireland in their own country, and of arousing a spirit of inquiry which can be satisfied only by reference to other sources of information, probably of a less passionless and more suggestive and inspiring character.

BOOKS OF THE WEEK.

Barr, Mrs. Amelia E. The Last of the Macallisters: A Novel. Harper's Handy Series. 25 cents.
Blackie, J. S. What Does History Teach? Harper's Handy Series. 25 cents.

BALZAC IN ENGLISH

Messrs. Roberts Brothers have reason to be pleased with the reception accorded to their edition of the novels of Balzac, newly translated into English, the first volume being now in its fifth edition and the second volume in its fourth edition. They venture to print the following letters, as specimens of the many voluntary tributes paid to the enterprise, which they are constantly receiving:

"ST. AUGUSTINE, FLORIDA. MESSRS. ROBERTS BROTHERS —*Gentlemen:* Although a stranger to you personally, I cannot refrain from returning to you the heartfelt thanks always due in courtesy those who have, consciously or not, given extreme pleasure. In the publicaton of 'Père Goriot' you have rendered thousands of readers almost priceless service, and I most earnestly trust that the reception of the effort you have made will be so instantaneous and widespread as to encourage you to place the world of Balzac before those unfortunate enough not to be able to enjoy it in the original. Yours gratefully, F. S. A."

"LEXINGTON, VA. *Dear Sir:* I write to say how much I have enjoyed Messrs. Roberts Brothers' excellent translation of Balzac. They seem to me idiomatic, spirited, and fluent, and I have taken occasion to show my appreciation (in a leading critical journal); they strike me, in their English form, as reproducing faithfully the spirit of the great master. Faithfully yours, JAMES A. HARRISON," Professor in Washington and Lee University.

From the Art Interchange.

"Since the days when Thackeray and Dickens were issuing in numbers those novels which have delighted so many readers, or George Eliot's publishers were able to announce a new novel from her pen, there has been no series of novels given to the public so notable and so well worthy of wide attention, on the part of adult readers, as this translation of Balzac from the press of Roberts Brothers. THE TRANSLATION COULD HARDLY BE IN BETTER HANDS. THE ENGLISH IS DELIGHTFULLY CLEAR AND NERVOUS. Whoever reads these books will know Balzac very well, and it is safe to assume that they will like him very much."

Messrs. ROBERTS BROTHERS' edition of the Novels of Honoré de Balzac, newly translated into English, 12mo, handsomely bound in half morocco, French style, price $1.50 each.

READY:

PÈRE GORIOT. Prefaced with Balzac's own account of his plan of writing the 'Comédie Humaine.'

THE DUCHESSE DE LANGEAIS. With an Episode under the Terror, the Illustrious Gaudissart, A Passion in the Desert, and The Hidden Masterpiece.

should place on its shelves copies of

AMERICAN ORATIONS, from the Colonial Period to the Present Time. Selected as specimens of eloquence, and with special reference to their value in throwing light upon the more important epochs and issues of American History. Edited with historical introductions and notes by Professor Alex. Johnston of Princeton College. 3 volumes, 16mo. $3.75.

"The best method, in our judgment, to acquire a truly fine style either for the pen or the platform is by reading and re-reading the best specimens of English; and for the orator, whether at the bar, on the platform, or in the pulpit, a careful reading of these volumes will be an admirable education."—*Christian Union, New York.*

BRITISH ORATIONS. A SELEC- tion of the more important and representative Political Addresses of the past two centuries. Edited with introductions and notes by Prest. Charles K. Adams, of Cornell University. 3 volumes, 16mo. $3.75.

"Carefully selected specimens of oratorical eloquence. . . . The volumes contain a rich store of instructive, no less entertaining material."—*Advertiser, Boston.*

PROSE MASTERPIECES FROM THE Modern Essayists, selected with reference to their value in presenting specimens of the methods of thought and the literary style of their several writers, and also for the purpose of putting into convenient shape for direct comparison, the treatment given by different writers to similar subjects. Fourth edition. 3 volumes, 16mo, cloth. $3.75.

For the convenience of classes, the publishers have also issued, under the title of REPRESENTATIVE ESSAYS, in one volume, octavo, cloth, selling at $2, a selection of complete essays, comprising about one-half of the series of prose masterpieces.

"A most admirable collection, which presents not only specimens of the best English style, but the methods of thought and characteristic modes of expression of the several writers."—*Magazine of American History.*

THE STORY OF THE NATIONS. A series of graphic historical studies, intended to present for young readers the stories of the different nations that have attained prominence in history. The subjects of the different volumes will be planned to cover connecting as far as possible consecutive epochs or periods, so that the set, when completed, will present in a comprehensive narrative the chief events in the great 'STORY OF THE NATIONS.' The stories will be printed in large type and in handsome 12mo form. They will be fully illustrated, and furnished with maps and indexes, and will sell at the uniform price of $1.50.

1. THE STORY OF GREECE. By Prof. James A. Harrison.

"His style is simple, yet strikingly graphic and forcible. He must be indeed a very dull and ill-regulated boy whose attention is not riveted by Prof. Harrison's narrative."—*Advertiser, Boston.*

2. THE STORY OF ROME. By Arthur Gilman.

"Will supply a want that has long been felt; they seem to us to meet it in a thoroughly adequate and satisfactory way."—*Christian Union, N. Y.*

3. THE STORY OF THE JEWS. By Prof. James K. Hosmer.

"Prof. Hosmer is to be congratulated on the masterly way in which he has treated his subject. The work appeals to all classes of readers, and the style is attractive to old and young."—*Jewish Messenger, N. Y.*

IV. THE STORY OF CHALDEA. From the earliest time to the rise of Assyria. By Zénaide A. Ragozin. With 80 illustrations and two maps.

'The Story of Chaldea' deals with the most fascinating of subjects—the dawn of civilization, the beginnings of man's knowledge or imaginings of his own origin, and of his relations with his Creator, the first data for the history of mankind, the causes and times of the separation and migrations of races, the points of contact or parallelism between the narratives and traditions of the Old Testament and the records (now rescued from the tablets in the Mesopotamian Mounds) of the tribes from which the Hebrews separated themselves.

The above will be immediately followed by Germany, by S. Baring Gould. Spain, by E. E. and Susan Hale; Norway, by H. H. Boyesen; Carthage, by Alfred Church; The Saracens, by Arthur Gilman; The Goths, by Henry Bradley, etc., etc.

Full prospectus forwarded on application.

BOOKS OF THE WEEK 245

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.

Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

Scale of Agate lines.

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27.

A page (3 columns), $60 each insertion; with choice of position, $80.

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top.

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography. (Subject to approval.) Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 9,100 copies. The Subscription List is always open to inspection.

35 cents; $4 a year.

The Voyage of the Jeannette.

The Ship and Ice Journals of Lieut.-Commander George W. De Long, U. S. N. Edited by his wife, Emma De Long. With a steel portrait of Lieut.-Commander De Long and numerous illustrations. New Edition, in one volume, 8vo, $4.50.

This remarkable story of human endurance and fortitude, which has heretofore been published in two volumes and sold by subscription, is now brought out in a single volume, and sold through the trade. It is one of the most thrilling of all the records of Arctic exploration, and must always hold a conspicuous place among books of adventure and valor and tragedy.

NEW LAW BOOKS.

JUST READY:

An Index-Digest

TO THE CASES DECIDED BY THE

SUPREME JUDICIAL COURT OF MASSACHUSETTS.

From Quincy to the 137 Massachusetts Reports inclusive.

By WILLIAM V. KELLEN.

One volume, 8vo. Law sheep. 1067 pages.
PRICE, $6.50 NET.

We are now able to announce that, after long and careful preparation, the INDEX-DIGEST TO THE MASSACHUSETTS REPORTS is just ready. It has been prepared by William V. Kellen, of the Boston Bar, editor of the new edition of Parsons on Contracts, and affords in a single volume, of handy size and moderate cost, a compact reference work to the important body of law embraced in the Massachusetts Reports from Quincy to the one hundred and thirty-seventh volume inclusive, October, 1884.

The Massachusetts Index-Digest is intended as a handbook of *ready* reference to the Massachusetts Reports. It partakes of the character both of an Index and a Digest. The exact points settled in each case have been digested. The names of cases have been omitted, to economize space and to keep the book within the limits of a single volume.

The Rule against Perpetuities

By JOHN CHIPMAN GRAY, Royall Professor of Law in Harvard University. One volume. 8vo. Law sheep. 534 pages. Price $5 00 *net.*

THE ONLY WORK UPON THE SUBJECT.

In this work is fully discussed and treated the legal doctrine governing the creation of future interests in property. No other work specially treating of this subject is now in print, the plan of 'Marsden on Perpetuities' excluding consideration of the history of the Rule, and the only other work, 'Lewis on Perpetuity,' being nearly fifty years old.

Story's Equity Jurisprudence

THIRTEENTH EDITION.

Judge Story's Original Text and Notes Restored.

COMMENTARIES ON EQUITY JURISPRUDENCE AS ADMINISTERED IN ENGLAND AND AMERICA. By JOSEPH STORY, LL.D. Thirteenth Edition. By MELVILLE M. BIGELOW, Ph.D. Two volumes. 8vo. Law sheep. Price, $12 00.

"The present edition of this work is printed from the last one to receive the author's revision, the fourth, published in 1846."

Among the original matter contributed by Mr. Bigelow to the work are the following monographs:

Existence of a Remedy at Law. Accident and Negligence. Mistake of Law. Mistake of Fact. Actionable Misrepresentation. Conditions in Restraint of Marriage. Apportionment of Rent. Cloud upon Title. Specific Performance as a Primary and as a Secondary Remedy. Injunction as a Primary Remedy. Trade-marks. Sale of Securities held by Lien.

LITTLE, BROWN & CO., Publishers,
254 Washington Street, Boston, Mass.

Contents:

1. WILLIAM LLOYD GARRISON. Goldwin Smith.
2. THE PROVINCE AND STUDY OF POETRY. Francis T. Palgrave.
3. A HOLIDAY: SONNET.
4. SEBASTIAN VAN STOECK. Walter Pater.
5. THE OFFICE OF LITERATURE.
6. VICTOR GRAHAM.
7. A CENTURY OF BOOKS.
8. IN GEORGE SAND'S COUNTRY. Miss Betham Edwards.
9. THE SOCIALISTIC TENDENCIES OF MODERN DEMOCRACY. Hon. G. C. Brodrick.

A NEW NOVEL BY MR. HENRY JAMES.

THE BOSTONIANS. A NOVEL. By Henry James, author of 'The Portrait of a Lady,' 'The American,' 'The Europeans,' etc., etc. One volume, 12mo, $2.00. *Friday, March* 19.

A NEW NOVEL BY MR. F. MARION CRAWFORD.

A TALE OF A LONELY PARISH. By F. Marion Crawford, author of 'Mr. Isaacs,' 'Dr. Claudius,' etc., etc. 12mo, $1.50. *Friday, March* 19.

BY MR. FREDERIC HARRISON.

THE CHOICE OF BOOKS, AND other literary pieces. By Frederic Harrison. Globe 8vo, paper, 50 cents; cloth, $1.25.

CONTENTS:

"The Choice of Books," "Culture," "Past and Present," "The Romance of the Peerage," Froude's "Life of Carlyle," "The Life of George Eliot," "Bernard of Clairvaux," "A Few Words About the Eighteenth Century," "Histories of the French Revolution," "A Few Words About the Nineteenth Century," etc., etc.

NATURE SERIES.—NEW VOLUME.

FLOWERS, FRUITS, AND Leaves. By Sir John Lubbock, F.R.S., D.C.L., LL.D. With Illustrations. 12mo, $1.25.

Now Ready, with over 200 *Illustrations.*

CLASS-BOOK OF GEOLOGY. By Archibald Geikie, F.R.S., LL.D., Director-General of the Geological Surveys of the United Kingdom, and Director of the Museum of Practical Geology. With numerous Illustrations. 12mo, $2.60.

JOHNSON'S LIVES OF THE Poets. The Six Chief Lives from: with Macaulay's "Life of Johnson." Edited, with a Preface and Notes, by Matthew Arnold. New and Cheaper Edition. 16mo, $1.25.

Macmillan's New Uniform Edition.

The Miscellaneous Writings of John Morley.

Uniform with the Eversley Edition of Charles Kingsley's Novels and Poems. To be completed in Eight Volumes, each $1.50.

VOLTAIRE. One Vol. *Ready.*
ROUSSEAU. Two Vols. *Ready.*
DIDEROT AND THE ENCYCLOPÆDISTS. Two Vols. *April.*
COMPROMISE. Revised and Enlarged. One Vol. *May.*
MISCELLANIES. Two Vols. *June.*

MACMILLAN & CO.,

New York, 112 Fourth Avenue.

HORSE AND MAN.

Their Mutual Dependence and Duties.

By the Rev. J. G. WOOD, M.A.,

Author of 'Homes without Hands,' etc.

With Illustrations. 8vo, Extra Cloth. $2.50.

"Mr. Wood, as a naturalist of no mean attainments, is qualified to throw much interesting and valuable light on the care of horses. For army officers, farmers, indeed, for all who own a horse or have to look after one, this book will be an excellent and scientific guide. The elucidation of the subjects treated is so clear, the physiology of the horse is so accurately described, and the economic feeding, care, and management of the animal are so well stated, that the book would interest almost any reader. The author has combined with his own large store of information on the subject he takes up the mature opinions of many eminent experts on horse hygiene."—*New York Herald.*

"Certainly he has written one of the most valuable books about the horse and his proper care that have ever been issued from the press, for it makes very explicit statements concerning conditions that most books of its class fail to treat with anything approaching fulness, while it antagonizes in the most direct and positive manner common practices of the stableman and blacksmith. Some idea of the scope and method of Mr. Wood's book and of his manner of handling his subject may be gained when we say that eleven of his seventeen chapters are devoted to the foot of the horse, its construction, its proper usage, and so on. Mr. Wood not only finds plenty to say about horses' feet and their treatment, but says it very entertainingly; indeed, the book is a remarkable one for its entertaining qualities. It is not only full of information and important suggestions, but it is most charmingly written."—*Philadelphia Evening Telegraph.*

"Is another of those attractive and edifying books, of which their author, the Rev. J. G. Wood, has written so many. This volume deals with almost every aspect of the relations existing between the horse and his master, and is not a mere contribution to the literature of natural history. The anatomy of the animal, the hoofs and their diseases, his shoeing, the question of bits, blinkers, and reins, his lungs, his endurance, his diseases, are all treated in that interesting and practical manner that characterizes the author's writings. There are many anecdotes given in exemplification of the theories set forth in the volume, and many illustrations to assist in a clear understanding of the text. The work is one that should be read and studied by every one interested in the treatment of horses. It will prove as useful to these as it will be instructive and entertaining to those who only read for amusement."—*Boston Saturday Evening Gazette.*

"The author of this readable and instructive volume is a well-known and pleasing writer on natural-history subjects, but the field he covers in this work is almost an entirely new one. The main idea of the author seems to be to bring in a forcible way before the owners and admirers of the noble animal the ills and miseries resulting from imperfect shoeing, the use of the check-rein, and the questionable practices of clipping, docking, and pricking. The student and lover of the horse will find the volume a valuable one."—*Chicago Evening Journal.*

"His works are not only interesting and instructive, but they can always be relied on as strictly correct, even in the minutest particular. The book is well written, always to the point, and contains no needless anatomical details. In it are many items of value to every owner of a good horse."—*Pittsburgh Chronicle-Telegraph.*

"He tells what a horse is, how to train and use it. He describes the animal anatomically with special reference to the capacity for use and the dangers of abuse thereby demonstrated. It is a first-class work on the horse, is fully illustrated, and should be in the hands of every owner of one of those useful animals."—*Baltimore Evening News.*

"In this book the horse is not treated of from the standpoint of a veterinary doctor, a stock-raiser, or a jockey, but simply from that of an enthusiastic and disinterested lover of the equine race, who wishes to induce the public to correct certain prevalent abuses in the treatment of his favorites. In spite of his lively warmth of manner in these tilts against universal custom, his arguments are so well grounded on undeniable fact so rational and convincing, that they must appeal to every one who has anything to do with horses. The exceptional beauty of the paper, type, and plates deserves a passing mention."—*Milwaukee Sentinel.*

J. B. LIPPINCOTT COMPANY,

PUBLISHERS,

715 and 717 Market Street, Philadelphia.

PUBLISHED MARCH 17th:

A LIBRARY EDITION, IN TWO VOLUMES, OF

FISHER'S OUTLINES OF UNIVERSAL HISTORY.

By GEO. PARK FISHER, D.D., LL.D.

OF YALE COLLEGE.

"It was a formidable task that the author undertook, and he has performed it in a manner worthy of all praise. . . . It will be found to contain a survey of the entire field of history admirable for its breadth and insight."
N. Y. NATION.

"..I am astonished that any one man should have been able to write such a work as the 'Outlines of Universal History.' No living man is more competent to do it than Dr. Fisher. I keep the book on my table for constant reference."
Pres. JAS. McCOSH, LL.D., Princeton College.

"..Professor Fisher's 'Outlines of Universal History' is a model of its kind and cannot fail to take the very highest place as a book of reference for the scholar and as a text-book for the learner and teacher."
NOAH PORTER, D.D., LL.D., Pres. of Yale Coll.

"..I have spent some hours with it, and as a result have received the impression that it is far superior to anything of the kind that has before been published in our language."
Pres. C. K. ADAMS, Cornell University.

"..The tact with which Professor Fisher has made this book must impress even the specialists."
Pres. FRANKLIN CARTER, Williams College.

"..While remarkably compact, it is at the same time both clear and comprehensive, and is admirably adapted for use either in the class room or the library. Its maps are a treasure in themselves."
Pres. JULIUS H. SEELYE, Amherst College.

"..I may add, what I always deem the highest recommendation so far as our own personal judgment is concerned, that we have adopted 'Fisher's Outlines' as a text-book in this College."
Pres. THOMAS CHASE, Haverford College.

"..Professor Fisher's pen is sure to exhibit a thorough knowledge of the subject treated, and to be characterized by a clearness of statement almost peculiarly his own.."
Pres. CYRUS NORTHRUP, University of Minnesota.

"..It seems to me the best work of its kind.."
Pres. S. CLARK SEELYE, Smith Coll.

"I cannot speak in terms of too high praise of the excellence of the work.."
Prof. J. B. ANGELL. Univ. of Mich.

"..Brief, condensed, well arranged, luminous, impartial.."
PHILIP SCHAFF, S. T. D.

"..I have no hesitation in heartily endorsing and recommending it.."
FRANCIS BROWN. D.D., Union Theol. Sem.

"..Better than anything of its kind we have had heretofore.."
W. P. ATKINSON, Prof. Hist., Mass. Inst. Technology.

"..Decidedly the best work of its class.."
Prof. CHAS. F. RICHARDSON, Dartmouth Coll.

"..Having no superior . . . and in some respects it has no equal.."
W. G. T. SHEDD, D.D., Union Theol. Sem.

"..The best work of its kind in the English language.."
Prof. ANSON D. MORSE, Amherst Coll.

2 Vols., 8vo, Cloth, Large Paper, Uncut, Gilt Top, in Box, $5.00.

The Nation.

NEW YORK, THURSDAY, MARCH 18, 1886.

The Week.

THE Senate, in executive session on Thursday, agreed to confirm the nomination of Richard S. Dement as Surveyor-General of Utah, in place of General Salomon, suspended. We are told by the reports that there was a contest over the appointment, lasting for several hours, but that the friends of the Administration finally won. As there is a Republican majority in the Senate, this must mean that enough Republicans voted with the Democrats to secure a majority, and we infer that this number of Republicans was made up of Senators who have friends in office whom they do not wish to see disturbed. There was no other reason for voting in favor of Dement. He is an Illinois tailor, from Commissioner Sparks's district, who has no fitness whatever for the position. He had probably never seen a surveyor's instrument in his life when he was appointed. The man whom he superseded was a brother of ex-Governor Salomon and a general in the Union army. No cause was ever given him for his suspension, and none could be, as he had performed his duties honorably and well. Here was an opportunity for the Senate to make a double point on the Administration, by rejecting a bad appointment and expressing its disapproval of the removal of a worthy official. But though the nomination had been reported unfavorably from Committee, and although all the Democratic members of that Committee who were present voted to reject it, the Senate confirmed it. As its confirmation was given in secret, nobody can be held responsible for it There could be no better illustration than this of the evil influence of the secret session. It is and always has been a shield for unworthy nominees and for unworthy Senators who help them into office.

Senator Gorman, of Maryland, is now trying to capture the offices of United States District Attorney and Marshal for two of his tools, and led all the Gorman members of the State's delegation in Congress to the White House the other day, to back up his demand for the appointment of two professional Democratic politicians, named Talbott and Fenton. We are glad to observe, from a report of the interview in a Democratic paper of Baltimore, that the President gave the patronage-mongers little encouragement. Mr. Cleveland is quoted as saying that he would like to appoint as Marshal Colonel Franklin, brother of General Franklin, and himself a gallant soldier, not only because he had been recommended by the late General Hancock, but because he was in every respect qualified for the position; and that he was greatly embarrassed by the recommendations of the Maryland Congressmen in these particular cases because he had received protests against the appointment of Messrs. Fenton and Talbott, not only from their political opponents, but from gentlemen of high standing in Maryland who were known to be of the same party as the gentlemen present. The President would have been justified in treating the Gorman delegation with even less than this scanty consideration. After his experience with Higgins, Thomas, and Rasin, the simple fact that Mr. Gorman recommends a man should be sufficient reason with Mr. Cleveland for peremptorily refusing even to consider his candidacy.

The action of the House Committee on Education on Friday, in voting to postpone consideration of the Blair bill until the middle of April, justifies that confidence in its rejection by the lower branch which led so many cowardly members of the upper branch publicly to vote for a bill which they privately condemned, in order to "keep their records straight." Every week's discussion weakens the measure in public estimation, and another month's riddling of the project by the press will leave it few defenders.

The keen scrutiny to which the Blair bill is now being subjected by the press is clearly exposing its many vicious principles. As finally passed by the Senate it is proposed that the educational subsidies shall be distributed among the States upon the basis of their illiteracy, as shown by the census of 1880, until the census of 1890 is taken, when a new distribution shall be made. The Cleveland *Leader* points out the inevitable influence of this provision to lessen rather than increase the disposition of the Southern people to improve their schools during the next four years, since "it will be to the interest of every State to make a bad showing of illiteracy in 1890," so as to get the biggest possible share of the appropriations during the following years.

Mr. Reagan, of Texas, has been a good many years at work regulating inter-State commerce by law, and has succeeded once at least in getting the House of Representatives to agree with him. He has introduced his bill again this session and has got his committee at work upon it, and will probably pass it in some shape. It provides against all the evils of railroad management except that of total stoppage of inter-State commerce. This happens to be the condition of things in a large share of the section of country of which Mr. Reagan is a distinguished representative and political leader. We therefore commend to him and his committee the existing state of affairs in Texas, Arkansas, and Missouri as a topic for early consideration. In order to regulate inter-State commerce it is necessary to have some. We can conceive of the Southwestern blockade operating all over the country. We can imagine a case where all discriminations and irregularities in freight charges would be obliterated in a sudden stoppage of intercommunication like that which took place in 1877 in the chief trunk lines of the country. The existing blockade on the South western roads may be raised within a short time, or it may become more stringent and unbearable. It may be raised peacefully or otherwise. However much we may hope for orderly conduct on the part of the strikers, the experience of 1877 justifies very grave apprehensions when the Missouri Pacific officers attempt to start their trains with new hands.

If Congress has the power to regulate commerce among the several States, it must possess the power to keep it going in so far as unlawful obstacles are thrown in its way. Of course men cannot be compelled to work on terms disagreeable to them, or to work at all if they prefer not to. But when any car-load of freight has been started on its journey from one State to another and its passage is resisted by violence, the power to assist and force it through to its destination undoubtedly resides in the national Government, having been put there in express terms by the Constitution. When Mr. Jefferson Davis and his confederates sought to establish an obstruction to commerce on the Mississippi River at the Tennessee border, the power of the Government was invoked to clear it away. The first tentative efforts of the Government to deal with the rebellion were based upon commercial and fiscal regulations and considerations. The great speech of Senator Douglas, at Springfield, Illinois, which aroused and confirmed the loyalty of his party of the Northwest, was grounded upon the commercial rights of the people of that section of the Union, whose pathway to the sea was disputed by forces "bearing new and odious banners" unknown to the law and Constitution of the United States.

The proposition or offer of Mr. T. V. Powderly, Master Workman of the Knights of Labor, to go to Texas to arbitrate the differences between the receiver of the Texas Pacific Railroad and the Knights, was inspired by good motives, and is so far entitled to commendation. But it was grounded upon the misconception of supposing that there was something to arbitrate. The truth is, that all the powers of arbitration were assumed by the Circuit Court of the United States when the road became bankrupt. This is no fanciful statement of the case. The facts perfectly support the theory upon which Receiver Brown's reply was based. The Texas Pacific Road is for all present purposes a cadaver; the Knights of Labor have struck against a corpse. Undertaker Brown is under no compulsion to pay dividends, interest, running expenses, wages, or anything else. The Government of the United States is, however, under obligation to protect the property, and to arrest and punish all persons who unlawfully molest it. The situation into which the Knights might have brought a more flourishing property—that is, ruin—was the situation in which they began the fight. It is quite true, therefore, as Receiver Brown says, that there is no question to arbitrate. The Texas Pacific had been boycotted to death financially, judicially, and every other way before the Knights tried their hand on it. The more extensive boycott of the Missouri Pacific system is beginning to tell on "organized labor" in other trades, through the closing of manufacturing

establishments for want of raw material. This is the only cure for boycotting. It is desirable by all means to let it run its course, and prove its results by experiment on the largest scale. If every employer in the United States were under a boycott, every employee would also be under boycott. The sooner this ideal system of industry is reached, the sooner will the country be physicked of this terrible malady.

It is difficult to form any correct estimate of the actual extent of the present labor disturbances from the mass of despatches in the daily press, and *Bradstreet's* has done the public a service in collecting and summarizing the facts in the matter from all parts of the country. It finds that there are no serious troubles anywhere in the South, east of the Mississippi, or in the Northwest. In the bituminous coal regions of Pennsylvania, Maryland, Ohio, and elsewhere, there is a strike of unexampled proportions, involving 21,480 men; in the textile, boot and shoe, and metal industries of New England 9,960 employees have struck; in the strike on the Texas Pacific and the Gould Southwestern railways, and the allied difficulties in Texas cities, not less than 9,000 men are involved; and in the great nail strike west of the Alleghanies, about 4,000 men. As compared with a year and a quarter ago, when *Bradstreet's* made a similar review of the field, there are nearly as many boot and shoe employees on strike, more than twice as many textile workers, nearly three times as many miners, and, in all, at least 51,000 men in various branches of industry, against only 18,000 in December, 1884. At the latter date almost all the strikes were against a reduction of wages, while now they are generally for an increase of wages, often in connection with efforts to secure a recognition by employers of employees' organizations, and compliance with their demands in other matters than wages. On the other hand, fewer active boycotts are now being waged than were reported three months ago, when *Bradstreet's* made an exhaustive study of this phase of the labor question.

Railroad Commissioner Kernan's Arbitration Bill, if its provisions have been correctly reported, either goes too far or not far enough. A judgment of court ought not to be entered in any case where there is no power to enforce it. What we understand by a judgment is the last expression of the power of law. It is something which the State can and must carry into effect, whether it be against the property or the life of the individual to whom it relates. Suppose that the court enters a decree, in a certain case of dispute, that the employees are wrong and must go back to their work, and suppose that they refuse to do so. The court has no power to compel them to work. Is not this something like the present situation on the Texas Pacific Road? That road is now operated by the highest court in the United States, except the Supreme Court, and the employees have no more respect for its decrees than for those of Vice-President Hoxie in St. Louis. Nor is there any reason why they should have, so far as questions of the employment and discharge of workmen, or the rate of wages, or the hours of labor are concerned. Again, suppose that the judgment under Mr. Kernan's bill should be adverse to the railroad, and the railroad should not be willing or able to pay the wages or do the other thing required by the judgment. How is that to be managed? There is evidently only one way, and that is for the State to seize the road and operate it under the decree of the court. This would be taking private property without just compensation, which is forbidden by the constitutions of the State and of the United States.

It may be said in reply that a decree of the Court entered in pursuance of the proposed arbitration would probably be respected by the parties to the dispute. But probabilities have no place in decrees. We never say that a man will probably be hanged, unless pardoned by the Governor, after being sentenced to death. We never say that property decreed to be sold under judgment of court will probably be sold. Courts are established to create certainties, not probabilities. All the moral force that the proposed arbitration can carry, it must derive from the arbitrators and the publicity of their proceedings, and not from the entering of the form of a decree in another tribunal. It is not a helpful step toward the solution of existing social problems to introduce an element of uncertainty into the final proceedings of the judiciary. Mr. Kernan's bill ought either to leave the courts out altogether, or arm them with powers to carry their decrees into effect in spite of all imaginable opposition.

The Constitution devolves upon the Vice-President the powers and duties of the Executive office in case of the President's "inability" to discharge them, as well as in case of his removal from office, death, or resignation. No provision, however, is made for securing the proper representation of a State in the Senate in case the Senator fails to discharge his trust, save what is found in the clause that "if vacancies happen, by resignation or otherwise, during the recess of the Legislature of any State, the Executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies." Since the present session of Congress opened more than three months ago, Senator Jones, of Florida, has not once been in his seat, or even in the capital, having persistently remained in a Western city. With only half her proper representation in the Senate, Florida begins to feel as though the matter must be treated seriously. The Jacksonville *Times-Union*, the leading newspaper of the State, says seriously that "if Senator Jones will neither take his seat in the Senate nor explain his absence, Governor Perry should take some steps toward securing Florida her constitutional representation in Congress." It is not quite clear what steps Governor Perry can take, as it has not been usual to regard a Senator's absence from Washington as producing a "vacancy," but we have little doubt that Senator Evarts might help him out by suggesting some feasible way of getting rid of Mr. Jones under the "general welfare" clause of the Constitution.

Absence, however, may prove the greatest service which a member of the national Legislature can render the nation. The Senate Committee on Commerce consists of thirteen members. Twelve of them are in Washington, attending to their duties at the Capitol. Six of them favor the Eads ship-railway job; the other six oppose it. Mr. Jones, of Florida, is the thirteenth man, who has the casting vote. He is supposed to favor the job, and if he were in Washington, the bill would be reported to the Senate with the recommendation that it pass. But Mr. Jones has been in Detroit for months past, and apparently means to remain there for months to come. In his seat the Florida Senator never did much for his country; by his absence, which thus blocks the Eads raid on the Treasury, he is doing a great public service which his home critics ought not to overlook.

There is everything to commend in Senator Ingalls's proposition to substitute the 30th of April for the 4th of March as the day for inaugurating Presidents. The 4th of March limit shortens the second session of each Congress so that the work is of necessity done hurriedly and carelessly, while there would be ample time for orderly proceedings if the session lasted through April. The 4th of March even in Washington is apt to be a raw and disagreeable day, which slays a host of victims to pneumonia and other diseases caused by exposure, while the 30th of April is the most cheery time of the whole year at the capital. The change would simply be a reversion to the date of the original inauguration of Washington, and there would be a sentimental fitness in celebrating the hundredth anniversary of that event in 1889, as Mr. Ingalls proposes. The suggested amendment to the Constitution ought to be adopted.

The most striking feature of the testimony taken by the telephone investigation thus far is the statement made by Rogers, junior, as to the conversation which Mr. Casey Young had with the Attorney-General concerning the bringing of a suit to cancel the Bell patent on the ground of fraud. According to young Rogers, Mr. Garland said to Casey Young that he would have Solicitor-General Goode bring the suit to cancel the patent, as it would look better for the Solicitor-General to do it than for him to do it himself. Rogers, senior, is said to have been the only witness to this statement of Casey Young. If this allegation can be sustained, the statement of Mr. Garland to Mr. Young is at variance with the declarations of the Attorney-General since the agitation of this question began. But it should not be overlooked that Rogers, senior, is a very unbalanced character, and that even he has not yet been examined or cross-examined as a witness. The testimony of Mr. Pulitzer signifies merely that he considered the contents of the Rogers album a promising sensation, which would be likely to sell a good many copies of the *World*. This is what all newspaper men understood in the beginning. Some Democratic politicians have taken the serious view that since Mr. Pulitzer is a Democratic Congressman, he must have been moved by private malice in making the publication rather than by the expected sale of newspapers

Here is what we think proper to require in case of any harm done to Americans in China. We quote from the *London and China Telegraph* of March 1:

"With reference to the outrage upon the members of the American Methodist Mission committed December 30, we learn by this mail that Mr. Smithers, the Acting United States Consul-General, having consulted the British and American Admirals, H. M. S. *Wanderer*, in the absence of an American man-of-war, was ordered to Chinkiang, and was followed by American man-of-war *Marion*. As soon as the Taoutai of Chinkiang became aware that men-of-war were going to his port he came to the conclusion that he had better punish the rioters. The ringleaders were arrested and cangued [pilloried in a heavy wooden collar] in front of the United States Consulate. Besides this they were each sentenced to receive 300 blows."

This account of the manner in which any Chinese ill-treatment of American residents in China is handled—on both sides—may be commended to the careful attention of Pacific Slope anti-Chinese agitators and legislators.

The discovery that a New York Alderman has for years been a regular receiver of stolen goods—an accomplice, in fact, of a notorious gang of thieves—appears to create a great deal of surprise in the public mind, but we do not see why it should. In 1884 and again last year the *Evening Post* published a "Voters' Directory," setting forth precisely the kind of men who were running for Aldermen. Thus it showed in November last that of the 57 candidates for Aldermen, no less than 19 were liquor-dealers and seven others had no reputable occupation. Out of the 57 there was only one of whom it could speak with commendation, and that was Mr. Van Rensselaer, who had stood almost alone against corrupt jobs in the former Board, and who occupies a similar lonesome position in the present Board. After the election we called attention to the fact that seven of the Aldermen elected were liquor-dealers, and that in the whole twenty-four members there were at most no more than three who could be counted upon to legislate in the interests of the city. The vote on the Cable Railway franchise showed this to be an accurate estimate. It is absurd to expect a Board made up of liquor-dealers and political adventurers, many of whom are professional gamblers, to act like honest men, and worse than absurd to keep such a Board in existence.

The members of the Baptist Social Union, after dinner at Delmonico's last week, discussed "The Sunday Question and the Saturday Half-Holiday." It seems odd that opinion should have been about equally divided for and against the Saturday half-holiday, considering that the Union was of one mind in favor of keeping all the museums and art galleries for ever closed on Sundays. One gentleman said: "A good deal of sympathy was wasted on the men who worked with their hands eight or ten hours a day. The proper subjects for sympathy were the professional men, who labored ten, twelve, and fourteen hours a day with their brains." There is much truth in this statement, but its bearing on the question of opening the museums, etc., on Sundays is directly against the argument of the speaker. Does he class professional men among those who cannot profit by museums of art or natural history? and, if not, how does he fancy that men who work from ten to fourteen hours a day are to make any use of places which are closed on evenings and Sundays? The reasoning is all the other way. It is a truth that a great many professional men in New York have never even entered, and under present regulations never can enter, public institutions in the use of which they are by education and disposition peculiarly fitted to gain not only intellectual pleasure, but also knowledge which in many cases would be of direct assistance in their daily work.

The loss of the great steamship *Oregon*, in sight of land, admonishes us that notwithstanding the great strides made in naval architecture and in the art of navigation in the last fifty years, we are very far from the line of safety in case a steamer is struck amidships by any floating thing having sufficient momentum to knock a hole in her side below the water line. Here, it seems, water-tight compartments are not effectual to prevent sinking, although they may delay it sufficiently, as in the case of the *Oregon*, to insure the transfer of passengers and crew to other vessels if there are any within reach. It was most fortunate, if there was to be a collision of this kind, that it occurred near the entrance to a great port, the converging point of hundreds of craft of all kinds, where any steamer which could keep afloat eight hours was almost certain of finding help. The immunity of the Cunard Line in this instance was due to good luck. The company can still boast that they have never lost a passenger on their transatlantic route, although they did, not long ago, meet with an accident on their Mediterranean line, which was attended with some loss of life to passengers as well as crew. The Cunard Company has had a wonderful career, and one which the *Oregon's* loss will but slightly mar, although no one can read the story of this disaster without a shiver.

Mark Twain's rôle of iconoclast is familiar to everybody. In his performance of it as a writer he has broken up many images long revered or sacred, has brushed the bloom of romance from many cherished pictures, and destroyed many illusions. But in his later capacity of publisher, bringing the Pope of Rome into the American "subscription book" field, he has outdone all such performances of authorship. The figure of the Sovereign Pontiff and Vicar of Christ submitting his biography to Mark Twain's publishing house "as a commercial enterprise" surpasses the most audacious travesty of Mark Twain's books. As a stroke of "business" it is probably supreme in its way. The effect of it on the popular idea of the Holy Father will perhaps be unfortunate. Until now this latest addition to the list of Royal and Noble Authors, in his secluded and withdrawn state, could fairly be allowed on all hands to be the most impressive figure in Christendom; but the centre of infallibility "booming" the subscription book market with a life of himself "published in every style," including "elaborately bound and illustrated copies," though it make the unskilful laugh, cannot but make the judicious grieve.

The colonial fever is strong in Germany just now; and one result of it has been a flood of pamphlets and magazine articles on colonies. One of the most interesting contributions to the discussion, especially to us of the United States, is an article in the last number of the *Jahrbuch für Gesetzgebung*, in which Mr. C. Herzog discusses emigration from Germany to this country. Some of the facts which he brings out are very curious and striking. Thus he shows that the proportion of women and children to the total number of emigrants is distinctly larger among Germans than among emigrants from other countries. Of course, the proportion among emigrants of men in the prime of life is always greater than it is in population at large, but the discrepancy is least among the German emigrants. In the years 1879-83 there were 612 males and 388 females for every 1,000 emigrants from Europe to this country; but for every 1,000 German emigrants there were but 596 males, and as many as 404 females. And similarly the number of children (under fifteen) was, among emigrants from Europe in general, 230 for every 1,000; but among German emigrants it was 272 for every 1,000. The proportion of people in the vigor of life, between the ages of fifteen and forty, was 669 out of 1,000 among European emigrants; among German emigrants it was only 622 out of 1,000. All of which means that German emigration is more distinctly an emigration by families, a steady stream from the general mass of the population, while from other European countries there is more emigration of individual roving spirits. It is very curious, too, that within Germany emigration is much larger from those provinces where the land is cultivated in large farms and estates than it is in the provinces where peasant proprietorship is the rule.

The figures show that as yet the German emigrants make for the United States as much as ever, if not more than ever. A recent statement showed that in the years 1871-84 about 95½ per cent. of all emigrants from Germany went to the United States. For the earlier part of this period, the ten years 1871-80, the proportion had been only 93½ per cent.; so that in recent years there must have been an increased proportion going to this country. And the figures for individual years, so far as we have them, bring this out very clearly. In 1881, nearly 98 per cent. went to the United States; in 1882, about 97½ per cent.; in 1883, over 96 per cent. The truth is, that although the Germans have a strong sentimental attachment to their country, they cannot and will not sacrifice their individual welfare to the advancement of its prosperity and power. This country offers them a settled civilization, security of life and property, an improvement in material welfare; in face of these advantages they will not go to the Balkans or to Buenos Ayres for the sake of possibly retaining a closer connection with their native country. The attraction of free and democratic institutions may not be as strong now as it was twenty or thirty years ago, and yet it counts for a good deal. It certainly counts for a good deal as against one feature of German government, compulsory military service, which is undoubtedly the strongest direct cause of emigration.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, March 10, to TUESDAY, March 16, 1886, inclusive.]

DOMESTIC.

PRESIDENT CLEVELAND has vetoed the bill to quiet the titles of settlers on the Des Moines River lands in Iowa. He says: "I cannot but think that every possible question that can be raised, or at least that ought to be raised, in any suit relating to these lands, has been determined by the highest judicial authority in the land. And if any substantial point remains yet unsettled, I believe there is no difficulty in presenting it to the proper tribunal."

President Cleveland on Tuesday sent in the name of Mr. Trenholm, of South Carolina, one of the present Civil-Service Commissioners, to be Comptroller of the Currency in place of Mr. Cannon, resigned; that of Mr. John H. Oberly, of Illinois, now Superintendent of Indian Schools, to be the Democratic Civil-Service Commissioner in place of Mr. Trenholm; and that of Mr. Charles Lyman, who has been the Chief Examiner of the Civil Service Commission since its inauguration, to succeed Mr. Dorman B. Eaton, term expired. Neither Mr. Oberly nor Mr. Lyman knew he was going to be appointed, neither of them had made application for the office, and neither had any papers on file in his behalf. Friends of the President say that both the new Civil-Service Commissioners are his own selections. Mr. Oberly has long been a journalist, and has had experience in executive office. He was Chairman of the Democratic State Committee of Illinois in the Presidential campaign. Mr. Lyman has been identified with the cause of civil-service reform since the first Commission appointed by General Grant, and is an enthusiast on the subject, as well as a very practical man.

Senator Eustis, according to an authorized statement, in his recent conferences urged the President to withdraw the nomination of all unconfirmed appointees against whom adverse criticisms have been justly made. "The record," said Senator Eustis, "can be forestalled. The names of appointees as to whose fitness there is any doubt can be withdrawn. Every man whose presence in the Government is a source of criticism and suspicion can be eliminated. From the highest to the lowest, I would lop off every branch that threatened the health and vitality of the Democracy."

Senator Pugh replied to Senator Edmunds in the Senate on Wednesday. At the start he pointed out the important fact that the nomination of Burnett to succeed Duskin had lain in the Judiciary Committee for a month after it was received; in the meantime, on December 20, Duskin's term of office expired. One month later, when Duskin was no longer an incumbent of the office, the resolution calling for the papers in his case was passed. The fact that Duskin's term had expired was news to most of those who heard it. Mr. Pugh also read a letter, signed by Mr. Thurman, which was read by Mr. Edmunds as an important precedent, calling for papers bearing on the removal of Judge Shaffer of the Territory of Utah, and said that in the provision conferring the power of removal on the President there was an express exception of judges of the United States; these could be removed only by and with the advice and consent of the Senate. The question was whether Territorial judges were embraced in that language. The Senator from Vermont knew that that question was an open one before the Committee of which he is Chairman.

In his argument on the President's refusal of papers to the Senate, Mr. Kenna (Dem., W. Va.) cited the confirmation of R. S. Dement to be Surveyor-General of Utah, by the aid of Republican votes and in the face of an adverse report by the Public Lands Committee, as a proof of the insincerity of the Republican profession of a desire to guard the interests of the service. The vote is said to have stood twenty-five for confirmation and twenty-two against. Of the majority seven Republicans are reported as voting for Dement, viz.: Stanford of California, Manderson of Nebraska, Sewell of New Jersey, Mitchell of Oregon, Logan of Illinois, Hoar of Massachusetts, and McMillan of Minnesota. Colonel Morrison says of Dement: "He is totally unfit for the duties of the office. I supposed, of course, that the Democratic Senators knew the services that he rendered General Logan in his recent contest for the United States Senate. I regard the confirmation of Dement as a reward for his treachery to me at Springfield."

The United States Senate on Tuesday passed the House bill increasing the pensions of soldiers' widows and dependent relatives from $8 to $12 per month. The bill now goes to the President.

An adverse report upon the Bennett bill to repeal the Civil-Service Law was made on Wednesday to the House. Mr. Stone (Dem., Mo.) will make a minority report. The opponents of that measure are, however, confident of a favorable report on the bill to repeal the law which was recently referred to the Committee on the Revision of the Laws.

The minority report of Mr. Rice, of Massachusetts, from the Committee on Foreign Affairs, against the Morrow Anti-Chinese Bill, which was presented to the House on Thursday morning, makes these points: That the bill is unconstitutional; that the provisions relating to the limitation of certificates and the twenty years' limitation are in violation of treaty; that the original restrictive act was in violation of the treaty, but that, inasmuch as it is working advantageously, there is no present necessity for a change; that statistics show that there are now 30,000 less Chinese in the country than there were when the restrictive act was passed, and that that act has six years more to run; that Chinese immigration is decreasing in volume; that there is no reason for the passage of an act which could only have the effect still further to irritate the Chinese Government, and that it is a wiser policy to let well enough alone; that there will be time enough to pass another bill, if it shall be deemed necessary, when the present act shall terminate; that, in the meantime, everything that is necessary to do can be accomplished by amicable arrangement with the Chinese Government.

The House Committee on Foreign Affairs on Tuesday, by a vote of seven to six, postponed the consideration of the Morrow Chinese Bill, and will instead take up the President's message recommending the payment of indemnity to China for outrages perpetrated on Chinese subjects in this country. The Chairman (Mr. Belmont), who cast the deciding vote, declared himself opposed to the Morrow bill on the ground of its being a violation of treaty obligations.

The House Committee on Education on Friday morning voted to postpone the consideration of the Blair Educational Bill to the third Friday in April. This action is regarded as unfavorable to the bill. It will probably be smothered in Committee

The House Committee on Post-offices and Post-roads gave a hearing on Friday to a number of people who appeared to advocate the passage of the measures which have been introduced providing for the establishment of postal savings banks. Speeches were made by Assistant-Secretary Fairchild, President Gilman, Walter Howe, E. L. Godkin, and others.

The House Committee on Post-offices and Post-roads has decided to report adversely the bill to double the rate of postage on fourth-class matter or merchandise.

Mr. J. Harris Rogers testified before the committee investigating the Pan-Electric scandal in Washington on Friday. One of the most significant points brought out was that which related to bringing the Government suit last summer. Some time in the summer—probably in July—Casey Young came to his house and informed him and his father that a suit would be brought by the Government to annul the Bell patent. The witness said, "My father asked him if Garland had promised, and he replied, 'Yes, he has promised.' 'Then if he has promised he will do,' my father said. Colonel Young said that the Attorney-General felt some delicacy about ordering the suit himself, and that he would leave it with Mr. Goode or turn it over to Mr. Goode. My father then asked if Goode was all right, and Colonel Young replied in substance that Goode was our friend, and that he did not know but he would rather have Goode than Garland to attend to the matter."

In the New York Senate on Wednesday a high license bill was introduced fixing the liquor tax as follows: "In cities of over 500,000 inhabitants, hotels, bars, saloons, and restaurants, first class, $500 per annum; second class, $300; third class, $150. Where wines alone are sold, the taxes shall be respectively $150, $75, and $60. In cities of between 100,000 and 500,000 inhabitants the taxes shall be $300, $200, and $100, and for wine alone $100, $50, and $40. In cities of between 10,000 and 100,000 the taxes shall be $150, $100, and $75, and for only beer $30. For all other places the tax shall be $100 for beer, malt liquors, and wine, and $20 for malt liquors. The taxes shall be paid to the county treasurers and the Comptroller of New York city. No further license tax shall be required. The taxes shall be paid into the State to meet the interest on the debt, prison maintenance, and general State expenses. The act does not apply to shops where liquor is sold in sealed bottles not opened on the premises."

Governor Hill, of New York, on Wednesday nominated Dr. Charles Phelps for Health Officer of the Port of New York; for Quarantine Commissioners, Dr. John H. Douglas, Marshall B. Blake, and Charles S. Higgins.

A sensation was created in the Broadway Railway investigation in this city, on Friday, by an affidavit showing that Alderman Jaehne had been accused of receiving stolen goods and had paid $1,100 to settle the matter.

About $1,207,000 was realized by the sale of the late Mrs. Mary Jane Morgan's collection of paintings, etchings, engravings, books, and art objects.

The Missouri Pacific Road was able to move a freight train on Friday from St. Louis only by letting police officers act as engineer and fireman, the persons employed regularly in those positions refusing to act. All efforts to compromise the strike have so far failed.

The steamship *Oregon*, of the Cunard Line, from Liverpool, while about fifteen miles off the American shore near Fire Island, at 4:30 o'clock Sunday morning, was run into by an unknown schooner, which struck the steamship on the port side. A large rent was made in the *Oregon's* side, through which the water poured rapidly. The 896 persons on board were transferred in three hours to a schooner and pilot-boat and afterward to the steamer *Fulda*, which brought them to this city. The *Oregon* sank at 1 P. M. She was one of the finest steamers afloat and cost $1,250,000. Only 138 out of 598 sacks of mail matter on board were saved. The cargo was valuable and large. Nothing is known of the fate of the schooner which struck the *Oregon*.

The celebrated physician, Austin Flint, M. D., of this city, died of cerebral apoplexy on Saturday afternoon, at the age of seventy-four.

Michael Hahn, the only Republican Congressman from Louisiana, died suddenly in Washington on Monday, at the age of fifty-six. He was a strong Union man during the war, and was the first Governor of the free State of Louisiana, having been elected in 1864.

Prof. Edward Tuckerman, of Amherst College, died on Monday of Bright's disease He was graduated from Union College in 1837. He was a botanist of note, and made a special study of lichens, on which subject he was recognized as an authority.

Capt. James I. Waddell, who commanded the famous Confederate cruiser *Shenandoah*, died in Annapolis, Md., on Monday, aged sixty-two.

Mrs. George Bancroft, wife of the historian, died in Washington on Monday.

FOREIGN.

It is reported that Mr. Gladstone decided against Mr. Giffen's plan for buying out the landlords, on the ground that, as the Irish land is mortgaged in England to an enormous extent, such a measure would benefit chiefly the English mortgagees, and be of little help to the Irish landlords.

The London *Observer* says that Mr. Gladstone's draft of a home-rule measure, submitted to the Cabinet on Saturday, deals exclusively with expropriation, for which a colossal sum (estimated at £200,000,000) will be required. The administration of the fund is to be intrusted to an Irish local body, the constitution of which is left blank in the draft, but which the Ministers were informed would be of the character of an Irish Parliament. The *Standard* on Monday morning said: "It is supposed that Mr. Gladstone's scheme for the government of Ireland proposes the establishment of a single-chamber Parliament at Dublin, and embodies the principle of minority representation. Ireland will continue to send members to Westminster, not in proportion to her population, but in proportion to her contribution to the imperial revenue. Under this scheme there would probably be thirty Irish members of Parliament. The police are to be disarmed, and are to be under the control of the Government at Dublin. Provision is made for the use of the imperial forces when needed for the security of life and property. The Government at Dublin will not have power to impose duties on British goods, to treat with foreign Powers, to employ the revenues of the country for the endowment of any religious body, or to pass measures impairing the validity of contracts."

All the London papers except the *News* oppose Mr. Gladstone's scheme. The *Times* says: "The addition of £200,000,000 to £220,000,000 to the national debt is the estimated cost to the British taxpayer of the luxury of permitting the author of the abortive land bills of 1870 and 1881 to carry out another of his interesting experiments. An annual burden of five or six millions sterling to be borne by ourselves, and transmitted to the unborn generations who will not have the satisfaction of listening to Mr. Gladstone's lucid expositions, will perhaps appear to some among us a rather high price even for so much honor. We do not believe that the people of this country will be imposed upon by the sham, if their proper leaders and teachers have the courage and manliness to do their duty."

The *Pall Mall Gazette* professes to have authority for saying that the statements of the *Times* and *Standard* that Mr. Gladstone's Irish expropriation scheme contemplates an outlay of £200,000,000 are ridiculous, and that the sum which Mr. Gladstone calculated necessary to buy out all the present landlords of Ireland is much nearer £100,000,000 than £200,000,000.

It was reported on Monday afternoon that at the Cabinet meeting on Saturday Mr. Trevelyan, Secretary for Scotland, and formerly Chief Secretary for Ireland, and Mr. Edward Heneage, Chancellor of the Duchy of Lancaster, both tendered their resignations. Mr. Heneage has authorized a denial of this report. The reason alleged to have been given by both gentlemen for their action was their disinclination to support the Irish policy outlined at the meeting by Mr. Gladstone.

Despite all stories to the contrary, it was authoritatively announced on Tuesday that both Mr. Joseph Chamberlain, President of the Local Government Board, and Mr. Trevelyan, had actually placed their resignations in the hands of Mr. Gladstone. The Premier had, however, declined to accept the resignations outright. His answer to the tender of them was a most conciliatory one. He suggested to both gentlemen that they should defer final decision on the resignations until after a personal discussion of the question at issue between them and him. To this both Mr. Chamberlain and Mr. Trevelyan have assented. It is now known that the subject of dispute between the Prime Minister and Mr. Chamberlain and Mr. Trevelyan is Mr. Gladstone's Irish expropriation scheme. The exact sum which will be required to buy out all the land-owners of the country according to the Premier's plan is £120,000,000. The proposition to increase the public debt of Great Britain that much in order to purchase peace in Ireland is asserted by the Radical leaders in the Cabinet to be asking far too much for what will be obtained. Both Mr. Trevelyan and Mr. Chamberlain were in their usual places in the House of Commons on Tuesday afternoon.

Mr. Gladstone's scheme was elaborated with the assistance of Earl Spencer, Mr. Morley, and Sir Robert Hamilton, the permanent Under Secretary at Dublin Castle. It provides for compensation for the vested interests in Irish tenanted land in case the possessors of those interests desire to abandon their property on the establishment of a statutory Parliament in Dublin. Wherever a landlord accepts a State commutation of his interest a land tax is to be substituted for rent. The new Irish Government will depend chiefly upon this tax for its revenues.

Messrs. Chamberlain and Healy flatly deny the intrigues attributed to them by a provincial paper for the overthrow of Messrs. Gladstone and Parnell.

Mr. Joseph Cowen, M.P. for Newcastle, and the colleague of Mr. John Morley, writes to his newspaper: "It is said that Mr. Gladstone has changed his mind about an early dissolution. If the Lords reject one or other of the Irish bills, he will hold an autumn session and pass it a second time in the Commons, as was done with the Franchise and Redistribution Bills. If the Peers should throw out the measure a second time, it will be passed by the Commons a third time, and, if again rejected, dissolution will follow in the spring next year. The Prime Minister believes that the people want to be educated about home rule, and that a discussion in Parliament will have the effect of enlightening them." Mr. Cowen's relations with Mr. Gladstone add special significance to this statement.

Lord Charles Beresford (Conservative) moved in the House of Commons on Monday that in view of the large number of workingmen out of employment and the cheapness of labor, the present time is opportune to suspend the sinking fund in order to place the navy in a state of efficiency. The motion was defeated by a vote of 206 to 98.

Mr. Henry Labouchere, Radical, during Thursday's debate in the House of Commons on the Government's civil-service estimates, moved to reduce the grant for the maintenance of parks belonging to or used exclusively by royalty or members of the royal family. The motion was carried against the Government by a vote of 131 to 114. Parnellites and Radicals made the majority.

Mr. Parnell publicly urges members of the Nationalist party in Ulster to refrain from celebrating St. Patrick's Day by demonstrations, such as parades, likely to anger the Orangemen. In his circular advising this course the Irish leader says: "Do not irritate the Orangemen, however misguided you may deem them; this is of vital importance now."

The distress among the inhabitants along the western Irish coast is said to be terrible. Gunboats have been placed at the service of the Relief Agent.

Lord Rosebery, British Foreign Secretary, has advised a reduction of the army of occupation in Egypt by six regiments, the withdrawal of the British troops from Assuan and the Egyptian troops from Wady Halfa. In a skirmish near Suakim on Sunday between the British and the rebels, thirty of the latter were killed.

Before Mr. Justice Stephen, in London, on Thursday, a wealthy Tory farmer was prosecuted by the Government for committing felony in having voted three times at three different places in one Parliamentary borough. He had three qualifications. Had these been in different boroughs, the Government admitted his right, but opposed his right to vote three times for one candidate. The defence admitted the voting, but claimed entire absence of guilty intention. The jury found the prisoner guilty, but with no guilty intent whatever. Mr. Justice Stephen entirely agreed with the verdict, but said that the law must be upheld, and the prisoner had done what the law decided was felony. The Court had no option in passing sentence but to inflict imprisonment with hard labor. He did not wish to pass any such sentence, and the only way he could avoid it was by ordering the prisoner to enter into his own recognizances and come up and receive judgment when called upon. Probably, unless he offended again, he would never hear any more about it. The prisoner was then bound over and discharged.

Richard Belt, the London sculptor, was on Monday found guilty of a misdemeanor in having obtained money of Sir William Abdy by false pretences, and was sentenced to a year's imprisonment at hard labor.

Sir Charles Warren has been appointed Commissioner of the Metropolitan Police of London.

The Earl of Chichester is dead at the age of eighty-one. He was Lord-Lieutenant of Sussex, and took an active part in the management of many leading religious and charitable societies of the Church of England.

Viscount Dupplin, heir of the Earl of Kinnoull, died at Monte Carlo on Wednesday.

The French Government has decided to issue a loan of 1,000,000,000 francs to consolidate the 618,000,000 of six-year bonds now outstanding, and to redeem the floating debt.

The Bank of France has given 40,000 francs for the proposed Pasteur Institute. Baron Rothschild has given a like sum, and the Institute of France has given 30,000 francs.

Louise Michel announces that she will make a lecture tour in America.

Austria has decided to prohibit the teaching of Old Catholicism in any public school in the empire.

The Austrian Minister of War has issued instructions to all the commanders of corps in the Austro-Hungarian army to order the enforcement of the study of German among all the troops. The Count complains that the use of local dialects among the soldiers has greatly increased of late. The Czechs, meanwhile, are steadfast in adhering to their own language. It is also asserted that a movement has been organized in Russia to convert to the Greek Church the Catholic Czechs in the Austro-Hungarian Empire.

The Committee of the Reichstag to which was referred Prince Bismarck's Spirit Monopoly Bill, on Friday rejected the first two clauses of the measure. As these clauses contain the essence of the bill, the action of the Committee virtually defeats the measure.

The conference of representatives of the Powers which met at Constantinople to consider the Turco-Bulgarian treaty (which, among other things, creates Prince Alexander, of Bulgaria, ruler of Eastern Rumelia) has accepted the treaty in its entirety.

Twelve thousand Burmese rebels are reported about to march on Mandalay.

COMPULSORY HIRING.

THERE are various plans on foot, some in the Legislature and some outside, for the settlement of disputes between workingmen and their employers by means of arbitration. But no scheme of this kind, however carefully considered, can be successful unless it is based on a clear understanding of what the rights of the parties who submit to arbitration are. That is to say, there can be no sound, lasting, and healthy settlement of the labor question which is not preceded by a plain definition of the position of the parties whom it affects. Thus far nothing of the kind seems to have been reached. Apparently a very large body of the workingmen all over the country seem to be possessed with the idea that they have a right to be hired by any employer whom they select for that purpose, at a rate of wages to be fixed by themselves or by the trades unions to which they belong. It may be said that this is an exaggeration—that all that the trades unions claim, at most, is the right of men to continue in the service of men who have already employed them. But this is a distinction without a difference. In the field of morals a right to be employed by any man you please flows logically from the right to be employed by a particular man who does not want your services. The right, if it exists, runs with the laborer. If A has a right to insist that B shall give him work at $2 a day heaving coal when B does not want him to heave coal for him on any terms whatever, A has a right also to impose himself on C, D, or E as a coal heaver.

In most of the strikes which occur nowadays this point is clearly brought out. The laborers of the Steam Heating Company, for instance, call on the company to make certain changes in its mode of doing business, as a condition of their continuing to work for it. The company refuses, and the laborers consequently leave its service. All is right thus far. Each side has exercised its liberty as a citizen. But the laborers do not go away and let the Steam Heating Company alone. They surround its premises in an angry way, as if the company were in possession of something which belonged to them, and they threaten those whom it takes in their places with serious bodily harm. They insist that they have a right to continue in the company's employment for an indefinite period, on terms fixed by themselves and without regard to their behavior. They do not concede to the company any right whatever of withdrawing from the relation or dispensing with their services, nor will they allow it to mention any fixed term of office for them. They are so sure of the justice of this arrangement, too, that they propose to assault anybody that interferes with it, and to damage the property of anybody who deals with the company and refuses to be a party to the quarrel.

Now, arbitration on a basis of this sort is impossible. It cannot succeed in any organized shape unless it is avowedly conducted between free agents—that is, unless the parties to it have perfectly equal rights: unless the Knights of Labor, for instance, openly acknowledge, and agree to live up to the acknowledgment, that the employer has the same right to dismiss that the employee has to leave, and that the laborer has no more right to hit or kick the capitalist, or damage his property for not giving him work, than the capitalist has to hit or kick the laborer for refusing to stay in his service. We trust, too, that employers of labor throughout the country, and all intelligent and peaceable men of every calling, whether employers of labor or not, will insist now on the abandonment of the monstrous theory, which the Knights of Labor are either putting forward or sanctioning, that one man has a right to be hired by another man whether the other man wants him or not. This sounds when one sees it in a paper so absurd as to be laughable; but such doctrine is not laughable when held by great bodies of the citizens of what is supposed to be a free country: it is dangerous. It merits the prompt and unfaltering resistance of every lover of his country and his kind. Nothing much more monstrous and oppressive was ever concocted in the Middle Ages to bolster up the power of feudal lords. All this "boycotting" which is going on in support of it is simply a disguised form of robbery, and should be met and stigmatized as such. Working by all sorts of methods to injure a man's business, or, in other words, to damage his property because he will not hire you, is no more moral or respectable than going to his safe and taking some of his money, and it is a pity and a shame that it is not as punishable and as easily punished. Everybody, no matter what his place or calling, who encourages it, or even submits to it, or connives at it in the case of his neighbors, is an accessory to a most odious offence against society and against his fellow-man. The moral law has not changed since the Knights of Labor were organized any more than the law of the land, and no change in the law of the land which does not take the moral law into account can possibly work anything but confusion.

Moreover, the doctrine of compulsory hiring is capable of indefinite extension without losing any of its force. It can easily be applied to the sale of any other commodity as well as labor. If I have the right to insist on another man's hiring me whether he wants me or not, and am entitled to kick and cuff him, and smash his machinery and furniture, and persuade his neighbors not to deal with him in case he refuses, why may I not do the same thing if he refuses to purchase goods of my manufacture? Why might a trades union not set up a producing co-operative shop and carry their goods round to people for sale, and hit them over the head, and break their windows, and hang round their door hissing and hooting, and threatening everybody who attempted to enter, in case of their refusal to buy? What can be said in defence or justification of the first of these performances which cannot be said in defence or justification of the second? Nothing that we know of.

The issue is a plain one. It must be met by the American people sooner or later. The present position of the Knights of Labor is an attempt to introduce terrorism and intimidation in their most odious forms into the every-day life of that community of all in the world from the success of which the workingman has most to expect. This is as good a time to meet it as will ever come.

THE TELEPHONE SUIT.

THE long delay which has attended the preparation of the bill of complaint of the Government against Bell, will surprise no one who has in mind the difficulties of the problem with which counsel have had to deal. It was quite evident that the original bill prepared by the Pan-Electric Company was never intended to come before the courts upon its merits, being gotten up merely to afford the Attorney-General an excuse for commencing suit. If the synopsis which first appeared in the Washington *Post* is, as would appear, a careful preparation by competent hands, the new bill is a much stronger document than the original one, and has avoided most of the absurdities and inconsistencies of the other. But the effect of this added strength is to bring out in a clearer light than ever the absence of all sound reason for commencing the suit.

We have no desire to anticipate in any way the final verdict of the court. When we consider how many informalities may invalidate a patent, how the extreme freedom with which our Government issues patents is set off by laws giving every possible advantage to parties contesting them, how numerous the competitors, and how great the reward of overthrowing the Bell patent, we cannot but regard the unbroken series of decisions in its favor as a marvel. It would be hazardous to claim that no loophole in the document and no invalidating circumstances in its issue could be brought to light by the searching inquiry now to be instituted. The point we wish to bring to the attention of our readers is, that the bill makes a number of statements which, if true, show that the action taken by the Gove.nment is quite unjustifiable, and the expense caused by it a flagrant waste of the public money.

For example, it is averred that Bell purposely framed his application and claim in general and ambiguous terms in order to cover both antecedent and future inventions, and to deceive and mislead the examiners of the Patent-office and the public. Now, if Bell did this, and if it was a fraud, then the fraud was practised on no other person than Bell himself. For the statutes of the United States clearly provide that if a patentee does this, any citizen of the United States may use the invention at his pleasure; and if Bell is so imprudent as to bring suit against him on his patent, the citizen can not only secure a verdict, but make Bell pay the costs of the suit. What excuse, then, can the Government have for going into court with such a plea? The bill also states that on March 10, 1876, Bell obtained a patent for a telephone in which the transmission of speech was obtained by a liquid transmitter or water telephone described in Gray's caveat, which had been filed three weeks before. Now, Gray's caveat has been before the courts and the public for many years, as well as Bell's patent. A patent by Bell for anything contained in Gray's caveat is not worth the paper it is printed upon. What possible excuse, then, has the Government for going to such expense in annulling the patent? The proceedings are very much as if the Government should be asked to expend several thousand dollars in erecting machinery to re-

move an objectionable building, on the motion of parties who averred that the building was only a fog-bank which would be carried away by the first breeze.

Our readers will be interested in knowing what the complainant now says about the state of Bell's knowledge of telephonic transmission during the critical period under consideration. We have alluded to the claim of the Pan-Electric Company, that Bell well knew his apparatus to be a speaking telephone, but cunningly and wrongfully withheld that knowledge from the examiner of the Patent-office. We have also discussed the claim of another party that he did not discover his apparatus to be a speaking telephone until some time later. On this critical point we find that the Government counsel sweep away both hypotheses by claiming that the apparatus was not a telephone at all, and "lacked in description or drawings any machine then, or at any time, capable of transmitting speech." Here again we find a remarkable silence on the burning question why the Government should spend money in invalidating a patent for such a cumbrous and worthless piece of apparatus. It is curious to see the same fallacy coming in from beginning to end of the paper. It again calls the attention of the court to what has been considered the great fact justifying the suit, namely, that only the Government and not a private citizen can bring suit to repeal a patent. It ignores in the most extraordinary way the fact that the laws make ample provision against any necessity for such repeal, by legislation which protects every person against a suit for infringing a patent which there is any grounds for repealing.

We have looked in vain through the document for any allusion to the supposed fraudulent alteration of Bell's application by the addition of new matter. As this fraudulent proceeding is one which the Patent-office and its clients have been engaged in every week of its existence, we apprehend that the proper formulation of the complaint in this case must have caused some embarrassment to counsel, and that the matter was dropped in consequence.

THE NAVAL OBSERVATORY.

With the publication of each new document on the subject, it becomes more and more apparent that the reasons advanced in favor of the removal of the Naval Observatory are balanced by evidence that an improved organization is more urgent than a removal. It therefore provokes no small degree of surprise that the advocates of its removal continue to press the matter. To expect Congress to make bounteous provision for the purpose on such a showing is, to say the least, somewhat vain.

Executive Document 67, embodying a letter from the Secretary of the Navy to the President of the Senate, forms a new contribution to the literature of a subject already threadbare, and one in which many of the leading men of science of the country long ago lost all interest. Fourteen pages of this document are occupied with the report of a committee of seven members of the National Academy of Sciences, a minority of whom are practical astronomers; but the Committee unanimously concur in the conclusion (1) that it is advisable to proceed promptly with the erection of a new observatory upon the site purchased in 1880 for this purpose; (2) that it should be under civilian administration, and called the National Observatory of the United States, (3) that all except three of the instruments of the present Naval Observatory, together with a good part of its library, should be transferred to the Naval Academy, Annapolis, with such members of the staff as may be required to operate them, while what is left (library, instruments, and officers) is to become the nucleus of a new national observatory to be built in Georgetown or West Washington.

Leaving out of consideration here, what is probably true, that the proposed site possesses only meagre advantages over the present one, it is to be noted that the present Observatory buildings are somewhat dilapidated and unsuitable for observatory use; that they are located in a spot which, in the opinion of many, has been notably malarious and may perhaps continue so; that the observers on night duty have no houses near their instruments, as they ought to have; and that, from the proximity of the Potomac River, fogs and vapors sometimes exercise a baleful influence upon the astronomical work. The Committee think the sanitary question the most serious one, but are compelled to state that, while their evidence is mainly drawn from documents prepared eight years ago, the matter has since assumed a different aspect, as the flats or marshes about the Observatory are now in process of being rapidly filled up; so that it is the belief of some of the medical men of Washington that, with their reclamation, the deleterious influences of which they have been the cause will cease to be exerted. As authorities on the subject are at variance, and it would at the most be a matter of only a few years when a positive conclusion might be reached, a prudent conservatism would say that it is advisable to wait and see. As for the obstruction to observation by fogs, the Committee consider it not a matter of gravity; while the dilapidated state of the building may, they say, be a reason for repairing, or, if necessary, reconstructing it, but it is not in itself a reason for a change of site.

The Committee contribute an elaborate and very just estimate of the astronomical work of the Observatory; and, in reply to the question whether its superintendent should be a line officer of the navy or a practical astronomer, they find that the views of Professor Newcomb, expressed in 1877, are so perfectly their own that they have no hesitation in adopting his letter entire. His view is, of course, that the Observatory should have a scientific head, (1) because of the generally recognized necessity that every office should, as far as practicable, be under a head professionally acquainted with its routine of business; (2) because the Observatory should be administered with well-defined objects in view; and (3) because individual astronomers of talent are more secure in the recognition of their scientific claims under a head professionally interested in the advancement of science. Also, "the proper essential business of a State Observatory" is defined by the Committee in terms which admit of no doubt, and which the future management of the Observatory, whatever it may turn out to be, will do well to keep continually in mind. Examining the publications of the Observatory itself, the Committee do not hesitate to announce their detection of many features which are far from satisfactory, while the volumes themselves show sufficiently the absence of any preconceived plan directing the operations of the institution. Recognizing the truth of this charge, the Committee seem to be justified in recommending the practical dismemberment of the present Observatory, in the hope, it may be, of getting something different or better in the new and disconnected organization which they propose in its stead.

Though not himself a member of the Committee, but as a member of the Academy, the views of Professor Holden, an astronomer of mature experience at the Naval Observatory itself and subsequently at the Washburn Observatory, Wisconsin, and now Director of the Lick Observatory, are worthy of note here, especially as he appears to take the broadest view of the question, and the Committee append his letters to their own report. He expresses himself unqualifiedly "not in favor of a change of its site now or at any time, under the present condition of the improvements to the harbor of Washington"; and subsequently, in response to a letter from the Chairman of the Committee, he says: "I am decidedly of the opinion that this change [of site] is unnecessary and unwise." At the same time he advocates the very common-sense plan of selling the new sites, and using the funds to extend the grounds about the present Observatory, thus affording the needed room for observers' quarters. Furthermore, Professor Holden does not believe that the architect's plan of the proposed new observatory would "receive the unqualified approval of competent astronomers. . . . The best modern observatories, Potsdam, Strassburg, Mount Hamilton, and others, are built on different, and, I think, better principles." The Committee do not seem to attach the importance they should to Professor Holden's testimony on the subject of the malariousness of the present site. He lived in the immediate vicinity of the Observatory for eight years, and says: "None of my family were ever ill from malaria, and I myself had only two or three very slight attacks." Professor Newcomb also, on duty at the Observatory for sixteen years, and engaged in night-service the greater part of this time, though residing in a remote part of the city, in his letter to the Committee says: "I cannot say that I personally suffered greatly in health from the cause alluded to. I had occasional malarial attacks, but they were no worse than before my connection with the Observatory." Professor Newcomb disposes of the fog business by simply directing attention to the fact that nobody has ever made simultaneous observations at the new site, only a short distance from the present one, to see whether fogs at the latter may not cover the former too.

On the whole, the evidence now in must quite suffice to show that the chief reason why the Government is expected to expend half to three-quarters of a million dollars in building a new observatory is because a half-dozen

or so of the observers at the old one are occasionally ill with malaria—and that, too, without any attempt to investigate the very pertinent question whether these same observers would not be just as ill if they stayed at home all the time.

THE IRISH LANDLORDS.

THE probabilities seem to be at present that when Mr. Gladstone produces his scheme of Irish home rule to the House of Commons, nearly all opposition to it will have vanished. The solid and very effective support which the Irish have been giving to the Radicals in their assaults on what used to be called the "Throne and Altar," is frightening not only the Tories but the Whigs into acquiescence in almost anything that will take the Home Rulers away from Westminster. In fact, it seems now doubtful whether even the House of Lords will make their customary one attempt to stem the tide.

Nothing very definite seems to be known about Mr. Gladstone's plan, but it is almost certain that he will so combine the expropriation of the landlords with the restoration of the Irish Parliament that they will have to be swallowed together in one dose. In other words, when "Grattan's Parliament" is set up again, the class to which Grattan belonged, and which in Grattan's day carried on the Government of Ireland, will have virtually disappeared. Here and there an Irish landlord may survive the general wreck, but the main body will be known no more in politics or society. There are but very few who have managed to pass through the last ten years without becoming fatally embarrassed. Most of the estates have either been mortgaged, or saddled with settlements and annuities at valuations which even the good old times of high rentals did not warrant. These rentals have been reduced by the operation of the Land Acts on an average 25 per cent. The great fall in agricultural produce within the last two years has carried them still lower, or rather has left the tenants unable to pay even the reduced rate.

An Irish estate used to sell, in the days before the land agitation, for about twenty times the amount of the annual rental, or "twenty years' purchase," as it was called. But the rental no longer affords a basis for valuation. Not only has the amount of the rental become very uncertain, but the willingness of the tenant to pay any rent at all has seriously diminished. It is only very resolute men who now attempt to collect rents by force. Collecting them by force means calling on the police and the soldiers to assist the sheriff in seizing and selling the stock or evicting the tenant. It is all but certain that under the present Ministry this aid will be furnished very charily, which means that evictions and seizures for rent will be practically brought to an end. With such drastic legislation pending as Mr. Gladstone is said to be preparing, probably few landlords will feel disposed to bother themselves about arrears.

Most of the money paid for expropriation, however, will go to the mortgagees, who are generally English insurance and other corporations. The landlords themselves will get very little. The main body of them will be thrown on the world in very bad times. There is very great poverty among them already, but they have house-room, some little credit, and the produce of their farms. These will now also be lost, and they will literally have to seek their fortunes over again in very bad times. There will be something very dramatic in this ending to the great attempt made by England in the sixteenth and seventeenth centuries to Anglicize Ireland. It has proved a prodigious failure. The Scotch settlement in Ulster was greatly reduced toward the close of the last century by the exactions of the landlords, which caused a large emigration to America and furnished some of their stoutest soldiers to the Revolutionary armies. There is no doubt, too, that the Cromwellian soldiery, who settled in considerable numbers on the forfeited lands in the midland and eastern counties, rapidly abandoned their faith, forgot their origin, and became part and parcel of the Celtic population. This Cromwellian element is very strong on the rich lands of Tipperary, and it showed itself in the stern and implacable hostility to the landlords for which that county was remarkable fifty years ago. It was there that assassination as a mode of reducing rents first excited serious attention in England. The Tipperary peasantry literally "shot their rents down," as some one humorously said, long before resistance had become really ferocious in other parts of the country; and the county during the last thirty or forty years has been comparatively peaceful. Finally, to crown all, in spite of the constant support and protection of the English Government, or perhaps we should say in consequence of them, the proprietors of the soil, after an experiment of 200 years, have to abandon it bankrupt and despairing. There is no more striking illustration in modern history of the powerlessness of force against a tenacious moral resistance.

But for English protection, the Irish land question would have been settled probably early in the eighteenth century. Left to their own resources, the landlords would have come to terms in some way with the tillers of the soil. Either they would have become blended with the native population, as the earlier Norman settlers were, or would have established friendly and sympathetic relations with them, or, in other words, would have come to regard them as their countrymen, and share their hopes and ideals in spite of the barrier of religion. This result would probably have come about by this time, had the Irish Parliament continued to exist and helped to keep the gentry in Ireland, and to cherish among them the feeling of Irish nationality. But reliance on the British troops and the British Treasury to pull them through all scrapes perpetuated the separation of feeling between the two classes, and kept alive the hard, cold, alien seventeenth-century temper of the dominant class toward the peasantry; and this has finally brought their ruin. Had they had to stand alone, either a revolution like that in France would have swept them away generations ago, or they would have avoided it by concessions which would have put them in the position of national leaders in a country where leadership has always been easy. But they kicked against the pricks, and set their teeth, and tried to remain Englishmen when they should have become Irishmen, in spite of a hundred warnings, until the democratic tide rose in England to sweep them away.

They were in their day, however, it must be admitted, a body not without merit. They furnished England with some of her greatest soldiers and administrators, and have served her well in every quarter of the globe. But they kept singularly apart from the moral and intellectual currents of later days Probably no educated class of later days has been less touched by philanthropic movements or sympathies, or has concerned itself less about the condition of the poor, or has remained more persistently Tory and reactionary in its politics than the Irish landlords.

LA BOURBOULE AND ITS WATERS.

ONE cannot examine the history of the thermal waters of central France without feeling anew the complexity of modern rivalries and the novelty of the forms in which they clash. That of La Bourboule in Auvergne, aside from its therapeutic and its geological interest, is a story of applied science and of business rivalry which is paralleled only, but only in some points, by that of certain oil-wells in our own petroleum districts. An account of the development of these mineral springs should precede a description of their curative virtues.

La Bourboule, until recently an insignificant and torpid village, now a thriving town, is situated in the centre of the springs of Auvergne, the richest, most varied, and most abundant group of mineral waters in the known world. They number about six hundred separate springs; and in the department of the Puy-de-Dôme alone, Dr. Petit of Royat, in his excellent chart of mineral waters (1878), indicates two hundred and seventy. Those of La Bourboule are the most important of known arsenical waters. Their history is modern, and it does not begin, like that of Mont-Dore, Royat, Plombières, Luxeuil, Aix, Vichy, and a score of other French mineral springs, with a Roman inhabitation and bath-installation. Duclos, in his 'Observations sur les eaux minérales de plusieurs provinces de France' (Paris, 1675), makes the first mention of La Bourboule as a mineral spring, remarking that the solid constituents of the waters amounted to 1-170 of their weight, and that these constituents could be partly dissolved in vinegar, being "semblable au sel commun." Their chemistry was not understood until long after this time; but mention of the waters and of their special virtues is not infrequent. Legrand d'Aussy, among others, in his 'Voyage dans l'Auvergne,' remarks the anomaly of a cold and a hot spring pouring from the same rock at a distance of but four feet from each other. At this time (1787) the place, though little known, already had, as he tells us, its establishment on a small scale, and cures were wrought here in cases for which even the waters of Mont-Dore were inefficacious. "In spite of all these miracles," he adds, "La Bourboule remains unknown, while Mont-Dore is famous. What a book could be made on the capriciousness of fame! Whoever may write it will not fail to instance the neglect of La Bourboule among the thousand and one illustrative facts which he will find ready to hand." Fame, as we shall see, came in course of time. The curative results obtained at La Bourboule were remarkable, and medical men had long recognized them as having much scientific interest. But it was not until 1854 that the waters were analyzed. Thénard then showed

that they were rich in arsenic beyond all other waters known; their medicinal reputation as an energetic blood restorer and alterant was fully justified in the laboratory.

But the small amount of water afforded by the springs was a serious hindrance to the development of the station: it did not exceed nine gallons per minute, a quantity entirely insufficient for an establishment. The attention of geologists was drawn to the question of the origin of the springs and to the possible augmentation of the water supply; and it was very thoroughly discussed by Poulet-Scrope, among others, in his admirable work on the geology of central France. In Auvergne, as in that other volcanic country, Bohemia, with its invaluable mineral waters, the springs are to be sought in the lowest parts of deep valleys and in the most disturbed and tormented ground. Formerly far more numerous than now, they are the last and departing signs of the inward eruptive forces of these regions. The central part of La Bourboule valley is filled with trachyte, erupted matter, tufa, etc., as a trough with so much mud or water. On either side this is walled in by abrupt granitic formations, dipping on the north toward the valley at an angle of forty-seven degrees. From this containing wall of granite, and from a point not far below its line of contact with the contained masses of trachyte, flowed the precious but insufficient stream of mineral lymph.

How, then, might the scanty flow of the springs be increased? Was the enclosing granite wall, as seemed likely from the regularity of its face, really a geologic fault? In that case, the water was brought to the surface by its means; and it would only be necessary to strike the inclined wall with a borer to liberate a layer of mineral water. But at what depth did the water actually leave the granite for the trachyte, thence to force its way to the surface? This it was impossible to tell. But it was finally decided, after careful study of the geologic situation, to sink in the tufa a shaft which should meet the granite at from sixty to eighty metres below the surface. It was the beginning of the battle of the wells, which, as we shall see, was to have the deepest interest, not only for the geologist, but for every inhabitant of the little French village, for years to come, and for many thousands of strangers besides.

The springs had been owned since the year 1828 by a family named Choussy. The only patients as yet were a few peasants from time to time; even as late as 1857 there were but 270 annual visitors to La Bourboule. But the time of transformation had now arrived. In 1864 M. Mabru began to sink a shaft on his own ground, at a short distance from the drowsy little establishment of the Choussys. Never was a well dug so slowly, even in a slow provincial village of France; but by January, 1867, it had reached the depth of thirty metres, and, to the great encouragement of M. Mabru, had already dried up three or four of the old springs. It yielded eleven gallons per minute, at a temperature of 35° C. (95° Fahr.), and in a few months this flow was doubled. An establishment was at once begun, and patients presented themselves in increased number.

Another rival now appeared in the person of M. Sédaiges. He leased the unoccupied lands of the valley (*terrains communaux*) for a term of fifty years, and sank another well; it yielded twenty-two gallons per minute. The Choussys saw that their subterranean reservoir was tapped, and that their only salvation lay in boring. Their well No. 1 took two years to sink; it was forty-eight metres deep, and it was afterwards deepened to seventy-eight metres; it delivered thirty-five gallons of arsenical water per minute, at a temperature of 54° C. (129° Fahr.). Best of all, it cut down M. Mabru's well to a flow of four gallons per minute; the rest of the wells it dried up entirely.

M. Perrière was incited to new exertions by the result, and in 1869 he deepened his well to fifty-three metres; he struck a deeper source, procured more water, and seriously diminished the yield of the Choussy well. During the following year he dug his well No. 2, but as he went down only thirty-three metres, the water delivered was weak in mineral constituents. It was now becoming evident that the deepest digger had the best chance. What might not be expected from further borings? Capital began to seek investment in the springs; the excitement deepened with each new boring. Many cures were made, and patients poured in upon the little village. New rivals appeared in the form of a company, which dug the "Fenestre" wells Nos. 1 and 2 in 1872 and 1873; and two years later the present company was incorporated, consolidating all the wells, except the stout M. Choussy's, under one management.

But M. Choussy was not to be beaten at digging. He returned unshaken to the field, and, at a point only four metres distant from the rival Perrière spring, he sunk his shaft No. 2. It penetrated to a depth of 75.73 metres, and the precious mineral waters poured forth with impartial abundance; but unhappily the rival spring continued to flow. And now M. Choussy had a brilliant idea: it was to bring the steam pump to bear upon his enemies. The principle of his procedure was not unanticipated. There is, or is reported to be, in Boston, a small restaurant, frequented mainly by patrons who do not dine every day in the week, and where a hard and unfeeling management demands prepayment for every dish consumed. A waiter, equipped with a large wooden syringe, is stationed behind each consumer of bean soup, and requires its price. If the color of silver or copper does not instantly appear, the entire contents of the soup-plate are reclaimed, at one stroke, by the wooden pump. It may be doubted whether M. Choussy was acquainted with this effective device; but the principle of it must have been familiar to him, for he showed no less intelligence in the treatment of the rival spring and the alimentation of his own. His boring was the deepest yet made; he placed a powerful steam pump at the mouth of his new well, and he had the grim satisfaction of perceiving, at the first stroke of the engine, that Perrière No. 2 had entirely ceased to flow.

This was in 1876. But the company, inscribing *semper inferior* upon their drills, deepened the Perrière well to seventy-five metres, and fitted it with a pump even more formidable than that of the ingenious M. Choussy. When, therefore, amid great excitement, it was set to work, he in turn saw his fortunes escaping in a small iron tube.

For several seasons the situation at La Bourboule had been an extraordinary one. The uncertainty as to the development of the rival establishments and of their springs affected the whole community—patients, proprietors, and the general public. The establishments, though repeatedly enlarged, could not contain the patients who poured in from every part of Europe. Now Dr. Choussy's, now the company's star was in the ascendant; yet each establishment in turn experienced water-starvation, and during whole seasons hundreds of invalids went to bed at night without any assurance that they could bathe or drink the next morning. The fortunes of either establishment depended upon the penetration of a still lower source. More than this, the integrity of the mineral waters, and consequently the "hydriatric fortunes" of La Bourboule itself, so geologists gave warning, depended upon the depth of the latest well, the efficiency of the strongest pump. Everything was perilled by this ravenous boring. If the disposition of the water-bearing substrata was so delicate as to be greatly disturbed by a single well, what mischance might not be feared from future borings? It was feared that some dilution, convection, admixture, or other injury to the precious waters might be wrought any day as the result of all these intrusions into the subterranean laboratory. Already the Perrière well No. 2 flowed weak. What if the springs should be destroyed entirely?

Meanwhile the supremacy passed rapidly from one establishment to another. The scientific question little interested the community, which found its profit in these rival interests. But the whole town was torn by the controversy, and to this day its feuds are not fairly laid, nor are all the losses that resulted from them made good. But for the greater part of the community, as for landed proprietors, the builders, the hotel-keepers, the physicians, this development was the source of fortune. The small land-owners sold their gardens and pastures at higher prices than had ever been known in the Puy-de-Dôme. Fine hotels arose; the incomplete establishments were urged toward completion; trade improved, and the population of La Bourboule grew. The little town was given over to prosperity; and yet there was no little anxiety as to its continuance, unless the hazardous borings could be checked. The whole prosperity of the place might run off, any day, through a three-inch pipe.

Such was the extraordinary situation when, in 1878, the irrepressible Dr. Choussy girded up his loins once more and returned to the field with new supplies of men, money, and boring tools. He deepened his well to the depth of eighty-four metres: La Bourboule hung upon the result. It was an anxious day for the company and for its patients when his great pump began to play. Would victory veer again to the original proprietor? The "hydriatric world" looked on breathless. But the precious water refused to answer to this last appeal. Waters, indeed, were reached, but the superiority remained with the company. Their borings had touched the vital point of the springs, verifying geological predictions in the matter; and during the following year, 1879, the stout Choussy gave up the contest and sold out to the company. All the springs, six in number, came under a single control; competition ceased from this date, and the destructive rivalry of the preceding years was ended.

Its record remains in a curious clause which forms a part of the present company's charter from the Government. By that clause all proprietors or other persons in La Bourboule are forbidden to dig any well, for whatever purpose, on any property within a certain considerable distance of the precious springs. The restriction, under the peculiar geologic conditions of the problem, is doubtless a reasonable one. "It makes one tremble to think," says the learned physician, Dr. Boucomont of Royat, "that a single puncture of the source might open a subterranean channel of escape for these precious waters, and in a moment swallow up one of the chief treasures of our Auvergne."

The recently completed establishment is one of the most perfect in Europe. Nowhere have I seen a fuller or more intelligently contrived apparatus of appliances for external applications of every kind. The waters are now assured in their integrity, and in the most ample quantity (fifteen hundred gallons per minute). About seven thousand visitors now come annually to La Bourboule, and with reason: its waters form one of the most efficient remedies known in certain extensive classes of chronic disease. Of these I may speak on another occasion.

TITUS MUNSON COAN.

TOLSTOI'S SOUVENIRS.

PARIS, February 25, 1886.

IT is impossible not to take an interest in whatever is written by Tolstoi. There is so much genius in 'War and Peace,' in 'Anna Karénine,' that you cannot help expecting some pleasure from whatever falls from the hands of the great Russian writer. I lately gave an account of his last work, 'My Religion,' and I could not help thinking, in analyzing it, of the old saying: "Aliquando dormitat Homerus." Now, I feel that I ought to give some account, not of the last works of Tolstoi, of the feelings and emotions of his old age, but of his early days and of his youth. There are few people who do not like to begin, so to speak, their lives over again. I confess that I have always admired the minuteness of the writers of memoirs, their extraordinary memory, the precision of their facts; to me, many years of the distant past are enveloped in a sort of dream, and I have great difficulty, when I wish to be perfectly sincere, and not to help my memory with my imagination, in reconstructing the past so as to give to it perfect life.

It is not so with Tolstoi; but Tolstoi is a man of genius, and distinctness of perception is one of his great attributes. He begins his 'Souvenirs' at the age of ten, and we learn much from him on the development of his mind. There is something quite childish in the first part of these 'Souvenirs.' Tolstoi had a preceptor, Karl Ivanitch, a German:

"Karl, with his spectacles on his nose, and a book in his hand, was sitting in the accustomed place. At the left of the door were two tables, one for the children, and *his*, the table of Karl Ivanitch. On ours were all sorts of books, some upright, others lying flat. . . . We were always ordered, before the recess, to put the *library* in order (this was the name which Karl Ivanitch gave to the table). As for his collection, if it was not as numerous as ours, it was more varied. I remember three volumes—a German pamphlet, unbound, upon the best manure for cabbages; a volume in parchment, with one corner burned, on the Seven Years' War; a complete treatise on hydrostatics. Karl Ivanitch spent most of his time in reading, so as even to hurt his eyes; but besides the books on his table and the paper, the *Northern Bee*, he read nothing."

Karl Ivanitch was old, he had a pure conscience and a peaceful soul, and Tolstoi loved him. "I sometimes said to myself: 'Poor old man! We children are many, we play, we amuse ourselves; he is alone and nobody fondles him. To be sure, he is an orphan. And how dreadful is his history! he once told it to Kolia." Nothing can be more charming than the description which Tolstoi gives of his mother, sitting by the samovar amidst her children, with the good old Karl, and the governess, Maria Ivanovna, or Mimi. "When mamma smiled (mamma was very handsome) she became even handsomer. . . . If I could only see that smile again in the difficult moments of life, I should not know what sorrow means. It seems to me that what is called beauty resides chiefly in the smile. If the smile embellishes, the face is handsome: if it does not change it, the face is ordinary; if it spoils it, the face is ugly."

Papa was a true Russian nobleman of the old school (he must often have been in Tolstoi's mind when he wrote his great novels), handsome, amiable, a man of pleasure, always in money difficulties, always mortgaging his estates. "He was," says Tolstoi, "a man of the last century, and, like all his contemporaries, he had in him something chivalrous, enterprising, confident, amiable, a passion for pleasure. He felt a great contempt for the men of our century. . . . His two great passions were cards and women. He gained or lost at cards, in the course of his life, several millions, and he was in love with an incalculable number of women, in all classes of society. . . . Nothing astonished him; in whatever situation he might have been placed, he would have seemed to be born for it." Here is another good *trait*: "He knew exactly the precise degree of pride and of presumption which raises a man in public opinion without giving offence to anybody." This gentleman of the last century belonged to the school of what was called then "sensibility"—he was emotional, he cried easily. When he read aloud he often became very pathetic. "He was one of those men who, when they wish to do a good action, must indispensably have a public." "There was no good in his eyes except what the public thought good." He could tell a story in a charming manner. "This," says Tolstoi, "is perhaps the reason why his principles were so elastic; according to the turn he gave to his talk, the same action became an amiable pleasantry or the greatest of horrors." It is clear that Tolstoi's father, whom he describes with so much impartiality, was not a family man, though he was adored by his wife. In the novels of Ivan Turgeneff, in the memoirs of Hertzen, we find the same type; the father of Tolstoi was a courtier of the time of the great Catharine.

The departure from the country to Moscow was a great event in the life of young Tolstoi. It is described with the minutest details—details which I might almost call photographic. "I still see all the domestics, and I could draw their portraits; but, strangely enough, the visage and the attitude of mamma are entirely out of my mind. This comes, perhaps, from the fact that during all this scene of the adieux I had not once the courage to look at her. It seemed to me that if I did, her sorrow and mine would surpass all bounds." The child travelled with his father, and his attention soon became absorbed by all the trifling incidents of the journey. In Moscow his education began more in earnest; but after a few months they were all recalled to the country by a grave malady of Tolstoi's mother. The child arrived in time to see her still living, but she died soon afterwards. Tolstoi describes his feelings on this occasion with great delicacy and pathos, analyzing them in a curious and almost painful way. When the service was ended,

"the face was visible, and all the assistants approached, one after the other, to kiss it. Almost at the end was a peasant woman, holding in her arms a pretty little girl five years old. God knows why she had brought her there. I had just dropped my wet handkerchief, and I stooped to pick it up, when I heard a scream, piercing, terrible, expressing such a terror that I shall never forget it if I live a hundred years; and when I think of it, I still shudder. I looked up; the peasant woman was on a footstool, next to the coffin, and tried to keep the little girl, who struggled and threw herself backwards with an expression of fear, and looked at the corpse with great screams. I screamed then even louder, I believe, and ran out of the room. . . . The idea that this face, so handsome, so amiable a few days before, the face of the person I loved above everything in the world, could inspire terror, unveiled (so to speak) the terrible truth, and filled my soul with despair."

We now come to the years of adolescence, and to the dreams which fill them. Tolstoi was a singular child. His imagination was morbid, his reflections were not much in accordance with his age. The reformer was already hidden in him. "During a whole year," says he, "I lived in an absolute moral isolation, lost in myself. The abstruse questions of human destiny, of a future life, of the immortality of the soul, offered themselves to me, and my feeble intelligence worked with all the ardor of inexperience at the solution of these great problems which human genius, in its greatest efforts, can only envisage without succeeding in solving them." He examined and tried, one after the other, all the philosophical systems. He had an abundance of ideas which gave him no rest, he lost himself in the wildest theories; and he acquired a rare faculty of incessant moral analysis. He sometimes thought that he was born for the good of mankind, that he should be a great man; "and, oddly enough, when I found myself in the presence of common mortals there was not one before whom I did not feel timid."

One of the prettiest chapters of the 'Souvenirs' is the story of Karl Ivanitch, who had to leave Tolstoi when he advanced in his studies and prepared to enter the university. "Was it really his story, which he had invented in his imagination while he remained in our house, and which he believed in the end for having told it so many times? Had he only put fantastic colors on true events? I do not yet know." The first time that Karl deigned to tell the long tale to his pupil he began thus: "God knows all and sees all! His will be done! Yes, Nicholas, my fate is to be unhappy; I was unhappy even before I was born, and I shall be so till I die. People have always rewarded me with evil for the good which I have done, and my recompense will not be given me in this world. If you knew all I have had to suffer! I have been a shoemaker, I have been a soldier, I have been a deserter, a manufacturer, a preceptor, and now I am dismissed, I am nothing, and I do not know where to lay my head." The military adventures of Karl Ivanitch are very characteristic: "It was a terrible time, Nicholas. It was the time of Napoleon. He wished to conquer Germany, and we fought to defend our country to the last drop of our blood. I was at Ulm, I was at Austerlitz, I was at Wagram." "So you really fought?" said Tolstoi, looking at him with astonishment. "You killed people?" The good Karl hastened to reassure his pupil. "Once," said he, "a French grenadier was left behind and fell on the road. I ran to him, and I was on the point of thrusting my bayonet through him, when he threw away his gun and said 'Pardon me,' so I let him go."

You can recognize easily in the story of Karl Ivanitch the author of 'War and Peace.' There is a curious chapter called "Eclipse," in which Tolstoi explains how, during his adolescence, his moral nature became, so to speak, eclipsed, and he was haunted by all sorts of bad ideas. He tells us the history of his *crimes*, as well as of his punishment. His new preceptor—a Frenchman, Saint-Gérôme—once shut him up in a dark room, and "'Basil,' he screamed, with a hideous and solemn voice, 'bring me the whip!'" This eclipse did not last long, and the 'Souvenirs' end with the account of Tolstoi's first friendship. He brought to it all the enthusiasm and ardor of his nature; he formed magnificent plans for the future of his friend and of himself. Alphonse Karr says that, in every affection, one loves, the other allows himself to be loved; one gives a kiss, the other offers the cheek. The friend of Tolstoi was of a passive disposition. Prince Dimitri Nekhliudoff, then a student, formed great plans for the regeneration of humanity, and, on the whole, his influence seems to have been good. Once in the University, Tolstoi enters into a new field of what he calls *rêveries*. He describes minutely his state of mind, his ambitions, his hopes, his family circle, the rules of life he made for himself. But the charm of all these confidences is entirely in the details, and I must refer the reader to the 'Souvenirs' themselves. On the whole, though they will add nothing to the fame of the writer, they are interesting as documents concerning the first stages of development of a great and noble mind.

Correspondence.

THE KENTUCKY RESOLUTIONS OF '98.

TO THE EDITOR OF THE NATION:

SIR: Sharing with you the interest you take in Mr. Durrett's valuable contribution to the history

of the "Kentucky Resolutions of 1798 and 1799," as found in the March number of the *Southern Bivouac*, I beg leave to subjoin to your note on that paper (*Nation*, No. 1080, p. 219) that the method of research to which you refer, as affording a probable means for ascertaining the genuine text of the earlier series, has already been brought to this inquiry by Prof. N. S. Shaler, in his recently published history of Kentucky. Prof. Shaler says: "Knowing that a copy of the document [the Resolutions of 1798] had been sent to the Governor of Massachusetts, it seemed to me worth while to search for it in the archives of the Secretary's office of that Commonwealth. The search was kindly undertaken by the present Secretary, Henry B. Pierce, Esq., and fortunately resulted in the discovery of the copy given below. The document is neatly printed, and in a perfect state of preservation. It may therefore fairly be taken as an exact copy of the original" (Shaler's 'Kentucky,' p. 409).

On comparing the text of the *Bivouac* reprint with the copy reprinted from the Massachusetts archives, I find the two to be identical in point of contents, the variations being such as result from the different spelling of certain words and from a difference in the frequency with which italic and capital letters are used. In Mr. Shaler's copy the punctuation and orthography are modernized. Mr. Durrett's copy seems to be the facsimile reprint of some copy which, in point of typography at least, must be closely related to the year 1798. In one of its passages, the blurred aspect of some of the characters in the original seems to have been reproduced.

Both of these copies contain in the first resolution of the series a clause—"its co-States forming, as to itself, the other party"—which has been dropped out in editions of Elliot's Debates published since the year 1832. As you remark that "varying versions of the Resolutions got early into print with every apparent mark of authenticity," I would be exceedingly obliged to you, or to any of your readers, if you or they will refer me to any publication prior to the year 1832 in which the above-cited clause does not form an integral part of the first resolution. I make this inquiry for purely historical reasons, because I suppose myself to have discovered the time and place in which the text was for the first time corrupted. JAMES C. WELLING.

WASHINGTON, March 13, 1886.

CHALLENGE AND BANTER.

TO THE EDITOR OF THE NATION:

SIR: Respecting the use of "banter" in the sense of "challenge," I would say that the word has that familiar meaning in southern Ohio, especially on the Ohio River, where I was reared. It was a favorite sport with the boys of my time to "*play 'banner'*"—for thus the word was commonly pronounced. A leader would start off on a series of adventurous acts, in which he would be imitated in regular turn by his Indian file of followers. These performances were often reckless and dangerous, and many a ducking or bad fall was the fate of the unskilful or unfortunate.

Also, one boy would "banner" another to do something, like: "I'll 'banner' you to skate over that thin ice after me," or, "to 'run' those loose logs."

I agree with "W. H. J.," in your issue of March 4, as to the distinction he draws between "challenging" a rival base-ball nine and one boy "bantering" another for a race. But the latter expression was not commonly used, our "banner" being more like a challenge of a "dare"—a test of skill, activity, or nerve. But the preposition "for" was not a necessary adjunct of the verb "banner." The preposition "to" with the infinitive of the act, or the present participle, like "skating," was the general use. We also said "doing 'banners'"; and to "make a 'banner'" was to make the break in the performance, or establish the route of ventures to be followed.

C. B., Jr.

DENVER, COL., March 8, 1886.

TO THE EDITOR OF THE NATION:

SIR: I have been surprised to find abundant confirmation of Mr. Utter's statement in your issue of February 18, that "banter" is generally used for "dare" in southern Ohio. Old residents in this neighborhood and in Cincinnati tell me such use is common. But I was much more surprised to-day to read, in an account of 'A Crosby Family,' page 61, printed in Lowell, Mass., the following:

"My father found a competitor in Moultonboro in Doctor Morse, but after a little while he bantered the doctor to sell out, which he did," etc.

The employment of the word in this peculiar sense by Judge Crosby, of Lowell, whose whole life was spent in New Hampshire and Massachusetts—the whole early part of it in remote country towns—seems to show that even in some towns of New England "banter" is used in a sense kindred, at least, to "challenge."

Respectfully,

WILLIAM F. BRIDGE.

FOSTERS, OHIO, March 10, 1886.

[We will close the discussion of this interesting locution by referring our correspondent to p. 172 of the 'Writings of N. P. Rogers,' a native and life-long resident of New Hampshire, editing the *Herald of Freedom* when he wrote (issue of October 1, 1841, italics ours): "Two scientific pedestrians halted here . . . and . . . *bantered* one another to jump in."—ED. NATION.]

"AUTHOR"—EDITOR.

TO THE EDITOR OF THE NATION:

SIR: Every person who is interested in having the New English Dictionary made complete and accurate owes you thanks for your conclusive answer to "J. P." in the issue of the *Nation* for March 4. Your timely caution to the editors and "more than 1,300 readers," said to be engaged on that work, will, it is to be hoped, make them more thorough and sharp-sighted. At all events, there ought not to have been any occasion for reminding them that the word "author" was used in the eighteenth century, both in America and England, in the sense of *editor* of a periodical. As you more than intimate, for the editors of the work to overlook the newspapers and magazines published in the eighteenth century, would be to overlook the department of literary production which best shows the remarkable growth and modifications of our language in that period.

In regard to the use of "author" in the sense mentioned above, permit me to make an inquiry. Instances of this usage can be found in Massachusetts newspapers as late as 1773; can an instance subsequent to that date be pointed out in any American publication? A. H. H.

BOSTON, March 8, 1886.

AN APPEAL FROM MISSISSIPPI.

TO THE EDITOR OF THE NATION:

SIR: As the discussion of the Blair bill, in and out of Congress, is one of the most interesting topics at present, it occurred to me that the views of parties living in the illiterate section might be of interest to your readers.

Wilkinson County, of which Woodville is the county seat, has a population made up of about two-thirds black and one-third white people. The State and county taxes are 18 mills, of which the school tax is 3 mills. It would be a fair estimate that the taxes represent 15 per cent. of the net income of property-holders. With the low price of cotton prevailing, it would be impossible to increase the taxes. The white people pay 90 per cent. of the taxes and receive 35 per cent. of the benefit of the school tax. The black people pay 10 per cent. of the taxes and receive 65 per cent. of the benefit.

As the present working of the school system is the very best that we are able to have under existing circumstances, let us examine the condition of the public schools. The school fund enables us to run the public schools during four months of twenty days each annually. The teachers are paid, according to the number of scholars, from $8 to $50 per month; a fair average would fall below $25 per month, equivalent to $100 per scholastic year. Now, what kind of material can be had for such a salary? Our worthy Superintendent of Public Schools examined candidates for positions as teacher who were looking for the West Indies among the Rocky Mountains, and who had no idea of fractions. Can this material be depended upon to dispel the literary darkness around us? Is not our situation desperate? In our impoverished condition to educate the white children and twice the quantity of black children thrust upon us, may we not, without being considered paupers, exclaim: "Help us, or we perish!" P. MÖLLER.

WOODVILLE, MISS., March 1, 1886.

[This is a dark showing, truly, and still not the worst that the South might make. There are corresponding degrees of school privileges, or lack of them, and of teaching capacity at the North. They furnish a ground of compassion, but they do not affect the general principle involved in opposition to the Blair bill—the danger of fostering a fatal dependence on external aid, especially in a State which is making notable educational progress by its own impulse.—ED. NATION.]

STATE AID TO EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to call attention to a point which seems to have been forgotten in the recent discussions as to the advisability of making national grants in aid of education? Your position, that gifts of money to the South for this purpose would in the long run prove a detriment to the self-reliance of the people, and consequently to education itself, is undoubtedly correct. The testimony of Connecticut would, at first thought, seem to confirm your objections to all national aid whatsoever. It is, indeed, a "fact," as you say, and facts, as all know, go a great way with Americans. We should not, however, so completely yield our allegiance to them as to forget to try to understand them. That State money has been and may still be badly used is no proof, though, that it can be made to do no good. The whole question turns on its administration. If the administration is bad, State or national grants in aid of education are likely to do more harm than good, as in the case of Connecticut. But if the administrators of that fund had been wise enough to make its distribution to the districts depend upon a reasonable amount of local effort, the State Commissioner would now have a different story to tell.

We have, for instance, in Illinois, an example of the good State money may do in stimulating local effort even with very light conditions. In that State the income from public-school funds, together with the direct State school tax, is 20 per cent. of all money expended for education in

the State. The distribution to the districts is made on the one condition of their supporting a school for six months each year. This condition is always complied with, and at a present cost of over $29.00 per pupil in average attendance. A much smaller grant from the State would secure the fulfilment of the imposed condition. Similar results follow the administration of the income from State funds in other States. Again, the Peabody fund is administered on the same principle; yet nobody claims that this tends to demoralize the people, for it helps only those who help themselves.

But the most striking example of enormous State subsidies to education, which at the same time have no tendency to produce stagnation and helplessness among those who receive their benefits, is found in England. The total Parliament grant for elementary education in England and Wales alone was, in 1884-85, £3,110,912, and was made not only to public schools, but, startling as it may seem, most largely to schools organized and managed by religious societies. That which at first view looks like subsidizing religious bodies at public expense, excites neither alarm nor serious opposition in England, yet this is perhaps the most thoroughly non-paternal government in the world. As in the United States so here, everything turns on the administration. Grants are made chiefly on these conditions, viz.:

1. That at least an equal amount of money be provided by local effort.

2. That the school be held in approved premises and taught by duly certificated teachers.

3. That a portion of the grant depend upon the individual examination of pupils by Government inspectors.

Subject to these conditions, the various classes of schools receive from Government subsidy the following per cent. of their whole school expenditure:

	Pupils.	Per cent.
1. Church of England Schools	1,607,823	43.5
2. Wesleyan Schools	128,584	45.8
3. Roman Catholic Schools	167.841	48.7
4. British Undenominational and Other Schools	253,044	42.5
5. School Board Schools	1,115,832	36.1
Total for Elementary Schools		41.04

Twenty years ago England was one of the worst educated of civilized countries; now, under the action of State aid, it is one of the best. Further, under the beneficial action of well-administered school subsidies, it has raised teaching from a poor calling to a respected and profitable profession. So it might be in America. A well-administered national grant for public schools would be as beneficial in its action as similar grants have been to elementary education in England. A national *gift* would do more harm than good.

CHAS. DE GARMO.

HALLE, February 26, 1886.

YALE COLLEGE AND THE SCIENTIFIC SCHOOL.

TO THE EDITOR OF THE NATION:

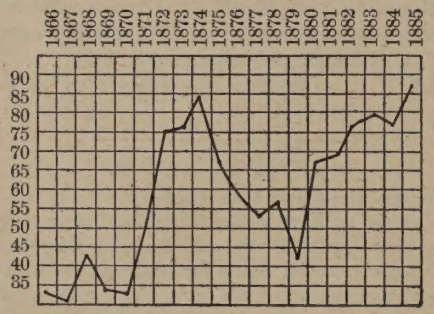
SIR: It is a common assumption, among the defenders of the "old régime" at Yale, that they are entitled to whatever credit may accrue from the progress of the Scientific School. They claim that since it is an undergraduate department of the University, its numbers should be added to those of the similarly undergraduate Academical Department, in any comparison with the progress of rival institutions.

It was with full foresight of this probable but illusive objection that I determined to exclude the Scientific School from the larger part of my previous comparison. The baselessness of the objection is apparent to any graduate of the School; but to the alumni of the other department a few words of explanation may be necessary.

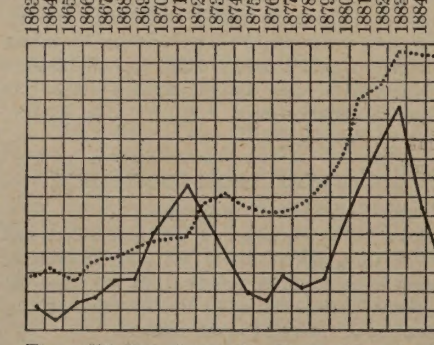
The first and most obvious reason for its exclusion is the fact that the President and Fellows of the College have had nothing whatever to do with the progressive management of the School. The credit of its success belongs elsewhere, as is well known.

A second objection is found in the fact that the comparison is drawn between two systems of education, as well as between two colleges that practise them. It could only confuse the solution to make the Scientific School, with its three years' course and strictly technical education for an average of 74 per cent. of its students, a factor in the problem. It is designed to educate good civil and dynamical engineers, chemists, and metallurgists. President Eliot's annual report for the college year 1884-85 shows that nobody goes to the Academical Department of Harvard College for this class of instruction. And besides, while every Harvard undergraduate receives the full benefit of all the instruction offered in the Academic Department of the University, no academical undergraduate at Yale can share in any way the instruction so admirably given in the Scientific School. To include the Scientific School in the comparison of numbers would therefore vitiate the force of the whole argument with respect to instruction.

In the third place, just as the management of the Scientific School has had nothing in common with that of the College, so has its growth been determined by other and entirely extrinsic causes. The following diagram shows the fluctuations in the number of students entering the Freshman classes of the Scientific School every year of the last twenty:



It will be found instructive to compare these lines with those that display the same facts for the Academic Department (*Nation*, p. 148). And the causes of the contrast are as different as the results. The Scientific School sends the bulk of its graduates into the great technical professions. It furnishes the supply for a certain demand; and the number of its students is dependent upon the progress of the industries in whose development these technical professions play a part. The following diagram shows the progress of railway construction and the output of the iron and Bessemer steel trades for the twenty-two years 1863-1884:



The solid line shows the fluctuations in the miles of new railway annually constructed, while the dotted line denotes the number of tons of steel and iron annually produced. It will be observed that there is a remarkable relationship between this diagram and that which precedes it, indicating that the fluctuations of the classes follow, accurately enough, the fluctuations of these great industries, at an average distance of two or three years. No such relationship is apparent in the figures of the Academical Departments of either college.

The fact is, that any attempt to mix more than about 26 per cent. of the Scientific School figures with those of the Academical Department is a simple attempt to obscure the real causes of Yale's decline. Had the cases been reversed, and were it a question of adding one of *Harvard's* professional schools to the College in order to enable it to make a fair showing alongside of Yale, the Yale apologists would have made a terrible outcry against it. And yet it would be almost as fair to add the Harvard Law School to the College figures as the Sheffield Scientific School to Yale's.

For the accuracy of my statement with regard to elective studies at Harvard in 1841, I shall cite President Eliot as authority. He shows, in his annual report for 1883-4, page 13, that a system of elective studies was opened by vote of the Faculty, May 24, 1841, not only to juniors and seniors, but even to sophomores. These reports also afford information concerning the influence and functions of the Board of Overseers which the College catalogues do not supply.

EDWARD D. PAGE.

NEW YORK, March 11, 1886.

THE TARIFF ON DIRT.

TO THE EDITOR OF THE NATION:

SIR: Referring to your editorial of the 11th inst., on the "great struggle over the tariff on dirt," permit us to call your attention to the fact that, inasmuch as the scoured wool loses nearly 50 per cent. of its weight in being cleansed, a duty of two and one-half cents per pound on unwashed wool is equivalent to five cents per pound on scoured wool—*i. e.*, the same quantity of wool as it left the sheep's back unwashed at two and one-half cents per pound would bring into the Treasury, when scoured and charged five cents per pound, no more duty. Therefore, the difference between two and one-half cents on unwashed and five cents on scoured wool is practically one and the same thing, and wherein it is a tax on dirt is not apparent.

The other two and one-half cents per pound on scoured wool (making the entire duty seven and one-half cents) is no more than a fair equivalent, in view of the fact that the thorough cleansing or scouring has made an article fitted for other uses than those for which unwashed wool can be employed. The scoured wool is ready for immediate use by the manufacturer, and will take dyes without further cleansing. This is not the case with either unwashed or washed wools, both of which require further cleansing.

The statute imposes a certain duty on wools in a certain condition, *e. g.*, scoured. It matters not how they got to be scoured, whether by the use of chemicals and machinery or by hand labor and hot water. It is the *condition*, and not the process, which governs. Now, in the case of the Donskoi wools, it is undisputed that they are so thoroughly cleansed that nothing more is requisite to fit them for dyeing and manufacture.

Truly yours, DALLAS SANDERS,
JAMES W. M. NEWLIN.

NEW YORK, March 13, 1886.

[It seems, then, that the duty on wool is two and one-half cents per pound, and the duty on scouring two and one-half cents per pound more, and the duty on immediate usefulness two and one-half cents per pound more. We are no sticklers for terms, but it looks to us as though

the last two and one-half cents were a premium on the importation of dirt. This is the view taken by Mr. John L. Hayes, a great tariff authority, in a recent humorous publication.—Ed. Nation.]

POSTAL SAVINGS BANKS.

To the Editor of The Nation:

Sir: The failure of the "Dime Savings Bank" at New Brunswick, with the widespread suffering that it entails, affords another proof, if any were needed, of the pressing call for Congressional action in the matter of postal savings banks. An event like this failure operates as a discouragement to thrift in every town and village through the country to which the news penetrates. The poor have little opportunity of discriminating in such matters; they learn that those who placed the fruits of self-denial for years in the New Brunswick bank found it swept away in a moment; the depositors had economized in order that a dishonest cashier might speculate in Wall Street. To the poor, laying up money involves a multitude of sacrifices, and, at least, when laid by it should be made safe for them. But through a very large portion of this country this can only be accomplished by the action of the Government. The matter is now under discussion by a Congressional committee, and public opinion should be brought to bear upon the committee in a very emphatic way. L.

DUTY AND HONOR.

To the Editor of The Nation:

Sir: I have, by chance, in the same half-hour, come across two stories, each interesting in itself from the men concerned, and both together so singularly emphasizing an excellence of English character and a peculiar form of moral discipline connected with English Parliamentary life, that it is perhaps worth while to bring them in connection with one another before your readers. The one is to be found in Mr. Leslie Stephen's 'Life of Fawcett,' the other in Mr. J. Cotter Morison's study of Macaulay—both works of much interest in all respects.

Mr. Stephen, in relating Mr. Fawcett's action with regard to the preservation of Commons, describes the incessant vigilance on Fawcett's part needed to secure the legislation desired. At one moment the struggle (which was between the Government and Fawcett and his supporters) resolved itself into a determination on Fawcett's side to prevent the passage of a proposed bill:

"The third reading of the bill was set down for every Government night. It did not come on for discussion till the end of the evening's debates—that is, often at 2 or 3 A. M. . . . If Fawcett or his supporters had failed to be in their places, the third reading might have been achieved without opposition. But night after night he was ready, and the motion for the third reading postponed. On one occasion Fawcett, as he used often to relate, had caught a bad cold. He sent a message to the Government whip asking that the motion might be once more postponed as it had been so often before. He received no answer; but fancying that his request would be granted as a matter of course, he was retiring to bed. A friend happening to call suggested that it would be safer not to relax even for a night. Fawcett struggled into his wraps, went to the House and found that business had been so arranged as to secure the passage of the Enclosure Bill. The whip started 'like a guilty thing surprised' on the apparition of Fawcett in the lobby, but good-humoredly admitted the failure of his little bit of dexterity, and gave a formal undertaking which enabled Fawcett to get once more into bed with a safe conscience."

It was not he alone who would not go to bed except "with a safe conscience." After the breakdown of Macaulay's health in July, 1852, he was constantly oppressed with asthma and heart disease, and so weak at times that he could hardly walk, even with a stick. But as long as he was a member of the House of Commons, although his constituents were willing to grant him every indulgence, his attendance in the House often took little heed to prudence. On one occasion, as he wrote in his diary,

"I was in pain and very poorly. I went down to the House and paired. On my return, just as I was getting into bed, I received a note from Hayter to say that he had paired me. I was very unwilling to go out at that hour [it was in January], and afraid of the night air; but I have a horror of the least suspicion of foul play, so I dressed and went again to the House, settled the matter about the pairs, and came back at near 12 o'clock."

It is such men as these who not only "command the applause of listening senates," but who may proudly "read their history in a nation's eyes."

In speaking of this devotion to duty as an excellence of English character, let it not be supposed that I would imply it to be *peculiar* to the English; but with what kind of emotion does an American read on another of Mr. Stephen's pages *this* passage, which, perhaps, I may also be allowed to quote?

"Fawcett frequently remarked to me [while Postmaster-General] upon the high standard of honor in the public service, observing that officials in receipt of moderate salaries had often to decide upon questions, such as mail contracts, involving large sums of money, and that there was never the slightest suspicion of their turning their opportunities to private profit."

* *

SLEET OR HAIL.

To the Editor of The Nation:

Sir: It is curious to note that there is a wonderful lack of uniformity as to what is understood by the term "sleet." If you merely announce that "it is sleeting," and refer to an ordinary Physics or Physical Geography to see what sort of information you have really given, you will no doubt be astonished, if not amused, to learn that no less than six varieties of phenomena are described by Geikie, Maury, Steele, Webster, and the leading encyclopædias.

Now, in Maryland—at least in this section—it is only "sleet" when the rain has frozen on the ground. Further south, "it sleets" when fine particles of ice (frozen rain) pepper one on the upturned face. Indeed, a professor in a university of note has told me, "Sleet is frozen rain; hail is an aggregation of sleet-drops—*i. e.*, is always compound."

Since I am convinced that there is no little confusion in the ordinary understanding of the terms, I have thought to call forth some really reliable information through these most discriminating and satisfactory columns.

G. F. Yonce.

Lutherville, Md.

STENOLOGY (?).

To the Editor of The Nation:

Sir: Does man possess an instinctive language—not the Babel of the thousand and one tongues that divide human intercourse, but the defined form of sound of natural intuition? Has not the bee, the ant, its own language by which the common interests of the community are directed; the brute creation instinctive sounds, by which ideas are communicated? The bird also—for instance, the nightingale—has it not a language? The beautiful songster sends forth its notes without hesitation, no mistake is made, the phrase is decided on before utterance, the words conveyed to his fellow companions, to us unintelligible, though a most enchanting symphony of sound. Has man, then, no inborn language, revealed perhaps in part and dispersed in the language of the world, to be further evoluted as the human mind is developed?

This question has been suggested under the following circumstances. At the moment between waking and sleeping an imaginary conversation frequently crosses the field of the mind. It is then, occasionally, that a few syllables appear to me to express the exact idea intended to be conveyed. On waking, the words have no apparent meaning, although so precisely adapted at the moment of expression. This ideal phraseology has been repeated, at intervals, for years past, perhaps on fifty different occasions, the words differing each time. No record has been kept, as until now the writer has paid no attention to the question. The idea has suggested itself of the possible existence of an innate language. So far as memory carries me, the words, in general, were short, and the letter *a* was pronounced as in the Italian language.—Yours truly, F.C.

Notes.

J. B. Lippincott Co. have in press a new translation from the German by Mrs. A. L. Wister, 'Violetta'; a new novel by George Thomas Dowling, 'The Wreckers: a Social Study'; and 'The Story of Don Miff as told by his friend John Bouche Whacker: a Symphony of Life, edited by Virginius Dabney.' This last, a subscription book (the author's address being No. 108 West Forty-ninth Street, New York), is an attempt "to portray life in the South in the old days," at first in peace time in Richmond and the lower tide-water region of Virginia; afterwards, during the rebellion, in "The Valley."

A Hancock Monograph, with a steel portrait of the late General, will be published immediately by G. P. Putnam's Sons. They have also nearly ready 'A Study of Dante,' by Susan E. Blow; 'Essays on Finance, Wages, and Trade,' by Robert Giffen, President of the British Statistical Society; the 'Physics and Metaphysics of Money,' with special regard to California, by Rodmond Gibbons; and 'Torpedoes for National Defence,' by Lieut. William H. Jaques, U. S. A.

Another reconciliation of science and theology will be attempted in 'Reason and Revelation, Hand in Hand,' by Rev. Thomas M. McWhinney, D.D., of which Fords, Howard & Hulbert are the publishers.

'The Prelate,' a story of the American colony and native society in Rome, by Isaac Henderson; 'The Sphinx's Children: and Other People's,' by Rose Terry Cooke; and 'A Stroll with Keats,' by Frances Clifford Brown, illustrated, are about to be issued by Ticknor & Co.

A missionary work is announced to be 'Triumphant Democracy,' by Andrew Carnegie, now in the press of Charles Scribner's Sons.

Ginn & Co. announce for May 1 'Our Government,' a text-book, by J. Macy, Professor of History and Political Science in Iowa College.

D. C. Heath & Co. announce 'A Short Manual of Chemical Arithmetic,' by J. Milnor Coit, of St. Paul's School, Concord, N. H.

A 'History of the Storrs Family,' compiled by the late Charles Storrs, of Brooklyn, is promised immediately by A. S. Barnes & Co.

'In Aid of Faith' is the title selected for a series of articles, by the Rev. Lyman Abbott, that appeared in the *Christian Union* last year under a slightly different caption. They have been revised for republication in book form by E. P. Dutton & Co.

Whittier's new volume of verse, which Houghton, Mifflin & Co. have nearly ready, is to be entitled, 'St. Gregory's Guest, and Other Poems.'

The same publishers have just added to their dainty little Riverside Aldine Series Warner's 'Back-Log Studies'; and have likewise produced

a new edition of the late Richard Grant White's 'Words and Their Uses.'

A translation, by A. L. Alger, of the third edition of Reissmann's 'Life and Works of Robert Schumann' has just been added to the Bohn Library (Scribner & Welford). Reissmann is one of the most prolific and best informed of modern writers on musical topics. Besides editing a musical dictionary of his own and the last five volumes of Mendel's great work, he has written numerous theoretical works, biographies of Mendelssohn, Schubert, Haydn, Bach, etc. His style is somewhat diffuse, and his generalizations are occasionally too vague, but his facts are reliable, his inferences usually correct, and his opinions unbiassed. His 'Schumann' is perhaps the best of his biographical works; and as the world is only beginning to realize what inexhaustible treasures of beautiful music are stored up in Schumann's scores, this biography ought to have a wide circle of readers. Especially to be commended is the chapter on Schumann's *Lieder*, or songs, a department of music too much neglected in this country. The translation reads smoothly, and appears to be free from errors.

H. C. Banister's 'Handbook of Music,' of which twelve editions have appeared in England, was well worth reprinting in this country (Henry Holt & Co.). It covers the whole range of musical theory, beginning with notation and the scales, and explaining the chords, counterpoint, fugue, the elements of composition, etc. The various instruments are also briefly explained, and there is a glossary of musical terms, and numerous examples for practice. While avoiding anything that seems revolutionary, the writer believes in the enlargement of the basis of contrapuntal study, in conformity with the wider range of harmonies now recognized; and he does not sanction the rigid exclusion of the chord of the 7th and its inversions. The book was primarily intended for the use of students preparing for examinations; but it would make an excellent textbook in music schools, while the definitions are sufficiently clear to make it of value to private students. There are, of course, numerous illustrations in musical type.

Professor Lewis Campbell, of the University of St. Andrews, and Mr. Evelyn Abbott, of Balliol College, Oxford, have by their joint labors added to the "Clarendon Press Series" an edition of all the extant tragedies of Sophocles, "for the use of schools," in two beautiful 12mo volumes. In 1879-81 Professor Campbe l published a very elaborate and complete edition of Sophocles, also at the Clarendon Press, containing almost everything that the advanced scholar would like to know, and the knowledge of which is attainable, in regard to the great Greek dramatist. The present edition is founded upon the larger one, with such omissions, additions, and alterations as were necessary to render it more suitable for use as a text-book. The first volume contains the general introduction and the Greek text; the second, the commentary and indexes. Among the points of interest in the general introduction is a list of the titles, so far as they have been preserved, of the dramas of Sophocles. This list contains the titles of 115 dramas, all but 7 of which have perished with the exception of here and there a few lines or words quoted by other writers. For this wholesale destruction it is some consolation that we are justified in believing that the seven tragedies which time has spared are the masterpieces of Sophocles's genius. There is also a list of about 350 words "peculiar to Sophocles, or copied by later writers only." The metres of the dramas are very minutely treated, and the account of the MSS. from which our texts are made up is very interesting. It will perhaps surprise some of those who are unacquainted with the sources whence our texts of the Greek authors are drawn, to learn that between the date of the death of Sophocles and the date of the MS. which is at once the oldest and the best that we possess, a period of about fifteen centuries intervenes. The commentary is very full, and the "introductory analyses" to the plays are of such extent, and are evidently written with so much care and with such subtle appreciativeness, that they might with almost equal fitness be collectively entitled "Essays on the treatment and development of the plots and characters in tragedies of Sophocles." It may not be out of place to remind our readers that Professor Campbell was the schoolfellow, life-long friend, and biographer of James Clerk Maxwell.

The petition of Prudence Crandall (Mrs. Philleo) to the Connecticut Legislature for redress for injuries done to her estate in Canterbury in 1833-35 has revived the history of her *cause célèbre*. The pulpit (very properly, having some amends to make in the matter) has taken it up, and there lies before us a thin pamphlet discourse, 'Connecticut's Canterbury Tale, and its Moral for To-day,' by John C. Kimball, Pastor of Unity Church, Hartford. It is embellished with the early and the late portrait of the heroine already made widely familiar in the *Century Magazine* and in the Life of Garrison. The preacher is in error in making Miss Crandall a native of New Hampshire. She was born in Rhode Island.

Mr. S. S. Rider, in his last *Book-Notes* (Providence, March 13), gathers together some indications concerning the life of the wife of Roger Williams, whose maiden name is doubtful, as is the time of her arrival in Providence and also the date of her death.

An Audubon Society has been formed to protect wild birds from destruction for millinery and commercial purposes. Its headquarters are at 40 Park Row, New York.

The Sea-Side Laboratory at Annisquam, Mass., will be reopened to students during the coming season, by the aid of the Women's Education Association and under the direction of the Boston Society of Natural History. Address the Curator, Mr. Alpheus Hyatt.

We chronicle with pleasure the beginning of a new undertaking of value to our scholarly readers: *Wiener Beiträge zur Deutschen und Englischen Philologie* (Vienna, Braumüller). The editors are Heinzel, Minor, Schipper—names whose *imprimatur* is a sufficient guarantee to the initiated. In make-up and scope the *Beiträge* are evidently intended to rival the well-known Strassburg *Quellen und Forschungen*. The initial volume has just reached us: 'Sir Thomas Wyatt und seine Stellung in der Entwickelungsgeschichte der Englischen Literatur und Verskunst,' by Rudolph Alscher. The author is a pupil of Schipper's, and his pamphlet of 143 pp. is the expansion and rewriting of his work in Schipper's *Seminar*. It treats of Wyatt's life, works, and metres. Those of us who are already familiar with Schipper's thorough method will recognize in the débutant a worthy pupil. The series opens well, and we wish it a long prosperity.

—The second number of the *New Princeton Review* opens with an article on the poet Gray, by Mr. Lowell. It is sufficient of itself to make the number a success. The rubbish that is talked about the eighteenth century by men who know nothing about it, has now become so oppressively wearisome that the intelligent reader experiences a sense of peculiar gratification when he comes across an article even which has little to recommend it, save the fact that it is free from the conventional cant that finds constant expression about this period. In this case, however, we have exhibited, in addition, the most thorough appreciation of it, both as regards its strength and weakness. Into the nature of Gray's genius and the characteristics both of his prose and poetic style, Mr. Lowell seems to us to show far keener insight than has been displayed by any of that author's numerous critics, though the list of these includes some of the most eminent names in later English literature. We are disposed to say the same thing of the treatment of the poet's personal qualities and habits of mind. About the facts stated, were we to give utterance to any dissent, it would be merely that "courteously friendly" hardly seems a strong enough expression for the relations existing between Walpole and Gray after their reconciliation. On the part of the former, in spite of occasional slight criticism, it is surely not strong enough. Incidentally, the opening pages of this essay give, in a short space, the most felicitous criticism, felicitously expressed, of Dryden that we remember to have seen in our literature. But the whole article, from beginning to end, is full of striking and suggestive passages. Mr. Lowell furnishes from that most delightful of epistolary correspondence (the letters of Gray) a number of entertaining extracts; but it would be no difficult matter to pick from his own article a number of short sentences that would fully parallel them in their wit and wisdom. We trust that this essay is but the beginning of a series. Certainly if anything would justify the English-speaking race in rejoicing that Mr. Lowell had been withdrawn from the field of diplomacy, it would be that he had entered upon the field of literary criticism. There he has no living superior, and the periodical is to be congratulated which can secure his services.

—One of the first fruits of Boston's attempt to organize her charities may be seen in the somewhat surprising little book called 'A Directory of the Charitable and Beneficent Organizations of Boston, together with Legal Suggestions, etc., prepared for the Associated Charities' (Cupples, Upham & Co.). Index and all make less than 200 pages, but recall Sir Walter Scott's story of the man who found in the dictionary "braw stories but unco' short." The Preface, which is really an excellent key to the contents, says that the book contains a good deal besides descriptions of charitable societies. For instance, Vacation Schools, the Hemenway Industrial Schools, and others, Training Schools for Nurses, and Mrs. Shaw's Kindergartens now appear for the first time in the new light which has gleamed upon that much abused word, "charity." The book, too, proves to be a record of the development of ideas and the advancement of the uneducated. Hints toward reform in public institutions are discernible: such as the removal of pauper girls from a criminal institution, and improvement in the boarding-out system, and separation of young offenders from hardened wrong-doers. Manual training in schools is recorded, and the clues given for its increase. Nor is the Public Library omitted, with its branches spreading out into the poorer and outlying districts. We have space only to refer to two other points of special interest, one of which is the little library connected with the central office of the Associated Charities, where any one may consult books bearing upon almost every branch of the large subject of political economy; the other is that portion of the book devoted to "Legal Suggestions." Here we find, in a perfectly accessible form, the statutes relating to the many forms of abuse which persons interested in the unfortunate of the earth are chiefly brought in contact with. Looking at these closely printed pages, and remembering that Boston is a city of only about 400,000 inhabitants, a stranger to the subject might ask, Is it a city entirely of the poor that so much help is needed? The reply must be: "No,

it is a rich city which has been ignorant and unmindful of the true needs of the poor until a nation of paupers has grown up about it." But Boston is not exceptional in this respect, though this book shows it capable of setting a useful example in rectification of past errors.

—The census of Wisconsin for the year 1885, published by State authority, has just appeared. An unexpected blunder is prominent in this work, namely, respecting the area of Wisconsin, which the Secretary of State, the responsible editor, states to be 34,359,246 acres—that is, 53,686 square miles. The true area, according to the United States Census returns (vol. i, p. 668), is 54,450 miles, which is 764 miles more than Wisconsin claims. This mistake may well be called "unexpected," because it is a statistical blunder unfavorable to those who make it. It gives up a tract three-fourths as large as Rhode Island, and shows the acreage of Wisconsin as less than that of Florida, which is really a smaller State. Such errors usually lean to the advantage of those who commit them. Thus Governor Ireland, in a spread-eagle paper on Texas (a disguised immigration pamphlet), in the December number of the *North American Review*, says that State "has an area of 274,000 square miles, which is larger than the half of Europe, omitting Russia." Here is a two-fold misstatement, and that throughout in favor of Texas. Governor Ireland's domain, according to our supreme authority, falls short of 274,000 miles by almost 12,000 miles (11,710)—an extent greater than that of Maryland. Again, instead of being larger than half of non-Russian Europe, Texas, even according to Governor Ireland's overestimate, is not one-third so spacious as that moiety, which is well-nigh 1,700,000 square miles. But to return to Wisconsin. The population, according to the State Census of 1885, amounts to 1,563,423, showing a gain of almost 19 per cent. upon the United States returns for 1880. This vast gain in the last five years may be viewed with suspicion by those who note that in the previous five years, from 1875 to 1880, the increase was only one-third as much, or about 6 1-3 per cent. At all events, as the growth in the last decade was largely in the first half of it, we may fairly infer that history will here repeat itself in slow growth for five years to come. But, taken for all in all, the Wisconsin statistics seem to have been scrupulously gathered and dexterously bound up in sheaves for the garner. As to the increment of 326,696 souls within the last quinquennium, it is noticeable that most of it has taken place in the north. Well-nigh half the growth has been in twelve of the sixty-seven counties, only one of which twelve is in the south; and the growth in that one is due to gravitation to urban life in Milwaukee. In three southern counties the numbers have actually fallen off. There are nine towns in the State of over 10,000 inhabitants; six of these are in the north. More than one-fourth of the entire populational advance is credited to immigration from foreign lands, chiefly Germany and Scandinavia. Hence the percentage of foreigners is now larger than in 1880, though it does not to-day amount to a third of all the inhabitants. In exact figures it stands 493,996 to 1,069,533 natives. But foreign immigrants from beyond the sea are largely men, and those in their best years. Hence one census result otherwise incredible is nothing strange, namely, that in 1880 the foreign-born voters in Wisconsin outnumbered the native-born by 40,000 (40,006). This disproportion is now still more enormous. But the foreign element is nowhere concentrated in large masses. It leaves no corner of the State untouched, and yet forms the majority in no single county. It everywhere prefers the English language. German churches abound, but German preachers find it necessary to abandon their vernacular in at least half their services. If they do not, they are straightway themselves abandoned by their young people. Those who are heretical on monometallism are orthodox on monolingual speech.

—The acreage of Wisconsin, even according to its own underestimate, exceeds that of England by more than two millions. Their actual proportions are—England, 32,590,897 acres, to 34,848,000 in Wisconsin. The farm lands in the State foot up sixteen and one-third millions, and of these not quite one-half are improved; three and two-thirds millions are farm woodland, while the lumber region—pine and hard wood—covers full half the State. Most of this land, when cleared, will be suitable for agricultural purposes. In regard to agricultural and manufacturing products, there is no statement for what year the returns are made. But the year 1884 must be meant. A few leading staples are: corn, thirty-eight millions of bushels; wheat, twenty-one; oats, forty-three; barley, eleven and a half. The tobacco crop (three-fourths of it in two counties) was valued at three millions, and manufactures of it at as much more; cheese also three millions, and butter twice as much. The horses were more than 400,000, or about one to every four inhabitants; hogs three to every horse, and nearly as many slaughtered within the year; cattle and sheep, each about one to each inhabitant. Farms and their products were estimated worth considerably less than six hundred millions, while factories and their output are almost one-third of that sum. The assessed value of town lots being over a hundred millions, the whole visible wealth is set down as eight hundred and seventy millions. The lumber crop was reckoned at twenty-seven millions of dollars, and that of beer at a third as much. With establishments turning out nine millions of beer annually, and with forty thousand and more majority of foreign voters, the prospect for prohibitory temperance legislation seems faint. A peculiar feature in the Wisconsin census is an enumeration of all the ex-soldiers and sailors who served during the late civil war and are now resident in the State. The number of these returned is almost thirty thousand (29,686). Some of them were discovered in each of all the sixty-seven counties. An appendix of 387 pages contains the names of all these veterans, with the postal address of each, also his rank, company, and regiment, and the name of the State or force in which each man was mustered. This is a roll of honor well worth preserving by the art preservative of all arts, and, owing to the polyglot character of Wisconsin citizens, the list furnishes such a mine for studies in patronomatology as cannot be easily paralleled.

—The second number of *Les Lettres et les Arts* (Paris: Bussod, Valadon et Cie.; Boston: C. Schoenhof) has appeared. Like its predecessor for January, this number shows the delicacy of the directing spirit of its editor, M. Anatole France. In lingering over its luxurious pages we feel that its writers have submitted to the influence of the *milieu* or of the editor or of both. There is in most of the articles a charming grace and lightness of touch to which their authors have not always accustomed us elsewhere, and, as it were, a subordination of the aggressive personality of each to the artistic harmony of the whole. Among these authors are the names of three Academicians, MM. Alexandre Dumas, François Coppée, and Maxime Du Camp, but the most attractive articles are by less famous men. M. Maurice Barrès, in his "Notes sur Paul Bourget," shows a power of appreciation and of critical insight, and a moderation and sobriety in the expression of his ardent admiration, that give a literary as well as a critical value to this essay, the most serious one in the number. It is accompanied and illustrated by a striking portrait of M. Paul Bourget, a face which will probably be a surprise to most of his readers, but, in the end, a most satisfying representation both to the eye and to the mind. A graceful and lively paper by a writer who is generally neither gay nor brilliant, M. Louis Ganderax, the serious theatrical critic of the *Revue des Deux Mondes*, is entitled "À propos d'une aquarelle de Madame Madeleine Lemaire." The aquarelle is reproduced in a beautiful full-page illustration, and represents the comédienne, Mlle. Réjane, *en pierrot noir*. There is much delightful talk about the actress, given in a very charming way, and without a touch of that flippancy which in such writing so often takes the place of wit. M. Fernand Calmettes writes about what, when the present number was issued, was the approaching "Exposition des Aquarellistes." The paper is profusely illustrated with reproductions of the water colors exhibited, in the delicate tints and with the indescribable touches which convey so well the impression of the originals. The accompanying article is most attractively written, and is always as far as possible from recalling the diluted catalogue which such things usually are. Among the many beautiful aquarelles of the Exposition here reproduced, none is more charming than M. Guillaume Dubufe's "Illustration d'andante," which surrounds and blends into the music of Gounod's "Andante d'un quatuor," making in every way the two most exquisite pages of the book. The number opens with a very strange article by Alexandre Dumas, entitled "Une Volée de Paradoxes," and closes with the usual literary and theatrical notices, all in keeping with the general excellence of the *revue*. As an added luxury for the reader, a delicately ornamented movable cover of levant morocco is furnished to yearly subscribers, serving to enclose and protect the current number while in use.

—In the *Bibliothèque Universelle* of Geneva for January, Alphonse de Candolle gives an interesting abstract of Alexander Graham Bell's memoir, published by the National Academy of Sciences at Washington, on the production by selection in the United States of a race of deaf mutes—a publication which has naturally excited the particular attention of those who affect scientific studies in their relation to social well-being. De Candolle objects to the term *congenital* deafness, because the sense of hearing, as he thinks, is never manifested until some time after birth, and he is confident that most cases of infantile deafness are brought on by imprudent exposure of the new-born to cold. Under this view, he refers to the early baptism by immersion in the Russian Church as a most dangerous custom. He might also have instanced the very early baptisms in chilly churches of the Latin communion. As to correctives, he insists, with Bell, upon the exclusive adoption of the method of articulation. But he adds that the English language is one of the least favorable to this mode of teaching, being the one in which the vowels are the most indistinct and inarticulated, and in which the movements of the lips, so marked in French and still more in Italian, are largely replaced by accentuation or intonation, of which there is no outward visible sign. A distinguished deaf-mute acquaintance of his, who could read French and German discourse from the lips with almost complete facility, remarked that he probably might do the same with English if he could look into the throat, but not otherwise. We know in this country a fairly similar instance. Mr. Bell's suggestion for suppressing the nascent race of deaf mutes by prohibiting their intermarriage, De Candolle would extend to the marriage of all

cousins-german; for he is convinced that consanguineous unions tend to propagate and develop other maladies and defects as well as the one in question. Moreover, he is of the opinion that the United States, of all countries, is the one in which such marriages may be most readily restrained by legal enactment, because its citizens are less dominated than in Europe by ideas of personal independence! To continue in his own words: "Nous voyons en effet les Américains fermer les yeux sur la liberté personelle quand il s'agit des Chinois, des buveurs d'eau-de-vie ou des Mormons, tandis que les Anglais et les Hollandais ne s'inquiètent dans leurs colonies ni des Célestes, ni des ivrognes, ni des millions de sujets polygames."

—German authors are perpetually airing their grievances, and insisting that respect be paid them, not as individuals, but in their professional capacity. They have two organs for their complaints, one of which, the *Deutsche Schriftsteller-Zeitung*, edited by Joseph Kürschner, who is laughed at by many of his contemporaries as a jack-at-all-trades, but who, even they have to admit, is successful, if not good, at all, appears to care for no readers except the authors themselves. The other is the *Magazin für die Litteratur*, which appeals to a wider public. We have previously quoted from this journal respecting the injury to the profession caused by circulating-libraries and the like—complaints which seemed to us absurd, not to say childish; hence we are the more pleased with an article in a late number by Carlos von Gagern, a writer who died the other day, after having seen a remarkably great deal of the world. He writes with a degree of common sense which, under the circumstances, is as surprising as it is refreshing. The profession of authorship, he remarks, is not, as is often asserted, a new or young profession; it is not a profession at all; it has never existed as such An author is something one must become, not by study or conscious intention, but, so to say, by accident. Moreover, authors are nearly always something else, and define themselves accordingly. Hence Von Gagern objects to the name "Authors' Union" for the society of German authors, and, more strongly, to the proposed fund for the relief of indigent members of that body, arguing that authors should provide for the results of illness or other misfortunes, like common folk, by means of the ordinary life-insurance companies. Another point in favor of his view, which he does not mention, but which seems to us important, is the extraordinary number of writers for the literary press in Germany, which, taken in connection with the extremely low scale of payment of all except popular novelists, indicates that authorship is there pursued for subjective rather than objective results. Writing appears to be as common as, say, piano playing, and its chief object to please the ear of the performer.

RECENT FICTION.

Valentino. By William Waldorf Astor. Charles Scribner's Sons.

Domesticus. By William Allen Butler. Charles Scribner's Sons.

A Conventional Bohemian. By Edmund Pendleton. D. Appleton & Co.

The Knave of Hearts. By Robert Grant. Boston: Ticknor & Co.

John Maidment. By Julian Sturgis. D. Appleton & Co.

Bonnyborough. By Mrs. A. D. T. Whitney. Boston: Houghton, Mifflin & Co.

High-lights. Houghton, Mifflin & Co.

'VALENTINO' is described on the title-page as a romance. The author has misapprehended the meaning of the word. Romance, when written, implies the presence of imagination, and, though not in the same degree as a novel, of design developed coherently and with smooth consecutiveness. 'Valentino' is an assemblage of facts, creating no illusion by their arrangement and treatment, forming no picture to the mind, conveying no definite impression either of the meaning and effect of the incidents or of the character of the people engaged in the action. The failure of the author to produce a romance may be ascribed, perhaps, to a fundamental misconception of the kind of historical material from which a romance can possibly be produced. Rienzi may have been a charlatan, a demagogue, a *poseur*. He may have stirred the people by artful appeals to their vanity only, to the shadowy memory of Rome's past grandeur, cleverly ignoring their long and shameful supineness, sloth, and corruption. But he was essentially human, that is, his conspicuous characteristics were not of one nation, nor of one period, but of all time. Therefore his enthusiasms, his passions, and his failures afforded splendid food for the imagination of a man of another nationality and a later civilization. Cæsar Borgia, *il duca Valentinos*, Valentino, was the most profligate, depraved, and inhuman of a race and a period to which these attributes were peculiarly common. By the philosophical historian his character may be used as a typification of the political tendencies and methods of his age in England, France, and Spain, as well as in Italy. The manufacturer of the "penny-dreadful" may work him up with great success and profit. But the author of 'Valentino,' making no pretension to either of these functions, has simply gathered into a book his most striking adventures in war, with a slight recognition of his and his father's adventures in love. He has not only failed to invest the Borgias with an atmosphere of romance, but he has hurled a lance at those who have previously attempted it, an attempt splendidly successful because altogether of the "penny-dreadful" kind. His vindication of Lucretia does not, however, excite the hostility of a surprise. Most of us have already become reconciled to the loss of our old-time horror of her atrocities, letting it go along with our faith in William Tell's archery and "the sword that scarce an archangel could wield."

If Mr. Butler's 'Domesticus' is not literature, it has at least the air. It is an allegorical tale of New York, having for its direct motive the discussion and solution of the household-service difficulty. The composition is admirably correct, and the allegorical idea and style are sustained throughout to the most trifling forms of speech and descriptive phrase and word. Addison's style was marvellously correct and consistent, and the *Spectator* is literature. An analysis of almost any one of Lamb's essays will reveal erratic thought and pleasant little irregularities of grammar and construction. Yet these essays are better examples of pure literature than the *Spectator*. The lovable essayist was gloriously free from the moral nightmares which haunted Addison, infecting even his lightest work. Therefore it appears that though correctness and consistency of style may be important elements in the production of literature, they are not essential, while a too obvious moral intention is a hindrance to its perfection. Mr. Butler's desire to set people right about problems political and social as well as domestic, crops up everywhere, seriously impairing the beauty and interest of his work, and, in consequence, the enjoyment of the reader. The final picture of a whole family radiating the most advanced and ever progressing virtue is more apt to excite harmless mirth than recognition of our own wicked ways and resolution to mend them. Still, 'Domesticus' has claims upon our regard and admiration beyond those qualities of style to which we have referred. There are passages of quite poetical beauty, touches of lively satire, and vigorous opinions, notably on the theme "Domesticus Africanus," couched in language passionate without vehemence, genial without hypocrisy. Moreover, the author's manifest pleasure in narrating the ups and downs of his just and discreetly merciful "Little Lady" is infectious, if not to the point of compelling us to finish them at a sitting, at least enough to induce us to return to them again and again.

'A Conventional Bohemian' is also a first venture in fiction, and, no more than 'Valentino' or 'Domesticus,' bears the Grub Street stamp. It is a society novel, but the average society novel is many things which it is not. It is not a handbook of etiquette, nor a genealogical history of first families, nor would it find its real sphere of usefulness in the apartment of a lady who designs "robes et manteaux." It is a society novel because it has to do with those whose chief business is to "chase the glowing hours with flying feet," and whose consciousness is their Waterloo. Something of Mr. Butler's pleasure in his work is here discoverable, and the author's desire to say his say about the passions, emotions, follies, and foibles of a circumscribed portion of humanity not infrequently obscures his perception of the relation between character and opinion. But there is nothing quaint or allegorical in the method or style. It is all very direct and modern. It is as modern as the telephone and the mugwump and the dude. The only suggestion of the antique is in the leading lady. She, we are bluntly told, is introduced at the advanced age of thirty. On reflection, however, the selection of so mature a person for an important rôle appears to us as the most modern feature. It may be hailed as a blessed audacity, a sign that the European mind is about to be relieved from its distress about the prominence of the young girl in American life and fiction. Besides, the old girl has long suffered the neglect or contempt of novelists She is between the *jeune fille* and the old maid. She never had the ingenuousness of the one; she never can have the inflexibility of the other. The moral severity common to both is impossible to her. If she had married young, she would still be "young Mrs. So-and-so." If she ever does marry, she is virtually the old girl still. So the old girl whom the conventional Bohemian, Villars, takes to illumine the domestic hearth, remains the reckless, whimsical, unscrupulous Angèle Wentworth. He realized, too late, that perhaps the only situation in life where the old girl cannot rally her forces and shine is by the domestic hearth. There is no good in trying to depict the old girl as a lovable person in life, or a person who, in fiction, can attract the sympathies of right-minded people. The author has not tried so to depict Angèle Wentworth. He has treated her without sentiment, and, indeed, throughout the book there is no vestige of sentimental consideration for popular notions about what is proper and beautiful in the characters of a novel. Except in the glibness of their talk, none of the people are literary figures. They are real. Angèle suffers most from an excessive flow of language, but all are infected with the malady. The quantity of frequently irrelevant talk weakens a really strong emotional drama and wearies the reader, not with its dulness, but its persistent, abnormal sparkle. It is in a way unnatural, too, if we insist that a novelist shall reproduce life, and not eliminate from among summer loungers the numbers of the dull and the commonplace. The movement is still further impeded by the author's lengthy analyses, explanations, and criticisms.

The bold, reckless nature of Angèle, with its substratum of passion and superstructure of

cruel selfishness, the irresolution of Villars, always marring his best and more deeply degrading his worst; the calm perfection of Constance—all are made sufficiently evident by the behavior of the several individuals in both ordinary and exceptional circumstances. Even if they are not completely understood, it is more satisfactory to the reader to make his own interpretation, and better art in the author not to be prodigal of labels. But, on the whole, the novel is clever and entertaining. It is so singularly free from cant that it may be considered immoral by the multitude who still confound freedom from cant and hypocrisy with immorality. The faults are mostly technical. The author's range of thought, and perhaps of sympathy, has been limited by his horizon of observation; but, as far as the thought and the sympathy go, they are clear and warm. In the balance of judgment, the courage of opinion, the passion and conviction of some chapters, lies the promise of work of wider scope and more catholic application.

There is a frivolity that exhilarates and a frivolity that depresses more profoundly than meditations among the tombs. Of the first description the frivolity of 'The Knave of Hearts' is not. Undoubtedly the author meant to write an airy, pungent satire about the goings-on of the harmless Don Juan who roams the rocks at Mount Desert and leads every notable german the Continent over. Playful satire is a treacherous weapon, and the author is not the first whom it has discredited in the attempt to wield it. The situations in this production are a series of drawings from *Life*, without their occasional quick humor of idea and their clever execution. If anything can be more incomprehensible than the writing and publishing of such inanity, it is the author's reason for giving it an old-time flavor by the use and abuse of Latinisms; by such phrases as "in sooth," "of yore"; and by wording a letter, presumably written in 1823, in an approximation to the English of 1382. The style suggests that the author has looked over 'Rasselas' for his words; and, lest he should have overlooked Imlac's description of a mental state which seems to us to be that of the man who can perpetrate such a book as 'The Knave of Hearts,' we will quote it. It is that condition of "mere privation by which nothing can be produced; it is a vacuity in which the soul sits motionless and torpid for want of attraction."

Julian Sturgis's 'John Maidment,' judged by an absolute standard, is good; by comparison with most of modern fiction, it is great. It is an admirable piece of work, strong, dignified, calm—such work as becomes a man. It shows the author's power to pierce the heart, and his mastery of a fine method for exposing the core of things to a more obtuse world. Maidment of Balliol, the finest speaker that Oxford had heard during generations, is introduced in the flush of his youth and the glory of his last and greatest speech in the debating room of Oxford Union. Very soon we perceive that the splendid young theoretical avenger of injustice is going to damn himself out of his own mouth, by his own deeds, and yet remain unconscious as a baby of his innate baseness. We all have met his like and suspected him; yet so impressive is his exalted estimate of himself that a modest man will doubt his own intuition, question the correctness of his observation, often stifle his conviction through very shame of having criticised such glowing unselfishness and uprightness. He is a much more complicated and dangerous individual than the conscious hypocrite trading on credulity. When invested with Maidment's intellectual brilliancy and personal charm, he is more harmful than a pestilence. Mr. Sturgis has not permitted Maidment to save himself by any moral grace. His work is artistically complete. He has approached it scientifically, and its completeness helps to prove that a good artistic creation implies the mastery of a scientific method. The finish of the minor characters is an essential part of the completeness. Though the author leaves Maidment still on the threshold of life, his task is quite finished. We know him thoroughly, and the record of a thousand defeats or triumphs could not add a grain to the fulness of our knowledge.

It is late in the day to comment upon the high spiritual flights and excursions into New England kitchens which are the principal elements of Mrs. Whitney's stories. The argument of 'Bonnyborough' is, that destiny hinges on one's baptismal name. And why should not a name be a power? the author questions. "It is given us solemnly, in the very moment that we are baptized into the name of the Lord. And the name of the Lord is his own revelation." To those who have taken a course of Mrs. Whitney, the statement of the argument carries conviction; others need only read 'Bonnyborough' to feel that if elaborate demonstration is proof, the hypothesis is proved irrefutably. If Peace-Polly and Doctor Comfort had been named respectively Jane and Thomas, they would certainly not have had the chance to quote Isaiah profusely in the moment of acknowledgment of their mutual passion, and it is just possible that an almost literal transcription of the Episcopal marriage service might never have adorned the last pages of a novel.

'High-lights,' which is said to be the work of Mrs. Whitney's daughter, is quite as pious as 'Bonnyborough' and much more intelligible. It is rather a pretty idyl, narrating how a neat-handed Phyllis, of rare domestic and intellectual accomplishments, ensnared the heart of a wandering knight of the pen and brush. It is very nice to know that intellectual giants on a holiday become as babes. The melancholy *Jaques* doing *Silvius* unbeknown would not offer a more refreshing spectacle. The sophisticated intelligence has some difficulty in accepting the probability of such transformation, but to the author of 'High-lights' it is evidently as natural, easy, and positive a process as breathing.

Ecclesiastical Institutions: being Part VI. of the Principles of Sociology. By Herbert Spencer. D. Appleton & Co. 1886.

Mr. Spencer's philosophy of religion starts from the premise—which most theologians will of course deny—that man has no innate religious ideas. Religious belief is a purely natural growth, the course of which can be traced from its germ in the mind of the savage to its latest stages as exhibited in the creed or scepticism of civilized man. He is even able to take a step beyond this, and indicate the probable future of religion.

All religion, then, Mr. Spencer traces back to the belief in ghosts. It is the fancy of a double existence which suggests the notion of agencies transcending experience. The other self supposed by primitive mankind to wander in dreams, the double which is imagined to survive at death, "is simply the original man, with some added powers of going about secretly and doing good and evil." These earliest supernatural agents are conceived as having but temporary existences, and they are supposed in the end to die like the natural persons whose representatives they are. Thus, the Unkulunkulu, or Old-Old One of the Zulus, is regarded as absolutely dead, and consequently past praying to. But where circumstances lead to repetition of sacrifices, kept up from generation to generation, there is eventually generated the belief in a permanently existing spirit. These increase in number, and "there is a strengthening tendency to think of them as everywhere around and as causing all unusual occurrences." Ordinary ghosts are propitiated by their descendants, but other spirits are introduced into the pantheon for prudential reasons—*e. g.*, those of dreaded individuals whom it may be desirable to propitiate. There come to be also local gods, good and evil spirits, gods reigning over this or that order of phenomena.

The attributes of these gods are derived entirely from human experiences: they eat, drink, sleep, fight, are wounded, suffer pain, are angry, jealous, or envious, just as men are. With advancing civilization, however, there is a gradual dematerialization and improvement of the idea of deity. The god ceases to be tangible; later he ceases to be visible or audible, his intelligence grows stronger, he is not conceived as making mistakes and repenting; his gross passions, originally among his most admired attributes, gradually fade away, leaving only those which the better part of mankind are inclined to regard with approval. Finally we reach the conception of a single God, of unlimited power and wisdom and benevolence, who does not, however, directly reveal himself to man by manifestations of his power, except under special circumstances and at very rare intervals.

Such having been the history of religion, what is to be its future? As cruelty is one of the human attributes always attributed to God in primitive times, so, through the process of "deanthropomorphization," this must be taken completely away, and consequently all belief in hell and damnation will disappear. So, too, will the notion that the Deity has a "craving for praise," and will be angry if prayers are not offered. But we must go beyond this. "A consciousness constituted of ideas and feelings caused by objects and occurrences cannot be simultaneously occupied with all objects and all occurrences throughout the universe"; consequently, we cannot conceive of God as having emotions, and there are difficulties just as great in conceiving him as having intelligence or will. Thus we shall be compelled to drop "the higher anthropomorphic characters given to the First Cause," as we have long since dropped the lower, and, having attained the conception of a God without any human qualities, we find that "it becomes a consciousness which transcends the forms of distinct thought, though it for ever remains as consciousness."

But now we are brought face to face with a difficulty of a very serious character;

> "How can such a final consciousness of the Unknowable, thus tacitly alleged to be true, be reached by successive modifications of a conception which was utterly untrue? The ghost theory of the savage is baseless. The material double of a dead man in which he believes, never had any existence. And if by gradual dematerialization of this double was produced the conception of the supernatural agent in general; if the conception of a deity formed by the dropping of some human attributes and transfiguration of others resulted from continuance of this process, is not the developed and purified conception, reached by pushing the process to its limit, a fiction also? Surely, if the primitive belief was absolutely false, all derived beliefs must be absolutely false."

Mr. Spencer's answer to this question, he warns his readers, will prove to most of them unexpected. It is that at the outset a germ of truth was contained in the primitive conception—the truth that the power which manifests itself in consciousness is but a differently conditioned form of the power which manifests itself beyond consciousness. To most readers this would seem to point to a refined Pantheism as the future religion of thinking men, but Mr. Spencer is not a Pantheist. He seems to conceive of religious belief as it exists transformed into a kind of en-

lightened wonder at the incomprehensibility of the whole subject; "and this feeling is not likely to be decreased but to be increased by that analysis of knowledge which, while forcing him to Agnosticism, yet continually prompts him to imagine some solution of the great enigma which he knows cannot be solved."

If such is the future of belief, what is to be that of religious observance? Mr. Spencer has an answer for this question also in another chapter. In the first place, "all observance implying the thought of propitiation (*i. e.*, all prayer) may be expected to lapse." On the other hand, the teaching of correct rules as to the conduct of life will become a more and more important branch of the service, while "musical expression" will be given to the feeling which is to supplant the old dogmatic beliefs. An objector might say that there is no evidence of any tendency of this kind at present. In all the churches of our day there is as strong a tendency towards the strengthening of ritual as there is a weakening of dogmatic belief, and the sermon as an instrument of ethical teaching is surely not in its prime, but in its decadence. Music is undoubtedly growing in favor; but it is music connected with the adoration of a not wholly deanthropomorphized God. Mr. Spencer's speculations up to the point of his declared agnosticism we can understand; but granted agnosticism as an accepted creed, we can see no future for religion. Christianity, certainly, was built up by men who believed in its dogmas; the Religion of the Future will have to be built up by means of belief of some kind, or it will be something very different from what men have hitherto called religion. The answer to the difficulty which Mr. Spencer very fairly states is still to be given. If the religions of the past were founded in delusion, and God is the product of delusion, or at any rate of thinking we know something of which we know nothing, why is not religion itself a delusion? What is the "germ of truth" which makes the product of all this delusion the highest truth of all? In fact, what is Truth? But the answer to this question is contained in other portions of Mr. Spencer's philosophy.

Handbuch des Oeffentlichen Rechts der Gegenwart, in Monographien. Herausgegeben von Dr. Heinrich Marquardsen, Professor in Erlangen. *Amerika*, bearbeitet von Dr. H. von Holst. Freiburg i. B.: J. E. B. Mohr. 1885.

MARQUARDSEN'S 'Handbook of Public Law' is a work of encyclopædic character, such as Germany produces in great number and excellence. It is in form a large octavo, and is planned to cover the entire field of contemporary constitutional law. It is divided into half-volumes, the first two of which are of general nature, the next four—vols. ii. and iii.—being devoted to Germany, each of the independent States of Germany, large and small, being the subject of a separate treatise. Of these three volumes vol. ii. is now complete, also the first half of vol. i. and the second half of vol. iii. Vol iv., completing the work, is devoted to the constitutions of other countries. Of this, however, only a very small portion is as yet completed—Austria by Albrich, the United States by Von Holst, and Great Britain (with dependencies) by Marquardsen. The division before us is the third *Abtheilung* of the first *Halbband* of vol. iv., and contains 189 pages.

The laborious and systematic Germans appear to be taking out of the hands of us more superficial Anglo-Saxons the philosophical study of our own Constitutions, and Dr. von Holst promises to do for the United States what Gneist has done for England, and to provide us with a more thorough and complete account of our Constitution and its history than any American has yet found time and courage to undertake. His point of view and method of treatment are more distinctly historical than those of the Berlin professor; the work before us—his systematic treatise—is, as it were, but a trifling diversion from the solid historical work upon which he has been engaged for so many years, and makes a very small show by the side of Gneist's ponderous and exhaustive volumes. Nevertheless it is enough for its purpose. However great, for the purpose of detailed study, may be the value of elaborate treatises on constitutional law, there are few classes of work more dreary and profitless for general readers. The brilliant and accurate generalizations of Bagehot, contained in a small duodecimo, give a more intelligible notion of the English Constitution as a living and working organization than any amount of minute analysis. So with Von Holst's book. It is not at all like Bagehot's in its treatment; but it reminds one of it in this, that it treats our Constitution and Government as active forces rather than as a formal set of rules.

This characteristic of the work is well illustrated by the section upon "the three departments" (p. 38). It has been the fashion of late to undervalue this characteristic feature of the American Constitution. It is easy to see that no such independence of departments as the early disciples of Montesquieu contended for is possible; and—largely under the influence of Bagehot and the theory of the English Constitution—there has been a tendency to consider this independence as one of the weak points, and, in fact, a fatal defect of our system. We turned to this section of Von Holst's treatise with special interest, and were not disappointed in finding a view which appears to us to preserve what is essential in the earlier theory, and to add to it that vitality and practical character in which it had been found deficient. He quotes Pomeroy to the effect that the departments are in no sense independent of one another; and the 'Federalist,' as saying that each has a constitutional control over the others; and then adds:

"Since, by the organization of the Government, each department has received a constitutional control over the two others, it stands to reason that in the exercise of this control there can be no superiority or inferiority [*Ueber- und Unterordnung*]. On the other hand, it is a fundamental principle of constitutional law that the three factors of Government are placed on a complete equality with one another [*vollkommen gleichgeordnet*]. Placed on an equality, but not perhaps possessed of equal powers [*gleichmächtig*]. In this respect the Constitution has set them on an entirely different footing, and the distinction thus made has even been materially enhanced by the actual development of relations."

This leads him to discuss the claims made repeatedly by Congress, and once by the President (Jackson), for a superiority of their respective departments over the others, ending with the profound remark that the department "upon which regularly devolves the final interpretation, has in the first place received the greatest possible stability, and in the next place has been completely withdrawn from any immediate influence upon its composition on the part of the people."

Equally satisfactory is the discussion of the subject of State sovereignty. We have thought, from some expressions in his History, that Professor von Holst leaned over-much in the direction of centralization, and underrated the share of the States as integral parts of the national organism. If we have been right in this suspicion—and we have not been able to find the passages which suggested it—we find no trace of this view in the discussion before us, which recognizes the constitutional rights of the States in the heartiest and completest manner. The discussion in question, which begins on page 23, is a masterly one, and in it the relation of nation and States receives the clearest possible and, as we think, the most correct statement.

The principal part of the work is, as is natural, concerned with the National Constitution and Government. Part iii. (Part i. being introductory) treats of the constitutional law of the States in thirty pages, and of the institutions of self-government in about ten more. These chapters will be found very valuable. The Constitutions of our several States are not easy to study and to compare, though it is from a study and comparison of them that the tendencies of American constitutional law are most easily discovered; for the extreme difficulty—amounting to a practical impossibility—of effecting amendments in our national Constitution has given a great development to what may be called the unwritten Constitution, while in the States, on the other hand, the organic law is so readily and frequently amended that every passing phase of popular opinion finds expression in some Constitutional provision. The sections upon the institutions of self-government touch upon a more familiar subject—thanks to the Johns Hopkins Studies—and here the most valuable part is perhaps that which treats of the cities, the most vulnerable part of our political system. The relation of the towns and counties to one another, and to popular self-government—a subject not well understood even in America—is rather inadequately treated.

There is a good index, but—strange omission—no copy of the Constitution itself.

Suicide dans l'Antiquité et dans les Temps Modernes. Par Gaston Garrisson, docteur en droit, etc., etc. [Librairie nouvelle de droit et de jurisprudence.] Paris: Arthur Rousseau. 1885. 8vo, pp. 280.

THIS serious and to some extent scholarly study of the historical conditions of suicide, of the development of "that malady of humanity," has for its object "the exact definition of the nature and causes of suicide, and the designation of the remedy, if there be one, which should be applied to it." The profound interest which is touched by all such investigations may perhaps give pertinence also to a résumé of the contents of this volume, and to a few comments upon it.

The opening pages are a hasty sketch of the attitude of early times with regard to this form of homicide, in the course of which M. Garrisson speaks of its condemnation by the laws of Moses. But the injunction in the Decalogue, "Thou shalt not kill," is the sole expression in "the laws of Moses" of what has been metamorphosed by the Church into a condemnation of suicide, regardless of the far stronger emphasis to be laid on it in relation to war and capital punishment. There is not in the whole Bible (whatever Shakspere thought was to be found there) any "canon" against "self-slaughter," or any one condemnatory phrase in the many narrations contained in it of suicidal deaths. M. Garrisson again mistakes, in the opposite direction, when, in a later page, he says that the Bible calls the suicide of Razis (II Maccabees) "a noble action," and in thinking, apparently, that it was a voluntary escape from wrong-doing.

After speaking of the condemnation of suicide by "the laws of Moses" and by the Vedas, and later by Mahomet, its permission and more than permission to old persons by the laws of Manu, and as a form of sacrifice by (the followers of) Vishnu, and as release from dishonor in China and Japan, M. Garrisson as hastily touches on the famous suicides of Asia, Africa, Egypt, Carthage, and Greece. He dwells a little on the repressive laws of Athens, Thebes, and Sparta, while mentioning that at Athens suicide was permitted by authority if the Areopagus approved the motives of it; and he refers (without giving

his authority) to the statement of Valerius Maximus that at Marseilles, when a Greek colony, hemlock was prepared at the public expense for those whose desire to hasten their end was approved by the Senate.

He then notes, still hastily, the opposition to suicide of Socrates and Aristotle, and Plato's contrary favorable view of it—in certain determinate cases—a view maintained later by the Stoics, who formulated their principles in the proposition that suicide was permissible in these five cases: 1. Propter magnam necessitatem: great compulsion. 2. Propter pudorem: sense of honor. 3. Propter delirium animi: insanity. 4. Propter insanabilis corporis morbos: incurable bodily disease. 5. Propter paupertatem: poverty. After a few sentences regarding the sects of the Cyrenaics, the Cynics, and the Pyrrhonians, not touching, strangely, on the Epicureans, M. Garrisson enters more at length into the subject as connected with the Romans and Roman law before the Empire and under the emperors, and more especially in the time of Justinian.

The causes which in the Pandects of Justinian were held to render suicide legitimate were eight: 1. Disgust at life (tædium vitæ); 2. Incurable physical suffering; 3. The death of one beloved; 4. The shame of an unpayable debt; 5. Desire for distinction; 6. Insanity; 7. Idiocy; 8. Outraged honor (of women). All other suicides were punishable by the deprivation of funeral rights and the forfeiture of the property of the individual. But it is difficult to see what others were likely to occur; remorse, almost the only suicidal emotion not classifiable under these heads, ranking even now, and still less then, not as a frequent motive. The Roman legislation concerning suicide thus practically declared every free man at liberty to die—every man except soldiers and slaves and those under accusation of crimes, whose self-inflicted deaths were held to infringe public and private rights; to them, consequently, suicide was entirely forbidden.

This assumption—of a man's life being due to others—which only in part pervaded Roman law, became the principal point of view, and all-powerful in Canon law, and from both these sources the modern legislation of all nations has been deeply tinged and influenced, and the public opinion of all peoples. The murder of one's self came long ago to be regarded as akin to the murder of another. It is an illustration how completely similar conceptions are now born in our blood that we find a declaimer of popular beliefs, Edmond About, in his volume entitled 'Le Progrès,' asserting that "gratitude [to the social organization to which we belong] should itself alone forbid it" (suicide), and adding that till the age of twenty-seven (!) a man does not belong to himself in consequence of his indebtedness to society for the benefits bestowed on him.

M. Garrisson passes on from Roman law through Canon law to the Droit Coutumier, exhibiting thus more especially the legal customs of his own land; and so, reaching present times, he turns from the records of legislation to the records of statistics of suicide throughout Europe in late years. It is only too well known that these statistics show a steady increase of this "malady"—M. Garrisson believes the homicide of one's self always to be that. He therefore naturally completes his work of investigation by considering it in its aspects of contagion and inheritance. And after all this research what are his conclusions? In passing judgment on those who kill themselves *en pleine connaissance de cause*, he sets aside all question of the so-to-speak legitimate right of men to suicide, and also of their duty toward God in this matter, and asks merely if we have a moral right to break the ties that connect us with society. He accepts the answer of M. About, that *gratitude* should hold our hand; at least, apparently, that a man should never kill himself till after he is twenty-seven.

But many wise men, with a true passion for moral perfection, and a noble fear of moral deterioration, have felt not only that piteous circumstances of helpless and hopeless suffering, sorrow, insanity, and poverty justified suicide, but have held that "a man of equanimity and magnanimity, good, modest, true, and rational," if he found himself losing his grasp of the virtues dear to him, should "go courageously into some nook where he can maintain them, or even depart at once from life, not in passion, but with simplicity, and freedom, and modesty, after doing this one [laudable] thing in life, to have gone out of it thus." And Marcus Aurelius, who thus believed, had as high a conception as ever man had of our relations to society; since he was convinced that felicity was to be found only "in passing from one social act to another social act, thinking of God."

If we look at this subject from still another point of view, it will be seen that the death of each of us is simply a matter of sooner or later, of before or after the deaths of others; it is inevitable; it may, in the course of nature, occur at any moment; it is an event that has no likeness to those wrong-doings of men which might *not be*, and which shatter and torture and mutilate the existences around them. Is it, then, certain that we can rightly assume that we are not bound to exercise our judgment with regard to the length of our lives, as well as about the course of our lives? Is it certain that we are judicious when we believe with M. Garrisson that the desire to shorten our lives is always insanity? Can such a desire never arise from tenderness toward others, to spare them the most mournful and exhausting of burdens, and to diminish the sum of sorrow in the world and of unavailing effort?

These are questions every man should answer for himself, not accepting any decrees which do not appeal to his own reason. Meantime every man would join with the author before us in the wish to diminish the causes of suicide; but we doubt whether many would agree with him that "the sole efficacious means . . . is to render the condition of men easier." The facts do not appear to confirm this view. The condition of the masses becomes "easier" with every generation; the ratio of suicides is steadily increasing; and M. Garrisson himself quotes with agreement the assertion of a writer (Esquirol), who says, "The more civilization develops, the more do needs increase, . . . and the more suicides must there be." It is evident, therefore, that we must define first what "easy conditions" are, before we can proceed to produce them for our fellow-creatures.

M. Garrisson's last words are a quotation from Beccaria concerning crime, here applied to suicide: "Pour combattre le suicide, que la liberté marche éclairée du flambeau de la science." Let us turn rather to the eloquent passage of Rousseau, one of the so-called "apologists" of suicide: "Every time that thou art tempted to depart from life, say within thyself, 'Let me do one more good deed before I die.' Then seek some one in poverty to succor, some one in misfortune to console, some one in oppression to defend. . . . If this consideration keep thee living to-day, it will do so to-morrow, and the next day, and all thy life." Let us also remember, not so much for ourselves as for others, in thinking of the choice of life or death, the words of Seneca (another apologist) quoted by Montaigne (another yet): "I have forced myself to live, and merely to live is sometimes magnanimity."

Upland and Meadow: a Poaetquissings Chronicle. By Charles C. Abbott, M.D. Pp. x, 397, 8vo. Harpers. 1886.

POAETQUISSINGS is an ancient name for a little creek near by which Dr. Abbott resides, and his chronicle relates to the birds, fishes, insects, and other animals whose habits and manners he has minutely observed and entertainingly recorded. The flowers, birds, and animals of midwinter afford him an interesting chapter. The ways of redbirds, wrens, and grakles, of the spade-footed toad, the opossum, mink, and 'coon, are lovingly dwelt upon and enthusiastically described. The multitudinous contents of a fisherman's seine afford a basis for a dissertation on the water insects and those little fishes which often become their prey. The chapters on a summer at home, September sunshine, and an October diary, carry the reader well through the incidents of a country year devoted to the study of wood and field life. Dr. Abbott is a keen and appreciative observer; that in watching the flying and creeping things of upland and meadow he is in his most congenial element, is obvious on every page. He sometimes reminds us of that notable person whose "foible was omniscience." It is sometimes quite evident that he is too prone to generalize, and that his enthusiasm saturates its object, in some cases, with thoughts, ideas, and emotions foreign to its intrinsic nature. But this, while a fault, considered from the standpoint of an exact biographer of animated nature, is, from another point of view, not to be too harshly condemned. There is no doubt that, in general, both the naturalist and the layman are more apt to underrate the intelligence of birds, wild animals, and insects than to overrate it. This has its apparent exceptions in those forms which are useful to man, and are therefore brought most closely under his observation, such as bees, poultry, and domestic animals. But if in some of these the tendency is in the opposite direction, and such a relatively stupid and small-brained animal as the horse has thus been exalted far above his natural position in the scale of intelligence, it may help to equalize matters when observers like Abbott take up the cudgels on behalf of the spiders, the bats, and the garter-snakes. Every bright, active boy will find new use for his eyes and ears on summer vacations; the closet student will be stimulated to verify his faith or intrench his disbelief by wider field experience—even by the very errors, if such there be, of this book and others like it. Taken in chapters, the general reader will, we think, find Dr. Abbott's chronicle refreshing—perhaps not the less so from the absence of any noticeable literary quality such as, in John Burroughs's essays, delights and yet divert us from the natural world it would unveil.

Studia Biblica: Essays in Biblical Archæology and Criticism and Kindred Subjects by Members of the University of Oxford. Oxford: the Clarendon Press; New York: Macmillan. 1885.

THE few words which preface this work explain that the essays which it contains were mostly read before a University Society which regularly met for the purpose of discussing papers on Biblical Archæology and Criticism. While not intending to publish a journal, the announcement is made that should this volume be favorably received, the series will be continued as the material is gathered. The essays, of course, vary in interest, in importance, and in value. Some of them are based on original work, while others are professedly reports upon the work of other (generally German) scholars.

The first is by Dr. S. R. Driver, on "Recent Theories on the Origin and Nature of the Tetragrammaton." He gives Friedrich Delitzsch's

theory that Yah and Yahu, instead of being shortened forms of Yahveh, as is generally assumed, were really the current and popular names of God, and that Yahveh was constructed upon them according to the expression found in Exodus iii, 14. Yahu (not Yaveh) Professor Delitzsch takes back to Assyrian *Ya-u*, who was, in the pantheon of the non-Semitic aborigines of Babylon (the Akkadians) *I*, the supreme God. The next important theory is found in an article by F. A. Philippi in the *Zeitschrift für Völkerpsychologie*. This writer contended that Delitzsch had failed to make out his case, that Yahveh was the more original form (instancing its occurrence in the famous inscription of King Mesha); that, admitting an Assyrian *Yau*, it would be difficult to derive Yahweh from it, and impossible to get Assyrian *Yau* from Akkadian *I*. Professor Sayce, naturally at the present moment, thinks it to be of Hittite origin. Dr. Driver emphasizes the fact that none of these theories are objectionable on theological grounds, because they all recognize that Yahweh is of Jewish origin, and, even if built upon *Yah* or *Yahu*, received an entirely new signification. The essay concludes with the statement that "no ground appears at present to exist for questioning either the purely Israelitish origin of the Tetragrammaton, or the explanation of its meaning which is given in Exodus iii, 14."

The third essay, by Ad. Neubauer, is on a subject always full of interest, the "Dialects spoken in Palestine in the time of Christ." The older scholars thought that Alexander and his successors had caused the Greek language and literature to spread so completely throughout Asia that the Hebrew had not escaped the fate of the other Asiatic language. The moderns, like Renan and Franz Delitzsch, take the position that the language spoken was still a kind of Hebrew. Neubauer holds in the main with these, and, after a mass of interesting and acute discussion, he concludes that if the New Testament were to be restored to its original form, the Hebrew dialect to which it should be most nearly approximated would be that of the Jerusalem Talmud.

Essay Number VI, by W. Sanday, is an account of the Text of the so-called Codex Rossanensis, a newly-discovered sixth-century text of the New Testament found in Rossano in 1881. Only an incomplete examination of it has been made, the chapter at Rossano refusing all permission to scholars to study it as soon as they discovered its value. It in a great measure supports the traditional text.

Number IX, a very careful paper by Mr. T. Randell, is on the date of St. Polycarp's martyrdom. This date has ranged all the way from 147 to 175, but Mr. Randell attempts to fix it in the spring of 155.

The Story of the Heavens. By Robert Stawell Ball, LL.D. With colored plates and numerous illustrations. Cassell & Co. 1885.

THIS is a capital book, but not without its faults. A marked diffuseness is in several instances particularly unfortunate, needlessly taking the reader on rambling excursions before he is allowed to reach the objective point. However adapted it may be to British needs, the volume is too bulky for the general American reader, and fully a quarter of it might with advantage be expunged, and that, too, without damage to the rhetoric. Printer's errors are not numerous, yet the book bears evidence of having been hurried through the press.

Dr. Ball writes with the hand of a master, and his book is an exceedingly attractive exposition of the astronomy of to-day—the best popular English treatise, in fact, if one can spare the time to read it all. The story of Neptune's discovery has never been better told, nor more fairly; while the chapters on shooting-stars and comets, stellar distances, the tides, and the astronomical significance of heat, are in every way excellent. Dr. Ball is ready to acknowledge in detail his indebtedness for numerous illustrations, but he has nothing to say about a work of like character with his own, well known in Great Britain and better known in America, Professor Newcomb's 'Popular Astronomy,' published by the Harpers in 1878, which has afforded him an occasional suggestion. We parallel two passages:

BALL (p. 9).

". . . Tycho Brahe, who was born in 1546, three years after the death of Copernicus. His attention seems first to have been directed to astronomy by the eclipse of the sun which occurred on the 21st August, 1560. It amazed his reflective spirit to find that so surprising a phenomenon admitted of actual prediction, and he determined to devote his life to the study of a science possessed of such wonderful precision. In the year 1576 the King of Denmark had established Tycho Brahe on the island of Huen, and had furnished him with the splendid observatory of Uraniberg. It was here that Tycho assiduously observed the places of the heavenly bodies for some twenty years," etc.

NEWCOMB (p. 66).

". . . Tycho Brahe, who was born in 1546, three years after the death of Copernicus. His attention was first directed to the study of astronomy by an eclipse of the sun on August 21st, 1560, which was total in some parts of Europe. Astonished that such a phenomenon could be predicted, he devoted himself to a study of the methods of observation and calculation by which the prediction was made. In 1576 the King of Denmark founded the celebrated Observatory of Uraniberg, at which Tycho spent twenty years, assiduously engaged in observations of the positions of the heavenly bodies," etc.

BALL (p. 393).

"In February, 1862, Messrs. Alvan Clark & Sons, the celebrated telescope makers, were completing a superb 18-inch object-glass for the Chicago Observatory. Turning the instrument on Sirius, for the purpose of trying it, the practised eye of the younger Clark soon detected something unusual, and he exclaimed, 'Why, father, the star has a companion!' The father looked, and there was a faint companion due east from the bright star, and distant about ten seconds. This was exactly the predicted direction of the companion of Sirius, and yet the observers knew nothing of the prediction. As the news of this discovery spread, many great telescopes were pointed on Sirius; and it was found that when observers knew exactly where to look for the object, many instruments would show it. The new companion star to Sirius lay in the true direction, and it was now watched with the keenest interest, to see whether it also was moving in the way it should move, if it were really the body whose existence had been foretold. Four years of observation showed that this was the case, so that hardly any doubt could remain that the telescopic discovery had been made of the star which had caused the inequality in the motion of Sirius. The correspondence between the observed motions and the predicted motions has not since proved quite exact; for the observed companion appears to have moved about half a degree per annum more rapidly than the calculated companion. This difference, though larger than was expected, may be partly due to the inevitable errors of the difficult observations from which the movements of the theoretical companion were computed."

NEWCOMB (p. 439).

". . . February, 1862, when Messrs. Alvan Clark & Sons, of Cambridgeport, were completing their eighteen-inch glass for the Chicago Observatory. Turning the glass one evening on Sirius, for the purpose of trying it, the practised eye of the younger Clark soon detected something unusual. 'Why, father,' he exclaimed, 'the star has a companion!' The father looked, and there was a faint companion due east from the bright star, and distant about 10". This was exactly the predicted direction for that time, though the discoverers knew nothing of it. As the news went round the world, all the great telescopes were pointed on Sirius, and it was now found that when observers knew where the companion was, many telescopes would show it. It lay in the exact direction which theory had predicted for that time, and it was now observed with the greatest interest, in order to see whether it was moving in the direction of the theoretical satellite. Four years' observation showed that this was really the case, so that hardly any doubt could remain that this almost invisible object was really the body which, by its attraction and revolution around Sirius, had caused the inequality in its motion. At the same time, the correspondence has not since proved exact, the observed companion having moved about half a degree per annum more rapidly than the theoretical one. This difference, though larger than was expected, is probably due to the inevitable errors of the very delicate and difficult observations from which the movements of the theoretical companion were computed."

We forbear further criticism: the downright sinfulness of this sort of thing is perhaps small; but if all such passages had been closed with marks of quotation, nobody could have thought the less of 'The Story of the Heavens,' and everybody, surely, would have thought more of Dr. Ball.

Royalty Restored: or, London Under Charles II. By J. Fitzgerald Molloy, with an etching of Charles II. by J. Grego, and eleven other portraits. In 2 vols. Scribner & Welford.

THE fascination that traditionally pertains to evil things has certainly kept bright the memory of the Merry Monarch. The virtuous William is a pale figure beside the amiable youth whose return to Whitehall was attended by so much revelry in town and court, and whose services to his country consisted largely in providing it with an aristocracy presumably sprung from his own loins. Indeed, the age of Charles II. was one of those in which the fascination of evil is brought to so brilliant a focus that it almost adorns history. Such, at least, would seem to be the opinion of the compiler of these two handsome volumes, from whose portraits all that was most beautiful and most dangerous in that fallen Eden looks out upon the reader, and in whose pages are gathered all the gay adventures of the quarter century of the reign which was the first to be prolific in that illegitimate literature, as it must be thought, of private diaries. Politics have been practically ignored by the writer, but a connected story is made up very deftly by accounts of parades, suppers, and receptions, characterizations and short sketches of the principal figures of the court, each of whom was the hero of many an intrigue, and extracts from the common sources of the history of the Caroline scandals. Larger features, though not more dwelt on and extended, are the plague, the fire, and the Popish plot, which were altogether too useful as material to be neglected, and have a certain relevancy as convenient centres about which to display the life of the town. The whole forms a very complete history of the life of London from the standpoint of royalty in the Restoration, and the work has been, in a literary sense, well done.

It is needless to say that the effect is that of a pretty comedy, for in this handling of the subject vice certainly has lost its grossness. Much of it is well known from Grammont and others, but here, as Byron says, the reader has the felicity of obtaining the age's naughtiness "at one fell swoop." The court, however, was not altogether depraved; there was innocence even there, and the figure of the much tried Queen, who had such "need of patience," is as bright as Shakspere's famous candle that sends its rays so far into the night. The romp of the maids of honor as orange girls in their visit to the astrologer, himself no other than the mountebank Rochester, and the notorious Colonel Blood's capture of Arundel, and that heartless duel of Shrewsbury's, and that most pathetic one of Tom Porter's; Sedley's town frolic, Pepys's prying eyes and the sights that rewarded them—everything of note is here, even to the story of Lady Chesterfield's green stockings, which in the humor of hosiery is almost a match for that of *Malvolio's* unfortunate dandyism. It is all high-life, it is true, such as Thackeray alone could make moral, or Scott healthy; the seeds of death were in it, and England got rid of it, though only to know a grosser age with the Georges. Of the people, which, growing up in labor and Puritan dissent, was at last to remand it to secrecy if not to slough it out of the social system, these volumes say little. The author is not concerned with the character of the times or the tendencies of his own celebration of them. He has portrayed them only. But it does not need this new example to show us how often nowadays the necessary toleration of history is made the cover of a scandalous chronicle.

Physical Arithmetic. By A. Macfarlane, M. A., D. Sc., F. R. S. E. Macmillan. Pp. 357.

PROFESSOR MACFARLANE has had the excellent idea of collecting in one book of convenient size the arithmetical processes involved in the physical sciences. It is not to be considered as a text-book of arithmetic to be studied without knowing anything about physics—nothing could be more fatal

to the difficult task of forming clear and correct physical concepts than to use it in that way. But as a companion to laboratory work and good instruction, and as a compendium of the mathematics involved in a non-mathematical course of physics, it will be found to be of great value.

Professor Macfarlane's familiarity with symbolic logic has enabled him to give a particularly happy setting to the general arithmetical problem. His equations may be considered as a cross between the equations of pure mathematics and the equations of logic. The question, in a great part of the work in arithmetic, is whether a given number is to enter the work as a multiplier or as a divisor, and the question has a connection with the logical problem of the elimination of a middle term. If the A's are M, the M's are N, the N's are P, and the P's are X, it follows that the A's are X. Professor Macfarlane's one rule which covers the ground of his whole book (but which is to be mixed, it is true, with a good proportion of brains) is in effect this: Arrange the units which occur twice so that they appear once as subject and once as predicate; then cancel, and an equation results between the two units which have appeared once only. For instance, if

120 cents = 4 dozen eggs,
3 dozen eggs = 2 lbs. butter,
5 lbs. butter = 75 pts. milk,

then

$$1 \text{ cent} = \frac{4.\ 2.\ 75}{120.\ 3.\ 5} = \frac{1}{3} \text{ pt. milk};$$

and similarly with volts, and ohms, and amperes, and chemical equivalents. The plan has the advantages and the disadvantages of a "method"—the student is in danger of working by rule of thumb instead of by pure head; but if he is destined to do enough work to become expert at it, he is saved a good deal of head for other and more difficult purposes. The same remarks apply to a memorized multiplication table and to symbolic logic. There is a large collection of examples, partly selected from recent examination papers and partly prepared by the author.

Professor Macfarlane has left the University of Edinburgh to become professor of physics in the University of Texas. The latter University bids fair to become a centre of learning. It contributes a paper to the current number of the *American Journal of Mathematics*.

Frank's Ranche; or, My Holiday in the Rockies. Being a contribution to the inquiry into what we are to do with our boys. By the author of 'An Amateur Angler's Days in Dovedale.' Boston: Houghton, Mifflin & Co. 1886.

THE attraction of this little work is due to its great simplicity and directness. It appears that its author (a well-known English publisher) had a boy who preferred to try his fortunes in American agriculture to being pinned to a city desk, and hence came over. He learned enough of a Minnesota farmer in a few months to think he understood the art, and bought a farm, with the aid of his father's purse; and, not succeeding in this venture, he turned the capital into a creamery, in which it disappeared. The boy (whose partner, we are told, made a paying business of "the milk idea" after he got the sole ownership of the plant) went West, and "roughed it" near Bozeman, Montana. The father by this time had concluded to let "Frank" make his fortune by himself, and "Frank" took hold of his task with cheerfulness and pluck. The letters from "Frank," which are given in the first part of the book, are by far the most interesting portion. He had a hard time of it, and his endurance, resolution, and the buoyancy of his hopes in the most dismal circumstances, stand out in his free and straightforward narrative with delightful unconsciousness. So fresh a nature is not often met with in books, and in this is the charm of the whole; those who think no boy can "rough it" in the West without being "spoilt," can read to advantage.

The second portion consists of the account of the father's journey to see his son and judge for himself of his prospects. "Frank" had got a piece of ground and a cabin and "a few things together" by the hardest of real toil, and perhaps the purse-strings might be loosened once more. The journey tells of the voyage, the Catskills, Saratoga, Niagara, the Yellowstone, and the "Ranche," with a few notes of the return by Helena, Salt Lake, Cheyenne, and Boston. These sketches are interesting light reading, and breathe a spirit of appreciation for things American which is at once spontaneous and unbroken, and, in an Englishman of sixty years, is marvellous. It is pleasant to know that "Frank" did increase his real, and possibly his personal, estate by this visit of "the Governor." From the title-page one infers that the author advises other parents to do as he has done; but it would be well for the "boy" who is to go out, also to read the account of what "Frank" had to do, and to reflect well whether he has got the fibre and the spirit for such a severe apprenticeship to fortune.

BOOKS OF THE WEEK.

American Law Review. Vol. XIX. St. Louis: Review Publishing Co.
Anderson, E. L. Vice in the Horse, and Other Papers on Horses and Riding. Edinburgh: David Douglas.
Brooks, Louise. A Year's Sonnets. Boston: Cupples, Upham & Co.

LORENZ ALMA TADEMA.

His Life and Works. By Georg Ebers. With Thirteen Illustrations. One Vol., paper, 40 cents; cloth, 75 cents.

*** *Sent by mail on receipt of price.*

WILLIAM S. GOTTSBERGER, Publisher,
11 Murray Street, New York.

G. P. Putnam's Sons,

27 and 29 W. 23d St., New York.

READY THIS WEEK:

I. A STUDY OF DANTE. By Susan E. Blow. With an introduction by William T. Harris, LL.D. 12mo, cloth, gilt top, $1 25.

"Miss Blow's analyses of Dante are remarkably clever. They show not only a thorough knowledge of the author, but a very clear discrimination in the details that make up character and a profound insight into human nature. Miss Blow's criticisms are valuable studies in psychology and moral science."—*Howard Crosby.*

II. EVOLUTION OF TO-DAY. A Summary of the Theory of Evolution as held by Modern Scientists, and an Account of the Progress Made through the Investigations and Discussions of a Quarter of a Century. By Prof. H. W. Conn, of the Wesleyan University.

III. THE PHYSICS AND METAPHYSICS of Money. With a Sketch of Events Relating to Money in the Early History of California. By Rodmond Gibbons. Octavo. Paper, 25 cts. *Questions of the Day* series, No. 33.

*** *Putnam's new lists sent on application.*

DOUGLAS & FOULIS,

9 Castle St., Edinburgh, Scotland.

Scribner & Welford's

NEW BOOKS.

Important Work on the History of Music.

A History of Music from the Earliest Times to the Present.

By W. S. ROCKSTRO,

Author of the 'Life of Handel,' 'The Life of Mendelssohn,' etc.

In one Volume, 8vo, cloth, $6.

Synopsis of Contents: Section I., Music in the Early Ages, including an introductory description of the Music of the Ancient Greeks; section II., Music in the Middle Ages; section III., Music in the Seventeenth Century; section IV., Music in the Eighteenth Century; section V., Modern Music; section VI., Future Prospects.

Prominence is given to the progress of music in England, and it is proposed to treat this part of the subject as fully and as fairly as that which concerns the development of music on the Continent.

The work will be accompanied by a copious index and chronological table.

George Eliot:

Thoughts Upon Her Life, Her Books, and Herself.

By Margaret Lonsdale, Compiler of 'Sister Dora: a Biography.' 12mo, cloth, 60 cents.

Madame de Maintenon.

AN ETUDE.

By J. COTTER MORISON.

Square 16mo, parchment, 50 cents.

*** A vivid sketch of the life and times of Madame de Maintenon.

Personal Recollections of Thomas de Quincey.

By JOHN RITCHIE FINDLAY.

Two Portraits. Crown, 8vo, cloth, $1.80.

YACHT ARCHITECTURE. By Dixon Kemp, Associate of the Institution of Naval Architects and Member of the Council. 1 vol., super royal 8vo, cloth, $16.80.

This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance.

It also deals comprehensively with the subject of Steam Propulsion as applied to yachts.

An easy System for Designing is provided, and every necessary calculation is explained in detail.

The latter part of the work is devoted to Yacht Building, and engravings are given of every detail of construction and fitting, including laying off, taking bevels, etc.

The list of plates (exclusively of over thirty devoted to the elucidation of the text, and nearly two hundred woodcuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat, by the most successful builders and designers.

WANDERINGS IN CHINA. By C. F. Gordon Cumming, author of 'At Home in Fiji,' 'A Lady's Cruise in a French Man-of-War,' etc. With a portrait of the author and numerous illustrations. 2 vols., 8vo, cloth, $10.00.

Bohn's Libraries.

A Series of Standard Works of European Literature in the English Language. Full Catalogue sent, post-free, to all parts of the world on application.

NEW VOLUMES:

The Life and Works of Robert Schumann.

By August Reissmann.

Translated from the third edition of the German by A. L. Alger. 1 vol. 12mo, cloth, $1 40.

The Spirit of the Age,

Or Contemporary Portraits. 4th Edition. To which are added Free Thoughts on Public Affairs and a Letter to William Gifford. By William Hazlitt. Edited by W. Carew Hazlitt. 1 vol., 12mo, cloth, $1.40.

W. Hazlitt's other works, each in 1 vol., 12mo, cloth, $1.40, viz.:

TABLE TALK. A New Edition.

LECTURES ON THE COMIC Writers and on the English Poets.

LECTURES ON THE LITERA- ture of the Age of Elizabeth, and on Characters of Shakespeare's Plays.

PLAIN SPEAKER.

ROUND TABLE; The Conversa- tions of James Northcote, R.A.

SKETCHES AND ESSAYS, AND Winterslow (Essays written there).

RECENT ADDITIONS TO THE LIBRARIES.

HENFREY'S GUIDE TO ENG- lish Coins. Revised Edition. By C. F. Keary, M.A., F.S.A., with Historical Introduction. $2.40.

FAIRHOLT'S COSTUME IN England. Third Edition. Enlarged and Revised by the Hon. H. A. Dillon, F.S.A. With more than 700 Engravings. 2 vols., $4. Vol. I. History. Vol. II. Glossary.

COLERIDGE'S MISCELLANIES, Æsthetic and Literary: to which is added The Theory of Life. Corrected and arranged by T. Ashe, B.A. $1.40.

WALTON'S LIVES OF DONNE, Hooker, etc. New Edition. Revised by A. H. Bullen. With numerous illustrations. $2.

GRIMM'S GERMAN TALES. With the Notes of the Original. A New Translation, by Mrs. A. Hunt. With Introduction by Andrew Lang M.A. 2 vols. $2.80.

BURNEY'S NOVELS. EVELI- na, 1 vol.; Cecilia, 2 vols. By Frances Burney (Mme. D'Arblay). With Introductions and Notes by A. R. Ellis, author of 'Sylvestra,' 'Marie,' etc. Price per volume, $1.40.

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock will be mailed, if desired, to those interested. New Catalogue of Choice, Rare, and Second-hand Books ready. New Catalogue of Musical Literature ready.*

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

VOL. XLII.—NO. 1082. THURSDAY, MARCH 25, 1886 PRICE 10 CENTS.

MACMILLAN & Co.'s NEW BOOKS.

TWO NEW NOVELS BY AMERICAN AUTHORS.

THIS DAY.

THE BOSTONIANS.

A Novel.

By HENRY JAMES,

Author of 'The Portrait of a Lady,' 'Daisy Miller,' &c. One volume, 12mo, cloth, $2.

"He is easily the greatest of our modern American society novelists."—*Boston Beacon.*

A TALE OF A LONELY PARISH.

By F. MARION CRAWFORD,

Author of 'Mr. Isaacs,' 'Dr. Claudius,' &c. One volume, 12mo, cloth, $1.50.

"In ceasing to be sensational, eccentric, melodramatic, Disraelish, he has learned to write a very good novel. His new book is a capital piece of work. The story is well conceived and well constructed, the narrative is always animated, and the sketches of character, although they touch only surface indications, are clear and true. . . . Mr. Crawford's management of this stock personage is highly effective; all the situations in which he figures are dramatic; the difficult scene of the first meeting with the wife is admirably done; and the closing chapter is one of the strongest and at the same time one of the most natural pieces of writing that any author has given us."—*New York Tribune.*

"Will be devoured by all novel readers, will be talked about by everybody, and will be the popular book of the season. . . . 'A Tale of a Lonely Parish' is the best story Mr. Crawford ever published, and one of the best-told stories in recent literature."—*Boston Be*

TYPES OF ETHICAL THEORY.

By JAMES MARTINEAU, D.D., LL.D.

Late Professor of Manchester New College, London. Second Edition. Revised. Two volumes. Post 8vo. $4.50.

"The most important and original ethical work which English philosophy has produced for at least a century and a half."—*Spectator.*

Twenty-third Annual Publication.

THE STATESMAN'S YEAR-BOOK.

Statistical and Historical Annual of the States of the Civilized World, 1886.

Edited by J. SCOTT KELTIE.

Revised after Official Returns, 12mo, cloth, $3.00.

"Not only statesmen, but all men who desire to keep pace with the march of events, with political and commercial changes—in fact with the general progress of the world—will find in the 'Statesman's Year-Book' an indispensable guide."—*New York Tribune.*

The Second Punic War.

Being Chapters of the History of Rome. By the late Thomas Arnold, D.D., Formerly Headmaster of Rugby, etc., etc. Edited by William T. Arnold, M.A. With 8 Maps. 12mo, $2.25.

The Choice of Books,

And Other Literary Pieces. By Frederic Harrison. Globe 8vo, paper, 50 cents; cloth, $1.25.

CONTENTS.—"The Choice of Books," "Culture," "Past and Present," "The Romance of the Peerage," Froude's "Life of Carlyle," "The Life of George Eliot," "Barnard of Clairvaux," "A Few Words About the Eighteenth Century," "Histories of the French Revolution," "A Few Words About the Nineteenth Century," etc., etc.

"Containing a great deal of sound exhortation and useful criticism. . . . Of the choice of books he writes with acuteness and knowledge. . . . He has fairly characterized the principal imaginative productions in the Greek, Latin, English, French, German, Spanish, and Italian literatures which the world agrees to value among its choicest possessions. The remarks upon all the authors whom he enumerates are interesting, and often they are brilliant."—*New York Tribune.*

Amiel's Journal.

The Journal Intime of Henri-Frédéric Amiel. Translated, with Introduction and Notes, by Mrs. Humphry Ward. Crown 8vo, cloth, $2.50.

"Has taken a place in literature which the editor aptly compares with that of Obermann and that of Maurice de Guerin. Nothing in Amiel's public career warranted the world in expecting such a legacy. The Journal was his one posthumous success. . . . Perhaps no man in any age has ever equalled Amiel in the analysis of his own soul, the complete exploration of his deepest and most elusive feelings; and as he represents in one respect a type of mental disturbance which is becoming more and more common, it happens that in his merciless dissection many others see their hearts laid bare. . . . But the point where the life of Amiel has the keenest interest for many of our generation is at the conflict between the critical faculty and the religious instinct."—*New York Tribune.*

"Among the most interesting philosophical writings which have appeared of late years."—*Renan.*

"A record of his intellectual attitudes—a minute and marvellous, though unstudied, chronicle of mental impressions, the publication of which was an event in the history of literature, and has insured his name an immortality that might have escaped the most finished conscious performance within the limit of his powers. . . . This marvellous and fascinating production."—*New York Commercial Advertiser.*

"A book which will be carefully and closely read and lovingly remembered. . . . It is not often that we have such a book to comment upon nor such a mind as Amiel's to respect and pay tribute to."—*Mail and Express.*

"A wealth of thought and a power of expression which would make the fortune of a dozen less able works."—*Churchman.*

"It has already made its mark, and is a book not to be exhausted in a few readings, but which, when once read, will be laid aside to be read again, and which in the last review will both yield more than in the first and leave the impression that it must still be taken up anew."—*Independent.*

TERMS OF SUBSCRIPTION.

Three Dollars per year, in advance, postpaid to any part of the United States or Canada; to foreign countries comprised in Postal Union, Four Dollars.

The date when the subscription expires is on the Address-Label of each paper, the change of which to a subsequent date becomes a receipt for remittance. No other receipt is sent unless requested.

The paper is stopped at expiration of the subscription, unless previously renewed.

Remittances at the risk of the subscriber, unless made by registered letter or by check, express order, or postal order, payable to "Publisher of the NATION."

When a change of address is desired, both the old and new addresses should be given.

Address THE NATION, Box 794, New York.

Publication Office, 210 Broadway.

TERMS OF ADVERTISING.

[No deviation.]

Scale of Agate lines.

On any page not specified, 15 cents per line each insertion; with choice of page, 20 cents.

A column (140 lines), $20 each insertion; with choice of page, $27. — 5

A page (3 columns), $60 each insertion; with choice of position, $80. — 10

Twenty per cent. advance for top of column or other preferred position, when specified; where positions are not specified, advertisements are classified as far as possible and arranged in order of size, the largest at the top. — 15

Twenty per cent. advance for cuts, fancy or other letters not comprised in THE NATION fonts, and all other special typography. (Subject to approval.) Cuts are inserted only on inside pages of cover or fly-leaves, not on outside of cover, nor on pages numbered for binding.

Marriage and Death Notices, 50 cents each.

DISCOUNT on yearly accounts amounting to $250, 10 per cent.; $500, 15 per cent.; $750, 20 per cent.; $1,000, 25 per cent. Credits are made December 31. On a yearly account amounting to 52 pages the discount is one-third.

Advertisements must be acceptable in every respect. Copy received until Tuesday, 5 P. M.

THE NATION is sent free to those who advertise in it, as long as advertisement continues.

The EDITION of THE NATION this week is 9,100 copies. The Subscription List is always open to inspection.

*** Copies of THE NATION may be procured in Paris of J. G. Fotheringham, 8 Rue des Capucines; and in London of B. F. Stevens, 4 Trafalgar Square; George Street, 30 Cornhill, E. C.; H. F. Gillig & Co., 449 Strand; and American News Reading Room, 8 Haymarket.

"An essay in the highest intellectual morality."

Anna Karenina.

By COUNT LEO TOLSTOI. Translated from the Russian by Nathan Haskell Dole. Royal 12mo, 750 pages, $1 75.

'Anna Karénina' is one of the great novels of the world. It deals with questions which appeal to every man and woman. The young and beautiful wife of an influential official in St. Petersburg suddenly wakes to the fact that she passionately loves a young officer, and that her life with her husband, whom she married as a matter of convenience, has been a long lie. She struggles against the temptation, but at last she yields and goes away with her lover. Not even George Eliot paints with greater power the inexorableness of law. The happiness of the lovers at first is complete, but Anna is jealous and exacting from the very reason of the unstableness of her position, and the downward path is sure and terrible.

For a more complete analysis of this remarkable book see Mr. Howells's notice in Harper's Monthly for April, page 809.

THOMAS Y. CROWELL & CO.,

13 Astor Place, New York.

Two Interesting Papers on

James Russell Lowell

appear in the *Critic* of March 27. Mr. Thomas Hughes, author of 'Tom Brown's School-Days,' writes vivaciously of "A Fable for Critics" and "The Unhappy Lot of Mr. Knott," and Mr. George E Woodberry, the biographer of Poe, describes the poet's home-life at Elmwood. The latter sketch is the eighteenth in the *Critic's* series of Authors at Home. Order a copy of the paper through your newsdealer, or send ten cents for it to the address below. The subscription price of this well-established literary weekly is only $3 a year.

THE CRITIC, 20 ASTOR PLACE, NEW YORK.

CROSBY'S VITALIZED PHOSPHITES

For fifteen years has been a standard remedy with Physicians who treat mental or nervous disorders. Not a secret. Formula on every label.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion; refreshes weakened vital powers in old or young. A Vital Phosphite, not a Laboratory Phosphate.

It is used by the Emperor Dom Pedro, Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

G. P. Putnam's Sons,

27 and 29 West 23d St., New York.

HAVE NOW READY:

I. THE PHYSICS AND METAPHYSICS of Money. With a Sketch of Events Relating to Money in the Early History of California. By Rodmond Gibbons. Octavo. Paper, 25 cts.

II. EVOLUTION of TO-DAY. A Summary of the Theory of Evolution as held by Modern Scientists, and an Account of the Progress Made through the Investigations and Discussions of a Quarter of a Century. By Prof. H. W. Conn, of the Wesleyan University. Octavo, $1 75.

III. A STUDY OF DANTE. By Susan E. Blow. With an introduction by William T. Harris, LL.D. 12mo, cloth, gilt top, $1 25.

"Miss Blow's analyses of Dante are remarkably clever. They show not only a thorough knowledge of the author, but a very clear discrimination in the details that make up character and a profound insight into human nature. Miss Blow's criticisms are valuable studies in psychology and moral science."—*Howard Crosby.*

IV. HUNTING TRIPS of a RANCHMAN. Sketches of Sport in the Northern Cattle Plains, together with Personal Experiences of Life on a Cattle Ranch. By Theodore Roosevelt, author of 'The Naval War of 1812.' Popular edition. Octavo, cloth, fully illustrated, $3 50

V. THE STORY OF CHALDEA. From the Earliest Time to the Rise of Assyria. By Zénaide A Ragozin. With 80 illustrations and two maps. 12mo, cloth, $1 50.

IN THE STORY OF THE NATIONS SERIES, FOURTH VOLUME.

'The Story of Chaldea' deals with the most fascinating of subjects—the dawn of civilization, the beginnings of man's knowledge or imaginings of his own origin and of his relations with his Creator, the first data for the history of mankind, the causes and times of the separation and migrations of races, the points of contact or parallelism between the narratives and traditions of the Old Testament and the records (now rescued from the tablets in the Mesopotamian Mounds) of the tribes from which the Hebrews separated themselves.

VI. THE STORY OF THE JEWS. By Professor James K. Hosmer, of the Washington University in St. Louis, author of 'The Life of Samuel Adams,' etc. Large 12mo, with thirty-five illustrations and two maps, cloth, extra, $1 50.

IN THE STORY OF THE NATIONS SERIES, THIRD VOL.

"The author is a master of the finest English prose; his style a model of elegance, clearness, and strength, worthy to rank with that of the most celebrated writers."—*Literary World.*

"We have seldom read 'a story' more dramatic or more interesting, less 'juvenile' in a certain sense, and yet so fresh and young."—*The Critic.*

PREVIOUSLY PUBLISHED IN THIS SERIES:

I. THE STORY OF ROME. By Arthur Gilman.

II. THE STORY OF GREECE. By Prof. Jas. Harrison.

*** See prospectus of "The Story of the Nations Series."

VII. THE MILL MYSTERY. By Anna Katharine Green, author of 'The Leavenworth Case,' 'A Strange Disappearance,' 'Hand and Ring,' etc., etc. 16mo, cloth $1 00; paper, 50 cents.

*** Such is the extraordinary popularity of Miss Green's novels, that although 'The Mill Mystery' has only been published about ten days, two immense editions have been required to meet the demand.

*** Putnam's new catalogue forwarded upon application.

27 and 29 West 23d St., New York.

Scribner & Welford's

SCRIBNER & WELFORD, 743–745 Broadway, N. Y.

Charles Scribner's Sons'

NEW BOOKS.

Mr. Stockton's Novel.

The Late Mrs. Null.

By FRANK R. STOCKTON, author of 'Rudder Grange,' 'The Lady, or the Tiger?' etc., etc. 1 vol., 12mo, $1.50.

Mr. Stockton's first novel is sure of an enthusiastic welcome from the thousands of readers of his short stories. It is one of those fortunate books which go beyond all expectations. Mr. Stockton has not only written a very characteristic novel, but a great deal more—a remarkably powerful, sustained story, where all his best traits are put into a fitting form and a permanent piece of literature.

American Diplomacy;

AND THE FURTHERANCE OF COMMERCE. By Hon. EUGENE SCHUYLER, author of 'Peter the Great,' etc., etc. 1 vol., 8vo, $2.50. Pub. March 23.

The author's exceptional experience has admirably fitted him for the preparation of this volume, which for the first time adequately sets forth the workings of this important department of our Government. It may be specially commended to those in the public service.

CONTENTS:

The Department of State.	Free Navigation of Rivers and Seas.
Our Consular System.	The Congo and the Niger.
Diplomatic Officials.	Neutral Rights.
The Piratical Barbary Powers.	The Fisheries.

Charles Scribner's Sons,

743–745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, MARCH 25, 1886.

The Week.

THE attempted mediation of the Governors in the Missouri-Pacific strike seems to have as yet led to no result. At all events the strikers have not, up to this date, taken their advice to accept Vice-President Hoxie's offer to let bygones be bygones, and take back into the service of the company all strikers who have not been guilty of doing damage to property. At this moment things in Texas are in a worse condition than ever, since the strikers, as the strain on their resources increases, are evidently more and more disposed to resort to violence. A masked mob has overpowered the guards and "killed" the engines at Denison, and at Omaha a freight train which escaped from the station was pursued and brought back by force. To this complexion it was pretty sure to come at last. The position taken by the Knights is, in fact, one which cannot be maintained in any community without violence. No man not a Knight can be won over to it by argument simply. The right of another man to stay in your employment on his own terms, or, in other words, the right of trades unions to billet laborers on any one they select for as long as they please, which is now the central doctrine of the labor gospel, is one which civilized communities will no more accept peaceably than they will accept the Koran and the Mormon Bible. It is aggravated, too, by the right, which the Knights also claim, of obstructing highways and damaging property in one part of the country in order to aid them in having their way in the settlement of disputes in another.

If the railroad corporations—whose defects, as owners of property, we see as clearly as any one—think they can escape this trouble by surrender now, they are greatly mistaken. We have seen enough to know that the Knights are in the hands of men who do not know what moderation is, and who are utterly indifferent to the general welfare, and probably hardly understand it, and who will be emboldened by every success to make new and more intolerable demands. The railroads might just as well push this question to a settlement this year as any other. What is needed most of all just now is a thorough comprehension by the American people of the nature and extent of the danger with which the labor question, in the form in which the Knights are presenting it, is threatening their civilization. They did not revolt against George III. for quartering soldiers on them in time of peace, in order to allow Mr. Powderly to quarter vast bodies of Knights on them, on terms fixed by him and for indefinite periods. An employer who gets a Knight on his hands, literally does not know from day to day how long he will have to keep him, or what he will have to pay him, or whether he will not eat him out of house and home, and break his furniture before he leaves.

The reply of Mr. H. M. Hoxie to Mr. T. V. Powderly's request for a conference to arrange terms of adjustment with the Knights of Labor on the Missouri-Pacific Railroad clarifies the situation in the Southwest in a remarkable manner. The central fact that a strike was ordered on the Missouri-Pacific because something had happened on another road not controlled by the Missouri-Pacific, and that all the misdemeanors and brigandage that have followed have had no cause in any difference or disagreement between the employing company and its employees, but have their origin in something as foreign to the parties as the changes of the moon, is stated so methodically and convincingly that Mr. Powderly in his rejoinder has no answer to make to it. He retreats under cover of some general observations regarding the goodness of his intentions, but does not deny Mr. Hoxie's statement that the strike is really a boycott, and that it is only a repetition, on a more extensive scale, of the attempted boycott of the Wabash Road at the time when that property was taken charge of by the United States Court.

The whole trouble in the Southwest may be traced to the boycott of the Mallory Steamship Company in the city of Galveston. The Mallory Company had a difficulty with its employees. The Knights of Labor, in order to force the company to reëmploy some discharged workmen—the rate of wages was not the subject of the dispute—issued orders intended to prevent the bringing of any goods to Galveston to be shipped by the steamships of this particular line. It was found to be impossible to discriminate between goods coming to Galveston for one purpose and for another. So the boycott was enlarged to the proportions of a blockade of the city. The sympathy of the public, as is usual in such cases, was extended to "the workingmen," this phrase being ingeniously applied to the minority of workingmen who were organized as boycotters; all other workingmen and women being, for the time, cast out of the reckoning. The Mallory Company made some concessions to the force of circumstances, upon which the Knights were enabled to claim a victory. This was to them a demonstration of supreme power. It turned their heads completely. They fancied that they had only to swing the club of the boycott in order to dominate industry, society, the courts of law, and the Government of the United States. Their range of intelligence was as narrow as their demands were boundless, and both found a notable opportunity for exercise when the man Hall was discharged by the Receivers of the Texas-Pacific Road, for being absent without leave—that is, for staying away three days on a leave of absence for half a day. A demand was made for Hall's reinstatement and it was refused. A strike was ordered, together with a boycott of certain connecting roads to make the strike more effective.

The lengthy reply of the Knights to Governors Marmaduke and Martin and to Mr. Hoxie betrays a dawning sense of the weakness and indefensibleness of their position. They say, in the first place, that the two Governors came in as negotiators voluntarily—they were not asked by the Knights to take a hand in the fight. That is quite true. The chief executives of the two States whose business and industry have been deranged, and who may shortly be compelled to put all the machinery of law in motion to restore the broken communications, did take some pains to avoid this disagreeable duty, and they are now virtually accused of meddling with what did not concern them. This is a refreshing glimpse of the ideas that are uppermost in Assembly No. 101. Then we are told that the Governors are all wrong in saying Mr. Hoxie has lived up to the "agreement" of March, 1885, because there was no such agreement. What is called an agreement was simply a lot of pledges and promises made by Mr. Hoxie and posted up in public places. It signifies nothing that Mr. Hoxie kept his pledges, if there was no agreement on their part to do anything in consequence. Here is another glimpse at the future prosperity and well-being of a country dominated by a class whose whimsies are to be substituted in the place of acts of the Legislature and the decrees of courts. Finally, we are told that even if Mr. Hoxie's pledges and promises had amounted to an agreement, there was a dark design underneath it to destroy the Knights of Labor organization, and that Mr. Hoxie has been laboring insidiously to bring about the present strike, so that he might stop the operation of his own road and embarrass the business of three States, and thus excite public opinion against the Knights. This is such a manifest falsehood that no person endowed with common sense will waste breath in discussing it. The simple truth perceived through the whole mass of dark-lantern sophistry is that Assembly No. 101 of the Knights of Labor have, without cause or provocation, but in the exercise of an unbridled ambition, and with the intent to show their power, boycotted three States, and that now, being alarmed by evidences that they have aroused against themselves a public opinion hitherto favorable to them, they are inventing excuses for their conduct. It remains to be seen whether the people of those States are as much attached to their form of government as American citizens are commonly supposed to be, or whether they are disposed to try a new experiment, the attractive outlines of which are sketched in the reply of the Knights to Governors Marmaduke and Martin.

The United States Senate indulges Mr. Blair's love of notoriety too much. Last month it passed a bill providing for Federal aid to Southern education because his feelings would be hurt if the measure should be defeated in the upper branch, and the lower branch could be trusted to smother it. On Thursday it passed a bill, introduced by the same Senator, establishing a commission to report on the evils of the liquor traffic and appropriating $10,000 for the Commission's expenses;

the measure, according to an intelligent correspondent, being "allowed to pass the Senate with the knowledge that it never will be heard of in the House." Yet, with such encouragement to what may be called the profession, there are people who wonder that the number of "cranks" in this country appears to be on the increase.

Mr. Morrison introduced in the House on Tuesday a resolution which it is to be hoped that the Committee on Rules will speedily report back and the body adopt. It is in these words:

"Resolved, That it shall be in order, when any general bill or proposition to increase the rates or amounts of pensions, or to grant pensions to persons not previously entitled thereto by law, is under consideration, to amend the same so as to provide by taxation or otherwise for the payment thereof; but no such amendment shall be in order unless the net revenue provided for shall be thereby set apart for the sole purpose of paying such increased pensions."

With such a rule the demagogical member who proposed an amendment extending the limit of the arrears act, which involves the payment of two or three hundred millions of dollars, would have to accept the amendment of a level-headed member providing new methods of taxation to raise the money required. A worse blow could not be struck at the pension demagogues. It would be well, however, to broaden the scope of the resolution so that it will apply to all sorts of raids upon the public Treasury. Whenever anybody proposes to spend $50,000,000 on a ship-railway scheme, $77,000,000 on education in the States, or a hundred or two millions on some other job, let the rules provide that it shall be in order to amend by inserting in the bill a clause imposing the taxes required to provide the money. Blair bills, Eads ship-railway schemes, and the whole brood of gigantic raids upon the Treasury would speedily wilt away under the flood of light which would thus be turned upon their real meaning to the taxpayers.

Mr. Hemphill, of South Carolina, made a very strong speech on the silver question on Saturday. His statement of the effect of a fluctuating currency upon the interests of the cotton States and the cotton planters was extremely perspicuous and profoundly true. He showed how entirely at the mercy of the broker and the speculator the planter must be when he has no means of protecting himself against variations in the value of the two kinds of money in which the value of his product must be computed if silver becomes the monetary standard in this country. Four-fifths of the cotton crop is sold to foreign countries at gold prices. If it is bought at silver prices in this country, the buyer must protect himself against fluctuations in the value of silver, and all the errors in his computations will be in his own favor. The growers of cotton, tobacco, wheat, or any exportable article will be absolutely powerless to protect themselves against these exactions, which are, in fact, inherent in any traffic carried on with two measures of value. Mr. Hemphill also gave his opinion of the kind of service rendered to the laboring man by those who seek to pay his wages in "cheap dollars." The mystery of mysteries is that any laboring man should be such a fool as to admit that an eighty-cent dollar is good enough for him. Roast turkey and cranberry sauce for the capitalist, bran and potatoes for the laboring man, would be just as wise and quite as worthy of acceptance and adoption by the wage-workers of the country as the current saying, "Gold for the rich and silver for the poor."

In connection with the recent changes in the Civil-Service Commission at Washington, mention should be made of the appointment of Mr. W. L. Trenholm to the important position of Comptroller of the Currency. Mr. Trenholm was called to the Civil-Service Commission because the public service required a man of high principles and superior culture, representing the best type of Southern society, to fill one of the three places on the Board. He would undoubtedly have remained there, had not the resignation of Comptroller Cannon made a vacancy requiring, in addition to the foregoing qualities, a special acquaintance with financial studies, and a reputation as a sound thinker co-extensive with the section to which Mr. Trenholm belongs. A better selection could not have been made. Mr. Trenholm enters upon the discharge of his new duties at a time when the national banking system is approaching a crisis. The bond security of its circulating notes is being slowly but surely cut away, and the questions relating to its future existence, if it is to continue at all, are among the most perplexing that the Government will have to deal with. It is fortunate that the position of Comptroller of the Currency at such a time is filled by a man like Mr. Trenholm, who has the ear of that portion of the country most hostile to the national banks, and which would, perhaps, be glad to see the old State-bank system of the *ante-bellum* period revived.

The Hartford *Courant* is a Republican organ which is never disposed to take an unduly sanguine view of any Democratic action. When, therefore, it commends an appointment by the President to a responsible position, its words should command attention. The *Courant* says, regarding the disposition of sundry Republican organs to condemn the selection of Mr. Oberly, of Illinois, as a member of the Civil-Service Commission, on the ground that he has been in the past an active Democratic politician, that the same criticism was made when he was appointed Superintendent of Indian Education nine months ago, but that "in simple justice it must be said that he has demonstrated that his critics of last year were not well informed." The *Courant* goes even further, and volunteers this warm tribute to Mr. Oberly:

"His general management of the important work intrusted to him has been satisfactory. He has made an intelligent and efficient Superintendent, according to the testimony of those best informed on the subject. He has endeavored to correct evils which unquestionably existed, and, unless favorably misrepresented, he has made no effort to use the office for partisan or personal advantages. It is said to be because the President is pleased with the manner in which he has performed the duties of an important subordinate position that he has made him a Civil-Service Commissioner. Now that he has received the appointment it will be fair and just to defer condemnation until it is merited. He has ability enough to make a first-rate Commissioner, and possibly may be disposed to make a good record. Certainly there can be no gain in treating him unjustly simply because he is a Democrat and has been an active politician."

The example set by the law-abiding citizens of Portland, Oregon, on Wednesday week, ought to make a salutary impression upon the country. Fifteen hundred men, moved by a sense of their responsibility for republican government, met in pursuance of public notice, and resolved that they would dedicate their fortunes, and if necessary their lives, to the defence of law and order and the principles of common humanity. They then appointed a committee of fifteen to take immediate steps, in conjunction with the proper authorities, to put the community in a posture of effectual defence against the threatened attack of outlaws upon the Chinese. The hoodlums had assembled in mass meeting in an adjoining room for the purpose of overawing the friends of law and order, but the strength of the latter was so overwhelming and its spirit so determined that they contented themselves with boycotting the Portland *Oregonian* newspaper, whose resolute and persistent defence of the principles of American institutions, of liberty regulated by law, and of a common humanity, has been largely instrumental in keeping the sacred fires of public spirit alive in Portland. The example of the *Oregonian* is in fine contrast to that of certain newspapers which, a few days ago, were encouraging a mob to seize and overturn coal carts and grocery wagons to make barricades against the running of street cars in New York.

The Californians are beginning dimly to perceive that there are two sides to the Chinese question in its commercial, if not in what they stigmatize as its "sentimental," bearings. In Stockton the mob have been trying to get everybody to sign a petition for the abrogation of the treaty with China, and an attempt was made at one of their recent meetings to pass a vote of censure upon Mayor Welsh for having refused the use of his name. The *Independent*, a strongly anti-Chinese paper, is forced to denounce this movement as being "impudent as well as absurd." It appears that three-fourths of Stockton's flour is shipped to China, and would be without a market if the treaty with that nation were to be abrogated. "One of the counts in the indictment against the Chinese," says the *Independent*, "is that they do not spend money enough with white producers and manufacturers, yet here was a proposition to bring discredit upon one of white labor's best employers, because he would not sign a demand to stop the one important source of American money in return from China. Neither of Mr. Welsh's mills employs Chinese, but both are large employers of white labor, which is treated considerately and well paid." We must warn the Stockton *Independent* that it has an account to settle with the San Francisco *Post*. The latter newspaper, a fortnight ago, was insisting upon a break-off of all commercial relations with the Chinese, on the ground that "we are apparently doing a losing business with these people." Far be it from a "doctrinaire" jour-

nal published in New York to decide when two such eminent anti-Chinese doctors differ so radically in their diagnosis and prescription.

The bill passed with such commendable promptness by both branches of the Legislature on Thursday, authorizing the sale of all street-railway franchises at auction hereafter, is an immense gain for reform. The Governor has signed it, and it goes into effect as a law immediately. All bargains between railway companies and the Aldermen which are unfulfilled, are thus declared "off." Not one of the franchises granted as a result of such bargains is worth a penny to anybody. The Aldermen henceforth will be able to command very small prices for their votes, since, even after their consent to a railway is given, the franchise must be sold at public auction. Governor Hill, in approving the Cantor bill, points out certain defects in it which must be remedied by supplemental legislation, as no time could be lost in the passage of the present bill if the game of the Aldermen with regard to other franchises was to be blocked. He draws attention to a curious piece of optimism on the part of Governor Cleveland, who thought it unnecessary to make the sale of franchises by auction compulsory instead of optional, on the ground that if the local authorities were determined "to cheat and defraud their constituents by refusing to put up a valuable franchise at auction, they must under this bill [the General Surface Street Railway Act] do it in the broad light of day, and with a brazenness and boldness that would find a way to evade the most carefully framed law." This is, however, exactly what the Aldermen did. They sold the franchise at 9 o'clock A. M. in the summer season, and with a publicity and éclat which showed they did not care what any one thought of the transaction.

Senator Daly's bill reducing the number of Aldermen to fifteen and requiring their election on a general ticket, the candidate receiving the highest vote to be President of the Board, is a good measure, and ought to be promptly passed by the Legislature. The arguments in its favor are obvious. The strongest one is that the proposed change would break up the constantly growing practice of nominating liquor-dealers for Aldermen. No party would venture to put a liquor-dealer on a ticket which was to be submitted to the whole city for election. There has been a great outburst of indignation over the Jaehne case, but there is no reason for surprise. With few exceptions there is not a member of the present Board who is at all fitted by character or experience for his position. It is entirely within the bounds of moderation to go further, and say that fully two-thirds of the present members are by character and experience totally unfitted for any position of trust. No reputable business man would have one of them in the smallest place of trust or responsibility in his establishment. Seven of them are liquor-dealers, and nearly all of them are companions of liquor-dealers and regular frequenters of gambling saloons. When Jaehne was wanted the other night, he was sought and found in a liquor store, as were three ex-Aldermen interviewed in the morning papers.

Mexico seems about to consider the question of Federal aid to education. The initiative has been given by the action of the Legislature of the State of Chiapas, asking the National Congress to pass a bill establishing in the various States schools for the education of the Indians. The idea has been caught up enthusiastically by a section of the press (especially the provincial press), is reported to be "favorably entertained" by the Government, and promises to be discussed among the important questions in the next session of Congress. The advocates of the plan are not slow to point to the precedent now set by the United States, and, indeed, are able to press the familiar arguments with a force altogether greater than that of our Senatorial debaters; for, with an equal poverty on the part of the States, the burden of illiteracy is far heavier, the part of the population for which help is invoked being at least three-fifths of the whole. The obvious objection of unconstitutionality will probably prove but a slight obstacle to the scheme, though a more serious difficulty would seem to threaten it in the bankrupt condition of the Federal Treasury. In these days of paternalism in government, however, it does not seem to require the existence of a tempting surplus to suggest an appeal to national aid.

The project of an international exposition in Mexico in 1892, submitted to the Government by the Associated Press of the City of Mexico, is the latest theme for newspaper comment. It is received with that jaunty self-confidence so characteristic of a Mexican discussing a grand idea, while the almost insuperable difficulties of detail, being still so remote, are overlooked. One would think that the conspicuous failure of the National Exposition at Orizaba, in 1882, would serve to retard somewhat a more ambitious attempt. It is possible that the underlying motive with the Mexicans is a desire to revenge or recoup themselves for their experience at New Orleans. Some very bitter things have been said by the Mexican press of the misrepresentations which induced their Government to incur so great an outlay to give their country a creditable appearance at an exposition which turned out to be little better than a provincial affair.

The news from England goes to show that the importance of Chamberlain's reported desertion of Gladstone has probably been greatly exaggerated. Chamberlain has not been gaining ground in public estimation during the last two years. On the contrary, he has been losing it. His economical plans during his last term of office led the business men to distrust his judgment and suspect him of demagogy. His attitude toward Mr. Gladstone more recently has led the Radicals to question his sincerity and disinterestedness. The chances are, therefore, that if he should abandon Gladstone at this crisis, he would simply take one more step toward his own political ruin. Moreover, however much the Whigs or timid Radicals may outwardly wriggle over Gladstone's Irish plans, the economic agencies, which are very powerful just now, are working in their favor. The owners of rented land both in Ireland and England—particularly the latter—and their creditors, are a very influential body, and this proposal to expropriate them is probably the last chance they will ever have of getting rid of worthless estates. They will therefore, however much they talk against Gladstone's schemes in public, probably secretly support them, and push them through the House of Lords, where the landed interest is all-powerful. They will be made all the more eager by the growing recognition of the fact, to which we have frequently called attention in these columns during the past six or seven years, and which English economists at last begin to see, that a large proportion of Irish land, like the land in New England and most of the Eastern States, will no longer yield rent. That is to say, it will support the man who tills it, but nobody else, neither a wage-paying farmer nor a gentleman landlord. The probabilities are, indeed, that, owing to American competition, a very large part of the island is now in this condition.

The protracted debates to which the various measures instituted by the Prussian Government for the further Germanization of Posen, West Prussia, and Upper Silesia have given rise in the German Reichstag and the Prussian Diet, render it clear that the task of the Government will be an exceedingly arduous one. Bismarck's historical dissertations on the subject—and he has indulged in these with his wonted unbridled frankness and rude unconcern—and the additional testimony of the Ministers Puttkamer and Gossler, not only show that the Poles in those provinces have hitherto triumphantly withstood the denationalizing pressure exercised against them by the governmental machine and the surrounding German populations, but that their methods and means of resistance are of a nature to baffle the most strenuous efforts. The intrinsic justice of their cause, the profound influence of religion the untiring propaganda of their clergy, the prestige of nobility, the charm of their language, the patriotic fervor of the Polish women, the cringing subserviency of Germans speculating on Polish patronage and custom—all these and similar subtle agencies combine to create a moral strength of more than merely defensive character. Bismarck and his associates pretend that the violent measures proposed, which the rest of the civilized world deems acts of international barbarism, worthy of Muravieffs and Potapoffs, are only processes of self-defence in the interest of German nationality and Prussian integrity. Russia has effectually applied such measures in Lithuania, Volhynia, and other portions of ancient Poland, but she had the advantage of acting upon mixed populations, of which the Lithuanian and Malo-Russian elements counterbalanced the properly Polish; and then she had also the gallows and Siberia to emphasize her decrees. Bismarck and his successors will have to deal with the purest portion of the Polish nation, and will be hampered by constitutional limitations and widespread sympathies which even German chauvinism will not be able to stifle or ignore.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, March 17, to TUESDAY, March 23, 1886, inclusive.]

DOMESTIC.

THE Senate on Wednesday passed the new Electoral Count Blll.

In the Senate on Thursday Mr. Van Wyck offered an amendment to the Edmunds resolutions, that all appointments in place of suspended men shall be considered in open session. This was defeated.

In the Senate on Monday afternoon Mr. Logan submitted the following resolution: "That the sessions of the Senate commonly known as executive sessions, so far as they apply to nominations, confirmations, or rejections, shall hereafter be held with open doors, and that a public record of the same shall be kept, the same as of legislative sessions." It was ordered printed.

Three Republican Senators and one Democratic Senator, members of the District Committee, voted on Monday in favor of reporting the nomination of Mr. James C. Matthews (colored), of Albany, to be Recorder of Deeds of the District, and three Democrats and one Republican voted against reporting it. Upon this tie vote an adverse report was ordered. The affirmative votes were those of Ingalls, Pike, and Palmer (Reps.), and Brown (Dem.). The negative votes were those of Blackburn, Vance, and Harris (Dems.), and Riddleberger (Rep.).

Mr. George Hearst has been appointed United States Senator in place of the late Senator Miller by Governor Stoneman, of California. He is a man of wealth, connected with a leading mining firm, and a mining prospector of recognized authority. He was a candidate for Governor before the Convention which nominated Governor Stoneman, and received considerable support for Senator when Mr. Stanford was elected.

Pension Commissioner Black on Thursday submitted to the House Committee the names and numbers in twenty cases which he said had been allowed or rejected under Commissioner Dudley on account of the politics of the claimants. He said he would furnish in addition 300 or 400 affidavits, when the Committee should have examined the list, in support of his allegation that the Pension Office had been conducted as a political machine.

The House Judiciary Committee has finally agreed upon a bill which is designed to correct one of the greatest evils of the present system of legislation. It proposes to relieve Congress of the great burden of private legislation by giving the United States district and circuit courts equal jurisdiction with the Court of Claims, to amounts of $10,000, in all suits against the Government.

The House Committee on Elections on Friday decided the Hurd-Romeis (Ohio) contested election case in favor of the sitting member, Mr. Romeis. Mr. Hurd thinks the House will give him the seat.

The House Committee on Shipping on Monday, by a vote of 7 to 6, instructed Representative Dunn to report favorably his Free Ship Bill, with an added section authorizing the entry free of duty of materials used in the construction of ships. All the Republican members voted against the bill, and all the Democrats except one in favor of it.

Something of a sensation was produced in the House of Representatives on Monday, when the Chaplain devoted his opening prayer to an invocation to God to rid the land of gamesters, whether in cards, dice, chips, stocks, wheat, bucket-shops, or boards of trade, and to lead the people to know that money-making other than by the sweat of the face was contrary to His laws. On motion of Mr. Butterworth (Rep., O.), the prayer was ordered to be inserted in the *Record*.

The prospects of the Tariff Bill in the House are not encouraging. It is now proposed by Mr. Morrison and his associates to put wool on the free list, strike off the specific parts of the duties on woollen goods which the manufacturers could spare if there were no duty on wool, and strike out the sections putting all ores on the free list, and reducing the duties on metal goods, glass, and pottery. This proposition contemplates an abandonment of Ohio, and an effort to conciliate Pennsylvania and New Jersey, and secure the votes of Democratic members from those States.

Both houses of Congress have passed a bill giving the widow of General Hancock a pension of $2,000. It met with considerable opposition in the House, on the ground that General Hancock had long had a liberal salary, and that such pensions were an inducement to extravagant living.

The President has talked freely with Congressmen as to the Blair Educational Bill, and has impressed some of them with the belief that he does not think the measure constitutional.

The Secretary of the Treasury on Monday issued a call for $10,000,000 3 per cent. bonds of the issue of 1882.

There is a rumor that Mr. Trenholm, as Comptroller of the Currency, will interfere with the operations of the Louisiana Lottery Company, so far as they have been conducted through the national banks.

General Schofield will be General Hancock's successor in command of the Division of the Atlantic.

The petition or bill of complaint in the suit brought by the United States Government to annul and vacate the Bell telephone patents was filed in the United States Circuit Court at Columbus, O., on Tuesday, by the District Attorney. It is a large pamphlet, showing that the ground-work of the action is the fraud alleged to have been practised by Alexander Graham Bell in obtaining his patents by the connivance of persons holding official position in the United States Patent Office, and by misrepresentations made in his behalf.

Governor Murray, of Utah, has resigned. The Gentile press are indignant that this action should have been requested.

The Receiver of the Texas and Pacific Railroad agreed on Thursday with the Knights of Labor to submit their dispute to arbitration.

On Friday Vice-President Hoxie, of the Missouri-Pacific Railroad, replied to Mr. Powderly, of the Knights of Labor, that he would not meet him and a committee to arrange the questions about the strike, because of the frequent annoyances the company had experienced at the hands of the trade organizations in the last eight months. This lessened the chances of a settlement, but Governor Marmaduke of Missouri and Governor Martin of Kansas decided that public interest rendered it necessary for them to endeavor to act as mediators in the strike. They prepared a proposition which was accepted by the strikers, and left on Friday night for St. Louis to lay it before the railroad officials. The men agreed to return to work on the terms of agreement in force at the time they struck, simply making a request that the question of increasing wages of bridge and trackmen be taken into account. The matter of Hall's reinstatement on the Texas and Pacific was not mentioned. Vice-President Hoxie said that the agreement entered into with the men on March 15, 1885, would be accepted by him, with the following provisions: That all parties who have entered the service of the Missouri-Pacific Railway Company since March 5, 1886, would be retained, and that men of families and who had homes would be given the preference; that no one who had participated in the destruction of the company's property, or who directed such destruction, would be reinstated; and that on account of the strike he should not require as many men to perform the work as were employed before the strike occurred. These terms the men promptly rejected.

Early on Sunday morning, ten watchmen at the round-house at Denison, Texas, were seized by 150 masked men, who disabled all the engines and did serious damage to other property in the shops. A Missouri-Pacific freight train which was started out of Omaha on Sunday afternoon was pursued by Knights of Labor on an engine and compelled to return. An attempt to start a similar train from St. Louis on Tuesday was defeated, the coupling pins being drawn every time a start was made. A train started from Sedalia, Mo., on Tuesday, was thrown from the track and four men were badly hurt. New developments of the trouble were the strike of all the switchmen at Kansas City, Mo., on Monday, and a general strike of all the coal miners in the fourth district of Pennsylvania.

One of the results of the transcontinental railroad war is the shipment of apples, potatoes, and onions from Chicago to California. Apples are not grown successfully in that State.

At a meeting of presidents of the coal roads in this city on Monday, a harmonious arrangement was made by which prices are increased 25 cents a ton, and the total allotment for the coming year fixed at 33,500,000 tons.

The San Francisco Chinese are taking advantage of the low railroad rates, and are coming East in large numbers.

Anti-Chinese mass-meetings were held throughout California on Saturday night.

Ten negroes were killed and three fatally injured by an armed band of fifty white men at the Court-house in Carrollton, Miss., on Wednesday. Several weeks ago a young lawyer of Carroll County had been slightly wounded by three negroes. The case was on trial when the white men rode up and killed the negroes.

The Massachusetts House on Wednesday defeated the biennial-election resolution by a vote of 112 to 86, not the necessary two-thirds.

The "no-tobacco" rule went into effect at the Concord, Mass., Reformatory on Monday. The 600 prisoners accept the situation philosophically.

The Connecticut Legislative Committee on Woman Suffrage voted on Wednesday 7 to 1 in favor of a bill allowing women to vote in school-district meetings without any property qualification.

Governor Hill, of New York, has appointed five ladies notaries public.

Alderman Henry W. Jaehne, of this city, was arrested on Thursday charged with bribery in connection with the Broadway Railroad franchise. He has confessed, it is alleged, that he received $20,000 for voting in favor of the Broadway franchise.

Hamilton Cole, Referee in the action brought by George C. Holt, the assignee for the benefit of the creditors of Ferdinand Ward, against William S. Warner, filed his report with the Clerk of the Supreme Court on Wednesday morning. It finds that the payment of all money made by Ward upon the so-called contract business was fraudulent and void as against the defendant, Julien T. Davies, as receiver, and that Warner must pay over to Davies, as receiver, all moneys received by him from Ward over and above the amount paid by him to Ward. This sum the Referee finds to be $1,255,361 34, which, with interest thereon from May 6, 1884, $140,391 20, makes the total amount to be recovered $1,395,752 54.

The Rev. Thomas Parry, of the Jefferson Park (Chicago) Presbyterian Church, delivered a sermon Sunday night in the line of thought of the "two Sams." He applauded the vigorous style of the evangelists Jones and Small, and said he felt the beneficial effects of their work in his own church.

Severe thunder storms have prevailed during the week in different parts of the country, accompanied by loss of life. On Sunday the severest snow storm of five years occurred in Iowa, and there was also a heavy fall of snow in Maine.

General John H. Devereaux, one of the most prominent railroad men in the West, died in Cleveland on Wednesday at the age of fifty-four. He was born in Boston, became a civil engineer, and early achieved a reputation in railroading.

Miss Abigail Bates died at Scituate, Mass., on Wednesday, aged eighty-nine years. She was one of the two women who, during the war of 1812, drove the British forces from this harbor by concealing themselves in the bushes and playing vigorously upon the fife and drum, thereby leading the enemy to believe that a large force was ready to receive them. This, at least, has been the cherished local tradition.

FOREIGN.

Mr. Robert Bannatyne Finlay (Liberal) moved in the House of Commons on Wednesday the second reading of his Church of Scotland Bill. This opposes disestablishment, and favors such reform of the Church as would practically amount to reconstruction. It aims at removing all those obstacles which now exist to a reunion of the Free Church and the United Presbyterian with the Established Church. The Scotch Radicals and Parnellites vigorously opposed it, and it was rejected by 207 to 177.

Mr. Gladstone, in the House of Commons on Thursday afternoon, declined to recommend to the Queen the appointment of a day for national humiliation and prayer because of the distress prevalent among the poor and unemployed of the kingdom. The Premier said that bad as the distress was, it did not justify the action proposed.

In the House of Commons on Friday Mr. Gladstone said that during the coming week he hoped to be able to name a day for presenting his statement of Irish proposals. The statement would probably be followed by a bill to carry his plans into effect. He asked that the members exercise caution in regard to rumors about dissensions in the Cabinet and alleged features of his Irish plans.

Sir William Vernon-Harcourt, Chancellor of the Exchequer, replying to Mr. Goschen in the Commons on Monday, said the Government was not disposed to appoint a special committee to examine into and report upon the silver question, because the special commission which was now inquiring into the causes of the depression of trade would in all probability cover the silver question.

The House of Commons on Tuesday night, by a vote of 216 to 176, adopted a motion in favor of local taxation falling partly upon the owners of landed property instead of upon the occupiers only, as the law now stands. Mr. Chamberlain urged that the motion be withdrawn, as the Government was preparing a bill to equalize taxation.

John Bright had an interview on Saturday with Mr. Gladstone. It is believed that Mr. Bright strongly protested against the Premier's Irish expropriation scheme.

The latest report from London about Mr. Gladstone's home-rule scheme is that he does not intend to ask authority to issue a loan in order to secure funds to buy out the real-estate owners of Ireland, but that he proposes the appointment of a commission of experts to fix the value of the various land properties in Ireland, which at these valuations are to be handed over to the possession of the Government in exchange for consols. In this way Ireland is to be made a debtor to the empire for the entire amount paid to the landlords, together with interest, the whole sum to be repaid into the Imperial Treasury by Ireland in instalments within the term of fifty years, at the end of which term the lessees are to become the owners. This necessarily involves home rule.

Mr. E. Dwyer Gray, M. P., presiding at a St. Patrick's Day banquet in London on Wednesday night, said that Irishmen wished to legislate for themselves in their own country, and would loyally accept any measure giving them that privilege, thus benefiting both countries instead of endangering the empire.

Sir James Caird, as great an authority on agricultural questions as Mr. Giffen is on finance, writes to the London *Times* opposing land purchases, on the ground that the good land is not worth buying because the landlords are quite able to take care of themselves, and the bad land is not worth buying because nobody can get rent out of it. The letter contains the following highly significant sentence: "If the present prices of agricultural produce continue, I should fear that from the land held by the large body of poor farmers in Ireland any economical rent has for the present disappeared. The purchase of it at any price would therefore be a certain loss." The *Times's* editorial on the letter says: "It is not too much to say that the rental of 528,000 holdings is practically irrecoverable by anybody, whether landlord, English Government, or Irish Government."

The Duke of Argyll has written a remarkable letter to the London press. Writing as one of the chief landlords, he points out in detail how every important measure in Parliament thus far, whether for or against the Government, has been solely carried by the Parnell vote. His conclusion evidently is that the Irish-Americans rule Great Britain.

The Paris *Journal des Débats* says that Russia refuses to join the other Powers in coercing Greece to comply with Turkey's policy in the Balkan States. The press of Bulgaria denounce the Russian policy of opposition to Prince Alexander, and declare that it will be impossible to separate the Prince from the Bulgarian nation. The Russian Consul at Philippopolis, the capital of Eastern Rumelia, has expressed a wish that the politicians of the country refrain from using the Czar's name or that of his Government for any political purpose whatever during the coming Rumelian elections.

The Bulgarian Government has suspended all the Russophile newspapers within its territory, and caused the arrest of thirteen Conservative leaders who are partisans of M. Zankoff, formerly Prime Minister of Bulgaria. A warrant was issued for M. Zankoff, but he escaped arrest by placing himself under the protection of the Russian Consul at Sophia. The Bulgarian Government will continue to use every means in its power to put an end to the Russophile agitation.

A London despatch says: "The situation in Greece is not a whit more, but rather less, pacific; all available troops have been summoned, generals are en route for the frontier, the fleet has sailed with sealed orders, and the cavalry is ordered to Thessaly. The statement has been made, denied, and reaffirmed that Russia has refused to be a party to the coercion of Greece. Servia has concluded a fresh contract for 10,000,000 cartridges in Austria, with the consent of the latter. The condition of the interior of Turkey is said to be deplorable. The country is denuded both of men and money. Every Cabinet in Europe may be described as waiting for something to turn up. It is impossible to see what this something can be except blows."

The French Chamber of Deputies has adopted the bill authorizing the city of Paris to issue a loan for the construction of public works to furnish labor to the needy unemployed, on the condition that nothing but French material be used in the works.

One of the wolf-bitten Russians, who was treated by M. Pasteur in Paris to prevent rabies, has died in great agony, with all the symptoms of hydrophobia.

The parade of unemployed Socialists in Liége, the iron-manufacturing centre of Belgium, on Thursday evening resulted in disorderly demonstrations. A mob composed of Socialists and the lowest classes of the people took possession of many of the streets, shouting, "Down with the capitalists!" They wrecked all the cafés and sacked all the shops in the Rue Leopold. The gendarmes finally attacked the mob, and after a severe fight, in which many of the rioters were wounded, succeeded in clearing the streets and restoring order. Several hundred Socialists were placed under arrest. The riots broke out afresh on Saturday night in Liége and also in other Belgian towns. A severe fight occurred near Liége with anarchists, who were marching against the town to loot it, and they were defeated. 6,000 troops are on duty in the disturbed district.

General Appert, the French Ambassador to Russia, has received letters of recall, and will leave St. Petersburg in two weeks. When General Appert has left Russia Baron Mohrenheim, the Russian Ambassador to France, will transfer his residence from Paris to Cannes, or perhaps just beyond the French frontier, in order to mark Russia's disapproval of the reasons of General Appert's recall.

The exodus of Jews from Russian Poland has attained extraordinary figures. During last year 20,150 left the country for America alone.

The Emperor William's health is pronounced restored. He received warm congratulations on Monday, the eighty-ninth anniversary of his birthday

The Right Rev. Dr. Kopp, the Roman Catholic Bishop of Fulda, has been instructed by Cardinal Jacobini, Papal Secretary of State, to obtain the largest concessions possible from the German crown in the new Ecclesiastical Bill, but to do nothing which will endanger the success of the measure, the passage of which, the Cardinal says, even unaltered, will be a distinct gain for the Vatican.

Leopold Zunz, the distinguished Jewish scholar of Berlin, is dead at the age of ninety-two.

A coalition has been formed in Spain, for the defence of the Republican cause, of all the sections of the Republican party—the Castelar group excepted. The coalition accepts the Constitution of 1869 as the basis of its programme until the Cortes has decreed a better constitution.

Marie Heilbron, the opera singer, died at Nice on Sunday.

Christine Nilsson is to make a "final tour" of America.

The British expedition to relieve Yemethen, in Burmah, has been successful.

Sir John A. MacDonald, the Canadian Premier, is seriously ill.

Mail advices from the Sandwich Islands received on Tuesday state that the volcanic phenomena which extended over March 5, 6, and 7, and which were accompanied by a large number of earthquake shocks, resulted in the total disappearance of the new lake at Halemaumau and in the extinction of the fire in the crater of the volcano of Kilauea. These phenomena are believed to be the precursors of a grand outbreak in the near future, either in Kilauea or Mauna Loa. Some persons, basing their views on the observations of Professor Agassiz, believe that the disappearance of fire is a prelude to the total extinction of Kilauea volcano.

"THE PAPERS."

It is not too much to say that the bottom was completely knocked out of the discussion in the Senate on the "papers" question, on Friday week, by the powerful speech of Mr. Kenna, of West Virginia. His citation of counter precedents and authorities in support of the President's position was particularly effective. When the House of Representatives asked President Washington for "the correspondence and other documents" relating to the treaty then just concluded with Great Britain, he declined to furnish them, on the ground that the papers "were not relative to any purpose under the cognizance of the House" except that of impeachment, to which no allusion had been made in the resolution. When the Senate asked President Jackson for "a paper purporting to have been read by him to the heads of departments" relating to the transfer of the deposits, Jackson declined compliance, under "a proper sense of his own self-respect and of the rights secured by the Constitution to the executive branch of the Government." Under President Tyler, the Secretary of War sent to the Senate at its request the letter dismissing one Sylvester, but declined to send any other papers, on the ground that they were of "a confidential character." In 1849, under the Presidency of Taylor, the Senate called for

> "all charges which have been preferred or filed in any of the departments against individuals who have been removed from office since the 4th day of March last, with a specification of the cases, if any, in which the officers charged have had an opportunity to be heard, and a statement of the number of removals made under each department."

The resolution was opposed by Daniel Webster as follows:

> "Since the practice [of removal] has become a settled practice, since every administration has indulged in it, and since it must now be considered as the legal construction of the Constitution, that it is one of the powers of the President to remove incumbents from offices which they hold, it follows, as a necessary and as an inevitable consequence, that this power, thus legally vested in the President, must be exercised by him as independently of our control as any other power that is to be exercised by him under the Constitution. If he holds the power, he holds it to be exercised at his own control and discretion. And I see no ground upon which we can call upon him to give us reasons for the manner in which he exercises that power, any more than we can call upon him to give reasons for the manner in which he exercises any other power under the Constitution. . . ."

Mr. Kenna produced one other very curious bit of documentary evidence as to the practice and opinion of Webster's day on this subject—namely, forms prepared in the Department of State, when Webster was Secretary, to be used in answering just such inquiries as have been addressed to President Cleveland. There is no proof that these forms were ever used, but here they are:

> "SIR: I have the honor to acknowledge the receipt of your letter of the ——, desiring me to send you the papers on file relating to the nomination of ——to be——.
>
> "The letters accompanying this will be, I presume, very satisfactory testimonials of Mr. ——'s fitness for the office; but I take occasion to say, that, in this Department, letters of this description, though usually communicated on request to the Senate or its committees, unless in peculiar cases there be reason for withholding them, are not considered as public letters, and, therefore, are not placed on the official files. When sent to the Senate, or its committees, they are understood to be sent in confidence, and it is expected that they will be returned when the occasion has passed.
>
> "I am, sir, etc.
>
> "To Hon. ——,
> Chairman of the Committee on——of the Senate."

Another read as follows:

> "Hon. —— ——,
> Chairman of the Committee on —— of the Senate.
>
> "Letters recommending individuals to office are not considered as official communications any more than verbal recommendations. They are not kept on the public files, and it has not always been the case heretofore, as I learn, that they have been preserved. So far as may be proper, however, it will give the Department great pleasure to afford the Committee any information in its possession. I send you several communications respecting the persons mentioned in your letter, which, when examined by the Committee, I will thank you to cause to be returned."

In 1874, too, when the Democrats got possession of the House of Representatives once more, after many years of exclusion, they began to ask General Grant in what place he performed the duties of his office. He answered, with the applause of the whole country, that he was not bound to give them "an account of his discharge of appropriate and purely executive offices, acts, and duties, either as to when, where, or how performed."

Mr. Kenna reserved to the last the most instructive and, we might add, the most entertaining of his examples. The person who even more than Mr. Edmunds started this longing in the Senate for "papers" relating to removals and appointments was the Honorable John Sherman, of Ohio. He made a great speech on the subject at the opening of the debate, in which he said:

> "That we have a right to call for information of any kind whatever in any department of the Government, whether it be by written order or by parol, I do not think there is the slightest doubt. Indeed, but for that we could not legislate; but for that we could not act wisely in executive session."

And, warming to his work, he added:

> "The idea of a distinction between papers public and private in the public records never occurred until during the present Administration and to meet an exigency."

But when Mr. Sherman was Secretary of the Treasury in 1877, and Mr. Conkling asked for the papers in the case of the removal of Mr. Arthur, the Collector at this Port, Mr. Sherman wrote the following remarkable answer:

> "TREASURY DEPARTMENT,
> November 17, 1877.
>
> "SIR: Your letter dated the 15th instant was received only this morning, and I take the earliest moment to reply to it.
>
> "To answer in an official way the questions put to me, would not only compel me to violate that trust and confidence reposed in me by the President, necessary for the transaction of the business of this Department, but to disclose papers of a confidential character filed in the Department, and require me to enter into the discussion of questions totally immaterial to the nominations submitted to the Senate. I do not think it within the just limits of the intercourse of the Senate with executive officers to answer in writing, or even verbally, all the questions submitted by you, nor have I ever known such an instance.
>
> "The President has the power to nominate to the Senate a proper person for Collector of the Port of New York, whether that office be already vacant or not, and it is within the power of the Senate to either confirm or reject.
>
> "These are independent powers. No law requires the President to give the reasons for his nominations, and it does not appear that in this case the Senate even has directed this inquiry. The Tenure-of-Office Act required of the President the reasons of a suspension made during the recess of the Senate, but this provision, after a very brief period, was repealed. To answer your questions would compel me to state to a committee of the Senate the reasons of an appointment by the President, to disclose confidential communications between the President and the Secretary, and to enter into an arraignment and accusation of the officers superseded. In the free exercise of independent powers it is the common practice, as we both know, for members of the Senate to have full conference with the heads of executive departments on all matters in which the concurrent action of the President and the Senate is required, and therefore it will give me pleasure to confer with the Committee, or any member of it, on the subject of the fitness of the appointment of Mr. Roosevelt to the office of Collector of the Port of New York.
>
> "It will also give me pleasure to furnish to you, or to the Committee on Commerce, or to any member of the Committee, in the usual way, the several reports of the Commission on the New York Custom-house, upon which mainly the action of the President was taken. As the investigation progressed, these reports made it of the highest public importance that a change should be made in the leading officers of that service. It was because abuses were thus developed that the President was convinced that it was incompatible with the public service to retain in their present positions the Collector and Naval Officer.
>
> "The other cases mentioned by you under the same envelope will be governed by what is here stated, and with these limits I will be happy to confer with you or the Committee at your convenience. Very respectfully,
>
> "JOHN SHERMAN, Secretary.
>
> "Hon. ROSCOE CONKLING, Chairman Committee on Commerce, United States Senate."

The above, under the circumstances rather diverting, letter was disinterred by the Administration some weeks ago, and has been reserved until now as a final bucket of water for the extinction of this "burning question." Time was when its production would send its author to Europe for a few months; but the skin of public men is tougher now, and when their tergiversation is exposed, they simply smile and change the subject, as Mr. Sherman undoubtedly does. Nothing could better illustrate the insincerity and puerility of this debate.

The truth appears to be that whenever the Senate has been in harmony with the Executive, it has either not asked for papers, or has obtained them without difficulty, or has taken the refusal of them in good part. When, on the other hand, the Senate has for any reason got out of harmony with the Executive, it has almost invariably become clamorous for papers about offices, has demanded them with more or less vehemence, and sometimes has got them and sometimes not. The President, however, whether he gave them or did not give them, has always remained, and must always remain, master of the situation, for the simple reason that, in case of non-compliance, there is no remedy against him but impeachment. But it is also to be observed that there is no trace, in all the long history of this question, of any systematic desire on the part of the Senate to know the President's motives, in making either appointments or removals, for the purpose of improving the service. It has always been due either to a desire to "get even with him" for some failure to carry out his bargains, or to compel him to come to terms in some contemplated division of the spoils, or to some party purpose.

THE ANNULMENT OF CHARTERS.

MR. CARTER, in his argument before the Legislative Committee last week, protested strongly against the annulment of the charter of the Broadway Railroad on two grounds. One was that the interests created by the charter were property like any other property, and therefore

sacred. The other was that, the practice of annulling charters once begun, it would be taken for a precedent, would be frequently resorted to or threatened, and thus not only put all rights created by a charter in constant peril, but would transfer the corruption of which we now complain in the Board of Aldermen, to the Legislature itself. In other words, we presume, money would be paid to induce the Legislature not to annul charters as it is now paid to the Aldermen to grant them.

All this, however, suggests but does not answer the question, why the power of regulating charters is reserved to the Legislature. What is the object or use of this power? What good purpose did those who reserved it expect to be served by it? The State, as represented by the Legislature, was surely not armed with it simply as an ornament or for the purpose of levying blackmail. It cannot have been intended simply to compel the holders of charters to work the railroads for which the charters are granted, because this is provided for otherwise. Charters of which no use is made can be forfeited by proceedings in the courts instituted by the Attorney-General. Why, then, does this power of repeal exist?

It exists, we take it, for the same purpose as all the other powers with which the Constitution arms the Legislature—for the same purpose as the Legislature itself exists—for the purpose for which charters are granted—the promotion of the public interest. Franchises are not bestowed in this or any other civilized country in order that a particular set of men may make money out of them, or that securities furnishing a convenient form of investment may be based on them, or, in other words, in order that they may become valuable property in the hands of a small number of persons. The prospect of making money out of them, or of basing securities on them, is undoubtedly what induces individuals to ask for them; but that, the franchise once granted, the State is bound not to interfere with the money-making, and is bound to see that it goes on undisturbed under all circumstances, is a doctrine which we believe no civilized State has yet adopted.

What the Legislature has to consider first and foremost in exercising any of its powers, the power of annulling charters among others, is the effect on the public welfare. In deciding whether it will take Sharp's franchise away from him or not, it ought, of course, to weigh the benefits of the proceeding against the advantages. This has to be done in nearly all legislative action. Hardly anything it does or can do is unmixed good. The interests of Sharp's bondholders, or of that comparatively small number of them—say $1,500,000 worth—who can be called "innocent holders," should undoubtedly not be overlooked, but no injury to them which the law allows should stand in the way of great benefit to the community at large. As a matter of fact, in this case, no injury need be worked to them at all. Their bonds can be readily paid out of the proceeds of a sale of the franchise at auction.

Now, what is the first duty of the Legislature in this matter of the Broadway Railway? It is to put a stop to what was called by one of the witnesses before the Committee, the "Aldermanic business"—that is, the business of selling franchises. The commoner and the longer established this business has been, the more solemn and imperative is the obligation resting on the Legislature to break it up. If it be true, as Jaehne is reported to have said, that the Aldermen have been paid for every railroad franchise granted in this city within twenty years; or even if it be true, as some of Sharp's apologists have said, that all franchises granted by any legislative body in this country now are paid for regularly by the grantees, the more needful is it that such action should be taken as will warn all persons applying for franchises and all persons investing money under them, that, as far as this State and city are concerned, they are not a good purchase, and that all money put into them runs the risk of being lost. It will never do in this community and this age to surrender to the notion that because an evil is great it is incurable, or that because it is of long standing there is no use in attacking it.

It is not the business of the Legislature to punish the individual bribers or bribed. That duty belongs to the courts or the police. But it is the duty of the Legislature, and its highest duty, to take such steps as may seem likely to be effective to stop or impede the practice of bribery, by making it unsafe and unprofitable. It was for just such purposes and emergencies as this that, in our opinion, the power of revoking charters was granted. It is not once in a hundred years, too, that so good a case for the exercise of this power offers itself as Sharp's case. It is a power which, as being liable, we grant, to great abuse, should never be exercised unless its justification be clear to the public eye. But a plainer case than Sharp's could not be asked for. The evidence, even if it be not sufficient to procure his conviction and that of his confederates before a court of justice, is abundantly sufficient for legislative action. His own confessions, and those of Kerr, Richmond, Foshay, and Hayes, coupled with the revelations made as to the sudden accessions of wealth at a certain period, of some of the Aldermen, are ample proofs of the use of money to procure the charter. No civilized government, we venture to affirm, having the power to strip Sharp of his spoils, would, in view of what is now known of his operations, fail to exercise it. Moreover, the very enormity of his corruption and its audacity furnish the best possible defence against the danger to which Mr. Carter points, that an attack on it may be converted into a precedent dangerous to honestly acquired franchises. Sharp's offence is so flagrant that we shall probably not for a hundred years see anything which could be made to look like it as an excuse for legislative interference with vested rights.

Finally, we would ask legislators to consider for one moment what the effect will be of allowing Sharp to get clean off with his 9,520 shares of stock, and his $788,000 of bonds, upon the generation which has been growing up since the civil war in this city, and which has learned to consider money the chief earthly good, its possession the one final proof of talent and success, and the purchasability of every public man and public body one of the fundamental facts of our social and political system. We heard a political observer of high standing maintain very recently that our Government was now so permeated with corruption that, in trying to effect any public improvement, one had to calculate on the venality of legislators as one of the essential conditions of the enterprise, like the hardness of rock or the weight of clay. Does any sane man suppose that this state of things, or rather this state of feeling on the part of good citizens, can continue indefinitely without danger to everything that is valuable in public or private life? Would it not, in view of it, be madness to allow men like Sharp and his confederates, not only to escape punishment for their misdeeds and to grow rich on them, but actually to erect a monument in our streets, both of their own successful villany and of the feebleness and corruption of the Government they thrive under?

THE WASTE OF TIME AT COURT.

The administration of justice in this city suffers under a multitude of abuses, most of which are perpetuated because it is for the pecuniary interest of some one to perpetuate them. But there is one most vexatious abuse which is apparently an exception to this rule. It is the compulsory attendance at court of a large number of people upon the bare possibility that their attendance may be necessary. This particular evil seems to involve no advantage to any one, and to be the object of the united execrations of both lawyers and clients. It is highly injurious to the business of lawyers, not only because it wastes a great deal of their time, but also because it deters their clients from invoking legal aid in procuring their rights. It is injurious to the general business of the community because it operates as a denial of justice. It destroys the satisfaction of victory by the enormous loss of time that it involves, and for the same reason it makes defeat more crushing. The bench and the bar, clients, witnesses, and jurymen, all groan under this affliction, and all are apparently equally helpless.

The abuse in question is an instance under the familiar law that institutions in their origin well adapted to their purposes may become grossly oppressive when changed circumstances have destroyed this adaptation. In former days, when communities were of moderate size and business was of moderate volume, a single court might without great inconvenience dispose of the cases at issue in any term by placing them all upon its calendar for a given day. Even now this probably remains true throughout the greater part of the land. The number of cases is not very large, so that in any event no one will suffer from prolonged delay. The attorneys are acquainted with one another's cases, and can calculate the probable course of things; and all parties, including judges, are generally in such intimate personal relations as to be compelled, even if not disposed, to be accommodating. But with the enormous calendars of the courts of this city such calculation and accommodation has become impracticable. Instead of a single

court, with a calendar of a dozen or twenty cases for the term, there are, besides the City Court, three courts of nearly equal jurisdiction, each of which is divided into a number of parts. Each of these parts has upon its day calendar from twenty to forty cases, and each case involves the attendance of two attorneys or their clerks, and possibly three or four witnesses. It is no exaggeration to say that upon almost any morning of the term a thousand men are obliged to leave their business and make a journey to the court-house simply as a matter of precaution. It is very certain that not more than one hundred of the thousand will find that there is anything to be done but to wait for half an hour and then return; but, as it is impossible to determine whose presence will be required, it is not safe for any one to stay away.

If this vexatious experience were not too many times repeated, it might be tolerable; but it is not uncommon for a case to appear on the day calendar for weeks at a time, and it may be necessary to stand ready to go to trial upon any day during that period. When there are many witnesses, and especially when there are witnesses from out of town, the expense and inconvenience caused by this delay are almost inconceivable. Business men are usually reluctant to leave their own affairs and go to court to testify about matters in which they have no interest; and though it may be possible to overcome this reluctance upon one or two occasions, their patience is exhausted by demands too often repeated. Lawyers frequently do not summon their witnesses when they really ought to do so, because they are afraid of exasperating them even when willing, and, if unwilling, of losing them altogether. Hence they are often caught finally unprepared, although they may have been for weeks in a state of complete preparation, and must choose between two evils: they must either go to trial when they are not ready for it, or lose their chance for weeks or even months, only to have the same experience repeated. "Cases must be ready when reached" is the rule of the court, and though when a case is first called this rule is not rigidly applied, any further accommodation is a matter of chance or favor. Many judges seem to think it a fine thing to be severe in the application of this rule, regardless of the fact that their arbitrariness often condemns innocent parties to the loss of the labor of weeks, and not infrequently drives them to abandon their causes altogether.

The trial terms of our courts do not average more than five hours a day of actual session, and of this time nearly one-fifth is frequently taken up with the disposition of the calendar and procuring a jury. Arrangements ought to be made by which a part at least of this time should be saved, so that the actual trial of causes might begin before midday. A reform of this nature would do much to remedy the present delay of justice, but it would not go to the root of the evil. So long as the number of cases exceeds the capacity of courts to dispose of them, suitors must wait, and the rule "First come, first served" must apply. But it is certainly possible so to arrange matters that after a man has necessarily waited a year for his cause to be reached, he shall not unnecessarily be kept with his witnesses dancing attendance for weeks at the Court-house.

It would be absurd to deny that it is extremely difficult to devise a remedy for these abuses. The trouble is of a two-fold nature. It is impossible at present either to determine the time that cases will occupy in trial, or to know whether they will be ready when called. A case that will occupy weeks may come on at any time, and on the other hand twenty cases may melt away in as many moments. The remedy, therefore, must meet both these difficulties. There should be a classification of cases as they are put upon the calendar, according to the probable length of time that their trial will consume. Of course, only a rough estimate of this kind could be made; but that such an estimate is practicable appears from the existence of the "short cause" calendar, an institution that might well be constituted upon somewhat more enlightened principles than at present. Wherever possible the calendar clerk should be informed when a note of issue is filed whether the case will be ready for trial upon short notice or not, in order that there may be a supply of cases that can be drawn upon in an emergency. There should always be one judge unassigned, ready to hold a term for the trial of cases that were ready at their appointed time, but were crowded out of their regular place by unforeseen delays.

With these arrangements, it would become possible when a case was put upon the calendar to set it down for trial upon a particular date, no matter how far in the future. If at that date another case having priority was still on trial, the extra term could be resorted to. If on the other hand the calendar was cleared sooner than was calculated, the reserve of cases ready upon short notice could be called upon, or the judge could hold the extra term for the trial of cases that were ready and waiting. Immediate notice of the settlement of cases should be required and advertised, in order that the time thus set free might be claimed by those who wished to advance their suits, or by those whose places had been lost by accident or mistake.

Doubtless many improvements upon this remedy could be suggested by members of the bar, and it would obviously require calendar clerks of a high order of ability as well as of a certain degree of impartiality, and nowadays calendar clerks are changed according as Tammany or the County Democracy gets the upper hand. No doubt, also, many imperfections in the scheme would reveal themselves in practice. But no one can deny that something of this kind ought to be attempted, and that it ought to be attempted very soon. As we have suggested, there is no reason to expect opposition on the ground of pecuniary interest in the existing abuses, and on the other hand lawyers are losing a great deal of money by their continuance. If things remain as they are, it will soon become the general conviction of business men that it is better to let small claims go, no matter how just they may be, or how solvent the debtors, rather than to lose the time required to collect them by litigation.

CURATIVE PROPERTIES OF THE WATERS OF LA BOURBOULE.

THE traveller who takes his way southward for two hundred and sixty miles from Paris, by Nevers, will find himself, after a nine hours' ride, at Clermont-Ferrand, at the foot of the mountains of Auvergne, and on the eastern periphery of the railroad circle, or rather quadrilateral, that encompasses them. This mountain region, more than a hundred miles across in its least diameter, was untouched by railways until 1881; but in that year a road was opened from Clermont to Brives, carrying the traveller through some of the finest hill and mountain scenery in France, and some of the most interesting in Europe, for the ancient volcanoes of Auvergne rise upon the left hand of the new route. An hour from Clermont brings the traveller to Laqueuille station, and here he finds the diligence waiting to carry him still further and higher among the hills to the thermal mineral springs of La Bourboule and of Mont-Dore.

After two hours of ascent and descent among the hills, one is set down at his hotel door, upon the right bank of the Dordogne River, and in the mountain village of La Bourboule—a village of six hundred inhabitants according to the census; but more than six thousand people spend a part of the year at the springs. The bottom of the valley lies at 3,782 feet above sea level. At this elevation the climate is, of course, variable, yet it is not trying; the range of the thermometer during the season is from 53° to 86° Fahr., and some patients prolong their stay beyond the close of the regular season (September 30th) for the sake of the pleasant autumn weather. A rude granite cliff walls in the valley on the north. From the "tormented ground" at its foot spring the precious thermal waters whose curative values I will describe.

No mineral waters that I know have more legitimately acquired their title of "precious" than these. While many of their constituents, as the chlorides and the alkaline carbonates, remind us that they belong to the great family of the waters of Auvergne, the large quantity of arsenic (nearly half a grain to the gallon, or two grains of the arseniate of soda, according to Lefort's analysis in 1878) gives to these waters an individuality which is rivalled by no other. It must be added, however, that since the deepening of the Choussy well in 1878 the amount of arsenic has been somewhat diminished. Four of the springs are thermal, ranging from 85° to 140° Fahr.; the two Fenestre springs are at 66° Fahr. These are less rich in arsenic than the others, but have iron in them, and are well charged with carbonic-acid gas. They are used for drinking only, or to temper the excessive heat of the stronger springs as used for bathing.

(1.) What, first, are the strictly physiologic effects of these waters? One might almost call them pathologic at the outset. Taken as a drink in the morning, they produce a sensation of warmth and fulness, somewhat like that of veal broth, which indeed they resemble in taste; but they disturb the digestion, diminishing the appetite, and sometimes bringing on looseness, though the patient generally gains flesh under their continued use. But if they cause indolence of the digestive tract, on the other hand they excite the circulatory system to an almost febrile activity. Under the influence of their stimulus, which extends to the capillary circulation, the skin becomes dry and hot; the subjacent tissues are tense; cutaneous affections become more irritating, and the invalid's sufferings may be at first increased. But it is in this very development of circulation and cutaneous energy that the physician finds his resources for the cure, whether of a grave constitutional dyscrasia like

scrofula, or of local ailments like certain diseases of the skin or of the throat which are its manifestations. Not only the circulation, but the respiratory tract feels the stimulus of these waters; there is dryness of the throat and more or less constriction of the laryngeal muscles. The nervous system, too, is excited: many patients cannot sleep well at first, and feel unusual need of exercise. In a word, the waters of La Bourboule are at the outset eminently exciting to the circulation, to the skin, and to the nervous system. But this excitation, which needs the physician's care as long as it lasts, supplies the physiological capital for the cure of chronic disease.

(2.) For what classes of disease, will have been divined already. Scrofula and the lymphatic temperament, and most of the complaints that depend upon *lymphatism*, as certain affections of the respiratory tract and certain obstinate skin diseases—these form the great specialties of cure at La Bourboule. The therapeutic qualities of the waters, by virtue of their arsenic and chloride of sodium, are tonic and "reconstituant." The salt excites the lymphatic system, stimulates the mucous tract, and modifies its secretions, and, with the alkaline carbonates, acts powerfully upon strumous engorgements and tumors, often dispelling them entirely. Arsenic has long been recognized as one of the most powerful tonics known, and the researches of Fowler and Pearson in England, and of Biett in France, have long made known its special efficacy in the treatment of scrofulous and skin diseases.

What is the nature of scrofula, the parent of "a pestilence-stricken multitude" of varied ailments? It is, in a somewhat less restricted sense than usual, a disease itself: but it is rather a condition, a diathesis, which produces a lowered vitality in most of the tissues, solid or fluid, of the human body, and a consequent predisposition to maladies of many different forms, as cutaneous, ganglionic, and pulmonary—both the mucous and the serous tracts, and even the joints and the bones themselves, being often attacked. In consequence of this variety of manifestations, we find at La Bourboule a multitude of patients whose symptoms would seem quite unamenable to any common treatment, did we not know that they came from one maleficent cause. To begin with one of the most stubborn and evident manifestations of scrofula, that of adenitis or glandular enlargements: these I have known to be diminished during the first season of treatment, and mostly, though not quite, dispersed by a second season. But a speedy cure is not to be hoped for in these cases. Scrofulous conjunctivitis and blepharitis, or stubborn inflammation of the eyelids, are successfully treated here, and also at the neighboring station of Saint-Nectaire, by spraying with the mineral waters. Chronic bronchitis, when of scrofulous origin and catarrhal in its nature, is especially well adapted to treatment at La Bourboule, and so also are asthma and chronic laryngitis, when they are of the same category.

Articular affections, such as white swellings and torpid effusions after sprains or dislocation, are relieved or cured by the baths and douches, conjoined with the moderate internal use of the water. Even scrofulous caries and necrosis have been arrested in the same way; though here, again, we have to deal with structural changes so serious that it should always be with guarded hopes. Lastly, a considerable number of skin diseases find in La Bourboule their appointed healing waters—such, namely, as depend upon the herpetic diathesis. For such as eczema and herpes, which indicate the arthritic diathesis, the neighboring waters of Royat are the better place. This distinction, a very valuable one for the consulting physician and for his patient, is pointed out by my accomplished friend Dr. Boucomont, inspector of the waters of Royat. Psoriasis, ptyriasis, and symmetric eczema are among the dermatoses which find almost certain relief or cure at La Bourboule.

I have named the leading ailments for which a definitely specialized remedial agency exists in these potent waters. It will be useful also to point out certain classes of patients who should not go to La Bourboule. Plethoric persons in general, those who have any tendency toward congestion or hemorrhage, cases in which there are any organic changes in the heart or in the larger blood-vessels, and those who suffer from hepatic enlargements and inflammations, as Dr. Vérité has especially pointed out—cases of these sorts are those chiefly contra-indicated as for these stimulating waters. Vichy and Carlsbad are the types of the reducing waters that they should employ according to their special need.

A word of caution in closing as to the determination of this special need will not be amiss. The very frequent secret of failure to make a cure at a watering place is the fact that the spring, however good, has not been rightly chosen. Do not insist, like Ahab of old, upon choosing your own Abana and Pharpar. Carlsbad, for instance, is one of the most effective of all springs for cases that are suited to Carlsbad. But I know one of the most prominent men in the country who went last summer to Carlsbad, took its lowering treatment, which was quite unsuited to his particular need, and came back worse than he went. At the right spring he could have been cured. It is only the competent consulting physician who can rightly direct the invalid in a case like this. It is not enough for him to know that a certain mineral water, a certain climate and regimen, have been good for others. He must be assured that they are good for him.

But if his choice of La Bourboule has been rightly made, he will never regret it. These potent waters, acting in concert with the favorable climate and surroundings of the place, and taken under the direction of a competent local physician, such as Dr. Vérité or Dr. Danjoy, will certainly work either a cure or as much alleviation of suffering as is possible. Though now frequented by the English, scarcely any waters of corresponding merit are as yet so little known to our public; none are more deserving of being better known. Their fame, however, is recent; in due time their American vogue will follow.

TITUS MUNSON COAN.

ENGLAND.—A DISUNITED PARTY.

LONDON, March 9.

THE biography of this Parliament will certainly form an interesting chapter in the history of party government. Hitherto we have clung to the theory of Burke: we have regarded a party as a body of men who unite in promoting the common interest on principles which they are agreed in supporting. We are now compelled to acknowledge that a party is a composite body, which carries on public business by means of temporary compromises between various sections of opinion. There is no working majority for any set of opinions in the present House of Commons, and it is by no means certain that the next general election will give a working majority either to Liberals or to Conservatives. "The Queen's Government must be carried on," and is carried on; but the old rules of political discipline are relaxed or superseded to a considerable extent.

When Mr. Gladstone took office under Sir Robert Peel it was understood that every member of a government was bound to vote and act with due regard to the theory that the Cabinet is a united body, representing a united party. If Peel or Palmerston had been called on to repel Mr. Labouchere's attack on the House of Lords, there would have been no indulgence for any gentleman who found it inconvenient to be present on the Treasury Bench. It is now the regular custom for advanced members of the Government to signalize themselves by their absence on such occasions; some newspapers even express surprise that good Radicals like Mr. Mundella should have been found in the same lobby with Mr. Gladstone and the Tories. The spread of liberty among his colleagues tends to increase the difficulties of a leader. We know that Mr. Gladstone is not himself opposed to the existence of the Upper House; he told us the other day at Edinburgh that he is in favor of a "reasonable admixture of the hereditary element" in the Constitution. But his reply to Mr. Labouchere was halting and ineffective. He was speaking against the feeling of some indispensable colleagues, against what may turn out to be the preponderating sentiment of his party; his critics are they of his own household. His power is impaired and his personal responsibility is increased; for under present conditions none can say what a party stands committed to until its leader has spoken. The other night, when Mr. Crilly proposed to extend the principle of the Irish Land Act to house property, he was answered by Mr. John Morley in a speech full of dry common sense and economic principle. Mr. Crilly and his friends were not extinguished: they waited to hear what the Prime Minister would say; and the Prime Minister—balancing economic principles and political facts—admitted that a case had been made out for inquiry.

The reign of compromise is borne with more or less impatience by persons of definite opinions who like to know where they are going. Radicals are heard to complain that Mr. Gladstone has made a mistake in taking office. It is plain, they say, that this Parliament cannot deal with the Irish difficulty; the attempt to deal with it can only discredit us, and produce a Conservative reaction. Nor can we expect "big legislation" from a House of Commons which is divided to such an extent that the House of Lords will have a good pretext for rejecting any large measure of change sent up to it in the name of this Government. It would have been better to mark time for a few months until an opportunity offered to rouse the country on some intelligible and popular issue.

The Moderate Liberals, on the other hand, are in a very dissatisfied state of mind. They are strong in ability and character, and yet they seem to have no influence on the conduct of affairs. They are told that they hold the balance of parties; but instead of being conciliated by both sides, they are roundly abused by the Radicals for impeding political progress, and by the Conservatives for refusing Lord Randolph Churchill's repeated invitation to "come over and help" the constitutional party. If the Whigs thought only of increasing their own consequence, they would certainly go further than they have yet gone in declared opposition to the Government. But, "after all," as Mr. Goschen would say, they are Liberals; their leaders are personally attached to Mr. Gladstone; and they have no confidence in the other side. If the Conservatives had a perfectly clear record on Irish and economical questions, moderate men might be more strongly tempted to join them; but it is vain to pretend that they have anything of the kind. Lord Hartington cannot go over and help Lord Randolph to tax foreign produce, to increase the national expenditure, and to conciliate the Irish by abusing Lord Spencer. As usual in such cases, thoughtful politicians are asking why we cannot have a Coalition Government from

* B. 298.

which the impracticable men on both sides might be excluded. It would be rash to say that a coalition is out of the question; it certainly is not possible under existing circumstances. Lord Salisbury will not come in without his "noble friend," Lord Randolph Churchill; the "mariage de convenance" of two years ago has ripened into a union of mutual respect, if not of mutual affection. But even from the moderate Liberal's point of view Lord Randolph must be pronounced impracticable. In his speech at the Eighty Club last week, Lord Hartington returned a cool and formal answer to the impassioned appeals addressed to him. He is going to wait for Mr. Gladstone. It has been stated that Lord Hartington's refusal to take office was due, not to Mr. Gladstone's Irish policy, but to his want of a policy, and that when the Government produces its plan, his Lordship may possibly be able to support it. But all such statements are, of course, mere rumors. Lord Hartington is not a man of the communicative and aggressive temperament of Mr. Chamberlain; and the materials for ascertaining his personal opinions are somewhat scanty.

Among the Conservatives there are, for the moment, fewer sections and divisions than among their opponents. Opposition, when conducted in a hopeful spirit, is a great reconciler of differences, and Lord Salisbury's followers are full of hope. They believe that the current of reaction against what they call Gladstonianism is spreading to the counties, and running stronger than ever in the boroughs. Mr. Chamberlain's programme has never been heartily accepted by some of our best workingmen; on the other hand, it has caused alarm among the shopkeepers, and generally among people having small properties. Again, the State Socialism which Mr. Chamberlain has insisted on identifying with Radicalism may find a formidable rival in Fair Trade. The Conservative leaders are cautious in their dealings with the new form of protection, but the smaller men of the party declare boldly for excluding foreign competition, and gain votes by doing so. It is not surprising that East London, for instance, should be stirred by the cry of Fair Trade, when workingmen orators are sent down to proclaim that "here, as in the United States, protection means constant employment at high wages for every man among our own people who is willing to work." Your readers will be able to say whether this is a correct statement of the significance of protection in America. These heresies are of course hateful to the high-and-dry economical Conservative like Lord Wemyss, but the valiant endeavor to reconstitute the Tory party on the lines of commercial orthodoxy has not met with much success.

Another cause of division among Conservatives has been quietly put on one side. Lord Randolph's Irish views were as distasteful to Mr. Charles Lewis, the champion of Ulster Protestantism, as Lord Randolph's economic heresies must be to Lord Wemyss. When Lord Randolph mounted the Orange cockade and delivered his Belfast speech, Mr. Sexton saw his opportunity to have some sport at the expense of the Tories, and gave notice that he would call attention to the previous relations between the noble Lord and the Parnellites. But the notice has come to nothing. It was found on inquiry that Lord Randolph, while willing to accept the Irish vote at Birmingham or elsewhere, had not said anything which would fairly justify Parliamentary censure. Mr. Gladstone would not give a day for a discussion which would have stirred up ill-feeling and produced no result. Mr. Parnell did not press the matter: he does not mean to break with the actual or coming leader of any English party just at present. R.

A NOVEL BY OCTAVE FEUILLET.

PARIS, March 10, 1886.

Two novels are at the present moment occupying almost exclusively the mind of what used to be called "polite society." One is 'La Morte,' by Octave Feuillet; the other, 'Un Crime d'amour,' by M. Paul Bourget. I will now speak only of the first. It appeared serially in the *Revue des Deux Mondes*, and the first two numbers had a great success. The third and final number, if it satisfied some of the admirers of M. Feuillet, disappointed the great majority of his readers. The exposition was amusing and original. A young man, of good education, of good family, belonging, as the heroes of Octave Feuillet always do, to the "upper ten thousand," has lost his faith in revealed religion, in the supernatural; and has lost it, he thinks, for ever. He has only preserved the high sentiment of honor, the love of truth, which constitutes the "gentleman." The time comes for him to get married, and naturally he comes in contact with a girl imbued with the highest sentiments of faith, permeated, if I may say so, with religion, a pure spiritualist, a perfect Christian. The gentleman is a Parisian *par excellence;* he is worldly; she is a *provinciale*, who knows nothing of "Satan, his pomps and his works." You see at once the situation. He is perfectly honest and straightforward; he confesses his utter want of religion, his absolute rationalism; he does not affect to feel any sentiments which he does not really feel. The girl's family look upon him with fear and distrust; she also is afraid, but she hopes that love may operate the work of grace. She hesitates a moment, and then she accepts the idea of a union which may become the salvation of the man whom she loves for his frankness, his refined feelings, his culture. She cannot help hoping that marriage will transform him; that the continual spectacle of her own life, inspired and ennobled by an ardent faith, will soften his heart and make him feel the beauty and the power of her own ideal. She takes him to the altar as her lover, and she feels sure that some day or other she will bring him again to the altar as a Christian, and complete the communion of their two lives.

This is undoubtedly a very interesting situation; all the more so that it is not an uncommon one in our country, where the women receive a very religious education, and where the men are often completely imbued, not only with the philosophical ideas of the time of Voltaire, but also with the materialistic views of the Positivist school. Octave Feuillet's novel raises the whole question of the education of woman. In a highly civilized community, ought the women to receive an education based on other principles than those which form the education of men? Are they to be treated quite differently by the legislator, the moralist, and the philosopher? Are they, so to speak, two species in one? What is food for one, can it be poison for the other?

This, I will say at once, is the conclusion to which M. Octave Feuillet arrives; and in order to prove his theory he is obliged to introduce incidental characters in his novel—namely, a great surgeon, a thorough materialist, who has retired to the country where our couple live; and the handsome and fascinating daughter of the Positivist doctor. This young person has been educated by her father in total ignorance of any religious creed. She has learned what a man learns—natural history, chemistry; has grown up like a fine plant or a happy animal, accustomed to follow her natural instincts, and to consider them as good and almost holy. And what comes of it? She falls in love with the young husband, and places herself between him and his religious wife. You know now all the characters, and may yourself construct the drama.

Octave Feuillet attributes every virtue to the old doctor, and represents his daughter as a moral monster. He wishes evidently to prove that man is better made for infidelity than woman; that the religion of honor survives in man the belief in an established church; that man can construct rules of morality for himself with the help of mere science. He denies this faculty to woman, a creature of mere impulse, emotional, sentimental, sensational. It is a pity that M. Octave Feuillet has gone so far. A woman can learn chemistry without using her knowledge in poisoning her rival. A man can learn chemistry and be a poisoner. The episode of the old doctor and of his infamous daughter, who gives a dose of aconite to the wife of the man whom she wishes to marry, is forced and is even unnecessary. Feuillet wishes to convert his infidel young husband, and he does finally convert him by the death of his wife and the discovery of the crime of the woman who for a moment has robbed his wife of his love. He believes that his wife died believing him to be an accomplice in this crime, and he wants to prove to her his innocence; how can he do it? She is dead; how can he convince "la morte"? It is only in another life, and it is thus that he forces his soul into a belief in its own immortality. He becomes religious because if he does not, he loses every chance of clearing himself and of proving his innocence. But why should not love do the same work as pride? When I thought of the title 'La Morte' before reaching the end of the story, I thought that perhaps the young husband would be converted and feel "the new man" in him at the death-bed of his young child. There is much truth in the assumption that man is seldom converted by reasoning, by argument; hundreds and hundreds of books have been written by theologians which have probably failed in their object. We all have, or may have, our impressions of the road to Damascus; we may all, like St. Paul, feel the sudden and irresistible work of grace. Such transformations are generally worked by a great passion, by a sentiment. 'La Morte' would have been less melodramatic, but it would have been a more perfect work of art, if the transformation had been operated in the young and unbelieving husband by the mystic agency of love, of suffering, by the spectacle of a great sacrifice inspired by faith, by one of those miracles which are constantly taking place in the world of the soul. We do not want dynamite or poisons in the spiritual world. The last part of this otherwise excellent novel of Feuillet's is disappointing, disenchanting, unnatural, and almost revolting. He who wishes to prove too much proves nothing. Who can seriously think that unbelief necessarily conducts a woman to crime? Mlle. Sabine Tallevant, the poisoner, is too repulsive. After having seduced her country neighbor, after having poisoned his wife, after having been married to him six months, she coolly declares to him that she loves him no more, that she intends to resume her entire freedom, and to take lovers if she chooses. Octave Feuillet would have us believe that if she behaves so, it is because she believes in Darwin and in Comte, because she knows all about "the struggle for existence," and so on.

In his first novels Feuillet does not exhibit such preoccupation; he is content to show us fine ladies and fine gentlemen, very romantic in all their notions, much absorbed by the passion of love, and living in a sort of unreal world, a world of convention, of fine language, fine manners, and preëminently fashionable. By degrees we see a higher aim developing itself in his work; his object seems to be to demonstrate how the highest social state cannot but lead to vice and crime, in the absence of a definite faith. In one of his novels, written in this new manner, 'M. de Ca-

mors,' he clearly tries to prove that the religion of honor is insufficient. The father of M. de Camors traces for his son this programme of life: "To develop in all their extension the physical and intellectual gifts which chance has given to him; to make of himself the accomplished type of a civilized man of his own time; to charm women and to rule over men; to give himself all the pleasures of the mind, of the senses, of power; to subdue all the natural sentiments as the instincts of slavery; to disdain all vulgar beliefs as chimerical or hypocritical; to love nothing, to fear nothing, and respect nothing but honor." M. de Camors enters life with this programme, and whoever has read the novel knows where it leads him.

Octave Feuillet at the time of his first manner was sometimes called the "Musset des familles"—the family Musset. It may be that the slight irony contained in these words was not without influence on him. The novels of the second manner certainly show us very dreadful characters. The atmosphere is always the same—the heroes and heroines are always genteel, but it seems as if next to every angel the novelist felt the necessity of placing a devil. Some of his ladies, though they have not read Darwin and Schopenhauer, are real moral monsters; and it must be confessed that some of the "angels" are very terrestrial. What their faith may be, it is difficult to imagine; if they are to be judged by their works, their religion seems not to be incompatible with laziness, extravagance, and coquetry. It is the religion of a caste: it has gilded prayer-books and goes to the fashionable church. At times Feuillet's ladies and gentlemen make on me the impression of musk or of some other strong perfume; the air in which they move is laden with intellectual and moral incense. There is a certain sort of coarseness in all their gentility, as there is in a number of the *Vie Parisienne*. If this is spiritualism, give me a little materialism. The spiritualism of Octave Feuillet is not of the rarest quality; it is not the spiritualism of a Jansenist, or even of the pious lady of the seventeenth or the eighteenth century: it is superficial; it is the mask of a society which wishes to hide its scepticism, its love of pleasure, its egoism. Still, his novels are valuable documents for the history of our time—just as valuable as the documents of the realistic and naturalist school. They show us something different, but what they show us does exist; and Feuillet has often admirably depicted the weaknesses, the contradictions, the pretentious frivolities of a caste which, having no longer any privileges, has partly lost its sense of responsibility, and which is losing by degrees its influence in every sphere except the sphere of social vanities.

Correspondence.

THE TARIFF ON DIRT AGAIN.

To the Editor of The Nation:

Sir: I see from your last issue that the learned counsel of the Wool-Growers' Association of Ohio insist on the propriety of making carpet wool pay more duty per pound of clean wool, when imported clean or nearly clean, than when imported with the original dirt. To expose the fallacy of their argument would require more space than you are likely to grant me, but I may be permitted to ask Messrs. Sanders and Newlin a few questions with reference to some portions of the argument recently made by them before the Secretary of the Treasury and published by them. The closing sentence of that argument reads as follows:

"If the Secretary of the Treasury will notice the immense increase in carpet-wool importations in 1885 over 1884, and if he will further notice the yearly increase in wool importations from Russia, he will readily see the importance of this question, and how the increase was fostered to such great proportions."

The official figures of our importations of carpet-wools during the last six fiscal years, as given in the last annual wool-circular of Messrs. Geo. W. Bond & Co., of Boston, are as follows:

1880	59,320,411 pounds,	1883	40,130,322 pounds,
1881	42,385,709 "	1884	62,525,692 "
1882	47,208,175 "	1885	50,782,306 "

making an annual average of 50,392,102 pounds, just about equal to the importation of 1885.

Will Messrs. Sanders and Newlin be good enough to explain how these figures are to be reconciled with the above-quoted assertions? If they ever had any figures showing the alleged increase in our importations from Russia, I should like to see them and to know their origin: until they produce and prove them I rely on my own experience, and on that of other importers from Russia, and pronounce this part of their statement as unfounded as the other.

Will Messrs. Sanders and Newlin be good enough to explain that part of their argument before the Secretary in which they assert that "washed wool" means "wool washed on the sheep's back," and support the assertion by half-a-dozen written opinions from dealers in American wools? Arguing that Donskoi wool, being washed after shearing, must be "scoured wool," will they explain how it comes that all these experts and they themselves forget the fact that even among American fine wools there is such a thing as "tub-washed wool," which is not washed on the sheep's back and still never passes for "scoured" wool?

Surely, Messrs. Sanders and Newlin have studied law in Ohio, and are entitled to a degree or a decoration from that most honorable concern, the Wool-Growers' Association.

Gustav Schwab.

New York, March 23, 1886.

EXECUTIVE SESSIONS AGAIN.

To the Editor of The Nation:

Sir: It is believed that the vigorous and progressive public sentiment which has succeeded in securing a civil service law as a means of elevating and purifying the administration of public offices, will not be content with what it has already accomplished, but will continue its efforts to improve the public service by endeavoring to correct such abuses as stand in the way of further reform. But, while it is generally conceded that one of the worst obstacles to further progress in the direction indicated is the secret executive sessions of the Senate, it is evident from the manner in which the proposal, recently made by a member of that body, to throw open the doors for the consideration of executive business, was received by those to whom it was addressed, that the popular demand for complete publicity will have to be very strong and loud before the object sought can be attained.

It may be urged in favor of the suggestion made by the writer (in No. 1080 of the *Nation*), that the vote on nominations be public, but the discussion of them, if the Senate so desire, secret, that it is a remedy to which Senators could not object without betraying an unwillingness to bear their just share of responsibility in the matter of appointments. It would simply be requiring them to stand in line with the President, and be judged by their acts, as the President is judged by his. To this they could not validly object.

There is good ground for saying that the great evil of secret sessions for the transaction of executive business has been that they have afforded the most ample opportunity, of which industrious use has been made, for the consummation of bargains for the distribution of patronage, and not that they have prevented the people from knowing what sort of men have been chosen to fill the public offices. In almost every instance where an actually unfit nomination is made, the fact is published before the nomination is confirmed. But the confirmation takes place, and nobody in the Senate is responsible. Public opinion is as strongly pronounced upon the character of the person appointed as if the people had derived their knowledge of it from the Senate, instead of directly from the press. But, perhaps by a coalition which would be impossible if constituencies were looking on, the appointment is completed.

It may, however, be said that if the character of nominees is exposed to public scrutiny already, it is illogical to advocate the secret discussion of nominations in the Senate out of regard for applicants' feelings. We reply that it is proposed to preserve secrecy to this extent not more because the probability of a public and perhaps partisan discussion of character in the Senate would deter sensitive men from applying for office, than because it is conceived that in such a matter secrecy is conducive to the complete information of those who are required to decide, as well as to proper freedom of discussion. A great many communications in reference to appointments to office are confidential in their character; and much valuable information is obtained in this way from men who could not be induced to appear as public accusers. We know how difficult it generally is to persuade people to appear in courts of justice to aid in the prosecution of persons who are the pests of a whole community, and there would be still less inclination to incur inconvenience and enmities on account of a Federal appointment. On the other hand, it is going a great way to say that no man should apply for a public position who (as the *Nation* has said) "shrank from having his fitness discussed before any audience, however large." Unfortunately for the country, many honorable men whose services might be of great public benefit do shrink from such discussion, and refuse to go before the people as candidates for official position rather than subject themselves to the detractions of unscrupulous opponents. The Higginses, Thomases, and Rasins are the sort of persons who probably care least for public criticism. They are used to being discussed; and not infrequently they are found courting "the fullest investigation."

It is erroneous to suppose that the public discussion of nominations would reveal, when the Senate confirms a man, "whether" (to use the *Nation's* phrase) "it confirms him because he is a great rascal or because he is a model of all the virtues." It is not likely that, if a Senator were influenced by the former motive, he would make a public declaration of the fact; and unless he did, his real motive would, after all, be a mere matter of inference or conjecture. An illustration of this may be drawn from the regular passage of the River and Harbor Bill, which is universally recognized as a grand log-rolling scheme; and yet, notwithstanding the public debate on it, no member of Congress is ever betrayed into a confession of the impurity of his motives. The bill goes through because the sentiment in favor of better government has not yet grown strong enough to overcome the seductive and enfeebling influence which an appropriation exerts on a large mass of voters.

With respect to the public offices, the case is different. The office-seeking class is comparatively small; and against those who would scramble into place in the old-fashioned way stands a large body of intelligent, vigorous men, representing a potential force of conviction which few Senators could afford to disregard, if they were made responsible, by an open vote taken by yeas and nays, for their action in reference

to nominations. The secret session might still be resorted to for the purpose of discussing the character of candidates. For daily experience shows that such secrecy does not prevent the people from knowing when an unfit man is nominated and confirmed; while it doubtless often enables the Senate to act intelligently, without needlessly and unjustly exposing applicants to inconsiderate and injurious discussions. J. B. M.

WASHINGTON, March 16, 1886.

FEDERAL COURTS AND STATE RESISTANCE.

TO THE EDITOR OF THE NATION:

SIR: In your No. 1076, page 121, appears the following statement: "Until the present time the United States has never been victorious in its judiciary department over a State determined to defy it." At least one case has occurred in the history of the United States where a national court has imposed its will upon the legal, civil, and military authorities of a powerful State. On the 25th day of March, 1809, the Marshal of the United States District Court of the District of Pennsylvania appeared to serve a process of arrest in the so-called Olmstead case, upon a Mrs. Sergeant in Philadelphia. He was stopped by two guards with fixed bayonets, under command of General Bright, who was acting under the orders of Governor Snyder, backed up by special acts of the Legislature. The Marshal, being obliged by force to desist from his service, withdrew, with the warning that he should raise the posse. On May 2, 1809, in the case of the United States vs. Bright et al., the jury brought in the following verdict:

"That the defendants are guilty of knowingly and wilfully obstructing, resisting and opposing the Marshal in his attempt to serve [a] judicial writ, but that the defendants acted under the order of the constituted authorities of Pennsylvania in so obstructing and resisting the Marshal. The jury leave it to the Court to say whether, upon the whole matter, thus found, the law is in favor of the United States or the defendants, and if the Court are of opinion that the law is with the United States, then the jury find the defendants guilty; but if the Court are of opinion that the law is with the defendants, then they find them not guilty" (*New England Palladium*, March 31, May 9, 1809).

Whereupon Judge Washington sentenced the accused to fine and imprisonment, which was duly inflicted.

I have quoted this verdict in full, in part because of its entertaining form; but chiefly because the details of this interesting assertion of the powers of the United States Courts are quite difficult to find. The following references may be useful to any one who cares to follow the matter out: Hildreth's 'History of the United States,' vi, 155-165; American State Papers, Misc., ii, 6-12; Congressional Debates, ix. 635; American Register (1809), 150 152, 165, 168-176.

Respectfully yours,

ALBERT BUSHNELL HART.

CAMBRIDGE, February 26, 1886.

WHAT THE FEDERAL GOVERNMENT MIGHT DO FOR EDUCATION.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* is certainly to be commended for its vigorous opposition to that vicious and demoralizing piece of legislation, the Blair bill. The support of the measure depends largely upon demagogism on the part of politicians, and ignorant sentimentalism on the part of the people generally.

If there be one principle more firmly established than another in regard to public policy in this country, it is the duty of the state to provide liberally for the support of free common schools. People who do not reason about the matter, or who do not appreciate the relation existing between the national Government on the one hand and the State governments on the other, and the respective duties and obligations of each, think it strange and inconsistent in the national Government not to share in this support. It is to this mistaken, though honest, feeling and sentiment that those influenced by less interested motives appeal, and from which they derive their support and strength—at least their reliable strength.

Now, this sentiment ought certainly to be recognized, and it seems to me that there are ways in which the national Government can legitimately and intelligently foster the cause of education; and I have been somewhat surprised that this branch of the subject has not been touched upon in the discussion in your columns.

In the first place, Congress can see that model schools of the highest efficiency are maintained in the District of Columbia, which is under its immediate and sole jurisdiction. It can make the office of the Commissioner of Education effective by providing means for its support, so that it can employ specialists in its legitimate work, distribute educational literature until at least the demand is satisfied, get its report printed sooner than three or four years after its compilation, and do all that work in which such an office can wield so great an influence and accomplish so much good. There are men, like Prof. G. Stanley Hall, who might be employed in this office, where their writings, researches, and work might result in giving a great impetus to educational work throughout the country.

There are burning questions in the science and art of teaching pressing for a solution. For example, How and to what extent can manual and industrial training be introduced into our public schools? Why is this not a legit mate field of investigation and experiment for the Commissioner of Education to undertake with the encouragement and support of Congress? In a word, are there not many legitimate objects to which the national Government has not yet turned its attention to any satisfactory extent, and to which its efforts should be directed before any such dangerous experiments as are contemplated by the Blair bill are undertaken?

JOHN J. JENNINGS.

BRISTOL, CONN., March 20, 1886.

TYPICAL INDIAN TREATMENT IN MICHIGAN.

TO THE EDITOR OF THE NATION:

SIR: In my former letter I pointed out that thirty years ago the United States attempted substantially the very same policy that is being put forward now in Congress as a new movement in Indian affairs. I showed how the experiment, which was tried on the Isabella County reservation here in Michigan, resulted in robbery and utter pauperization and ruin of all save three or four of the Indians who received their lands in fee simple, and who would still have had homes on the reservation had the United States continued to hold their lands in trust, or compelled white scoundrels to respect their rights. In the present article I propose to show how a swindle begun among these Indians in the past is still operative, and how some of the people's money has been going for years to sustain idle teachers in empty schools, and to pay the salary of a minister of the Gospel in violation of the laws of the State and the nation.

From 1857 to 1867 the United States expended, under the direction of the President, for the educational interests of these Chippewas on their new reservation, $30,000. In 1864 the treaty of 1855 was amended, and among other things a provision was made authorizing the Missionary Society of the Methodist Episcopal Church to start a Manual Labor School on the reservation. A quarter section of land was set apart for the farm of the said school. The Missionary Society should, within three years, "erect suitable buildings, for school and boarding-house purposes, of a value of not less than $3,000" upon the school farm. The treaty designated a board of visitors, consisting of the Superintendent of Public Instruction, the Lieutenant-Governor of the State, and a person appointed by the Missionary Society, "whose duty it shall be to visit the said school once during each year and examine the same, and investigate the character and qualifications of its teachers and all other persons connected therewith, and report thereon to the Commissioner of Indian Affairs." "Upon the approval and acceptance of the school and boarding-house buildings by the board of visitors, the United States will pay to the authorized agent of said Missionary Society, for the support and maintenance of the school, the sum of $2,000, and the like sum annually thereafter until the whole sum of $20,000 shall have been expended." If, at the end of the said ten years, the Missionary Society can show that it has fulfilled the terms of the treaty "in a manner acceptable to the board of visitors during said ten years, the United States will convey to said Missionary Society the land before mentioned."

Well, at the end of the ten years the matter was allowed to rest until a proper opportunity came, when Republican officials in Washington aided the Missionary Society in obtaining the land, which it sold for $2,500; and as that could not have been done without satisfying the Administration that the terms of the treaty had been faithfully observed by the Missionary Society, and as such satisfaction could not have been afforded if the Missionary Society had not drawn the aforesaid $20,000 for the support of the School, it follows that the United States paid out for the education of these Indians, in addition to the $30,000 first named, also $20,000 in cash, besides awarding a quarter section of land which was sold at once for $2,500. Thus in about twenty years the United States paid $50,000 for the education of these Indians. But that is not all. Ever since the $30,000 fund was expended, the three Government schools on the reservation have been sustained by the United States at the rate of $400 per year each, or $1,200 annually for all. That outlay is still being made year after year, although the average attendance is not over three scholars per school, as I am informed by the most intelligent Indians on the reservation, and they are corroborated by the whites who know the condition of the schools. One of the schools, that at Nipising, gets $400 per year, and it has had but two scholars in the past year, as I am assured by Joseph Bradley, on whose land the schoolhouse stands, and who sends his own children to the district public school. This $400, therefore, is virtually obtained from the Government by misrepresentation, and it goes to pay the salary of the Methodist minister who is settled in that parish, not over the Indians, but the whites.

I am assured by both Indians and whites who know whereof they affirm, that in these Government schools, sustained for thirty years by the United States, not more than two Indians have ever learned to write their names, and not more than five or six ever learned to read, and these only familiar lessons in the first or second reader. They assure me, those very few Indians who have learned to read and write, that they learned nothing until they got into school among whites. To-day those Indians who have any desire to educate their children send them to the district schools, and they keep right along with the white children in the classes there.

"Do the whites treat them well?" I asked of the Indians.

"Yes! yes! Good. All right. No trouble 't all. Want our children come to school 'cause we who got any land have help pay school tax."

"Then you don't want the Government schools, do you?"

"They no good. Only keep few children 'way from district schools and draw money support teachers. We try to 'bolish these schools, but minister who gets $400 year for teachin' one where is only two scholars, he go among old Injins and get them vote keep Government schools open."

Whenever this is denied, or an investigation is wanted, I shall be happy to produce evidence of the truth of my statements. But let there be no whitewashing attempted.

Further, in regard to the Manual Labor School, for the support of which the United States paid the Missionary Society $20,000, and gave it a quarter section of land, the facts are that no such school ever existed on the reservation, none was ever attempted, and no such board of visitors as was designated in the treaty ever came up into the woods to visit the school—for the very good reason that there was none to visit. Now, will the present Administration continue to pay out the people's money to support idle teachers in empty schools against the wishes of the Indians, who want their children educated among the whites, among whom they are heartily welcomed, and where they are actually learning something—where, to use the language of an Indian who was himself a scholar in the Indian schools and who sends his own children to the district schools, "An Injin child learn more in district school in six months than learn in Government school in six years"? Will the present Administration, pledged as it is to reform, allow money to be drawn from the United States for the support of a minister of the Gospel settled over a white parish which includes an Indian school, which school the said minister presumes to teach, but which, in point of fact, is practically empty, and in which the Indian scholars learn nothing?

Here is an opportunity for those who propose to improve the management of Indian affairs to begin near home; and this matter is respectfully submitted to the attention of President Cleveland and his advisers. CHARLES ELLIS.

EAST SAGINAW, MICH.

A HARVARD CONTROVERSY.

TO THE EDITOR OF THE NATION:

SIR: I have received a copy of the *Nation* dated February 18, 1886 (very curiously, my seventy-fifth birthday), and in it an article signed "Anglus." I would rather have seen the name, as in the case of most of the other letters in your journal. I always sign mine—sign or not write. It is a sort of guarantee when the attack is a personal one, as in this case. May I ask the favor that you will grant me space for this in an early number, and kindly send me a copy?

"Anglus" has strained his logic against his countryman. As to Mr. Waters, I rejoice at any reward or recognition that may be conferred upon him. His labor has resulted in a great success, which would not, however, have been less with a little courtesy, in return for mine in my offering all my notes when I had not the least idea of his labors, except that they were toward John Harvard. I am, however, too old to be troubled about accidentals.

Nor am I about to bandy words with "Anglus." I have taken the liberty of posting to you twelve copies of my pamphlet, 'Old Southwark and Its People. John Harvard, born Southwark, 1607; died, Charlestown, 1698,' and to ask you to favor me by giving a copy to any thinking representative person who may desire one. That which I have written must speak for me; further I will, within my knowledge and power, answer any queries which may be sent to me. In my pamphlet will be found full recognition of Mr. Waters's work, the discovery of wills, etc., etc. On my side I produce evidences of the father's work and position in St. Saviour's parish, of the very site of his home for twenty-five or more years, and much else. Nothing of this was, I believe, known to Mr. Waters any more than his great find was known to me. The "hopeful" words of the President of Harvard will no doubt (after the heat is over) turn out to be correct: "That no difficulty will be seen in the different versions, but that they will be found to supplement each other." Those who honor me by reading my pamphlet may like to see also for themselves *Academy*, October 24 and November 7; *Athenæum*, July 11, 1885, and January 16, 1886. There I leave it, hoping to trouble myself no more with the controversial part of the question.

Faithfully, W. RENDLE

TREVERBYN, DARTMOUTH PARK, FOREST HILL, S. E., March, 1886.

A LITERARY COINCIDENCE.

TO THE EDITOR OF THE NATION:

SIR: There are some authors who, instead of being inclined to call down imprecations on the heads of those who utter their own sayings before themselves, are only likely to find pleasure in a coincidence of judgment and expression; and such must be the case with Mr. J. R. Lowell and Mr. F. Harrison, if they are at this moment turning the pages of the last publication of each.

In Mr. Lowell's article on Gray, published in the *New Princeton Review* for this month, Mr. Harrison will read (in a passage about the eighteenth century): "Burke thought it impossible to draw an indictment against a whole people, and the remark is equally just if we apply it to a century."

In Mr. Harrison's essay, "A Few Words about the Eighteenth Century," published in a volume this month, Mr. Lowell will read: "Invectives against a century are even more unprofitable than indictments against a nation."

Again, Mr. Harrison will read on another page: "Perhaps even our own age, with its marvels of applied science that have made the world more prosily comfortable, will loom less gigantic than now through the prospective of the future. Perhaps it will even be found that the telephone, of which we are so proud, cannot carry human speech so far as Homer and Plato have contrived to carry it with their simple appliances."

Mr. Lowell will read, in "A Few Words about the Nineteenth Century": "It is worth a few minutes' thought to ask, What is the exact effect upon *civilization*, in the widest and highest sense of that term, of this marvellous multiplication of mechanical appliance to life? . . . Is an age which abounds in countless inventions thereby alone placed head and shoulders above all the ages since historical times began?" And on another page (in the essay on "The Choice of Books") he will find: "Telephones, microphones, pantoscopes, steam presses, and ubiquity-engines in general may, after all, leave the poor human brain, panting and throbbing under the strain of its appliances, no bigger and no stronger than the brains of the men who heard Moses speak, and saw Aristotle and Archimedes pondering over a few worn rolls of crabbed manuscript."

March 22, 1886.

COBBLING EXTRAORDINARY.

TO THE EDITOR OF THE NATION:

SIR: In view of the numerous and startling expositions of the ignorance and the peculiar methods of translators from foreign languages which have been made during the last year, it is surprising that more discrimination is not used in the matter. Some remarkable examples have appeared lately, but the translation (through the French) of Count L. Tolstoi's 'War and Peace' easily takes the lead. Repeated remonstrances have been made against this double translation. It can never be successful; and it is to be regretted that, now that Turgeneff is dead, Count Tolstoi should have been selected as the victim of an attempt to achieve the impossible. I quite agree with Henry Gréville that, bad as are most French translations of Turgeneff, Tolstoi suffers infinitely more by the process. A very slight examination will convince the most sceptical that the American version of his novel is not true to the French; and the French is almost equally unreliable. This unfortunate result is due, in part, to ignorance of French on the part of both translators, as well as to carelessness, but chiefly to the headlong manner in which the version offered to the American public by two houses has been prepared, in which everything—sense, accuracy, and style—has been sacrificed to speed.

"The style is the man"; yet the liberties which have been taken with Tolstoi's style are innumerable. Would it be fair to Victor Hugo to translate him into pompous Johnsonese, or to Johnson to convert him into crisp Hugo French? By a free use of conjunctions, a number of short sentences are constantly welded into one long phrase; paragraphs are turned upside down; conversation is changed into description, and *vice versa*. Sentences belonging to two separate individuals have been united, thus putting the conversation which follows into the mouths of the wrong persons. Omissions, ranging from a significant adjective to a page in length, and inexcusable interpolations, are equally common. They do not restore the balance, however, by any means. Many of these points cannot be illustrated without longer quotations than space permits. In the specimens which follow, an (F) will denote that the French translation is faulty as well as the Anglo-American. The responsibility for all other phrases rests wholly with the latter. I attribute no blame to the person who is said to have revised and corrected the work, since, so far as I can discover, he has no existence except upon the title-page. It reads smoothly enough to the unobservant, but intelligent readers must have been greatly puzzled by the innumerable mistranslations and anachronisms.

In the first chapter, the American sends the elegant little Princess Lisa to an evening party in a "morning dress," and it is stated (F) that "her bewitching little upper lip could never be persuaded to close on the lower lip." *Rus.* "Her lip was short over the teeth, but all the more prettily for that reason did it at times lengthen and droop upon the lower." Again, (F) "Helen was so surprisingly lovely that she could not have a grain of petty vanity. If she had felt awkwardly conscious of such perfect, triumphant beauty, and had wished to mitigate its effect, she could not have done it." Her attitude is more pleasing in the original: "Helen was so lovely that not a shadow of coquetry could be detected in her; on the contrary, she seemed conscience-stricken at her undisputed, too powerful and triumphant beauty; she seemed to wish to lessen the effect of her loveliness, but was unable to do so." A good specimen of interpolation occurs here: (F) "Nay, he would have given a handsome sum never to see or hear one of them again, his wife included." "Tell that to the marines" is another elegant addition. The phrase is used by Anthony Trollope's vulgar Duchess Glencora, but not by Count Tolstoi. Another is: "It will all melt through our fingers, and then whose fault

is it?" *Fits* is a favorite expression of the Anglo-American translator, to represent a laugh of any kind. Not content with rendering "laughing heartily" by "such a fit of laughter as almost choked him," she interpolates it in this form: "In spite of herself, she, too, was in fits of laughing." These must suffice as instances of the numberless unwarranted additions to the text, which certainly are no improvement.

(F) "The ruthless glass showed her only a sharp, unattractive face." *Rus.* "As is the case with most people, her face assumed a strained, unnatural, stupid expression as soon as she looked in the glass." (F) "It is the morning drum, the sun is risen," is offered as the equivalent of "Not yet had the sun flushed the sky with dawn"; "evergreens" for 'flowers"; "plaster" for "marble"; "Sonia went on crying" for "Sonia stopped crying"; "Cossacks" for "Croats"; "a helpless idiot" for "a lazy man"; "an indifferent shrug" for "a wave of the hand." "Captain," or "company commander," is translated indifferently "major" or "sergeant-major"; which reminds one of the drum-major's wife who begged her friend not to be so dreadfully ceremonious as to address her by that long title, since "Mrs. Major" would suit her just as well. Ignorance of the fact that Michael (diminutive Mishka) is the Russian name for bear, corresponding to Bruin, leads the American to transform that animal into a human being, and "Come, let Mishka alone," changes to "No, no, Michka, let them alone." "I never think" is the startling statement evolved out of "I never think of them"; and "he betrayed some strongly controlled emotion," out of "he had the air of a man who was not much interested in the conversation of the two ladies." Princess Marie is represented as playing a sonata by (F) Dreyschock in 1804. Dreyschock was not born until 1818. It should read Dussek, who was a favorite composer of the period. "Bonaparte was a trumpery little Frenchman whose success was due to the fact that there were no longer any Potemkins and Suvaroffs to pit against him," furnishes a chance for an anachronism of which the American eagerly takes advantage. Bonaparte's success is attributed to "the incapacity of Potemkin and Souwarow." I admit that they were incapacitated: Potemkin died in 1791, Souvaroff in 1800. This is in 1805. On page 28, Kutuzoff and the Austrian general are described as inspecting the soldiers, and paying special attention to their tattered footgear, which is the chief point of the episode. (F) "From our boots to our screwdrivers, he inspected everything," one soldier is represented as saying afterwards. For this read: "He examined our boots and footbands thoroughly." Peasants in Russia and other countries often wind strips of cloth about their feet instead of stockings. The Russian word is *podvertki;* screwdrivers are *otvertki*, both derived from the root *vert* to twist. The Russian female translator probably used Reiff's dictionary, which is only good for elementary work, and, not finding *podvertki*, she accepted *otvertki* because both screwdrivers and footbands are twisted in use! "Reddish-yellow" is translated (F) "pale as wax;" "Marie Dmitrievna, nicknamed the Dragoon," becomes (F) ". . . nicknamed the Dreadful Dragon"; "wringing her hands," (F) "half crazy with terror." Thirty-five versts become 30 in the French, 30 hours in the American; 150 versts dwindle to 50, and "a carriage which stood at the door" is multiplied into (F) "a long line of carriages gave his word the lie." On page 34, we find this ridiculous sentence: "The little man looked as usual—snub-nosed and black-haired." Was he in the habit of transforming himself into a Roman-nosed blonde every now and then? The American would lead one to think so, for a little later she makes him red-haired. At first sight this is suggestive of the frugal woman in 'Handy Andy' who said she had had her old black silk dress dyed crimson. Investigation shows that, like the first sentence, this is due to carelessness, and that the red-haired man was named Dementieff. "Vaska Denissoff's snub-nosed, black-whiskered face, and the whole of his compact little figure, . . . was exactly the same as usual." This is sensible and simple: he did not shrink and turn pale under fire like the men who have just been described.

On the same page an extraordinary military manœuvre is executed. *Rus.* "Denissoff took up his position at the end of the bridge and watched his squadron as it approached. The sound of hoofs was audible on the planks of the bridge, as though many horses were galloping, and the squadron, . . . deploying upon the bridge by fours, began its march to the other side." *American:* "Denissof . . . watched his men pass by four abreast. . . . The whole squadron formed to pass to the other side." According to this, it will be perceived that the regiment passed Denissoff, turned and marched back over the bridge, which was immediately burned behind it, leaving it to the tender mercy of the enemy on the shore which had just been evacuated! Count Tolstoi now advocates the doctrine of non-resistance to evil; but he was a gallant and able soldier in former days, and when he learns what an astounding bit of strategy has been attributed to him—in connection with other imbecilities which are but faintly outlined above—he will probably renounce that doctrine long enough to visit New York armed like the traditional brigand. He may derive a profound and holy joy from cobbling shoes, but such unpardonable cobbling of his brains by incompetent and careless persons will be likely to awaken some other sentiment in his breast, as it does in the breasts of those who can read Russian, and who have been inspired with something like a warm personal affection for the man who can write such books. All the delicate touches which show the artist's hand have been ruthlessly eliminated from this translation. Instead of dainty portraits of people whose every word and movement disclose their several characters in clear, true outlines, we have something more nearly approaching the comic-valentine order of art.

"Owen Meredith" once made metrical versions of some Servian folk-songs. In the preface he claimed that their chief merit lay in the fact that he had gathered these fresh and simple wild-wood blossoms with his own hand, in their native vales. The Harvard Library copy of this volume contains a marginal note, in the handwriting of a distinguished professor belonging to the university, to the effect that they were adapted from the English prose translation of the French translation of the German translation of the Servian! Perhaps *pot-pourri* would be a polite word by which to express the state of those "freshly culled blossoms" after passing through five hands. I have not hit upon a polite word for the Tolstoi translation, and do not expect to. Neither do I expect that even the list of choice atrocities which I have given above—and which might be simplified by saying that there is hardly a page which should not be entirely rewritten—will have any effect in preventing further hackwork by unsympathetic and unskilled hands. I only wish to beg readers of translations from the Russian through the French—the worst possible medium—not to trust to the correctness of any ten consecutive words.

A word in regard to the proper names employed seems also necessary. The mongrel nomenclature leads to confusion. Part of the names are English, part French, part Russian. Count Rostoff is called Élie, and the Russian form, Ilya, is then employed when referring to his daughter, Natasha Ilinovna. Count Tolstoi's name is Lvov Leo, but it halts half way in the French Léon, and Lvovna is changed to Lvovna, which is nonsense. Pavlograd is allowed to stand, Pavlovna is turned into Paulovna. Prince Vassily becomes *Basil*, while André is allowed to remain in French. *Mlle.* and *Monsieur* are put where they never were written, and *Vicomte* is as carefully translated every time. And the French *w* (pronounced *v*) is always used, without explanation, where an English *v* or *f* should have appeared. A similar bit of ignorance and carelessness occurs in a Polish translation of 'Uncle Tom's Cabin,' which must be a great puzzle to the unfortunate readers. Once, in the first chapter, Mr. Shelby calls little Harry "Jim Crow." That was too much for the Pole; but, nothing daunted, he translated it *Jimka*, explaining that it was the diminutive form of Jeremiah, and used it for several chapters. Then, without a word of elucidation, he introduced Harry, and proceeded to use both names indiscriminately, as though the unfortunate child were Siamese twins! Such minor points serve to sustain a translator's well-earned reputation for carelessness.

ISABEL F. HAPGOOD.

BOSTON, March 11, 1886.

Notes.

THOMAS Y. CROWELL & Co. have in press, for immediate publication, Count Leo Tolstoi's 'Anna Karénina,' translated from the Russian by Nathan Haskell Dole.

As the American "Men of Letters" series was obviously suggested by the English "Men of Letters" series, so the series of "American Statesmen" seems to have suggested to Macmillan & Co. the limited series of "Twelve English Statesmen," intended "to present, in historic order, the lives and work of those leading actors" in the affairs of Great Britain who have left an abiding mark on the policy and institutions of England. The first biography to appear will be Mr. Freeman's 'William the Conqueror,' and this will be followed by Mrs. J. R. Green's 'Henry II.,' Mr. Frederick Pollock's 'Edward I.,' Mr. Cotter Morison's 'Henry VII.,' Professor Creighton's 'Wolsey,' Dean Church's 'Elizabeth' (who is an English *statesman* just as Margaret Fuller was an American *man* of letters), Mr. Frederic Harrison's 'Cromwell,' Mr. H. D. Traill's 'William III.,' Mr. Leslie Stephen's 'Walpole,' Mr. Froude's 'Chatham,' Mr. Morley's 'Pitt,' and Mr. J. R. Thursfield's 'Peel.'

By arrangement with the English publisher, Mr. George J. Coombes will soon issue a little volume called 'The Pleasures of a Book-Worm,' by Mr. J. Rogers Rees, containing half-a-dozen chapters of easy gossip about books, criticism, dedications, etc.

Mr. Coombes will publish this week Mr. Lang's 'Books and Bookmen,' the first of the series of 'Books for the Bibliophile.' It will be followed shortly by the second volume, Mr. Matthews's 'Ballades of Books.' There will be a special large-paper edition of this series as well as a large-paper edition of Messrs. Matthews and Hutton's 'Actors and Actresses'—the five volumes of which appeal especially to the extra illustrator.

We cheerfully substitute on our shelves Mr. C. A. Durfee's new Index to *Harper's Magazine*, vols. 1—70, for the previous Index, vols. 1—60. A great improvement is to be remarked in the typography, and in the table facilitating reference from volume and page to month and year. The obituaries, again, are now first displayed in alphabetical order. The portraits fill about the same number of pages as before, but the smaller type argues a great increase in their number. No

amount of painstaking could insure absolute accuracy in affixing an asterisk to titles of illustrated articles. We have noticed some lapses in this practice. and also in ascriptions of articles to authors. But the work is a noble monument of well-directed labor, and furnishes a clue to far more than the mere contents of the magazine.

One often wonders how those who appreciate poetry of the higher order can come before the public with illustrations of no artistic fitness or merit. Such a discordant combination is found in Frances Clifford Brown's 'A Stroll with Keats' (Ticknor & Co.). The poem which inspired these thoroughly amateurish pen-drawings begins, "I stood tiptoe upon a little hill."

With all our good feeling toward the dawning spring, we cannot give full faith and credence to the artistic mission of Irene E. Jerome, who makes the designs for 'The Message of the Bluebird Told to Me to Tell to Others' (Boston: Lee & Shepard). The poetry is by Mrs. J. S. Bayne.

Roberts Bros., Boston, have added 'César Birotteau" to their series of translations from Balzac.

We are glad to learn that Prof. A. V. Dicey's 'Law of the English Constitution' is passing through a second edition.

The projectors of the *Cosmopolitan*, a new monthly begun this month at Rochester, think there is a call for a new "family magazine"—the distinctive marks of which, we judge from this example, are a department called "The Household" and another called "The Little Ones." The illustrations are nearly if not quite all taken at second-hand.

Mr. F. H. Wines's monthly *International Record of Charities and Correction* (G. P. Putnam's Sons) is now launched—a quarto paper containing sixteen pages of reading matter. Its aim is to assist in the unification of measures for the relief of suffering and the repression of crime, and to interest the public in them. The first number has naturally a rather miscellaneous and disorderly look, as if the several divisions had not yet been determined. The reviews deal with three books, one French, one English, and one German, and justify the title of "international."

We may mention in connection with the foregoing the new *Archives de l'Anthropologie Criminelle et des Sciences Pénales*, of which Mr. Christern sends us the first number. The headquarters of the direction appear to be at Lyons. Original articles in this publication are followed by critical reviews in various fields, news, bibliography, etc.

The *Popular Science Monthly* for April will contain the first of a series of articles by Mr. David A. Wells on 'An Economic Study of Mexico.' It is safe to say that they will abundantly repay reading.

The most suggestive article, perhaps, in the semi-centennial number of the *Yale Literary Magazine* is that by ex-President White, of Cornell, who recalls the lifeless manner of teaching the classics in his day, and its benumbing effect on literary aspiration. President Gilman contributes a pleasant antiquarian paper on the studies required at Harvard in 1642-43, in which it is curious to remark the absence of Latin, the acquisition of which before entering college was assumed and was of course customary.

The March *Antiquary* opens with "Crown Lands, Part ii.," by S. R. Bird. This paper gives lucid definitions of the three classes of Crown lands—lands in ancient demesne, escheats, etc., and forests, parks, and chases; with the revenues, etc., accruing from each. "Notes on Common Field Names," by Rev. J. C. Atkinson, is a short paper, to be continued. It is of a genuine and valuable antiquarian character, and, after a general introduction, discusses in especial the term "wandale." The next paper is, "Notes on the Family of Frenche," by A. D. Weld French—the name being held to be a corruption of *fraxinus*, ash. Mr. Folkard's second paper on "The Antiquity of Surnames" gives some interesting facts on this matter. Mr. Jewitt's "Quaint Conceits in Pottery: iii, Some Mounted Knights, etc.," has, like its predecessors, several entertaining figures; and Mr. Carew Hazlitt's "Notes on Our Popular Antiquities" is chiefly devoted to "omens." Mr. Henry B. Wheatley's second paper on "Precious Stones" leaves the diamond for separate treatment (pearls having been the subject of the previous paper), and gives a sufficient description of the rest, including amber, coral, and the ancient murrhine vases—held by the writer to have been made of fluor spar. "Celebrated Birthplaces" is a short paper upon Robert Southey at Bristol, with an excellent illustration. Mr. Davey's second paper upon Beatrice Cenci introduces us to the several brothers and sisters of this family, ending with Beatrice herself, born February 12, 1577, and therefore twenty-two years old, instead of sixteen, when she was executed in 1599. At the end there are the usual book-notices and miscellaneous notes; and here we read with deep regret the obituary of Henry Bradshaw, the distinguished antiquarian, the learned and courteous librarian of Cambridge University.

An etching of the ministering children in Raphael's cartoon "The Sacrifice at Lystra" makes an agreeable frontispiece to the *Portfolio* for March (Macmillan). Notable among the pictorial accompaniments of Mr. Hamerton's papers on "Imagination in Landscape Painting" is a mezzotint after Claude's "Embarkation of the Queen of Sheba." Finally, there are two striking mechanical photographic copies of the masterly effigy of Guidarello Guidarelli, by Tullio Lombardi, at Ravenna.

In Nos. 520, 521 of *L'Art* M. Max Rooses completes his interesting revelation of the pecuniary and friendly relations between Balthasar Moretus and Rubens. The fact that the painter took his pay from the great printer mostly in books, enables the custodian of the Plantin Museum to exhibit the culture of Rubens, whom one of his contemporaries declared "le plus sçavant peintre du monde." A like preëminence is assigned by that competent judge, Viscount Henri Delaborde, to Gerard Edelinck, who is pronounced "the most harmoniously organized and the most complete of engravers." Among the samples of his work reproduced is the fine copy of Rigaud's portrait of Bossuet. François Boucher is the subject of a rather literary paper by André Michel, and here again there are numerous characteristic examples of this painter of nymphs and cupids. An etching of a family group by Rembrandt in the Brunswick Museum is the most significant of the larger illustrations in these issues of *L'Art*.

Dr. J. A. H. Murray, editor of the New English Dictionary, writes to the *Academy* concerning that paper's report of his recent account of the situation of the great enterprise: "But I regret to find comprised in an 'etc.' the unique work done for the Dictionary by Mr. Fitzedward Hall, who, almost since we began to print, has devoted four hours daily to reading proofs and revises, making critical annotations upon the explanations, sense-history, and use of the words, and, above all, to supplying from his marvellous store of references (some idea of which may be gathered from the footnotes to his 'Modern English,' 'English Adjectives in -able,' and other well known philological works) earlier, later, better, or, as often happens, unique quotations for the various words and senses. There is not a page of the Dictionary which has not thus been enriched by him; more than half of his day's work is voluntarily devoted to this service to the English language. Such disinterested labor on the part of a gentleman whom I never saw and know only through his loving work," Dr. Murray goes on to say, is a never-failing source of inspiration and encouragement to him.

From Charles Scribner's Sons we receive the initial number of *Les Lettres et les Arts*, the new review of whose literary merit and unparalleled artistic embellishment we have already spoken on two occasions. The Messrs. Scribner are the American agents of this superb periodical, the title-page bearing their imprint along with that of the French publishers.

Mr. George Wilson, whose address is Murrayfield House, Mid-Lothian, Scotland, writes to the Glasgow *Herald* an appeal for the preservation of the more important houses associated with Robert Burns. He wishes to estimate the probable backing such an enterprise would obtain, and requests "any practical assistance in the way of suggestion or otherwise (but, at the present stage, no money)."

The friends of Edward Caird, the distinguished Professor of Moral Philosophy in the University of Glasgow, are conspiring to present him with his own portrait. The subscriptions are limited to sums of from one to five guineas. Prof. George H. Palmer, of Harvard College, a member of the American Committee, will receive and transmit any cis-Atlantic contributions.

The Proceedings of the American Association for the Advancement of Science at its thirty-third meeting, held in Philadelphia in September, 1884, have but just been issued by the Secretary at Salem, Mass. They are stitched in two parts of about 350 pages each.

Four new maps just added by the Geological Survey of New Jersey to the great Atlas of that State—viz.: Nos. 1, 9, 13, 17—leave but seven out of the total seventeen to be issued, probably in the course of the next two years. They are, respectively, the sheets containing the extreme northwestern corner of New Jersey (Kittatinny Valley and Mountain, in Sussex and Warren Counties), or, say, from Port Jervis, N. Y., to the line of the Delaware, Lackawanna and Western Railroad, and from Lake Hopatcong to the Delaware; Monmouth Shore, embracing Coney Island, the south shore of Staten Island, Perth Amboy, Sandy Hook, and all the rosary of watering places from Long Branch to Point Pleasant and Lakewood; the vicinity of Barnegat Bay; and finally Cape May—this last a chart of extreme beauty, though the execution of all is of a uniform degree of excellence, and that very high. The ten sheets already issued complete the entire northern and eastern outline of the State; Nos. 5, 8, 10, 11, 12, 14, 15 will take in the southern and western portion. The work will then rank at the head of all State atlases not prepared by the national surveys. The scale is one inch to a mile, with figured contour lines and great minuteness and accuracy of detail.

A month or so ago we notified the discovery at Paris, by Paul and Prosper Henry, of a new nebula by photography, the existence of which could not be verified by the telescope. It now becomes worthy of note that the discovery has been optically verified, but only, so far as is yet announced, with the largest refracting telescope in existence, of thirty inches aperture, at Pulkova. Dr. Struve has succeeded in making out distinctly the particular features of this interesting object. While the Paris astronomers are undoubtedly entitled to the credit belonging to the perception and proof of the phenomenon, it is a matter of record that the faint light photographically perceptible in the vicinity of the star Maia first impressed itself upon a plate exposed at the Harvard College observatory about two weeks before the Paris photograph was taken. Professor Pickering exhibited this picture at the Albany

meeting of the National Academy last November, on which occasion the irregularities, now recognized as due to nebulous light, received some attention. They were supposed to be due merely to defects in the photographic process; but upon reëxamination Professor Pickering finds the appearances identical with those described by the brothers Henry.

As in two previous years, 1826 and 1867, the gold medal of the Royal Astronomical Society is again awarded conjointly, the recipients this year being Professor Charles Pritchard, of Oxford, England, and Professor Edward C. Pickering, Director of the Harvard College Observatory. The Harvard photometry, already alluded to in our columns, and a similar research in stellar magnitudes conducted at Oxford, form the very just basis of the award. Professor Pickering is the fifth American astronomer who has received the Society's medal, his predecessors in this honor being Professor G. P. Bond, in 1865; Professor Newcomb, in 1874; Professor Hall, in 1879; and Dr. Gould, in 1883. The total number of medals bestowed by the Society is now nearly sixty, more than one-half of which have been awarded to Englishmen.

The British *Nautical Almanac and Astronomical Ephemeris* for the year 1889 reaches us somewhat later than usual. It is constructed on the same plan with previous issues, and remains under the direction of Mr. J. R. Hind, F. R. S., who has now been the superintendent for a third of a century. Easter Sunday, 1889, falls on April 21, and the year 5650 of the Jewish era begins on September 26. There are three solar eclipses, of which only that on the first day of the year is visible in the United States, the path of central eclipse crossing California a few miles north of the Lick Observatory. In the latter part of the year the corrections according to Newcomb to be applied to the longitudes of the moon as derived from Hansen's Tables become for the first time as great as 20″—a discrepancy corresponding to an error of about twenty-two miles in its actual orbit.

—'Mobilizable Fortifications,' by Gen. Jos. L. Brent, formerly of the Confederate army (Houghton, Mifflin & Co.), maintains the proposition that, by defending lines of railroad with movable batteries, a great change can be made in modern warfare, and immense advantage secured to the party resisting invasion. General Brent would convert railroads into strong defensive fortified lines, to be held by a thoroughly organized system of movable batteries, suitably mounted on railway trucks. The power of concentration on threatened points thus secured would enable a comparatively small number of men to resist effectively the advance of large armies. He compares the results that might thus be attained to the power of iron-clad gunboats on a navigable stream to thwart the crossing of an invading army. General Brent is an accomplished soldier, and there is no doubt large room for the development of the line of defence he suggests. In some cases where the country is level, as in Louisiana, it might be made very effective; but we think it hardly admissible of the wide extension he proposes. In hilly countries, where railroads follow, as a rule, the valleys of the water-courses, a much larger percentage than he concedes would be badly located for the purpose. Again, while capable of motion in the direction of the railroad, such a system of batteries would have no power of movement or of escape in other directions. Nor is it to be imagined that this mode of mobilization would long be left to those on the defensive. Invaders would construct and use railroads as quickly and efficiently as the attacked party, and the net result might be a great increase in the weight of field artillery, and the use of new means for its transportation and concentration. The little book, however, is well worth perusal.

—A Danish schoolmaster, the Rev. Malling Hansen, Principal of the Institution for the Deaf and Dumb at Copenhagen, seems to have arrived at some interesting facts in regard to the increase in height and in weight of growing boys and girls. For some years past he has put the whole of his pupils to the test of the measure and the balance, by means of an ingeniously contrived apparatus, four times every day. As the result of his observations, he claims to have discovered a law of vital periodicity. Distinct variations in weight and height respectively are observable at three periods of the year of four months each. From August to December he finds that his pupils increase considerably in weight; from December to April the increase is slight, and from April to August that slight increase is wholly lost. The periodicity as regards height is the reverse of this; that is to say, the maximum period of weight is the minimum period of height. The experiments, if not exhaustive, certainly furnish interesting data which it is worth while to put to further test. Comparison is suggested with the difference in fertility of human beings in the summer and the winter months.

—The laws in force in Norway for the protection of literary and of artistic property, passed by the Storthing to take effect respectively January 1, 1877, and January 1, 1878, made no adequate provisions for registration. An additional act was therefore passed June 20, 1882, establishing a registry of copyright. This law, which is the practical outcome of a suggestion made by the university librarian, Mr. A. C. Drolsum, to the academical council in 1878, provides that there shall be kept at the university library a register, in which any person may cause to be entered whatever he deems of importance for the establishment and preservation of his right of copy, accorded by the laws just named, in any literary or artistic production. Such entry is to be made upon a written request, without preliminary examination as to the correctness of the statements desired to be entered; certified copies are to be furnished upon demand, and entry and certified copy charged for at the rate of one *krone* (26.8 cents) for each work, the fees to go to the treasury of the university; and the entry is also to be published in a journal designated by the King for such publication, at the expense of the person concerned. Publication as to authors of anonymous works and as to announcements of new editions, required by the copyright law of 1876, is considered accomplished by entry in this register, which is to be accessible for public inspection during certain stated hours. The law requires, also, that of every work or new edition entered upon this register a bound copy shall be delivered to the library at the time of entry, or, if not then published, at the time of publication; and in addition, one copy of every work printed or published in Norway during the year must be delivered before the close of the month of January next following. These deposits are entitled to free transmission by post, and payment may be claimed for them, except in the case of newspapers, when the publication price exceeds ten *kroner*. The responsibility of delivery rests with the printer unless he resides abroad, in that case with the publisher; and failure to observe this requirement is punishable by a fine for each delinquency of from two to fifty *kroner*, at suit brought by the academical council of the university. The law further orders that a catalogue be prepared by the library of all the books, charts, musical publications, engravings, and periodicals deposited during the year and received up to the 1st of February next following, and be issued not later than the 1st of the following August.

—This law took effect January 1, 1883, and the first annual catalogue, *Norsk Bogfortegnelse for* 1883—a record of all works published in Norway during that year—was issued in December, 1884, the delay in publication being due to the difficulty experienced in carrying out all the law's requirements during the first year of its operation. It contains 1,297 entries, including 87 periodicals and 102 newspapers. The second catalogue, *Norsk Bogfortegnelse for* 1884, published by Albert Cammermeyer, of Christiania, is a pamphlet in fine print of 105 pages, containing an alphabet of authors and titles of anonymous books, followed by lists of newspapers, music, charts, and engravings, and, at the end, by a classified index, prepared by Mr. J. B. Halvorsen. The volume contains 1,446 titles, which number includes 89 periodicals, 104 newspapers, 75 musical compositions, 33 illustrated works and engravings, 16 maps, and 132 annuals, leaving 997 titles of new books and pamphlets. The arrangement of the topical index does not enable us to readily ascertain the exact number of works in any distinct class, but theology, including under this head devotional and temperance books, numbers 250 titles, or one-quarter of the whole number of works published. The next largest division is that of statistical works, 162, and the third, technical and economical works, 137; and the chapter of history and politics is exactly equal to that of educational works and pedagogics, 115 books in each. But in fiction only 18 titles are recorded, and four of these are of new editions. Eighteen books were published in languages other than Scandinavian, nine of these being in German and three in English. The translations number about sixty—fourteen from the German, five from the French, and of English and American books no less than thirty. Among the former a sketch by Anthony Trollope, novels by "Hesba Stretton" (whose name the more trustworthy bibliographies give as Miss Hannah Smith, and not, as here, Sarah Smith) and Emily Holt, and the volume of travels, 'Three in Norway, by Two of Them.' From American authors, Ingraham's 'Throne of David,' Dr. Kellogg's 'Domestic Medicine,' and, according to a note, a "condensed" translation of Cooper's five "Leather-Stocking Tales." Also, 'Our Two Lives; or, Graham and I,' by "A. H. K.," which initials, according to American library catalogues, stand for Miss Eliza Warner; and 'Tim and Tip,' by "James Otis," who is stated upon good authority to be James Otis Kaler, a New York journalist. Under "Edgar Poe" there is a title, 'The Pendulum, a Tale of the Inquisition.' The care taken to make this catalogue something more than a mere list of the country's literary productions for the year deserves commendation. Annual catalogues rarely exhibit so much accurate and conscientious bibliographical labor. The editor has marked the type in which each article was printed, thus enabling us to form some opinion as to the present status of the movement for substituting the Latin for the German type in Norwegian typography. Of 1,200 books we find that 650 were printed in the former and 550 in the latter type, so that considerably more than one-half were printed in the preferable type. Unfortunately, it is not always the most widely circulated works which are so printed, though the works of the popular authors, Ibsen, Björnson, Lie, Kjelland, etc., are in this type. But of the 89 periodicals only 32 are printed with Latin characters, and of the 104 newspapers, all but seven are printed with German letters.

— A committee of the Cambridge (England) Philological Society, appointed to draw up a

scheme of the reformed pronunciation of Latin, has presented a report which is printed in the *Academy* of March 6. They announce that they "have come to the conclusion that the classical pronunciation of Latin has now been sufficiently ascertained for the purpose of drawing up a scheme which may be reasonably regarded as permanent." They then proceed to give well-put directions, which, however, it is not worth while to reprint, as the method is in all its essentials familiar to our readers, being the same which has long been advocated by the *Nation* and in vogue for many years in America. The subject of quantity is treated very gingerly: "The short and long vowels in Latin differed [differ?] in duration as the first and second in 'aha,' 'steady.'" Again: "Every vowel has a quantity of its own, and the English practice of pronouncing all vowels in position before two consonants as if they were naturally short, is erroneous. The Romans said *sĕcta*, but *rēctus, tĕctus; ĭndoctus*, but *īnsula, īnsulsus*." This is all very well as far as it goes. But this matter of quantity enters into the earliest instruction: of a boy who is not made to hear and to feel from the start that the Latin for "light" is *lĕuis*, and the Latin for "smooth" is *lēuis*—of that boy it is safe to say that he will never be able to read Latin well. The average English schoolmaster, who probably has never heard of the present interesting German studies in 'Hidden Quantities,' may well lift up both hands and ask the practical question, "What am I to teach my boys? *ăctus* or *āctus*? *ĕmptus* or *ēmptus*?" On this point the Committee might at least have laid down the familiar law that all vowels are long before *ns* or *nf*, and possibly have given a useful list of such words as have the vowel quantities before two consonants made out with perfect certainty.

— It would have been interesting to American readers if the Committee had said a word or two about the method of pronunciation now practised in England. But this obviously lay outside their province. A droll hint about present usage, however, is given: "*mensa, quinqueuir, amatur, puer*, all have their finals pronounced alike." That the best English scholars have long since thrown over the English mispronunciation is no doubt true. An eminent American was taken some years ago by Professor Munro, the editor of 'Lucretius,' to dine in hall. It fell to Mr. Munro to say the Latin grace, which he did with the Latin pronunciation. Shortly after, when talk was lively, Mr. Munro quoted a passage from Livy with the English pronunciation, at which there was a roar of laughter. "Oh," said Mr. Munro, "I always use that method of pronunciation which I think will be most acceptable and most intelligible."

—Many a time have scholars wished that they had found a Stoic's library rather than an Epicurean's in Herculaneum. Then we should doubtless have been richer by some of those capital quotations with which the Stoics spiced their writings, whereas the Epicureans were too well content with their own gardens to rob the flowerbeds of the poets. Still, philosophers and palæographers find the Herculaneum rolls a fascinating study, and every now and then Gomperz brings out some of his wonderful restorations; every now and then some historian of philosophy works some scrap of the Herculaneum papyri into the Epicurean system. To this fascination we owe a handsome volume issued from the Clarendon Press, Oxford (New York: Macmillan), and entitled 'Fragmenta Herculanensia,' edited with introduction and notes by Walter Scott, Fellow of Merton College, Oxford, and successor of the lamented Charles Badham in the chair of classics at Sydney, Australia. It consists of the Oxford copies of the Herculaneum rolls, together with the texts of several papyri hitherto unpublished, accompanied with facsimiles. As the Oxford copies are sometimes more complete than the originals in their present state or in the published Naples facsimiles, the importance of the book is evident, and England is to be congratulated on having a son of her own to do such work, which is generally relegated to some indefatigable German. One of these rolls Mr. Scott proposes to call "On the Mode of Life of the Gods." It may be dimly gathered from the fragments that the easy-living Epicurean gods must have had a better time than a layman who should attempt to grapple with the contents of this volume. The Greek scholar, however, will find much to reward his study, and the lexicographer a number of undesirable words to add to his Liddell and Scott.

— Leopold Zunz, whose death at Berlin, at the age of nearly ninety-two years, is just announced, was one of the three famous students of rabbinical literature, all of this century, who may be said to have created what Jewish scholars often designate as the science of Judaism—meaning by that the systematic study of Judaism, not as found in the Bible, but as gradually developed by the rabbis, in Sanhedrim, school, and synagogue, from Syrian and Roman times down to our own. The two other scholars were S. J. Rapoport (1790–1867) and Abraham Geiger (1810–1874), both rabbis themselves. Zunz, who was born at Detmold, August 10, 1794, officiated for a few years as synagogue-lecturer at Berlin and Prague, and was also active as teacher and editor of a liberal political journal, but spent most of his long life in purely literary labors. All three were born critics; their knowledge was equally vast and their literary zeal equally ardent. Rapoport, who wrote only in Hebrew, was the most original and ingenious, Geiger the most brilliant, Zunz the most scrupulously painstaking and accurate. Rapoport labored with love for his subject, which he would clarify and preserve; Geiger with the ambitious impetuosity of a radical reformer; Zunz with the coolness of an inquirer bent solely on establishing historical truth. All of Zunz's writings have a permanent value, but his 'Die gottesdienstlichen Vorträge der Juden' (Berlin, 1832), which is also important to Bible scholars, is monumental. His other chief publications are 'Die synagogale Poesie des Mittelalters' (1855,) and 'Literaturgeschichte der synagogalen Poesie' (1865). He also edited a translation of the Bible, in which Arnheim, Fürst, and Sachs were his colaborers. A German coreligionist justly remarks of Zunz: "He leads the student through the mazes and intricacies of a widely scattered literature, with unsurpassed perseverance, with unswerving directness of purpose, with the accuracy of a powerful intuition; and he uses an elegance of diction which may be termed classical, and by which he invests even didactic and abstruse matters with the attractions of poetry."

MAINE'S POPULAR GOVERNMENT.—I.

Popular Government: Four Essays. By Sir Henry Sumner Maine. London: John Murray; New York: Henry Holt & Co. 1885.

Sir John Lubbock, Mr. Ruskin, Mr. Swinburne, and others have given the world lists of good books—that is, books which ought to be read. As yet no one has produced a list of books which in fact have been read—of the works, that is to say, which, whatever their intrinsic merit, have as a matter of fact greatly influenced opinion. A book of influence may be a good book, a bad book, or a work which has gained a permanent place in the ranks of literature, or an ephemeral production of which the very name has long been forgotten. Its special characteristic, its *differentia*, as logicians would say, is its having in fact turned the current or directed the tendency of men's thoughts. Locke's 'Civil Government,' Montesquieu's 'Esprit des Lois,' Godwin's 'Political Justice,' Sieyès's celebrated political pamphlets, Burke's 'Letters on a Regicide Peace,' Paley's 'Evidences of Christianity,' Malthus's 'Treatise on Population,' Goethe's 'Sorrows of Werther,' are writings which certainly have very little in common and are of the most unequal desert. One quality, however, and one only, places them in the same class: they are all books which have told on the feelings or on the intellectual convictions of mankind; they were in their day —as one or two of them are still—works of influence; they are each and all open to much criticism, but they each and all of them hit their mark; they each told upon the generation to whom they were addressed. The writer of a book of influence may have served or sometimes have disserved the world; he may often have done more harm than good; but he can always boast that mankind, whether made better or made worse, were at any rate made somewhat different by his labors. He at least never committed the deadly sin of hiding his talent in a napkin; he has somehow or other made such light as he had it in him to give, visible to all the world.

It is easier in some respects to discern the writers of influence among the authors of a past generation than among the men of our own time. Yet a little consideration will show us that in our own day, as at all times, there have been authors both of great merit and of very slender acquirements who have exerted that mysterious, that almost personal power of influence, while there have been others who, sometimes owing to their defects and sometimes owing to their merits, have never been able to impress their ideas upon the world. The writer, moreover, of influence, now as at all times, may have the power to give a more or less lasting turn to men's ideas or feelings, or may be able to do no more than stimulate for a moment certain kinds of sentiments or convictions. There is something approaching to absurdity in mentioning in the same sentence Darwin's 'Origin of Species,' Strauss's 'Leben Jesu,' and 'Uncle Tom's Cabin,' yet the three books have each of them a fair claim to be reckoned works of influence. The essential difference between them is that the first has opened a new world of speculation, and has modified the thoughts of the age; that the second is not much more than the outward sign of the stage reached in a theological controversy which has already gone on for generations, and will probably not be closed till many more generations have lived and died; and that the third, though for a time it thrilled and interested the civilized world, can do so no longer. But this immense difference in the value of the three works does not prevent them from standing together among the class of books of influence, and being separated from books which, like Buckle's 'History of Civilization,' though at one time read and admired, never really altered the course of speculation or of feeling, or which, like Macaulay's splendid historical pictures, interest and always will interest any one who cares to read the story of great deeds told in grand language, but hardly exert an appreciable power over the theories or the conduct of mankind. The point, in short, to make clear to ourselves is, that the quality of influencing others is, with writers as with men of action, a special and peculiar gift, independent of the absolute and intrinsic merit of an author's work. It were the height of injustice or of stupidity to fancy that because a writer swayed the feelings or beliefs of his generation, he was therefore only a rhetorician who knew how to play on the feeling of his time. Montesquieu produced at least one work of influence, and Montesquieu, whatever his defects, can even

now be read with instruction no less than with pleasure. But it would be, on the other hand, simple folly to confound the talent for influencing the world with the quite different gift for discovering or enunciating the truth. Rousseau's works contain some things that are true, but it would hardly be now disputed that the small amount of useful truths which he may have impressed upon his contemporaries is far more than overbalanced by the mass of noxious and plausible fallacies to which his genius gave authority. These are, moreover, if Sir Henry Maine is to be believed, still current, and enjoy the repute which ought to belong only to sterling coin.

However this may be, all readers of Maine's 'Popular Government' will, especially if, like ourselves, they have studied our author's other works, be willing to admit that the latest and certainly by no means the least effective of Rousseau's critics belongs to that body of whom Montesquieu and Rousseau are equally members —the class, namely, of authors who can produce books of influence. His 'Ancient Law' marked an era in the legal studies of Englishmen. When it appeared just a quarter of a century ago, not one barrister in a thousand knew even the rudiments of the law of Rome; not one Englishman in ten thousand had even the dimmest conception of the deep mark made by Roman jurists on European speculation in law, in politics, and in theology. The idea, indeed, that law itself was a matter of more than technical or professional interest seemed a paradox to the great majority not only of intelligent readers, but of masterly writers on social and historical subjects. Macaulay was a lawyer, and displayed in one department the genius of a jurist. But no one would gather from Macaulay's history that the development of English law was nearly as important a factor in the progress of England as was the growth of English theology or of English literature. Macaulay belonged to the generation who had not learned from Maine the speculative importance of legal ideas. Since Maine's 'Ancient Law' appeared, every thinker or historian of average intelligence has become conscious of the fact that a nation's law is the record of a nation's genius. This notion, no doubt, was no novelty to Continental theorists, but it was, when Maine first began writing, a revelation to educated Englishmen. To have opened up a new line of thought to his countrymen is no small achievement for any author, and this feat is one which Sir Henry Maine has already performed at least once in his career. Nor is it at all unlikely that his 'Popular Government' will exert as great, if not as lasting, an effect on opinion as his 'Ancient Law.'

The book has been attacked, and is certainly on some points by no means beyond criticism. But the assaults of opponents who disagree with Maine's conclusions are in themselves a tribute to the power with which he expounds his opinions; and it does not need the proof derived from the controversy which 'Popular Government' has evoked, to show that the book has already produced an immense effect on that public opinion of educated men which, in every civilized country, and especially in England, sooner or later moulds the opinion of the whole nation. The aim of the work is, we take it, to prove or suggest that democracy, or, to use Sir Henry Maine's own expression, "popular government," is merely one form, and it may be a very transitory form, of human progress. That experience gives no guarantee for the stability or the success of democratic constitutions; that the very law of progress of which they are supposed to be the result is itself a very exceptional phenomenon, peculiar to certain ages and to certain peoples; that no careful thinker can feel any certainty how long the age of progress may endure, and that the pæans which have hailed the advent of democracy are, to say the least, premature—that this, or something like this, is the general effect of Sir Henry Maine's book, will not be disputed by any intelligent reader. That 'Popular Government,' combined, no doubt, with the circumstances of the day, has already done a great deal to impress English readers with a belief that views such as those we have attempted to summarize have in them a large amount of truth, will not be denied by any one who observes the course of English opinion. The treatise is already a book of influence.

When this fact is admitted, two inquiries at once suggest themselves to intelligent curiosity: What are the sources of the influence which Sir Henry Maine has once and again exerted over his contemporaries? What, in the next place, is likely to be the permanence of his influence? Will he take rank with authors, such as Locke and Montesquieu, whose ideas have become a lasting contribution to the thoughts of the civilized world? or will his writings ultimately sink to the level of works, such, for example (to take a very extreme instance), as Godwin's 'Political Justice,' which, after exciting great attention, has long become, not only ancient, but, what is a very different thing, out of date?

Milton and Vondel: A Curiosity of Literature. By George Edmundson, M.A. London: Trübner & Co. 1885.

THERE is no department of literary study more attractive to a learned mind, and none more beset with pitfalls, than this of authors' plagiarisms. The answer of genius has long been familiar in its unabashed claim to "take its own wherever it finds it"; but the list of those who have profited by high-handed appropriation of others' work, is so studded with famous names that one might well advise a young author not to seek originality, but, like the greatest of his craft, to look about for somebody "good to steal from," and rear his *monumentum ære perennius* on foundations already laid. Milton has been many a time violently attacked on this score, but with little effect, since the laws of the literary republic allow the imitation and incorporation of any ancient work, whether Hebrew or classic, and do not regard a similar obligation to the Italian or even the Spanish as an offence. It has been generally held, however, that writings in one's own tongue and those of one's foreign contemporaries are unfair game for such depredation. Now, Milton has been for many years vaguely accused of such indebtedness to Vondel, the most eminent of Dutch poets, but no real examination has been made in the case, excepting a cursory essay by Mr. Gosse, until the appearance of the very curious volume under review, in consequence of which it is most likely that the Shakspere-Baconians will hereafter have a cousinly group in the Milton-Vondelians; and certainly these last will not be without excuse for their folly.

It seems a strange coincidence that two poets, each the most gifted in his own country, should have written at nearly the same time on the same themes, and have toned their works with the same theological and political color. Vondel's "Lucifer," "John the Baptist," "Adam in Banishment," "Reflections on God and Religion," and "Samson," published between 1654 and 1664, afford this parallel with the "Paradise Lost," "Paradise Regained," and "Samson Agonistes" of Milton. The author of this inquiry into the resemblances of the two series finds Milton's obligation to be unexpectedly close and large. He first shows by a citation from a letter of Roger Williams to John Winthrop that the former introduced Milton to a knowledge of the Dutch tongue; he then proves with needless fulness the certainty of Milton's thorough acquaintance with Dutch affairs and men, among which Vondel and his books were in the first rank; he next reconciles the apparently conflicting points in the parallel chronology of the composition of the English poems with the publication of the Dutch ones; and finally devotes the body of his little treatise to a comparison of passages, the Dutch of the citations being added in the appendix; and he shows to his own satisfaction that Milton was indebted to Vondel for character-conceptions, plot-incidents, course and order of thought, distinct images, turns of fancy and ideas, and the mode of treatment of whole passages.

It would be impossible to compress this evidence, for its weight depends on the accumulation of instances. The student of literature will find it, indeed, a curiosity; but let him read with caution. For one thing, the translations are made into Miltonic verse, both in structure and phrase, and (while we do not question the exact fidelity of the rendering) something is to be deducted on that account. Again, not only does the practice of literature allow of appropriation from the Bible, the classics, and the Romance tongues, even to the extent of literal translation, but, apart from such direct borrowing, there is a large stock of imagery, sentiment, and rhetoric which is common property. If Milton had never read Vondel, yet in telling the same story about the same persons, in the same places, and drawing upon the same Biblical source for hell, heaven, Eden, the purposes of God, the manners, nature, and offices of the angels, and the biography of Adam and Eve, he would naturally have fallen into parallelisms; and from these, as, for example, that a standard is unfurled, a sword drawn, a messenger despatched, etc., nothing is to be argued as to plagiarism. So, too, from the mere use of such images as a ship under sail, an evening sun, towers of diamond, or others equally open to both authors, nothing is to be inferred to the detriment of either, though the special position of them in the text may sometimes prove a connection. But when every allowance has been made for what may have been derived from common sources, and under the most liberal construction of the rights of plagiary, the student will find it hard to resist the conclusion not only that Milton had read and pondered Vondel, but that his own work was fed from that source in a true sense. Taken by itself, a resemblance like the following unusual simile for the movement of the angelic host is slight:

"It quickly grew, and like a half-moon waxed,
Sharpening its points, and closed on us two horns." (*Vondel.*)

"The angelic squadron bright
Turned fiery red, sharpening in mooned horns
Their phalanx, and began to hem him round." (*Milton.*)

Or such a rhetorical point as this:

"John's shades and deserts, cell and prison shall
Change into light and paradise." (*Vondel.*)

"Eden raised in the waste wilderness." (*Milton.*)

Or even such an extraordinary circumstance as the change of Satan into the dragon form. But when there is a large number of these similarities, as here, one suspects that Milton's mind absorbed Vondel as intimately as it did Pindar. The evidence is perhaps most strong in the most unlooked for quarter, in the "Samson." Vondel's play is modelled exactly as Milton's in classical form; the time is the same; the details of the scene-setting are similar; the conduct of the story and striking passages of the thought and feeling are practically so closely related as to make the thesis of Milton's independence ridiculous. In the matter of phrasing take but one extract:

"The angel of my birth descending,
My dropping courage once more stayed." (*Vondel.*)

"Send thee the angel of thy birth to stand
Fast by thy side." (*Milton.*)

Such reduplication is not infrequent in the course of the poem.

Nevertheless, the author has, we think, weakened his case by over-stating it and leaning too often on slight parallelisms. He does not question, it should be said, Milton's supreme poetic faculty; and, after all, it seems to us that Milton has "bettered what he borrowed," and this he held to be a sufficient defence. Vondel, as he appears here, is a poet primarily of fancy, very literal in his imagery, very fertile in invention; but even when Milton approaches nearest the Dutch original, his affluence in beauty and sublimity in imagination and splendor of expression make him to Vondel as the eagle to the wren. Milton's laurel will not shed a leaf nor deaden its green ever so faintly for this exhibition of what one is compelled to accept as a leading influence in his later poems. The volume is of great interest, but the reader closes it with a stray line of Lowell's running in his head, which is the sum and substance of the whole matter of plagiarism and originality—"'Tis his at last who says it best."

Anthropoid Apes. By Robert Hartmann, Professor in the University of Berlin. [International Scientific Series, vol. lii.] Appletons. 1886.

THE anthropoid, or manlike or tailless, apes include the gorilla and chimpanzee of tropical Africa, the orang of Borneo and Sumatra, and the gibbons of the East Indies, India, and some other parts of Asia. The author of the present work has given much attention to the group, has made himself familiar with most of the literature, and has published original observations upon the habits and structure of the gorilla especially. After an account of the history of our acquaintance with the anthropoids, from the year 470 B. C., when the Carthaginians under Hanno found in Sierra Leone creatures which they called "gorillai," but which were probably chimpanzees, he considers in turn their external form and their structure, their varieties, their geographical distribution, and their habits, both wild and in captivity. He then discusses their zoölogical position and relations, and concludes with an instructive summary. There is a full index, and an appendix contains the titles of 116 books and papers, which would be more useful if the writers' names were always given and alphabetically arranged. The translator or American editor should have completed the list to date, and especially for American works, and should have seen that the first name of the anatomist, Wyman, was spelled Jeffries instead of Jeffrys, as in both the appendix and the text.

The author regards man, apes, and monkeys as constituting a single order, Primates, excluding therefrom the Lemurs. He quotes, with approval, Huxley's statement that the lowest monkeys are further removed from the highest apes than the latter are from man. The brains of anthropoids are somewhat fully described and figured. Although never so large as man's, and never to be mistaken for it, they present certain features of resemblance thereto which not only justify all that has been said of their human-like behavior, but lead us to anticipate more startling approximations whenever it is possible (as, for example, by the care bestowed upon the chimpanzee now at the Central Park Menagerie) to rear anthropoids and observe the effects of education upon several successive generations. For the present, however, notwithstanding the existence of the subfrontal gyre (Broca's convolution), which is certainly connected closely with the faculty of language, the anthropoids do not "talk" any more than other animals. Our author's views upon these points may be gathered from the following paragraph:

"It would, for instance, be a grave mistake to compare a tiger with a bloodthirsty executioner of the Reign of Terror, since the former only satisfies his natural appetite in preying on other animals. The atrocities of the trials for witchcraft . . . find no parallel in the habits of animals in their savage state. And such a comparison is, above all, impossible in the case of anthropoids, which display no hostility toward men or other animals unless they are first attacked. In this respect the anthropoid ape stands on a higher plane than many men. A great chasm between men and anthropoids is constituted, as I believe, by the fact that the human race is capable of education, and is able to acquire the highest mental culture, while the most intelligent anthropoid ape can only receive a certain mechanical training. . . . No anthropoid now in existence has shown itself capable of adapting stones, etc., to his personal use."

Like most living zoölogists, the author is an evolutionist, and holds that "man cannot have descended from any of the fossil species which have hitherto come under our notice, nor yet from any of the species now extant; it is more probable that both types have been produced from a common ground-form" which has become extinct. There is much yet to be learned of the anatomy of the anthropoids, especially of the brain; and their embryonic stages are almost entirely unknown to science. No fact respecting these, our "poor relations," is without its significance in determining our present affinities and common ancestry.

Most of the figures in this book are well chosen and well executed; but (especially in view of the somewhat extended consideration of the mooted point as to the overlapping of the cerebellum by the cerebrum) what is the intelligent layman to infer from the contrast between the orang's brain (fig. 56), which has nearly its natural shape, and that of the gorilla (fig. 60), which any unprejudiced anatomist can see had been distorted in the process of hardening, yet is not so described in the text? The skeletons of man and gorilla, and the facial muscles of the same, are instructively placed on opposite pages, but in two cases detailed anatomical descriptions of unfamiliar parts occur before the figures by which alone they are rendered intelligible to the unprofessional reader, and without reference to them. Like the other volumes of this series, the book is attractive in appearance; but there are numerous evidences of careless proof-reading, and several passages (notably on pp. 194, 198, 199, 110, 310) indicate that the translator (who is not named) had too little familiarity with the subject.

The History of the Anti-Slavery Cause in State and Nation. By Rev. Austin Willey. Portland, Maine: Brown Thurston. 1886. 12mo, pp. 503.

THE size of this book corrects at a glance the extravagance of the "Publisher's Notice" on the opening page, viz., that this is "the most complete and perspicuous history of the cause ever written, or that ever can be written." It is but just to the author to say that he makes no such absurd pretension. He has written seriously, in good faith, and to the best of his ability, but he is not a historian: he remains what he was, a combatant. He worked as a journalist and lecturer devotedly and unselfishly in a remote field, the State of Maine, from which he emerged occasionally to visit the great cities at the time of anniversary or nominating conventions. He naturally tells more and has more to tell, in quantity and in value, of the local movement with which he was identified than of the national movement, though this is sketched crudely and confusedly down to the outbreak of the rebellion. Mr. Willey began Abolitionist, in the technical sense, as President of the Anti-Slavery Society of the Bangor Theological Seminary, and later became one of the officers of the State Society, which, as a result of the sectarian schism in 1840, cut loose from the American Anti-Slavery Society, and passed, by steps which are not here recorded distinctly, into the political movement initiated by the Liberty party. Mr. Willey's account of the causes of this separation is not trustworthy, but the facts have meanwhile been laid before the public in another work, and have not been controverted. The same bias leads him to neglect totally, after the date mentioned, the body which rightly retained the name of Abolitionists, continued uninterruptedly the moral agitation, and was most conspicuous for zeal, activity, talent, eloquence, and conversions.

Mr. Willey was and is one of the most thoroughgoing believers in the efficacy of the ballot to effect a moral revolution, despising every other instrumentality in comparison. This view was the corner-stone of the Liberty party. It is instructive, therefore, to find our author admitting "that not one-half so many anti-slavery papers were taken in Maine in proportion to its Liberty votes, including those published out of the State, as were taken in many other States" (p. 407); and that the "Free Democracy" of 1853 in Maine could not have lived had it not made an alliance with prohibition (p. 419). This points clearly to the fact that, for Maine at least, the Liberty party was organized too soon, or, as used to be said, got itself prematurely counted. We can imagine a similar predicament if the Mugwumps, dissatisfied with inspiring fear in both parties and holding the balance of power, had come out as a separate party, and, after a vain effort to establish themselves on a pure civil-service reform basis, had attached revenue reform or currency reform to their platform. Mr. Willey shows, by the way, unconsciously and incidentally, how vulnerable is the myth which identifies, as parts of one continuous political growth, the Liberty, Free-Soil, and Republican parties. Third-partyism never flourished in this country, and it was only the disbandment (*i. e.*, the anti-slavery conversion, or, as our slang phrase is, capture) of the Whig party which permitted a national candidate to be elected in the person of Abraham Lincoln.

Mr. Willey is faithful now, as in the militant past, in denouncing the complicity of the American churches with slavery. His profession, of course, gives great weight to his utterances on this head, which are numerous and unsparing. That necessary alliance which he affirms between the anti-slavery and the temperance ballot, leads him to trace the fortunes of prohibition in Maine until it became the shibboleth of both parties and the fundamental law of the State. Hence a portrait of Neal Dow is included among the very interesting and valuable series, chiefly anti-slavery, which alone would make this book a desideratum in every public or special library. Most important of these is the benevolent face of the philanthropic Ebenezer Dole, the early prop of the *Liberator;* and next, the fine head of Gen. Samuel Fessenden. But Mr. Willey has succeeded in thus preserving the features of no fewer than nine founders of the Maine Anti-Slavery Society.

The Chersonese with the Gilding Off. By Emily Innes. 2 vols. London: R. Bentley & Son. 1885. 8vo.

THE readers of Miss Bird's 'Golden Chersonese' will find much to interest and amuse them in Mrs. Innes's lively account of her experiences in the same country. Her husband being appointed Collector in the Malay State of Salangore, she determined to accompany him, although assured that it was "perfectly impossible" for an Eng-

lishwoman to live at Langat. This place proved to be a wretched village in a swamp "of seething black mud," inhabited by Malays of the poorest class and a few Chinese. Their house was "an ordinary Malay wigwam," made of dry palm-leaves and boards, standing on piles, while the only walk was a mud path which lost itself in the swamp on the outskirts of the village. Yet here she lived for the greater part of six years, much of the time entirely alone, her husband being often absent on official tours. Her description of the way in which she employed herself, her difficulties with her servants, the straits to which she was often put to get food, the annoyances from her numerous and uninvited guests, is very entertaining. Among these latter visitors were tigers, which, though constantly roaming at night about their house, were singularly harmless. Not so the mosquitoes, however, which were of unexampled size and ferocity. The customs, dress, and mode of life of the natives are also very graphically pictured by Mrs. Innes. From her account they appear to be, though lazy and filthy in their habits, a gentle, inoffensive people, without a trace of the treacherous disposition which we were formerly taught to regard as the distinguishing characteristic of the Malays. She says: "I never found the natives otherwise than civil and obliging." The Chinese form the dangerous element in the population, as she had sufficient reason to know, being nearly killed by the gang which murdered Captain Lloyd, Superintendent of Pangkor, with whom she was staying at the time.

The pleasure of the reader in this book (for though the writer gives a very different picture from Miss Bird's rather highly colored account, yet she always describes her various trials in a cheery, good-humored way) is somewhat marred by the prominence given to the ill-usage of her husband by his immediate superior, the Resident. Though their complaints are apparently well-grounded, it would have been better to avoid the appearance, at least, of having written a book for the purpose of making them public.

SIR HENRY SUMNER MAINE'S

Popular Government.

Four Essays: I. Prospects of Popular Government. II. Nature of Democracy. III. Age of Progress. IV. Constitution of the United States. 8vo, $2.75.

"One of the most remarkable books that have appeared for many years. To Americans it has a peculiar attraction. Every page teems with keen suggestion and original thought. No higher eulogy has ever been pronounced upon the Constitution of the United States. It is impossible to do it justice in any critical notice. It is one of the books that every intelligent man ought to read."—Boston Advertiser.

"The moderation, dignity, and force with which these views are set forth cannot fail to afford a suggestive field for their study and careful observation."—N. Y. Commercial Advertiser.

"One of the most powerful, as well as one of the most useful, thinkers of our day."—The Book Buyer.

"A timely and valuable contribution to the literature of political institutions."—Hartford Courant.

HIGH CLASS ETCHINGS.

A new illustrated Catalogue free by mail. Frederick Keppel & Co., 23 East 16th St., New York.

Romish Teachings in the Protestant Churches.

A Tract for the Times. Price, 90 cents. A review of the traditional Theology received from Rome and retained in the Protestant creeds. *A live coal from the altar of conviction* (Telegram). N. TIBBALS & SONS, Publishers. For sale by all booksellers.

TWO NEW BOOKS.

The Student's Kent.

An Abridgment of Kent's Commentaries on American Law. By Eben Francis Thompson. With an Introduction by the Hon. T. L. Nelson, Judge of the United States District Court. 1 vol., crown 8vo, sheep, $2.50 *net.*

Judge Nelson, in his introduction to this work, says: "Mr. Thompson has succeeded admirably in presenting concisely and clearly the elements of our law as stated in the original, and in noting its more general modifications since Chancellor Kent's time. I believe that this volume will not only be of great service to the student and to the profession, but will be useful to those who have not an ample leisure for extended study and may desire to learn something of the leading principles of our elementary law."

A Harmony of the Four Gospels, in English.

According to the Common Version. Newly arranged, with Explanatory Notes, by Edward Robinson, D. D. Revised Edition, with Footnotes from the Revised Version of 1881, and Additional Notes, by Prof. M. B. Riddle, D. D., of Hartford Theological Seminary. From entirely new plates. 8vo, $1.50 net.

Prof. Riddle, whose recent revision of Robinson's 'Greek Harmony' won so high praise, has here undertaken to bring the same author's 'English Harmony' into accord with the results of the latest scholarship.

A. S. BARNES & CO.,

NEW YORK, 111 AND 113 WILLIAM STREET.

THE PRELATE.

By ISAAC HENDERSON. 12mo. Richly bound. With covers adorned with designs by ELIHU VEDDER. $1.50.

"An uncommonly clever book. He exhibits unusual capacity; a capacity for individual work not less marked, and scarcely less developed, than is shown by Mr. F. Marion Crawford."—*Brooklyn Union.*

"One of the most brilliant and fascinating romances that have been published in many a day. The story is dramatic, powerful, irresistible in its interest as a love story alone. Added to this there is vital thought and broad philosophy, a graphic panoramic picturing, and a *dénouement* to which the rapid action carries the reader spellbound in its thrilling interest. 'The Prelate' will doubtless be held as the greatest work of the day in imaginative art."—*Boston Traveller.*

The Sphinx's Children:

AND OTHER PEOPLE'S. By ROSE TERRY COOKE. 12mo. $1.50.

Delightful stories of hill-country life in the quaintest and most singular parts of New England, set forth with the sparkle and the realism of a Parisian *feuilletonist.*

"In spite of a style which is carefully clear and elegant, in spite of a tone that is wonderfully pure and healthy, what one remembers longest in Mrs. Cooke's writings is these dialect passages, forgetting for their sake her delectable descriptions of quaint, old-fashioned gardens, pretty girls, odd old maids, and odder old men, and even forgetting the bit of a moral usually concealed in each story; and her new book, 'Somebody's Neighbors,' is full of bits that one reads over and over again, enjoying their flavor anew each time."—*Boston Transcript.*

A Stroll With Keats.

By Frances Clifford Brown. 1 vol., square 16mo. Illustrated. Full gilt. $1.50.

A memento of the Easter and spring-time season.

**For sale by booksellers, or will be sent, post-paid, on receipt of price, by the Publishers.

706 Broadway.

The Nation.

NEW YORK, THURSDAY, APRIL 1, 1886.

The Week.

THE news of Mr. Manning's illness and temporary incapacity for work will be received with the sincerest regret by men of all parties. Not only has he given himself to the duties of a most laborious position with extraordinary devotion, but he has brought talents to it such as have not been placed at the service of the Treasury for many a day. His reports on the tariff, and particularly on the silver question, are masterpieces in their way, which will command the respectful attention of economists and public men all over the world. We join in this expression of the sympathy and regret which every one is feeling, all the more heartily because we were among those who doubted at the outset the expediency of Mr. Manning's appointment. We feared he was too much of a politician, and not enough of a financier, for the place. But he has utterly disappointed all doubters and cavillers. His selection has proved one of the very best illustrations of President Cleveland's sagacity.

The strike in the Southwestern railroads has apparently reached its termination in a somewhat simple way. The Executive Committee of the Knights have had long conferences with Jay Gould in this city, but apparently without getting any further than the instructions contained in Mr. Gould's telegram to Mr. Hoxie on Saturday. In answer to that telegram, Mr. Hoxie has expressed his willingness to meet a committee composed of Knights "actually at work in the service of the company, and adjust with them any grievances they may have." This is not what Irons sought for, but the Executive Committee here decided that it was sufficiently satisfactory to justify an order to the men to return to work at once, and such an order was accordingly despatched on Tuesday. As a matter of fact, however, the strike was already breaking down through its own weight; the number of freight trains moving on all the lines was rapidly increasing, and the property of the companies fully protected against the mob except at one or two points. Indeed, a decent excuse for stopping an enterprise which owed what success it has had to criminal violence, was evidently all that the Executive Committee here desired.

The circular of Mr. Powderly, the General Master Workman, to the Knights of Labor, complaining of their strikes and their boycotting and their violence and lawlessness and recklessness, coupled with the remarks of Mr. Arthur, of the Brotherhood of Locomotive Engineers, is the most encouraging sign which has appeared in the labor agitation for many years. It shows that moderation, and judgment, and knowledge, and discretion do exist among the Knights, though they may be temporarily overpowered by ignorance, and passion, and crime. They have done much to reassure the multitudes of good people, of all callings, who have been asking themselves during the past few weeks whether American society was really going to be called upon to defend itself with rifles and cannon against a huge band of brigands. Nothing is easier than for labor organizations to command in this country an amount of sympathy and support from all classes in any attempt to better their condition, which would compel employers to make every possible concession through the mere force of public opinion. But no organization can secure any aid from public opinion which resorts to violence, which seeks to further its aims through assaults, pillage, riots, murder, the destruction of property, and physical compulsion of dissidents. The great bulk of the community hate violence and disorder, and attacks on personal liberty, and the persecution of individuals and minorities, and, in fact, tyranny of all kinds, no matter who exercises it; and without the sympathy of the great bulk of the community neither the Knights nor any other organization, as Mr. Powderly points out to them, can succeed in anything.

The comments of Mr. Arthur, the Chief of the Brotherhood of Locomotive Engineers, on the practice of boycotting must be extremely lacerating to the Knights of Labor and other advocates of the system. Mr. Arthur says that the Locomotive Brotherhood publish a magazine which circulates 16,000 copies, and that he was waited on recently by a committee of Knights, who gravely demanded that the advertisement of a boycotted firm should be excluded from the magazine, and that he (Arthur) threw their written demand into the waste basket and told the committee to go about their business. What the committee will do next is not known, but they ought to "order out" all the printers who work on the magazine, and notify the paper mills not to supply any more paper to the Locomotive Brotherhood. If the papermakers refuse to obey the order, they should be boycotted, and picketed and prevented from getting any coal or rags, and all dealers in these articles should be served with notice not to trade with them. Finally, if necessary to "secure recognition" by the monopolist Arthur, all the Knights of Labor in the United States should be "ordered out," on the principle that an injury to one is the concern of all.

Perhaps the most dangerous feature of the whole Southwestern disturbance is the fact that the power to suspend the operation of thousands of miles of railway is practically lodged in the hands of one man, whose motives for ordering a strike may be dishonest and purely mercenary. It has been charged that Mr. Irons, the leader of District Assembly No. 101, ordered the strike on the Missouri Pacific in order to depress the stock market. A secret circular of his dated March 23 is published, which points out the probable effect upon the stock market of Mr. Gould's lawsuits against the Knights as one of the elements likely to work in favor of the strikers. It is improbable, however, that Mr. Irons had any speculative plans or intentions of his own to be promoted by the disturbance, but it is plain that such power as he exercises might be used in that way with tremendous effect, and that human virtue could not long resist the temptation to use it when by a mere scratch of the pen a man might make himself rich enough to retire from any kind of labor or business, and nobody need ever be the wiser for it. There are scores of operators in Wall Street who would guarantee Mr. Irons an independent fortune for one strike, and who would arrange things so that nobody should ever know where the money came from.

The evidence given before the Committee of the Legislature in Massachusetts, of Mr. Cyrus W. Field's proposal to wreck the New York and New England Railroad is now overwhelming. Mr. Clark on Friday repeated Mr. Field's declarations made in the presence of seventeen gentlemen, apparently in complete unconsciousness of the effect they would produce. What Field and Sage proposed was, to form a combination for the purchase of the second-mortgage bonds, to be followed by a foreclosure, so as to shut out the stockholders and the creditors and to "make some money," and they both opposed a plan to reorganize the road in such a manner as to save the stockholders and the creditors, on the ground that "there was no money in it." Field even went so far as to censure the directors for publishing a true account of the condition and earnings of the road, on the ground that the "showing was too good"—that is, would interfere with his plan of getting hold of the mortgages at a low rate. We are glad to say the plan was then and there indignantly denounced as dishonest by the Boston men, and it was the communication of it to the Governor and Council which made them refuse to sell the State bonds to Field and his associates on any terms, on the ground that the possession of the road by such men would be injurious both to the road and the State. "Character," as Mr. F. L. Higginson said in his testimony, "still counts for a good deal in this world," and Field and Sage had not enough of it for this particular transaction.

A bill to raise the effective strength of the army of the United States to 30,000 men—it is now 25,000—has been on the calendar of the Senate for several years, getting very little attention *pro* or *con*. Senator Logan has kept it alive by introducing it and referring it, and reporting it back and making a speech upon it now and then. In following his customary programme this year he finds that his measure has suddenly become interesting, and that almost everybody has something to say about it. The reason why this bill, this venerable bore of fatigued Senators, has become entertaining is not far to seek, although most of the debaters are looking quite the other way, and pretending not to observe anything in the internal disorders of the country calling for the exercise of force either now or at any future time. Senator Platt, of Con-

necticut, last week referred to the remote possibility that a strong military force might be required to deal with a class of socialist propagandists who are coming hither from the Old World, and seeking to put in force doctrines subversive of the Government of the United States. Senator Beck, of Kentucky, with his usual low view of every public question, opposed the bill for the reasons which caused Senator Platt to favor it. He (Beck) did not believe in standing armies. They were a menace to "the people" and a convenient tool of despotism. They always ended in the overthrow of liberty, etc., etc.

The arguments in favor of the bill are very plain and simple, and ought to be proclaimed by every supporter of it, not apologetically and with bated breath, but openly and manfully. No anarchist, no organization of law-breakers, will be deceived by the soft words and excuses of any supporter of the bill. No person of education and common sense will be taken in by Senator Beck's apprehensions of the overthrow of liberty. Five thousand soldiers are not going to subvert free institutions in this country. A million such, supported by all the energies of two-thirds of the Union, had their powers taxed to the utmost to conquer one-third of the American people twenty years ago. Mr. Beck's apprehensions are that if he votes for any increase in the army, the class who believe that they have the right to be billeted for life on other people at wages to be fixed by themselves, and that all persons who refuse to be billeted upon ought to have their tools destroyed and their windows broken, will vote against him at the next election. Although 5,000, or 50,000, or 500,000 soldiers would not be dangerous to liberty in this country, 5,000 men in addition to those required to guard the Indian frontier might be very useful in preventing a massacre in San Francisco, or in restoring a railroad to the possession of its owners in St. Louis, or in guarding bridges in Texas, or in performing in a sudden emergency any other duty which the ordinary police are inadequate to perform. Calling out the militia to meet such emergencies means disorganizing industry for the time being, and is therefore the most expensive way of meeting the crisis. The militia are never as efficient as the army, man for man, and they always move reluctantly for the suppression of disorder. Rioters have very little respect for the militia, but very much for the army. A movable force of 5,000 men would save more bloodshed than it would cause by preventing the gathering of mobs.

Any sign of returning sanity among victims of the pension craze in Congress is to be heartily welcomed, and we would fain believe that a glimmer of hope is justified by the action of the House in the case of Margaret B. Harwood last week. Mr. Rogers, of Arkansas, who, by the way, was a "rebel soldier," had introduced a bill granting a pension of $50 a month to the widow of Rear-Admiral Harwood of the United States Navy, on the ground that she is an aged woman in destitute circumstances, and that her daughter, who lives with her, has also been left a widow, and has four children to support. The Committee on Pensions reported the bill favorably, and everybody supposed that it would slip through the House without being challenged, like so many similar bills for the widows of other army and navy officers in the past. But discussion was insisted upon. The facts were brought out that Rear-Admiral Harwood had received a salary which should have enabled him to leave his widow in comfort, and that the daughter is receiving a pension because her husband died from disease contracted in the army. In short, it was shown that Mrs. Harwood's case is in no wise different from that of many thousands of other widows throughout the country, who receive no support from the public treasury because their husbands have left them without a competence in their old age. Thereupon members found sufficient courage to declare that Congress ought not to grant a pension which is not demanded by considerations of justice, and, on a vote, the bill very narrowly escaped defeat, receiving only 96 affirmative votes to 94 negative.

The minority report of the House Committee on Coinage, bearing the signatures of Messrs. Bland, Lanham, and Bynum, recommends the free coinage of silver as a substitute for the present law, which provides for the coinage of silver dollars on Government account. Mr. Bland's arguments in favor of a change in the law are not particularly impressive. The existing law is at variance with the tenets of every school of finance in the world. It is obnoxious to the theories of both bimetallism and monometallism. It is exposed to every sort of attack and is incapable of defence on any side. It was enacted against Mr. Bland's protest and as a substitute for his measure. It has been tried eight years, and its results have frustrated all the expectations and designs of the silver men except the single one of furnishing an artificial market for the product of the mines. This was not the object had in view by Mr. Bland and his followers. They wanted, as his minority report shows, to do something for the "debtor class"; that is, to furnish them a cheap dollar to pay off their mortgages with. No such result has been brought about as yet, and no man can say how near or how remote the millennium of the debtors may be. The only thing quite certain is, that the people are paying two million dollars per month for bullion, which might more profitably be employed in paying the public debt and lessening the interest charge.

Under these circumstances we looked for a pretty sharp rebuke and condemnation of the existing law at the hands of Mr. Bland. But we find only a very mild and deprecating censure of the two-millions-per-month law, and no suggestion that it should ever be repealed unless free coinage of silver be substituted for it. Perhaps Mr. Bland has postponed a more decisive expression of his views until a vote can be had on his free-coinage motion. If this is voted down he may intend to make another motion, either for an international conference, or for a suspension of silver coinage for a definite time. Logically, he and all other bona-fide silver men must attack and overthrow the present law and practice of the Government, if they expect ever to get a "cheap dollar" in actual circulation. But while Mr. Bland deals very gingerly with the law, he does not conceal his desire to see the single silver standard established in this country. So far is he from fearing that all our gold would be exported under a free coinage act that he considers that eventuality most desirable. "The result," he says, "would be an increase in the monetary supply in European countries of gold that would set the machines of industry in motion, giving the starving laborers of those countries employment, and enabling them to purchase our commodities." This method of reviving domestic industry by sending our gold to foreigners so that they may be able to buy our products, is feasible even without a free-coinage act, and it is a wonder that it has never occurred to us or to other countries as a cure for commercial crises in the past. But we advise Congress not to act upon it in the first flush of excitement upon so happy a discovery. Rather let us propose to Europe to make the first experiment, by sending us all of her gold to set our industry going, so that we can buy her commodities. Then, if the plan works well, we can reverse the operation.

The House voted on Monday, 115 to 133, not to refer a bill identical with the Blair bill to the Committee on Education, and subsequently sent it, by nearly the same vote, to the Committee on Labor. The advocates of Federal aid to schools claimed that the Education Committee would smother the measure by not reporting it back to the House at all, while the Labor Committee would give the House a chance to consider it. The House is entitled to have the matter brought before it, and a number of members, like Mr. Long, of Massachusetts, voted to send the bill to the Labor Committee in order that it might surely be reported back, without in the least thereby committing themselves to support the scheme when it comes up for consideration on its merits. If the Education Committee really intended to kill the measure by indirection, the action of the majority was justifiable and commendable. The long debate in the Senate a month ago was so disastrous to the scheme that, as the Washington correspondent of the Springfield *Republican* frankly confessed, the Republican majority only allowed the bill to pass the upper branch in order to "keep their records straight" for consistency, as they had supported a similar bill two years ago, and with the assurance that it would fail in the House. That this assurance was well founded appears more clear every week.

Cases have not been infrequent where a single speech in a legislative body against a pending measure has defeated it. It has very appropriately fallen to the lot of Congressman Singleton, of Mississippi, to achieve the unique distinction of defeating an excellent bill by a single speech in its favor. The bill providing for the much needed Congressional Library Building came up in the House on Wednesday week, and two hours were allotted for its consideration—a sufficient time, if judiciously employed, to secure a vote, which

would probably have been favorable. But Mr. Singleton, who had charge of the measure, insisted upon using up the two hours in making a needless speech for the bill, and so relegated the measure to the calendar of unfinished business, where it may be buried too deep for resurrection. But even such a warning will not produce any effect upon a statesman who is loaded with a speech.

The custom of having the sessions of the Houses of Congress opened with prayer by a "chaplain" needs either a serious reform or total abolition. Many of the prayers now offered are silly, and some blasphemous. One offered lately in the House was really a foolish stump speech on the strikes, which it was disgraceful to try to disguise as a petition to Almighty God. There ought to be a stop put to this sort of thing. If prayer be desirable, it had better be silent prayer, offered by the members, each for himself, and not for his neighbors. There are very few men indeed competent to pray for their neighbors.

The results of the operation of the Civil-Service Act, as set forth in the report sent in to Congress by the President, are most gratifying. Nearly every expectation of its friends has thus far been fulfilled. The effect of the report, too, will be much heightened by the attack on the reform itself in the Senate on Friday by Mr. Ingalls. Anything more blackguard is seldom heard in any Alderman's pot-house in this city, from a City Hall loafer. It cleared the galleries of decent women, but was received with roars of laughter by the Republican Senators to whom it was addressed in support of the Edmunds resolutions about "the papers." These resolutions were carried by a strict party vote. They cannot have the smallest effect on the President, or any one else, and they have been carried at a terrible cost to their chief promoters. It is, on the whole, a happy circumstance for the lovers of good government that the final stroke in their favor should have been a silly and foul-mouthed joke.

Since the recent hearing accorded to the friends of the Postal Savings Bank Bill by the House Committee at Washington there has been a considerable awakening of public interest on this question. A good many petitions have been sent in, some meetings have been held and resolutions passed, and many newspapers have spoken for or against the measure. We judge that although the system may not be adopted by Congress this year, it will gain strength by agitation and discussion, and will eventually and at no very distant day be engrafted upon our post-office machinery as it has been on that of the most enlightened countries of the Old World. We presume that the objections urged against the system by Mr. John P. Townsend in the *Evening Post* are as strongly stated as they can be by anybody, since that gentleman is a recognized authority in the literature of savings banks. The first of these objections, if we understand it rightly, is that if a large amount of money should be deposited in the Treasury through the post-offices, it must be invested in United States bonds, and that if a sudden demand should be made for the money by the depositors, the Government would be obliged to sell the bonds, probably at a loss, and make up the difference out of the general fund in the Treasury, thus taxing the many for the benefit of the few. The most obvious answer is that an ordinary panic would never cause a "run" on the Government by frightened depositors. The tendency in such a case would be to send in fresh deposits to a place considered absolutely secure rather than to draw out money already there. The class of people who deposit money in savings banks do not choose periods of panic for the purpose of making permanent investments. When they draw out money under the influence of panic, they do so because they have lost confidence in the place of deposit. What they draw out they bury in the ground, or stuff into mattresses, stockings, coffee-pots, or crevices in the wall; and to the minds of all such, without a single exception, the Government is the type and symbol of absolute safety. The danger, if any, in such a case would be that depositors in ordinary savings banks might be impelled in times of panic to draw out money in order to lodge it in the postal banks. But under the provisions of the pending bill no person can deposit more than $100 within a space of thirty days.

Mr. Townsend's next objection is, that at the end of twenty years or so there will be no public debt, and therefore no investment for the postal-savings deposits. What are we to do in such a case? Well, if the postal-savings fund earns no interest, it will not pay any, under the terms of the proposed bill. It would be quite indefensible for the Government to go on paying interest on the money of private persons without any reimbursement to itself. That would indeed be taxing the many for the benefit of the few. When the Government can no longer earn interest for the depositors it can pay their principal back to them or allow it to lie in the Treasury subject to the call of the owners. Nobody will be harmed by that situation, but on the other hand the valuable and to many the inestimable privilege of resorting to an absolutely safe place for the custody of their funds will still remain. It cannot be too often repeated that no friend of the bill proposes to continue the national debt one hour in order to keep alive an interest-bearing investment for the money of savings depositors.

The anarchists were unfortunate in making their first experiment on a great scale in Belgium, because, although the manufacturing population is large, the number of small farmers is greater in proportion to population than in any other country in Europe, or perhaps in the world, and their industry may fairly be called implacable. No eight-hour days or compulsory hiring for them. Their day lasts from dawn to dark, and as they ask nothing from any man, they allow no man to billet himself on them against their will. They consequently have little sympathy with communistic modes of making the earth a pleasant abode, and most distinctly object to being killed or having their houses looted by tramps from the great towns. Hence the troops in going to extremities with the strikers have their hearty sympathy and support; but they must have lived in great terror during the last week or two. The labor problem in Belgium is none the less most serious. A huge body of ignorant workers for daily wages has been gradually concentrated in the large towns of a small state, and orders have been diminishing and prices falling, and wages falling with them, and the French Anarchists have been busy showing that people who own anything are to blame, and ought to be exterminated.

The statement of the *Pesther Lloyd*, a leading journal of Buda-Pesth, that Prince Alexander is about making his army proclaim him King of United Bulgaria, may be true as expressing a hidden intention or wish of the Prince as to the future, but it is undoubtedly premature as the announcement of an approaching fact. The Prince has, in the last six months, given too many evidences of prudence and circumspection, combined with firmness and courage, to be believed capable of risking the fruits of a long series of favorable events and concessions wrung from foes. A secret movement intended to secure a Russian triumph and his own downfall was changed by the revolutionary *coup* of September 18, 1885, into a union *de facto* of Eastern Rumelia with his principality of Bulgaria, under his own auspices and sceptre. King Milan's invasion in November, which aimed at undoing this work for the sake of Servia's preponderance and expansion in the Balkans, was baffled in a most surprising manner by Alexander's military skill and the unexpected prowess of both his former and his new subjects. Czar Alexander's violent outburst of spite against the German Prince, as an ungrateful upstart, turned Russia's rival in Balkan politics, Austria-Hungary, whose sympathies had encouraged the King of Servia, into a supporter of the Bulgarian union. The Porte, whose suzerain rights the revolution of Philippopolis had infringed upon, was induced by the armaments of Servia and Greece, and the anti-Russian influence of the English Foreign Office, to conclude, in January, an agreement with Prince Alexander, which made him its Governor-General of Eastern Rumelia for at least five years, and stipulated military co-operation, if needed, against Servia and Greece. Discomfited by his reverses, abandoned by Austria-Hungary, and distracted by conspiratory plottings, King Milan, after much hesitation, signed an inglorious treaty of peace with Bulgaria, negotiated at Bucharest about the beginning of March, and a conference of the great Powers subsequently assembled at Constantinople sanctioned the results of both agreements; Russia yielding to the power of circumstances with very bad grace and some reservations, and Greece alone, of all the states concerned, continuing to bluster. So much substantial gain and newly-acquired prestige Prince Alexander will not jeopard for a title which, with the independence it may imply, he is sure to win in the end.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, March 24, to TUESDAY, March 30, 1886, inclusive.]

DOMESTIC.

THE President sent to Congress on Thursday the third annual report of the Civil-Service Commission with a message in which he said: "Wherever this reform has gained a foothold it has steadily advanced in the esteem of those charged with public administrative duties, while the people who desire good government have constantly been confirmed in their high estimate of its value and efficiency. With the benefits it has already secured to the public service plainly apparent, and with its promise of increased usefulness easily appreciated, this cause is commended to the liberal care and jealous protection of the Congress."

The report covers the year from January 16, 1885, to January 16, 1886. Among its features are the following: It shows a comprehensive execution of the Civil-Service Act and rules, the particulars of which are fully set forth. Applicants have been examined within the year from every State in the Union, and from every Territory except Utah. From three to six different examinations have been held in each of 17 States, and there have been in all 150 different examinations, all of which except 5 have been competitive, and at these only 8 persons were examined. The whole number of persons examined under the Commission during the year has been 7,602, of whom 6,872 were males and 730 were females. The whole number thus far examined since the act was passed has been 17,491. Of the 7,602 examined during the past year 5,034 attained the minimum of 65 per cent., which makes them eligible for appointment, and 2,568 failed to show that degree of proficiency, and consequently are ineligible for appointment. Of those examined a trifle less than two-thirds (66.22 per cent.) succeeded. The average age of all those examined was thirty years. The whole number of appointments made during the past year from those examined has been 1,876, each for the probationary period of six months. If to these we add 2,300, the number made during the previous eighteen months under the rules, it shows that 4,176 have been appointed in two years. The report shows how the examinations strengthen the school system of the country, and that the general results have been as salutary in New York and Massachusetts, where the competitive system is now established, as in the Federal service. Concerning the President and his Cabinet the report has this language: "Under all circumstances, and in every part of its work during the past year, not less than in previous years, the Commission has had the cordial and unswerving support of the President." The report in conclusion states that only a larger force for the Commission and adequate appropriations are needed to enable examinations of appropriate kind to be extended, not only to smaller post-offices and customs offices, but to the railway mail service, to mints, to the District of Columbia, to internal-revenue offices, to the consular service, to promotions, and wherever else they may, in the light of larger experience, be thought likely to be useful.

Senator Mitchell (Rep., Ore.) in the Senate on Wednesday decidedly opposed the Edmunds programme, and sent up a substitute resolution to the effect that, in the case of the failure or refusal of any head of a department to furnish papers concerning removed officers, it would still remain the constitutional duty of the Senate to proceed within a reasonable time to consider nominations with such light as it had; and such a refusal should not be deemed in itself a sufficient reason for the Senate to refuse to consider or consent to the confirmation.

The Edmunds resolutions were finally adopted in the Senate on Friday. Mr. Van Wyck's open-session resolution came up first, but was ruled out on a point of order, and an appeal was tabled, Van Wyck and Riddleberger voting nay with the Democrats. The first two resolutions were then adopted by a party vote, including the censure of the Attorney-General. The third resolution, providing for the rejection of nominations about which the information demanded is not furnished, was next adopted by one majority; Mitchell, Riddleberger, and Van Wyck voting nay with the Democrats. The majority by which this resolution was passed was so small that the most enthusiastic supporter of it does not expect that it will define the party policy. At least it is not expected that there will be a wholesale rejection of nominations. Liberal use will undoubtedly be made of the saving clause, which does not require rejections except in cases where the Senate shall consider it important to call for the papers.

In the course of a debate on the Postal Appropriation Bill in the House on Wednesday Mr. Burrows (Rep., Mich.) attacked the Post-office Department, declaring that it had not only nullified law touching the administration of the postal service, both domestic and foreign, but had defied not only the spirit but the letter of the Civil-Service Law.

Mr. Belmont offered a joint resolution in the House on Monday appropriating $147,758 "to pay the Chinese Government in consideration of the losses unhappily sustained by certain Chinese subjects by mob violence at Rock Springs, Wyoming Territory, on September 2, 1885, said sum being intended for distribution among the sufferers and their legal representatives, in the discretion of the Chinese Government; that the further restriction of Chinese and coolie immigration, if it shall be found expedient and necessary, can be most properly accomplished by the modification of existing treaties."

Mr. Willis (Dem., Ky.) introduced in the House on Monday a bill similar to the Blair Education Bill and moved to refer it to the Committee on Labor, which is supposed to be friendly to the measure. The House so referred the bill by 138 to 113. A member of the Committee says that he is confident that the Committee will not vote to report the bill favorably, but that the Committee will make a report of some kind and not smother the bill.

The House Post-office Committee has decided to report adversely the bill doubling the rate of postage on fourth-class mail matter.

It is ascertained that a majority of this Committee now favor the Postal Savings Bank Bill, having been convinced by the recent public hearing and by the favorable comments of the press that the supposed dangers to private institutions are imaginary.

Secretary Manning's condition continued very serious throughout the week. It was admitted that the attack was in the nature of apoplexy, and was the result of overwork.

Attorney-General Garland is seriously ill of nervous prostration.

Geronimo, three other Apache chiefs, and seventy-seven of their band have unconditionally surrendered to General Crook.

Grand Master Workman Powderly on Friday issued a notable manifesto to the Knights of Labor throughout the country. After dwelling at some length upon the inadvisability of taking in new members at present, the address continues: "We must not fritter away our strength and miss the opportunity of present success in the struggle against capital by rushing into useless strikes. To the cardinal principles of the order, we must add another—patience. You have had patience for years, and had not the Knights of Labor appeared upon the scene you would still be waiting. Your scales of prices must stand as they are for the present if you cannot raise them by any other process than a strike. You must submit to injustice at the hands of the employer in patience for a while longer. Bide well your time. Find out how much you are justly entitled to, and the tribunal of arbitration will settle the rest. Assemblies of the Knights of Labor must not strike for the eight-hour system on May 1st under the impression that they are obeying orders from headquarters, for such an order was not and will not be given. I write this circular to lay before the order the exact condition of things. I am neither physically nor mentally capable of performing the work required of me. I am willing to do my part, but must not be asked to maintain a false position before the world any longer. One of two things must take place—either the local and district assemblies of the order must obey its laws, or I must be permitted to resign from a vocation which obliges me to play one part before the public and another to our members."

On Saturday Mr. Powderly, on behalf of the Knights of Labor, sent a proposal to Mr. Jay Gould asking for the appointment of an arbitration committee of seven, three members to be appointed by Mr. Gould, three by the Knights of Labor, and the seventh by these six; the decision of the committee upon the railroad difficulties in the Southwest to be final.

The communications on Saturday between Jay Gould and T. V. Powderly did not result in any agreement, Mr. Gould refusing to accept arbitration so long as the Missouri Pacific Railway was subjected to unlawful interference by the strikers. On Sunday, however, an agreement was reached, after two conferences at Mr. Gould's house. The result was that Mr. Gould sent the following to General Manager Hoxie, of the Missouri Pacific: "In resuming the movement of trains on the Missouri Pacific and in the employment of labor in the several departments of the company, you will give preference to our late employees, whether they are members of the Knights of Labor or not, except that you will not employ any person who has injured the company's property during the late strike; nor will we discharge any person who has taken service with the company during the said strike. We see no objection to arbitrating any differences between the employees and the company, past or future." Mr. Powderly telegraphed to the Knights of Labor in the Southwest: "President Jay Gould has consented to our proposition for arbitration, and so telegraphs Vice-President Hoxie. Pursuant to telegraphic instructions sent to the Chairman of the Executive Board of District Assembly No. 101, you are directed to resume work at once." On Monday Mr. Gould said that Mr. Powderly had misunderstood him. He had not agreed to arbitration, but had referred the whole matter to Mr. Hoxie. Orders were issued by the Executive Committee of the Knights at St. Louis on Monday to resume work, but they were not immediately obeyed. Later in the day, on advices from Mr. Powderly that there was a hitch in the negotiations, the order to resume work was rescinded. Trains, however, were run from Sedalia without molestation.

Messrs. Gould and Powderly were again in consultation on Tuesday, and at 9:30 P. M. the Secretary of the Knights telegraphed to Martin Irons in St. Louis: "Have been in conference all day, with the result that Vice-President Hoxie agrees to the following: He is willing to meet a committee of employees, without discrimination, who are actually at work in the service of the company at the time such Committee is appointed, to adjust with them any grievances that they may have. Have your Executive Committee order the men to return to work, and also select a special committee from the employees of the Missouri Pacific to wait on Mr. Hoxie to adjust grievances. Do this as quickly as possible. Board will leave for St. Louis to-morrow." It is believed that this will end the strike.

Judge Dyer, of the United States District Court, sitting in Chicago, in a suit to recover $10,000 insurance on the life of a man who committed suicide while insane, insured in the Accident Insurance Company of North America against injuries effected by "external, accidental, or violent means," suicide being especially excepted, decides against the

company, holding that in this case the act of suicide was no more the man's act in the sense of the law than if he had been impelled by an irresistible physical power.

Steinitz won the twentieth and deciding game of chess and the championship of the world at New Orleans on Monday, the total score standing Steinitz 10, Zukertort 5.

It is now believed that the schooner *Charles H. Morse* sank the Cunard steamship *Oregon*.

The Rev. John Rankin, a native of Tennessee, and one of the oldest abolitionists in the United States, died at Ironton, O., March 18, aged ninety-three. He was pastor of the First and Second Presbyterian Churches at Ripley, O., for forty-four years. From this place (1824) he addressed some most forcible letters to his brother in Middlebrook, Va., dissuading him from slaveholding, which were published at Ripley in 1826, were afterward (1832) reprinted in the *Liberator*, and again in book form in Boston and Newburyport, and ran through many editions. He joined the Garrisonian anti-slavery movement, and was mobbed for his anti-slavery views more than twenty times; in 1837 being knocked down on leaving a church at Dayton, O., and in 1841 being assailed even on his own premises.

Ex-Justice Ward Hunt, of the United States Supreme Court, died in Washington on Wednesday. Justice Hunt was born in Utica, in 1810, was graduated from Union College in 1828, and attended law lectures afterward at Litchfield, Conn. He was a Judge of the New York Court of Appeals from 1865 to 1872, when he was appointed a Justice of the United States Supreme Court by President Grant. His health failed afterward, and in 1882 Congress passed a bill retiring him on a pension.

FOREIGN.

Mr. Gladstone was ill with a cold on Thursday and was prevented by his physicians from making his proposed announcement on the Irish question in the House of Commons. Sir William Vernon Harcourt was, however, delegated to do that duty, and announced that Mr. Gladstone would state his Irish policy to the House on April 8.

A British Cabinet meeting was held on Friday. Mr. Gladstone was better, and able to be present.

Mr. Gladstone reappeared in the House of Commons on Friday afternoon. Referring to the announcement made in his behalf by Sir William Vernon Harcourt, Mr. Gladstone said that the statement he would make on April 8 would take the form of the introduction of a bill for the future government of Ireland.

On Saturday it was announced that Mr. Chamberlain and Mr. Trevelyan had resigned, and their resignations had been accepted by the Queen. They expressed opposition as strong and unchangeable to certain details of Mr. Gladstone's home-rule plan as to the land-purchase scheme itself. This being so, no further hope of union is possible. In consequence of these secessions, land purchase will lose its precedence in the whole scheme, but will not be essentially altered in form. Home rule in itself will take the principal place, and the Conservative party will be left to take some initiative action on the legislative proposals which have been framed chiefly in their interests.

Mr. James Stansfeld (Radical) has been appointed President of the Local Government Board in the place of Mr. Joseph Chamberlain. Mr. Stansfeld occupied the same office once before. The Earl of Dalhousie has been appointed to succeed Mr. G. O. Trevelyan as Secretary for Scotland. Lord Dalhousie will not, however, have a seat in the Cabinet. It is expected that there will be six secessions from Mr. Gladstone's Ministry, outside of the Cabinet. There is no truth in the rumor that Lord Spencer will resign.

A London correspondent states, on the highest authority, that the following are Mr. Chamberlain's views on the Irish question, the views, moreover, to which he will adhere, and which he believes will secure the support of a majority of the Radicals of the country. He favors an Irish National Assembly in Dublin, free to make by-laws, but subject to the authority of Parliament, and able to make rates, but leaving the Queen's taxes to be settled at Westminster; Ireland to have liberty to manage her own affairs, but another sovereign authority similar to the imperial Parliament to be regarded as entirely inadmissible; not a single Irishman to be removed from St. Stephen's. This would involve a revision, if not a repeal, of the Act of Union.

Mr. Gladstone and Lord Hartington have interchanged views in regard to the Premier's Irish policy. It is surmised that Lord Hartington may come to Mr. Gladstone's support and more than offset the defection of Mr. Chamberlain. The London *News* believes that Mr. Gladstone's scheme does not place the police under control of an Irish Parliament. It is believed that a division on the Irish question will hardly be reached before Easter.

Mr. Gladstone, in the House of Commons on Monday afternoon, stated that on April 8 he would ask permission to introduce his Irish Government Bill. He added that on April 12 the budget would be introduced, and that on April 15 he would request permission to introduce a bill to amend the laws for the sale and purchase of land in Ireland.

Mr. Donald Horne Macfarlane, Radical, asked the Government, in the House of Commons on Thursday afternoon, whether it was true that the Cunard steamship *Oregon* had an insufficient supply of lifeboats aboard. Mr. Mundella, President of the Board of Trade, answered that the *Oregon* had 896 passengers and crew, and boats capable of carrying 265. He said the *Oregon's* boat accommodations were largely in excess of the statutory requirements. No ship carried boats sufficient to accommodate all the passengers.

It is asserted that Lord Randolph Churchill and William Henry Smith have had a bitter quarrel, and the latter threatens to withdraw from the Conservative party unless the former apologizes.

Queen Victoria went in state on Wednesday afternoon to open the ceremony of laying the foundation of the new Examination Hall of the College of Surgeons, on the Thames embankment, London. As the Queen and Princess Beatrice were driving near the Buckingham Palace Park, along the Constitution Hill road, a shabby-looking man elbowed his way through the crowd and threw a small package into the carriage. The Queen was alarmed at the man's approach, and Princess Beatrice leaned forward apparently to shield her mother. The package proved not to be dynamite, as was suspected, but a note complaining that the petitioner had been robbed of his pension. He proved to be Charles Brown, an old English soldier, who has several times been confined in an insane asylum. He was arrested, but afterward released at the Queen's command.

Justice Butt, of London, on Thursday decided that a divorce obtained in America from the bonds of a marriage performed in England is invalid in England.

Richard Chenevix Trench, D.D., formerly Archbishop of Dublin, of the Church of Ireland, is dead. He was born in 1807, educated at Cambridge, was professor at King's College, London, and for eight years Dean of Westminster. He was appointed Archbishop of Dublin in 1864, and resigned that office twenty years afterward. Archbishop Trench was a voluminous writer. Among his best known published works were 'Notes on the Miracles,' 'Notes on the Parables,' 'The Study of Words' (which reached a seventeenth edition), and 'Lectures on Mediæval Church History.' He will be buried in Westminster Abbey.

Sir Henry Taylor, the English writer, is dead at the age of eighty-six. He produced in 1827 'Isaac Comnenus: a Play.' His next venture in the dramatic line was 'Philip Van Artevelde: a Dramatic Romance' (2 vols., 1834), which was at once recognized as a masterpiece. His prose works comprised 'The Statesman' (1836), containing views upon the transaction of public business; 'Notes from Life, in Six Essays' (1847); 'Notes from Books, in Four Essays' (1849); and his poems appeared in two volumes entitled 'The Eve of the Conquest, and Other Poems' (1847), and 'A Sicilian Summer, and Minor Poems' (1868). His autobiography was published last year. His fifty years of official life in the Colonial Department won him the knighthood of the Order of St. Michael and St. George.

The strike begun by the miners at Liége a fortnight ago is extending rapidly all over Belgium. It has now practically become a universal demand by the miners of the country for an increase of wages accompanied by a decrease in the hours of labor. This labor movement at Liége is under the control of anarchists, and the city is really at their mercy. The damage done at Charleroi by the strikers amounts to $2,500,000. In the rioting there on Sunday several persons were killed and many wounded. The town is now quieter. The rioters at Jumet, upon the approach of the troops sent to disperse them, placed 200 women in the front ranks. The troops opened fire, and many of the women were wounded. The strike is extending to Namur. Additional troops have been called from Brussels to quell the disorders. The strike in the Charleroi district was ended on Tuesday.

The debate on the second reading of the German Spirit Monopoly Bill was begun in the Reichstag on Friday. Prince Bismarck made an irritating speech. It was impossible, he said, to increase the revenues by direct taxation. Spirits were especially favorable for taxation. If the Monopoly Bill should be rejected, the Government would introduce a bill to tax the consumption of spirits. It was doubtful whether, with such a majority, the Reichstag would ever be the pivot upon which German unity could revolve. If the Reichstag did not better comprehend its duty, he feared for the future of the empire in the event of complications with foreign countries, though he saw no immediate danger. He would also say that he foresaw no danger in the spring of 1870. If the strength of the empire was likely to be put to severe tests, the present was the time to provide for contingencies. The adoption of the Spirit Monopoly Bill would strengthen, while its rejection would prejudice the empire. The bill was rejected on Saturday by 181 to 3, the members of the Right not voting.

All the Powers except Russia have agreed to recognize Prince Alexander as Governor of Eastern Rumelia during his life.

It is asserted that Prince Alexander is about to make his army proclaim him King of United Bulgaria.

The progress of the electoral campaign in Spain indicates the return of a large Liberal and monarchical majority to the Cortes.

The Comtesse de Chambord is dead.

The two Russian patients of M. Pasteur who a few days ago showed symptoms of hydrophobia, are now recovering.

The natives of Senegal in rebellion against French authority have resorted to open warfare. In a recent attack the rebels killed nine French soldiers and wounded thirty-two. Reinforcements for the colony are being rapidly fitted out at Toulon.

The Abyssinian troops sent to relieve the garrison at Kassala have fought a battle with hostile Arabs near that place and defeated them, capturing 550.

The British troops have defeated 400 Burmese near Yemethen.

THE "FUNDAMENTAL PRINCIPLE" OF THE KNIGHTS OF LABOR.

THE *Overland Monthly* for March contains an interesting article by a leading Knight of Labor in California, giving the view taken by the Knights of the Chinese question. We say it is interesting, because as a general rule the Knights are rather chary about engaging in public discussion on any subject. Considering the size of the organization, and the claims it makes on public sympathy and forbearance, the small extent to which it puts itself on paper about anything is indeed very remarkable. Very little is known about its social or political creed, or about its plan for reconciling its own existence and activity with those of any civil government. The article in the *Overland Monthly*, therefore, by Mr. W. W. Stone, is almost the first bit of information we have had touching the way in which the Knights look at the constitution of human society. Here is, for instance, according to Mr. Stone, what an average Knight has a right to expect from any community in which he lives:

> "The fundamental principle on which our organization is based is, that the Almighty made air, earth, fire, and water for the use of man. Those who use these agencies incur an obligation which is best met by a due regard for the rights of others. We believe it to be reasonable ground to take that, having a common interest in these great natural agencies, no one man has a right to ask or expect a fellow-being to work for the mere purpose of continuing existence. Under our system of popular government, the man and citizen has a right to expect that he will be protected from the greed of the avaricious in the hunt for subsistence for his wife and family. It does not, therefore, seem absurd to hold that the working classes have a right to expect that those in authority shall devise means by which labor shall be fostered and protected."

That the use of air, earth, fire, and water imposes on each person an obligation to respect the rights of others, we can well understand. We concede, too, that it would be, to say the least, uncivil to ask any one to work for the mere purpose of continuing existence. What we complain of on the part of the Knights, however, is their insisting on working for people who do not desire their services. They are, in fact, trying to introduce into modern society a new right—that is, the right to be employed by people who do not want you and who cannot afford to pay you what you ask. Surely the use of air, earth, fire, and water imposes on us all the obligation not only to ask nobody to work for us at a rate of wages which he does not like, but also the obligation to ask nobody to employ us at a rate of wages which he does not like. The obligation on these points is and must be reciprocal. Nobody ought to use air, earth, fire, and water who insists on staying in a man's service against his will, at a rate of pay to which he does not agree.

We concede, too, that a citizen should be "protected from the greed of avaricious men in the hunt for subsistence for his wife and children," but then there must be some limits to the extent to which this protection can be afforded. "Popular government" is a fine phrase, but it means simply the joint action of the whole of us who live in the country, and who are engaged in procuring subsistence for our wives and children. By subscribing a certain sum of money every year, and employing policemen and judges, we insure each other against such of the avaricious men as take to robbery or fraud. But how are we to protect every father of a family from being overreached by avaricious men in making bargains and in the purchase and sale of commodities? We cannot send a lawyer around with each citizen to see that nobody cheats him or pays him too low a price for what he has to sell. Mr. Stone seems to forget that while Mr. Brick might be occupied in protecting him against some avaricious men, Brick's own family would be left exposed to them, and might be reduced to penury, owing to his absorption in looking after Mr. and Mrs. Stone and their children. The use of air, earth, fire, and water, in fact, imposes on all adults using them, as a matter of necessity, the obligation of protecting themselves against all but the grosser forms of violence and fraud. However much they might desire it, they could not possibly do more than this. Every one of us knows what hard work it is to take care of himself in his own sphere of activity, and how few there are who have the time and capacity to take care of their neighbors.

The way Mr. Stone applies these "fundament principles" to the Chinese in California is very curious. It appears that "from one thing especially the laborer should be shielded, and that is the operation of the competitive system, because under the working of this industrial curse the muscle of a human being is put up at a kind of auction, in much the same way that the old slave was knocked off the block." How the laborer is to be shielded from the competitive system, Mr. Stone does not say, but from this premise he jumps at once into the conclusion that it is the Caucasian only, after all, and not the whole human family, for whom God made the air, earth, fire, and water, and that the Chinese are not entitled to the use of these commodities, wherever they come in contact with the Caucasian. The reason why God has made this exception in the case of the Chinese is, according to Mr. Stone, that

> "they are the natural product of a pagan climate and a despotic soil. Their system of government comprehends the patriarchal as well as the monarchical form. The head of a family has the lives of his charges in his own hands. The head of the Government has the fate of his family under his will. It is no uncommon occurrence for a family to be sacrificed for the misdeed of some fugitive member. With such a training, who cannot see that an attempt to educate these people in the principles of government and to teach them the individual advantages of trade organization would be sheer absurdity? Their success in driving out of the market all white competitors in several branches of trade, shows the danger to the perpetuity of our republican form of government arising from consent on our part to continue the unequal competition."

So it appears that it is not all of God's creatures who are entitled to protection from avaricious men, and from the competitive system, but only those who have received a certain kind of education. If a man has had the misfortune to be born under a despotism, he has no rights which a Caucasian is bound to recognize, but may be killed or robbed by avaricious men with impunity, and exposed freely to any number of competitors armed with clubs and revolvers.

Without inquiring too minutely into the extent of Mr. Stone's knowledge of Chinese government or society, we would like to ask him whether the Emperor of China ever, on hearing that there has been a business quarrel between two men in one of the wards of the City of Pekin, orders traffic to be suspended and the streets barricaded on all the great thoroughfares, until the quarrel is settled to the satisfaction of one of the parties, and directs anybody who tries to force the blockade on his lawful occasions, to be kicked, and stoned, and have his wagon broken. Or whether, on hearing that the captain of a junk has wrongfully dismissed his mate in the province of Kan-Su, he ever orders traffic to be suspended along the whole of the river Hoang-Ho, and lines the banks with troops with orders to wreck and burn all junks and boats trying to move up or down, till the mate is restored to his place.

We have never heard of such things in China, but we know men in America who live under a despotism of this very kind, and seem to like it, and we think all talk from them about danger from the Chinese "to the perpetuity of our republican form of government" is very droll. Such men do not even know what a republican form of government is.

"THE OTHER SIDE OF THE CHINESE QUESTION."

THE country has heard so many wild statements and so much incoherent rhetoric from anti-Chinese agitators of the Denis Kearney type that it is refreshing to get a sober statement of facts such as Col. Fred. A. Bee, the Chinese Consul at San Francisco, has recently published, in the shape of a memorial to the people and the Congress of the United States. It is only when one has thus brought together before him the testimony of the leading citizens of California and the evidence of official records that he fully realizes the madness, as well as the brutality, of the warfare which a professedly Christian State is now waging upon an unoffending race.

The San Francisco Board of Supervisors a few weeks ago published a book which gave fresh currency to all the familiar old charges in their most aggravated form, and Colonel Bee's pamphlet takes up these charges in succession. The book embodies the report made last summer by a special committee of the Supervisors upon this question, and Colonel Bee says that the man who is the author and father of this report expects that it will give him the nomination for Mayor. Some of its statements were so preposterous that even certain San Francisco papers had independence enough to protest against them, the *News-Letter* pronouncing the report "more than usually sensational and misleading," while the *Argus*, after quoting the diatribe against the Chinese quarter, declared that "there are numerous patches in other parts of the city that can hold their own for unadulterated immorality, death-dealing filth, and general cussedness against any part of Chinatown."

The cry that the Chinese are really slaves is again raised. Colonel Bee says that this charge was made originally about twenty-five years ago, and the Legislature of 1862 appointed a committee to investigate it, which reported that, after most thorough inquiry, they were "satisfied that there is no system of slavery or coolyism among the Chinese in this State," and that "they are as free as

any persons in the State." The same charge was again brought in 1876, and an exhaustive inquiry was made by the Congressional Committee of which Senator Morton was chairman, who reported that "Chinese labor in California is as free as any other; they all come as free men, and are their own masters absolutely." Colonel Bee describes the origin and sets forth the character of the famous "Six Companies." The first Chinese immigrants who entered the mining region came from the six districts in the province of Canton, and they simply imitated a custom which they found among the Caucasian miners, who had formed organizations and established headquarters for the mutual advantage of men from the same State, Colonel Bee himself at that time belonging to the New York headquarters. The Chinese organizations are simply benevolent societies, which give aid to the new-comer, look after the sick, and send home the dead; and the only foundation for the charge that they maintain tribunals outside our laws is the fact that the presidents of the companies occasionally act as arbitrators to settle difficulties between their countrymen, although neither party is ever bound by their findings.

The Supervisors' book contains several pages of testimony to the depravity of the Chinese, which was taken ten years ago before a one-sided legislative committee, the Chinese not being permitted to present their case. Colonel Bee presents about thirty pages of the testimony which was given later in the same year by leading citizens of California before the Morton Committee. As to the character of the Chinese merchants, Joseph A. Coolidge, Secretary and Manager for ten years of the Merchants' Exchange, testified that "they are intelligent, shrewd, courteous, and gentlemanly, honorable in their business transactions"; that he had been "informed by merchants who have had extensive business transactions with them that the usual contracts in writing were unnecessary, their word being a sufficient guarantee for their fulfilment, and in a term of years, in which business to the extent of millions of dollars was transacted, not one cent has been lost by bad faith on their part." Richard G. Sneath, former manager of the Merchants' Exchange, President of a bank, and a merchant for twenty years, said upon this point:

"I have dealt a great deal with the Chinese merchants in this city. I have always found them truthful, honorable, and perfectly reliable in all their business engagements. I have done business with them perhaps to the amount of several millions of dollars. I have never had a single one of them fail to live up to his contracts. I never lost a dollar by them in all my business engagements with them, though we commonly accepted a Chinaman's word as good for a cargo of merchandise, while a written contract was demanded of white men."

So much for the merchants. Now for the laborers. Solomon Heydenfeldt, a resident of California for twenty-seven years, and Associate Justice of the Supreme Court for five years, testified that he considered the Chinese "the best laboring class we have among us; more faithful, more reliable, and more intelligent than an equal number of European immigrants; more industrious than the corresponding class of whites; thoroughly reliable and perfectly faithful to their engagements. Very few of the ordinary laboring class cannot read and write their own language." Herman Heynemann, President of a woollen factory and an employer of Chinese laborers for fifteen years, said: "We have not had a single case before the police court of murder, or rows among themselves, or theft upon the proprietors. I think there are few factories run entirely by white labor that could say as much." Donald McLennan, manager of a woollen mill and employer of 300 Chinese operatives, replied to questions regarding their character: "I never found a case of theft among them. They are a very steady people; I have never seen a drunken Chinaman in my life." Colonel William W. Hollister, one of the largest farmers in the State and a long-time employer of the Chinaman, gave this opinion of him "as a worker and man":

"As a laborer he is most submissive and kindly, ready to do what you want done, with entire good will. He descends to the lowest employments, and, when properly treated, thinks of no degradation in the lowest of labors. As a man I have found him honest, and as a rule very intelligent. Who ever saw a drunken Chinaman? His moral condition is so good that I think out of the whole 400 Chinese population in Santa Barbara there have been but five arrests in the course of a year. Two of them were dismissed: two cases were for petty larceny, stealing vegetables, or something like that, from their own people. I never saw a better population in my life. If the teachings of paganism make honest men, as I find the Chinamen to be, I think seriously of becoming a pagan myself."

As to their sanitary habits, Mr. Coolidge said: "In cleanliness of person they are remarkable. I have observed them closely in their various occupations, and on the streets, and cannot call to mind an instance of dirty face, or hands, or of soiled garments." William F. Babcock, director in a quicksilver mining company, which employed 120 Chinamen, said that "every night of their lives every Chinaman bathes himself from head to foot. If you will look at their hands and feet and necks, you will see them as clean and neat-looking people as you ever saw in the world. They are different from the lower white classes." Dr. Arthur B. Stout, a member of the State Board of Health, whose residence was almost in the Chinese quarter, said that the death-rate was greater among the whites than among the Chinese, although the latter live very closely in their quarter, and he thus accounted for the fact:

"Their frugal life gives them more immunity from disease. They eat only what is necessary to live upon. They eat to live, and do not live to eat. They are clean in their habits, and they drink no whiskey. I have never seen a drunken Chinaman in my life. They consequently obtain a better resisting power to the attack of disease."

Dr. Stout, being asked how the Chinese quarter compared with other parts of the city, replied that the squalor was not much greater, and that the difference was largely due to the fact that less care was taken of the quarter by the city authorities. "I can take you down to the lower part of the city," he told Mr. Morton and the other Congressmen, "and show you much more squalor in the form of neglect, want of drainage, and want of proper care, than you would find in the Chinese quarter. There has been a great exaggeration in all those charges against the Chinese."

Since this testimony was taken the Exclusion Act has been passed, all danger of the Pacific Coast being overrun by the "barbarians" is gone, and the proportion of the Chinese to the whole population is steadily sinking. Why is it that the white population are filled with such hostility against them? This was one of the questions which the Morton Committee repeatedly asked, and two of the answers which they elicited are worth quoting. Said Mr. Babcock:

"I think it arises from politicians, office-holders, and foreigners, as a general thing. Very many of our population pander to this low taste, you may call it, and join in the outcry against the Chinese in order to get the foreign vote and popularity among them. That is my idea."

Mr. Heynemann's notion of the cause was this:

"The same cause that has been prevalent all over the earth—strangeness of manners. It used to be in England that any man who did not speak English was a 'bloody foreigner.' It did not make any difference whether he was the best man in the world, he was a 'bloody foreigner,' and it was the height of contempt to use that expression. If this race, instead of keeping themselves in their peculiar dress, were to drink whiskey and patronize the bar-rooms to-day, just like others do, the prejudice would disappear immediately."

A KETTLE OF FISH.

THREE months ago there was a fisheries question all along the coast from Cape Cod to Eastport. Excited fishermen and their representatives were hurrying to Washington to protest against any negotiations with Great Britain looking to a renewal of any kind of a treaty regarding the fisheries, and gallant Congressmen were passing censure upon Secretary Bayard for the six months' arrangement which he made in the interest of the fishermen last year. Mr. Blaine was not unmindful of his duty to the country at such a crisis; so he published in the *Irish World* a long chapter from his "history" on the subject of the Washington Treaty, showing how completely we were taken in and done for at Halifax, and how, having paid $5,500,000 for fishing privileges, it was the part of wisdom and patriotism not to make use of the thing purchased a moment longer than was absolutely necessary. Mr. Pat Ford was naturally impressed with the statesmanlike tone of the excerpt. Everything betokened a flourishing political issue for the next campaign, grounded upon a tariff on codfish and protection to American labor.

But Mr. Bayard and the other betrayers of their country said, "Very well, have it your own way. If you are satisfied with the Treaty of 1818, so be it." Straightway there fell a calm, and the nation went about its other business, of which it had a plenty, forgetting the fisheries as completely as though there were no such thing in the universe. From the hour that the resolution was reached to let the fishermen and their learned counsel and their daring Senators have their own way, there ceased to be any fisheries question. The fishermen having elected to take their chances of profit under the tariff rather than under a treaty, there was no occasion to lash ourselves into a fury in anticipation of what Canada would do. As for Great Britain, she, too, had other fish to fry, Irish for the most part, and much more costly than any caught on the Grand Banks. Both countries closed the book on the 30th of December, 1885, and went about their greater concerns.

It now turns out that the first step to be taken to go a-fishing at Gloucester, Mass., is to ship a lot of Canadian sailors—this by way of protecting American labor. So the Gloucester captains put into Nova Scotian ports, hire the men, and make ready to take them on board. "No," say the Canadian authorities, "the Treaty of 1818 does not allow you to come here except for water and fuel. Sailors are neither water nor fuel. They are not even American labor. So please take water and fuel and begone." The Gloucester captains take their medicine manfully. They tell the hired men to buy tickets to some American port at their expense and they will call for them. This is one of the new costs of fishing, but no patriot heart will be fired on account of a prohibition against the shipping of foreigners in foreign ports to catch fish under the American flag, and to enjoy the wages due to our enlightened and beneficent tariff.

But the increased cost of fishing does not end here. Bait is one of the things wanted for successful angling on the Grand Banks, and it is obtained best and cheapest by trade with the shore fishermen. It was pointed out that bait was neither fuel nor water, but it was answered that the shore fishermen would paddle their canoes out to the fishing fleet, and do the trading outside the three-mile limit. Now, it appears that the Canucks will not do anything of the sort, and if they would their Government would not let them. At some of the bait-producing stations the shore fishermen have held meetings, and passed resolutions that they will not sell bait to people who tax their fish one cent per pound. Moreover, there is a confounded cruiser sailing along the coast, inspecting the three-mile limit and warning off trespassers. To make matters worse, the Committee of Ways and Means propose to abolish the duties on fish, together with those on salt, lumber, and wool.

The consoling part of the business is that there is no prospect of national irritation growing out of the enforcement of the Treaty of 1818. The fishermen may be put to additional expense by reason of the abrogation of the Washington Treaty, but the public understand that it is their own kettle of fish. They have got their affairs in the shape they wanted. They have flung up their heels at Mr. Bayard. They have got their tariff on fish. The nation has consented to be taxed one cent per pound on its fish-balls for their benefit, and is prepared to see the end of the game with entire good humor. Even the Irish contingent is singularly unmoved by the crisis, being perhaps more interested in Mr. Gladstone's scheme for home rule than in the profits of the fishing season.

THE FOURTH OF MARCH.

Most people suppose that the 4th of March is designated by the Constitution of the United States as the day when every Congress shall end and every new administration begin; many cherish a traditional superstition that it was selected, after much mathematical investigation, because it was found to be the only day in the almanac which on these constitutional quadrennials will never come on Sunday. Few—and they are very few—know that the members of the great convention throughout the 100 days of their stupendous work never so much as gave the 4th of March a thought, and that the Constitution itself is absolutely silent as to the day when Congresses shall expire and the transfer of executive power take place. Why, then, is the 4th of March, which is not named in the Constitution, nor in any statute or resolution of the time, and which was not selected by the men who framed the Constitution—why is it our constitutional inauguration day? And why will an amendment to the Constitution be necessary to substitute another?

The Constitution, which is remarkable for its masterly generalizations and the absence of definitions and details, made no provision whatever for setting the new Government of the United States agoing. The makers, indeed, knew not the year, much less the day or the hour, when it would be adopted by the discordant States. All that they could do was to build the framework of the future Government and leave the rest to the States and the Continental Congress. "The House of Representatives shall be composed of members chosen every second year"; the President "shall hold his office during the term of four years," are the only provisions which the Constitution contains on the subject. How, then, came the 4th of March to be so important a day in American history?

The Constitution was to take effect so soon as it should be ratified by nine States; and the Continental Congress was charged with the responsibility of inaugurating the infant Government. On the 13th of September, 1788, when Congress convened in New York, it appeared that eleven States had ratified the Constitution. Accordingly the Continental Congress—

> "Resolved, That the *first Wednesday in January* next be the day for appointing electors in the several States which, before the said day, shall have ratified the Constitution; that the *first Wednesday in February* next be the day for the electors to assemble in their respective States and vote for a President; and that the *first Wednesday in March* next be the time, and the present seat of Congress the place, for commencing proceedings under the said Constitution."

The first Wednesday in March chanced to be the 4th!

The first two scenes upon the programme came and went at the appointed times; the electors were chosen and the electors cast the electoral vote; but the first Wednesday of March found only a handful of Senators and Representatives assembled and either house without a quorum. Again and again the two houses adjourned for the want of a quorum; so that it was not until the 6th of April that the electoral vote was counted and the first President found to be unanimously elected. But the city of New York was then the seat of government, and Washington was then at Mount Vernon. It required three weeks to carry the official announcement to Virginia and bring the Chief Magistrate back. And thus it happened that the 30th of April was the day of the first inauguration.

It will be observed that the Constitution said then as it says now, "the President shall hold his office during the term of four years." It did not say that he should hold his office during the term of four years from the day when Congress should be directed to commence proceedings, nor did it even provide that the Congressional term of office and the Presidential term of office should begin on the same day. Yet Washington did not "*hold his office* during the term of four years." His first term was only about three years and ten months. Conceding that the holding of the office could have been in part constructive within the intent of the Constitution, it would nevertheless seem that a strong legal argument might have been made to show that such a constructive holding could not have been carried back further than the day when the vote was counted and the result declared, the 6th of April. We are inclined to think that many modern statesmen—the late Mr. William M. Tweed for example—would have taken that view of the case. We are almost persuaded to believe that when the 4th of March, 1793, came around, Mr. Tweed would have blandly but firmly refused to budge, and would have philosophically inquired what they were going to do about it. Indeed, we do not hesitate to say that his reverence for the Constitution would not even have allowed him to compromise on the 6th of April, but that he would have dispensed offices and patronage unflinchingly until the hour of noon on the 30th. Whether any doubt arose in 1793, and whether the good sense and self-abnegation of Washington settled the matter for the country without discussion, is, so far as our hasty researches go, unwritten history. One thing, however, is certain, that the first inauguration of the President did not take place until the 30th day of April, 1789.

During the last eleven years there have been many centennial celebrations, ranging from the Battle of Lexington to the Evacuation of New York. But one of the most notable, second only to that of the Declaration of Independence, if it be second to any, remains to be celebrated—the centennial of our Constitutional Government. To celebrate it on the 4th of March, 1889, will be to celebrate the fact that but a handful of Senators and Representatives assembled in New York in 1789, and that neither of the houses of Congress had a quorum. The constitutional government of the country certainly did not begin then. It began on Thursday, the 30th of April, 1789, at the moment when Chancellor Livingston, turning from administering the oath of office, proclaimed to the throng of excited citizens below, "Long live George Washington, President of the United States."

It was the remarkable fate of Washington to be foremost in the three great vicissitudes of our national infancy—the war for independence, the construction of a national government, the first administration of our national affairs. The schoolboy knows the fact that he was Commander-in-Chief throughout the Revolution and the first President after the formation of the Federal Government; but men have too often overlooked the fact that the first signature affixed to the Constitution was that of George Washington, President of the Convention. The "first in war, first in peace" of Henry Lee was not florid rhetoric, but philosophical fact.

The approaching centennial of Washington's first inauguration will give the American people a marvellous opportunity to stamp his name afresh on the Constitution which he was foremost in formulating. As every intelligent man knows, the short session of Congress has been the legislative season for the ripening of everything that was evil in our national legislation. The forced adjournment which takes place on every alternate 4th of March is a convenience to nobody; for it is still winter at the seat of government, a most unpropitious time for members to break up household arrangements and travel to distant homes. The inauguration day, moreover, has become a wonderful national holiday, which brings visitors from Maine and New Mexico, from States south of the Potomac and from States west of the Rocky Mountains, and is a matter of interest to every man and woman who can read a newspaper. In a word, sentiment and convenience and common sense unite in approving the Constitutional Amendment which shall substitute the 30th of April for the 4th of March. Its adoption will enable us most fitly to celebrate the great event, and the love and reverence of the American people cannot take better or more practical or more enduring form than by inaugurating the centennial President on the day which witnessed the inauguration of Washington. Their thanks are due to Mr. Winthrop for having brought the idea before Congress in his monument oration, and to Senator Ingalls for having introduced the amendment, and they will watch with some solicitude the action or non-action of Senator Hoar and the Committee on Privileges and Elections, in whose keeping the matter now rests.

THE WARNING OF MR. MANNING'S CASE.

Secretary Manning's break-down from sheer overwork is another solemn and impressive warning of the dangers to which the customs of official life in Washington constantly expose both the Government and the country. We presume nobody heard of Mr. Manning's sudden illness without asking himself whether other officers, and notably the President, were not exposed to a similar calamity through similar causes. The demands which the merely necessary duties of administration now make on the President and the members of the Cabinet are as much as even the most vigorous man, at the age at which men usually reach these positions, can possibly bear. To read all the documents which have to be read, and see all the people who have to be seen, in order to carry on the Government at all, are as much as, and even more than, the average American man, over forty and of strong constitution, is equal to. Our system of vacating offices at the end of four years, or on the incoming of a new Administration, makes of itself a tremendous strain on the strength of the officer who has any share in filling them. In no other Government in the world is any such thing known. No officer as highly placed as the American President is compelled to hold innumerable interviews and read innumerable letters about petty places in the public service. Such cases never come near Mr. Gladstone, or Bismarck, or Grévy, or Freycinet. After the places are filled comes the work of supervision, or, in other words, of seeing that the incumbents do their duty, and getting rid of them if they do not do it. And then there are our relations with foreign Powers and the relations of the Executive with the other branches of the Government to be looked after, and innumerable questions of internal law and police arising under the Constitution and Congressional legislation to be examined and comprehended, even if no immediate action has to be taken on them.

All these things mean constant labor at the desk. All the hours of the day in which any man who means to do his work efficiently ought to work, are insufficient for them, and they involve that most exhausting process for brain and nerves—incessant passage from one subject to another, and incessant efforts to keep hold of widely differing and often complicated details. But Washington traditions add to them another duty which is not administrative but purely social—the duty of gratifying the curiosity of travelling sight-seers. The cheap and easy travelling of our day brings thousands of persons to Washington in the course of the year, some for business, and some for pleasure, and not one of them goes away without what is called "paying his respects" at the White House—that is, shaking hands with the President. This involves for this functionary, we believe, now, two hours a day for three days in the week, in a crowded and ill-ventilated room, and it is performed for the sole purpose of gratifying the curiosity of people who have not the smallest claim on the President's time. He is no more bound to exhibit himself to those who find time and money to go to Washington, than he is bound to travel over the great railroad lines and hold levees at every station. It is all done in obedience to an old feeling that an American President must not be inaccessible to plain people. Against this we have not a word to say if accessibility to sight-seers in Washington does not involve injustice to the rest of the community—that is, does not take away from the nation at large the time and strength for which it pays, and which are its just due. We maintain that it does, and that unless the United States can provide their Government with a stronger and more enduring breed of men than has yet appeared on earth, the demands on the Washington officials will have before long to be thoroughly overhauled and inexorably cut down. The office-seekers and the curious will both have to be sifted, and confined to times and seasons in a way which is now unknown.

What increases the danger is, that only a very small proportion of the men of sedentary occupations in the United States have yet become fully alive to the dangers to health produced by hard work combined with plenty of food and drink, without fresh air and regular exercise. Exercise as a necessity for a sedentary man's existence and efficiency, is, in fact, as yet only recognized by a small body in the large cities. In the country towns, nearly every man's ambition is to be known as a gluttonous worker. What he is most disposed to boast of is his custom of sticking to his desk or store fourteen or fifteen hours a day. When he has passed forty under this régime, and begins to put up masses of soft flesh and consume ice-water by the gallon, the doctors know that trouble is brewing; but as long as he can attend to his business, and cannot afford "to go to Europe," he does not mind what they say, and gradually active exertion in the open air becomes odious to him; so he saunters on through life, until some fine day something snaps in the machinery, and he is put on the list of invalids. In private life there is no help for this, and it is of little consequence to anybody but the man's family or his business partners; but men in public life are responsible for what athletes call their "condition" to the whole people.

THE BERNE INTERNATIONAL-COPYRIGHT CONFERENCE.

The proceedings of the second International Conference at Berne have been published in a folio volume of eighty-one pages, entitled 'Actes de la 2me Conférence internationale pour la protection des œuvres littéraires et artistiques réunie à Berne du 7 au 18 Septembre, 1885.' The title of the first year's volume reads "pour la protection des droits d'auteur," but the French delegates claimed that the expression "des droits d'auteur" had, in France, a special and limited signification, namely, the remuneration due to a dramatic author for the representation of his play, and suggested the use of the words "de la propriété littéraire et artistique" as conveying in French the meaning expressed by the German "Urheberrecht" and the English "copyright." Upon the recommendation of the Swiss delegation, the term used in the title of the volume was adopted, although notice was taken of the fact that it does not exactly express the intention of the Conference, which is not to protect the works, but the authors. This object is more distinctly stated in the amended first article of the final draft convention, which reads, "The contracting countries are constituted into a union for the protection of the rights of authors over their literary and artistic works."

It is of interest to note the progress made towards this union by comparing the representation at this Conference with that at the preceding one. In 1884 thirteen countries, counting Austria-Hungary as one state, were represented by twenty delegates, of which those from four states were not active; but the final protocol, in which the individual delegates recommend that a union be constituted for the protection of the rights of authors, was signed by eighteen delegates, representing eleven states; the two delegates from Paraguay and San Salvador, only, not feeling authorized to sign. The countries conspicuous by their absence were Denmark, Russia, Spain, Portugal, Greece, Rumania, Servia, Turkey, the South American States, and the United States. At the 1885 Conference we find that two states have withdrawn, San Salvador and Austria-Hungary. The first is an unimportant country, and as regards the latter, there is good reason to believe that it will ultimately join the proposed union, such being, at least, the opinion expressed in German publications. This belief may be partially based upon the action of the Austrian Parliament, which has shown advanced views upon the subject of authors' rights by enacting, in April, 1884, a liberal copyright law, granting protection to literary property during the lifetime of the author and fifty years after his death. In place of the two absent states, six additional states were represented, Spain, Italy, Tunis, Honduras, the Argentine Republic, and the United States; the delegates from the two latter countries, however, as well as those from Belgium and Paraguay, being only delegates *ad audien-*

dum. Costa Rica, though having agreed to take part in the Conference, failed to send a delegate. In addition to the gain of active delegations from four new states, the delegates from some of the states formerly represented attended in 1885 with enlarged powers. England, instead of one silent representative, as in 1884, sent two delegates, with full authority to act; and their intelligent participation in the proceedings effected considerable modifications in the final draft of a convention.

The changes induced by the discussions in the Conference of 1885 in the draft convention which it is now proposed to submit as the definitive text of an international treaty during the coming September, were largely verbal, resulting, in most cases, in greater simplicity and directness and consequent clearness of statement. But the part taken in the deliberations by the delegates from the Powers for the first time actively represented, led to important alterations in certain of the articles of convention. The first article has been quoted above. To the second article, which declares that authors of one country are to enjoy for their published or unpublished works in the other countries the rights which the respective laws grant to natives—for a term, however, not exceeding that granted, and only after the accomplishment of the formalities prescribed by law in the country of origin—the important addition was made, at the instance of Mr. Adams, the British delegate, declaring that "the country of origin of the work is that in which the work is first published; or, if such publication takes place simultaneously in several countries of the Union, that one of them in which the shortest term of protection is granted by law." The author's country is considered the country of origin of unpublished works; and, according to article three, the stipulations apply to publishers of works issued in one of the countries of the Union, although the authors belong to a country not a party to the Union. Article four defines the expression "literary and artistic works" to comprehend "every production whatsoever in the literary, scientific, or artistic domain which can be published by any mode of impression or reproduction." The two articles, five and six, relating to translations occasioned considerable discussion. The conclusion arrived at in 1884 was that translations should be protected for ten years after publication, provided the translation was issued within three years from first publication of original work. The present articles grant to authors or their legal representatives the exclusive right of making or authorizing translations for a term of ten years from the publication of the original work, always counting from the last day of the year of publication, after which time the translating right falls into the public domain and the translator cannot oppose the translation of the same work by other writers. During this period authorized translations are protected as original works. As regards the reproduction of articles from newspapers and journals, or of extracts from books, the agreement of 1884 was so loosely worded that it afforded a loophole for wholesale appropriation, and it was therefore recast in 1885, to the effect that such reproduction or translation of extracts from periodicals is allowable unless the authors or publishers have expressly forbidden it. A general prohibition at the beginning of each number is sufficient, but this cannot in any case apply to political articles or news articles; and, according to article eight, "as regards the liberty of extracting portions from literary or artistic works for use in publications destined for educational or scientific purposes, or for chrestomathies, the matter is to be decided by the legislation of the different countries of the Union," or by special treaties. The stipulations of article two apply to the public representation of dramatic or dramatico-musical works, whether published or not; and to the public performance of musical works unpublished, or, if published, when bearing upon the title-page or at the beginning the author's prohibition of performance; and the authors of such works are, during the existence of their ten-years' exclusive right of translation, protected against the unauthorized public representation of translations. According to article ten, adaptations, arrangements of music, etc., are specially included among illicit productions; but it is agreed that in the application of this article "the tribunals of the various countries of the Union will, if there is occasion, conform themselves to the provisions of their respective laws." Article eleven provides that for authors of works protected to be considered as such, it will be sufficient that their names be indicated on the work in the accustomed manner; and, as concerns anonymous and pseudonymous works, the publisher is entitled to protect the rights belonging to, and is without other proof reputed to be the legal representative of, the author. The tribunals may, however, require the production of a certificate from the competent authority to the effect that the formalities prescribed by law in the country of origin have been accomplished. Pirated works may be seized upon importation, conformably to the domestic law of each state.

The remaining articles, thirteen to twenty-one, relate to the convention of union, and may be briefly summarized as providing that the convention applies to all works in which copyright exists in the country of origin at the moment of its coming into force, which is to be three months after the exchange of ratifications; that it may be submitted to revisions in order to introduce amendments; that it shall not affect the maintenance of existing conventions between the contracting states, provided always that such conventions confer upon authors more extended rights than those granted by the Union, or contain stipulations which are not contrary to this convention, and upon the same conditions the countries of the Union may enter into special arrangements with each other; that it does not abridge the rights of each country to control or prohibit the circulation of works in regard to which the exercise of such right is found necessary; and that countries which grant by their domestic law the protection of rights secured by this convention, shall be admitted to accede to it on request to that effect, and shall have the right to accede thereto for their colonies or foreign possessions. The final protocol contains some supplementary stipulations in regard to the admission of photographs and choregraphic works to the benefits of the convention; and also an understanding that "the manufacture and sale of instruments for the mechanical reproduction of musical airs which are copyright, shall not be considered as constituting an infringement of musical copyright." Finally, the protocol arranges for the establishment of the "Office of the International Union for the Protection of Literary and Artistic Works," which is to be placed under the authority of the Swiss Government, the expenses of conducting it to be shared by the contracting states in proper proportion. It will be the duty of this office, the official language of which will be French, to collect all kinds of information relative to the protection of the rights of authors, and arrange and publish it; to study questions of general utility likely to be of interest to the Union; and, by the aid of documents placed at its disposal by the different administrations, to edit a periodical in the French language treating questions concerning the Union. An edition in one or more other languages may be authorized if experience should show this to be requisite.

To the foregoing *précis* it should be added that the British Parliament has printed as a blue book, under the heading, 'Switzerland, No. 1' (1886), the "Correspondence respecting the formation of an International Copyright Union." The contents, owing to numerous enclosures, are more varied than the title promises, and possess considerable interest. The correspondence opens with a note from the Consul-General for Switzerland, at London, to Earl Granville, enclosing a circular note from the Swiss Federal Council inviting participation in a diplomatic conference at Berne in 1884, with a view to protecting literary and artistic property. After an exchange of letters between the Foreign Office and the Board of Trade, Mr. Adams, Minister at Berne, was directed to attend the Conference as a British delegate, but in a purely consultative capacity, with no power to vote or to bind his Government to accept any views which might be adopted by the Conference. He seems to have given intelligent hearing to the proceedings, and to have become warmly interested in the international Union proposed. On September 26, 1884, he writes:

"The result of this Conference is, in my opinion, that the Union will be founded. I cannot, of course, surmise how many Powers will sign the first convention. That France and Germany, Sweden and Switzerland will do so, I can hardly doubt. I am aware that, unfortunately, in the present state of our copyright law, Great Britain is unable as yet to enter into any such Union, but I cannot help, with all due deference, urging upon Her Majesty's Government the expediency of taking measures for amending that law. This course, I venture to presume, must ultimately be adopted. Should it not rather be sooner than later?"

On the 9th of May, 1885, in response to a second circular of invitation from the Swiss Government, Mr. Adams was authorized to attend the 1885 Conference, but, as in the preceding year only in a consultative capacity. In July, however, Mr. F. R. Daldy, on behalf of the Copyright Association, accompanied by Mr. Cotter Morison as a representative of the Incorporated Society of Authors, was allowed an interview with Mr. Bourke (who was one of the Copyright Commissioners in 1875), in order to point out the reasons why great importance was attached to England's being allowed to take part in the discussions, and also in order to submit a memorandum of the vital points apparently necessary to secure the efficiency of the convention which, Mr. Daldy thought, would result from these deliberations. The meeting with Messrs. Daldy and Morison evidently produced an effect; and when, August 13, Mr. West, at Washington, telegraphed, in reply to a question from the Marquis of Salisbury, Earl Granville's successor, that the United States Minister at Berne would be appointed United States delegate to the Conference, Mr. Adams received instructions, August 18, that he was authorized to attend, with power to take part in the discussions and to vote, but with the understanding that his part in the proceedings would be *ad referendum*, and that any resolutions arrived at by the Conference would be subject to subsequent approval or rejection by his Government. In the same letter he is instructed to be especially careful to notice and report any views which might be expressed by the United States delegate; and, in accordance with these instructions, the report made, September 25, by the British delegates says: "We have given special attention to the bearing which the draft convention might have upon any negotiations between Great Britain and the United States." The report quotes the statement made by Mr. Winchester as to the position of the United States in regard to the question of international copyright. This statement, which we prefer to give in our own translation, was made by Mr. Winchester in his address before the Conference, Sep-

tember 17. After defining his position and functions as the United States delegate, he says: "Meanwhile, I believe that I do not overstep the limits of my powers in saying that the Government of the United States is favorably disposed towards the principle that the author of a literary or artistic work, whatever be his nationality and whatever the place of production, should be everywhere protected upon the same footing as the citizens or subjects of each nation."

"In view of this statement," the report continues, "we do not think that there can be any ground for the apprehension which has been expressed in some quarters, that an immediate amendment of English law, with the view to the entry of Great Britain into the projected Union, would have a prejudicial effect in regard to any copyright negotiations with the United States. In fact, from the friendly interest in the objects of the Conference which has been expressed by the United States delegate, we are justified in anticipating that when once the Union has been formed, and has been acceded to by the more important European countries, the United States will before long feel it difficult to abstain from becoming a party to it also."

It seems scarcely honest for the Department of State to instruct its delegate to say that this Government believes in the principle that the author should be protected without regard to his nationality or to the place of production, when fifty years of almost continuous efforts in Congress have failed to result in the first step towards the *practice* of such a principle. We might almost suppose that Mr. Winchester's own sense of right and justice had unconsciously led him to misread his instructions here. And in spite of Mr. Adams's seemingly frank acceptance of the statement as showing the true position of the United States in regard to the question, we could almost suspect a covert allusion to the truth when he translates the statement to read, "The United States Government is kindly disposed in *principle* [italics ours] towards the proposition that the author should be protected," etc.

In concluding their report, the British delegates urge the importance of a complete codification and amendment of the copyright law, and point out that if this were done during the present session of Parliament it would enable Great Britain to become one of the original signatory Powers of the convention for the creation of an International-Copyright Union, and it is pleasant to note that the last letter contained in the volume is a communication to the Foreign Office from the Board of Trade, stating that the latter will be prepared to submit to Parliament a bill embodying the necessary changes in the existing copyright law. In addition to the various letters, this volume contains copies of the original draft conventions of the Berne Conferences of 1884 and 1885, with English translations; copies of the various circular notes from the Swiss Government, with translations; and Mr. Daldy's "Scheme of a bill to consolidate and amend the law relating to copyright," which is set out at length.

Correspondence.

SOUTH CAROLINA AND THE BLAIR BILL.

To the Editor of The Nation:

Sir: A friend has just brought to my attention your issues of the 4th, 11th, and 18th inst., in which you have placed me upon the witness-stand in your suit against the Blair bill. As I am now, and have always been, an unfaltering advocate of the policy which that bill seeks to carry out, the use you have made of a sentence taken from my annual report astonishes me and all those who know my pronounced views on the subject. It is said, and with some appearance of truth, that almost any kind of heterodoxy may be fortified by a text from the Bible. You have shown, in the articles indicated, how completely an isolated sentence from a very humble, uninspired production may be made to serve a purpose quite opposed to the one intended.

You quote from my annual report for the school year 1883-84 the following sentence: "In addition to these drawbacks, the discussion of the policy of Federal aid for the suppression of illiteracy revived into active expression all the latent, or hitherto silent, opposition to the common-school system of the State"; and you use it as "emphatic testimony" to fortify your argument against the passage of the Blair bill. While I do not entertain the idea that so respectable and influential a publication as the *Nation* could stoop to a wilful perversion of any statement, yet I think that, in your zeal to make headway in your controversy, you have unintentionally ignored three considerations necessary to a proper interpretation of that sentence. These are: 1st, where the report was written; 2d, to whom it was addressed; and, 3d, the antecedent and related circumstances of the subject-matter.

The system of free public schools in this State was the creation of the Constitution of 1868, and, like that instrument and most of the statutes enacted under it, was received with great disfavor by the white people of the State, on account of the character of the men then controlling public affairs. After the political revolution of 1876, the people began to take increasing interest in the public schools, and the enrolment of children in them grew larger year by year. There remained, nevertheless, quite a number of persons in the State bitterly opposed to the whole system—some on theoretical grounds, and many on the practical fact that they were taxed to educate the non-tax-paying mass of negroes. This opposition had ceased, however, to create much friction in the working of the school system until the discussion of the Blair bill began in Congress. A distinguished representative from this State had spoken in opposition to the bill on the floor of the United States Senate, and his views had been further disseminated by a newspaper interview. At once all the *irreconcilables*, whether occupying the editorial chair of a county newspaper or the dry-goods box in front of the village store, finding themselves in the shadow of a great name, began to rail at the public-school system of the State. To them the Blair bill meant increase of the facilities for public instruction, and to this they were opposed. Their cry was, "The public schools are a nuisance"; "Educate a negro and you spoil a laborer," etc., etc.

Writing the report in this State from an interior view of the condition of things, and addressing the two houses of the General Assembly, every member of which was cognizant of all these circumstances, I used the sentence you quote without the fear, or even the risk, of misinterpretation. Had I been addressing an outside audience, I would have said, "The *opposition* to the policy of Federal aid developed in Congress," etc., etc. Thus interpreted, or thus framed, the sentence will not serve very well the purpose of your argument.

Will you be kind enough to give me the benefit of this explanation, and thus set me *rectus in curia* with your large circle of intelligent readers?

Asbury Coward,
State Supt. of Education, S. C.

Columbia, S. C., March, 1886.

[The fact that Mr. Coward personally favors the Blair bill only lends force to the strong argument which his official report presented against it. We said (March 4) that "the mere talk about Federal aid" had exerted a "disastrous effect" upon the cause of public education in South Carolina, and, as evidence, cited the striking sentence regarding this matter in the Superintendent's report for 1884. Mr. Coward now says that it would have been better if he had framed the sentence differently, and had said that "the opposition to the policy of Federal aid developed in Congress" caused the trouble in South Carolina. But this explanation in no wise affects the lesson to be deduced from the incident. If the measure had never been proposed, no opposition to the policy would have been developed in Congress, and without this opposition in Congress, as Mr. Coward now says, "all the latent or hitherto silent opposition to the common-school system of the State" would not have been "revived into active expression." If there had been no "talk about Federal aid," there would have been no revival of the Bourbon opposition to the public-school system, which opposition, as Mr. Coward confesses, "had ceased to create much friction until the discussion of the Blair bill began in Congress."—Ed. Nation.]

IMPORTATIONS OF CARPET WOOL.

To the Editor of The Nation:

Sir: In answer to your correspondent about carpet wool and Russian wool in your paper of March 25, we refer to the official reports of direct importations, as made by the Treasury Department. He will find that the imports of carpet wool for the year 1885 were 25,610,177 pounds more than those of 1884; these figures being published in No. 6 of the "Summary Statement of Imports" for each year made for December, 1884, and December, 1885. These are for *calendar* years. The reports for fiscal years, ending June 30 in each case, do not include the great rush of carpet wools coming in since July 1, 1885, although they show a large advance in 1883-4 and 1884-5 over former years. Mr. Bond's figures as quoted are taken *from the warehouse and withdrawal accounts*, and are not the *direct imports*. On the 1st of July, 1885, the stock of carpet wools in bonded warehouse was 11,412,023 pounds, *none of which was included in Bond's figures*. The increase of carpet wool imported in 1885 over 1884 was more than 50 per cent., as follows:

1884, calendar year	47,672,926 pounds.
1885, " "	73,283,103 "
Increase (53 72-100 per cent)	25,610,177 "

For the fiscal years 1883-4 and 1884-5 the direct imports were:

1883-4	52,761,170 pounds,	value $6,559,762
1884-5	56,339,530 "	" 5,947,495

In both cases the increase was great over 1882-3, in which only 40,130,322 pounds were imported, and the last half of the year 1885 brought the largest importation and more than twice as much as in any former half year—making the quantity for the whole year 1885 73,283,103 pounds, or fully twice as much as in any year previous to 1882. Does not this amply prove the asserted increase in carpet-wool importations? The official reports of the Treasury Department also show that the imports of carpet wool from Russia were five times as great in the fiscal years 1884-5 as they were in 1879-80, and 30 per cent. greater in the last year, 1884-5, than they were in 1883-4, as follows:

1879-80	3,322,700 pounds.	Value, $375,053.
1880-81	4,400,151 pounds.	Value, 631,316.
1881-82	10,933,587 pounds.	Value, 1,465,765.
1882-83	12,569,523 pounds.	Value, 1,647,468.
1883-84	12,588,840 pounds.	Value, 1,422,020.
1884-85	16,151,392 pounds.	Value, 1,614,962.

Very respectfully,

James W. M. Newlin.
Dallas Sanders.

New York, March 29, 1886.

FIAT JUSTITIA!

To the Editor of The Nation:

Sir: Can you spare me room for a not unimportant question?

Heartily desirous of justice for Ireland, and for Britain also, I would ask if it will be just to tax the already overtaxed and overlandlorded laborers of England and Scotland, employed and unemployed, in order to purchase the land of Ireland for Irish farmers. I say farmers, not seeing very clearly how the Irish laborer is to be benefited by the transaction. W. J. Linton.

New Haven, Conn., March 22, 1886.

[We admit that the question is a difficult one. The arguments in favor of the purchase are, first, that the purchase money would be a sort of commutation of the annual expense of protecting the landlords against the peasantry, who hate them, and resist distraint and eviction at their hands. The expense is very heavy, but the English public has for eighty-five years maintained that it was legitimate and in some measure beneficial to the empire.

The second argument is, that the Irish system of land tenure would undoubtedly have been profoundly modified a century ago if the landlords had had to rely on their own strength or skill in dealing with the tenantry—that is, if the Irish had been an independent community. In other words, rackrenting without making improvements on the soil, and tenancy at will, would have disappeared either through a revolution or through fear of a revolution. The Irish landlords, as a class, have, in other words, been defended in the exercise of the powers which have brought on the present crisis for two hundred years by British troops, and have been so defended, for the last forty years, in the teeth of a full exposure of the system by an English Government inquiry, through a Commission known as the Devon Commission, which ought to have brought, but apparently did not bring, a full knowledge of it home to the English public. In fact, we think it would be hard to find in political history a stronger moral claim for compensation than that which the Irish landlords have on the English taxpayers. It is much stronger than that of the West India slaveholders.—Ed. Nation.]

A LITERARY COINCIDENCE.

To the Editor of The Nation:

Sir: Your correspondent "**," in his letter on "A Literary Coincidence" in the *Nation* of March 25, in quoting from Mr. Lowell's article on Gray, published in the *New Princeton Review* for March, and from Mr. Harrison's newly published book, overlooks the fact that Mr. Harrison's book mainly consists of essays republished from the English magazines. The first sentence he quotes originally appeared in the *Nineteenth Century* for March, 1883, the second in the *Fortnightly Review* for April, 1882, and the third in the *Fortnightly Review* for April, 1879. So that, whatever importance may attach to the fact, the priority of publication lies in favor of Mr. Harrison. D. H.

Washington, D. C., March 26, 1886.

JOHN HARVARD AGAIN.

To the Editor of The Nation:

Sir: I see by Mr. Rendle's letter, printed in the last number of the *Nation*, that he has forwarded to you twelve copies of his Harvard pamphlet for distribution among "thinking representative persons." I take the liberty to send you the same number of copies of Mr. Waters's pamphlet, 'John Harvard and His Ancestry,' and also of a reprint from the *New England Historical and Genealogical Register* for January, 1886, of Mr. Hassam's article on the subject, a part of which was also printed in the London *Athenæum* of January 2, 1886. If you will kindly distribute them among the recipients of the other pamphlet, they will readily see how shadowy is the claim which Mr. Rendle puts forward, and how much the antiquarian world owes to Mr. Waters for so successfully solving this intricate genealogical problem.—Truly yours,

The Editor of The Register.

Boston, March 27, 1886.

AN EMENDATION OF "MACBETH."

To the Editor of The Nation:

Sir: A passage in "Macbeth," act iv, sc. i, ll. 93-100, runs in our text (I adopt Dyce's reading):

> "Sweet bodements! Good!
> Rebellion's head, rise never, till the wood
> Of Birnam rise, and our high-placed Macbeth
> Shall live the lease of nature, pay his breath
> To time and mortal custom."

It cannot be denied that the passage, as it stands, makes a strange impression, so that Fleay and other critics with him believe it to be an interpolation by a foreign hand. Various emendations have been tried, but not satisfactorily. I think the difficulty may be set aside by a slight alteration, which with all humility I submit herewith to the judgment of more competent Shakspere students. I read:

> "Rebellion's head, rise never, till the wood
> Of Birnam rise, and *on's high place* Macbeth
> Shall live," etc.

—'on's' standing for 'on his.' The meaning would be: "These are sweet bodements you give me; for if rebellion's head does not rise until Birnam wood rises, then Macbeth may on his high place, the throne, live the lease of nature," etc. But in spite of all these attempts at easing his troubled mind, he cannot get rid of that horrid thought of *Banquo's* issue filling his place one day. Therefore he adds:

> "Yet my heart
> Throbs to know one thing," etc.

Taken thus, our vexed passage is perfectly in keeping with that which precedes it and with that which follows, and the whole gives good sense.

Theodor Marx.

Speyer, Germany, March 8, 1886.

Notes.

D. Appleton & Co. have in press a translation of Octavo Feuillet's 'La Morte,' made by Mr. J. Henry Hager.

Henry George & Co., 16 Astor Place, New York, will publish on April 1 a work by the senior partner in the firm, called 'Protection or Free Trade,' an examination of the tariff question (with special regard to the interests of labor), of which the bias is not in favor of protection.

Miss E. P. Peabody's 'Lectures to Kindergartners' is in the press of D. C. Heath & Co., Boston.

Houghton, Mifflin & Co. announce for immediate publication an abridgment of Kent's 'Commentaries,' edited by Eben Francis Thompson.

Dodd, Mead & Co. will publish an historical story, 'The Captain of the Janizaries,' by James L. Ludlow; 'A Ranchman's Stories,' by Howard Seely; and two new volumes in their series of "Tales from Many Sources."

President Porter's work on Kant's 'Ethics' is now in type, and will be published directly by S. C. Griggs & Co., Chicago. They announce, also, 'Geological Studies,' by Prof. Alexander Winchell; and 'Solar Heat, Gravitation, and Sun Spots,' by an anonymous author.

Mr. Austin Dobson has just completed his biography of Richard Steele, and it will soon appear as one of the volumes in the series of "English Worthies," which Mr. Andrew Lang is editing.

Mr. Lewis Carroll, the author of 'Alice in Wonderland,' has republished in a volume entitled 'A Tangled Tale' a series of ten papers, which originally appeared in the *Monthly Packet*, an English periodical. The title is somewhat misleading. There is no "tale" running through the book. It is composed of ten chapters, which are called "knots," and the only bond of connection between them is the reappearance of the same persons. Each "knot" represents some of these persons in a situation which gives an opportunity for the introduction of one or more problems or puzzles of a mathematical or quasi-mathematical nature, of which the reader is supposed to attempt the solution after having exercised his ingenuity in making out what the problem in each case really is. Exactly one-half the volume is occupied by an appendix containing a formal statement of each problem, the answer to it, a statement of the best manner of solving it, remarks and criticisms in regard to the various solutions sent in under assumed names at the time of the original publication of the "knots," and a classification in the order of merit of the names of those who succeeded in giving correct answers. Some of the problems are purely mathematical, and are to be solved by applying the principles and processes of some branch of mathematics, as arithmetic or algebra. Others are mere quibbles or "catches." There is throughout the book a desperate attempt at humor, resulting, as violent efforts at humor generally do, in producing an impression of heaviness and clumsiness. In fact, had it not been for the reputation achieved by Mr. Carroll in his 'Alice' books, we suspect this one would have been left to sleep quietly in the columns of the *Monthly Packet*. The publishers (Macmillan & Co.) have done certainly quite as much as the book deserved to render it attractive. We would, however, warn Mr. Carroll against the dangers of living too long on his acquired capital.

Mr. Morley's 'Diderot,' in two volumes, which closes the series embracing his 'Voltaire' and 'Rousseau,' has now appeared in the beautiful uniform edition undertaken by Macmillan & Co. Nothing has been added to the preface and note of 1878, so that evidently Mr. Morley is unaware of a discussion in the *Nation*, vol. xxvii, pp. 285, 398, which traced almost to its origin the famous speech of Polly Baker attributed to Franklin. It is a small matter, yet Raynal should stand excused for having borrowed in good faith from the *Gentleman's Magazine* the classical specimen of American humor which had imposed on the English editor (first of a long line of victims).

Mr. Theodore Roosevelt's 'Hunting Trips of a Ranchman' (G. P. Putnam's Sons) was essentially a popular work, yet the expensiveness of the first edition put it hopelessly beyond the reach of those whose purses were not long. The publishers have therefore done well to bring it out anew in a cheaper style and form, retaining the woodcuts, but omitting the etchings. An explanatory note referring to the previous edition might have been expected, since etchings are mentioned in Mr. Roosevelt's preface, and may perplex the librarian and bibliographer whose duty it is to know and define a perfect copy.

A. D. F. Randolph & Co. send us two seasonable quarto volumes—'The Blessed Easter-Tide,' and 'An Easter Song,' by Robert Hall Baynes. The first consists of appropriate passages from

the Scripture narrative, and numerous well-chosen and familiar hymns by authors ancient and modern. Mechanically considered it is conceived and executed in delicate taste. The companion volume adds one more to the dismal failures to substitute fancy lettering for type, and the illustrations are ineffably weak. That one firm should put its imprint on two such examples of how to do and how not to do, passes comprehension.

'The Correspondent,' by James Wood Davidson (D. Appleton & Co.), while it gives the ordinary business forms and habits of letter-writing which one would learn in a counting-room, occupies nearly all of its one hundred pages with directions how to address and to subscribe epistles to titled individuals who, by virtue of birth, custom, or office, have claim to ceremony in approach or withdrawal, from the attorney to the Emperor and the Pope. For the public this knowledge is, generally speaking, superfluous, and its painful setting forth with elaborate distinctions is amusing. Notwithstanding democracy, etiquette survives here in a thousand shades, answering the thousand ways in which man may be more than man, but for the most part, we observe, in English society and the Catholic Church. The little book is innocent enough, but we are constrained to call it misleading in title; for if the matter relating to Scotch aldermen, Earls' sons, English mayors, Sisters of Charity, Dominican monks, monsignors, cardinals, abbesses, kings, queens, and archdeacons, and a hundred or two other functionaries with whom most Americans have no occasion to correspond, were left out, there would be little left except the boards and the preface. The American schoolboy—much more the citizen—may safely be taught mere respectful courtesy, and left to decide for himself between "humbly" and "respectfully," and, though a Catholic, may hesitate to subscribe himself "your subject" to any archeminence whatever.

Miss Margaret Lonsdale, whose 'Sister Dora' was so well received, has published a little review of George Eliot's 'Life' ('George Eliot: Thoughts upon Her Life, Her Books, and Herself,' Scribner & Welford), which is a magazine article in the form of a book, and is entitled to no more attention because it has covers. The hour has gone by when any one without genius can detain the public with criticism of so bewritten a subject.

Nos. 6–9 of Cassell's diminutive "National Library," edited by Prof. Henry Morley, include "The Rivals" and the "School for Scandal"; 'Sermons on the Card,' by Hugh Latimer; Plutarch's lives of Alexander and Cæsar; and Horace Walpole's 'Castle of Otranto.'

Lippincott's Magazine for April introduces what it calls "Our Experience Meetings"—"a sort of public confessional for prominent men and women, of all callings and classes, who feel autobiographically disposed." But we doubt if the new *Forum* have not priority of patent in this device.

The *Rhode Island Historical Magazine* for January (No. 3 of vol. 6) is a full and interesting number, containing the usual genealogical miscellany, and also two reprints of rare publications—one of a chapter from Arthur Brown's sketch of America (1798), the other of Henry Bull's "Memoirs of Rhode Island" (1832-8), with additions and corrections. This last will run through several numbers.

The April number of the *New York Genealogical and Biographical Record* has sketches and portraits of the two Vanderbilts, and of the late Dr. Franklin B. Hough; and portraits of Gen. J. G. Wilson, President of the society whose organ the *Record* is, and of Col. Henry Rutgers—the former in connection with his inaugural address, and the latter in illustration of a paper on the Rutgers family.

The *Library Journal* has opened a bulletin of duplicates for exchange or sale, and books wanted, which is not confined either to librarians (who, however, started the idea) or to subscribers to the *Library Journal*. Yet these, we may hope, will be increased by it.

Science for March 26 accompanies a review of Commander Wyse's 'Le Canal de Panama' with a reproduction of his map of the isthmus, which will be found extremely useful for present and future reference.

M. Georges d'Heylli, who has already published half-a-dozen books about the Comédie-Française, its members and its doings, has now prepared a little monograph on the labors of Mme. Madeleine Brohan (Paris: Tresse & Stock; New York: F. W. Christern). Mme. Brohan, after "creating" the character of the quick-witted and plain-spoken old dowager in M. Pailleron's charming "Monde où l'on s'ennuie," with broad comic effect and humorous subtlety, has now gone on the retired list. M. d'Heylli sketches her career and gives a complete list of her parts. The pamphlet is illustrated by an excellent portrait, etched by M. Lalauze, and by the facsimile of an autograph letter.

Lest some unwary American reader may be tempted to order M. Auguste Baluffe's temptingly named 'Molière Inconnu,' it may be well to quote from the latest number of the *Moliériste* the opinion of its editor that M. Baluffe's book is absolutely worthless, and filled with fantastic and wilful mistakes. The best recent life of Molière in French is that which formed the first volume of M. Louis Moland's new edition of the great dramatist's works—an edition now complete, and likely to remain without a rival until we get the final volume in M. Regnier's incomparable series justly called "Les Grands Écrivains de la France" (Paris: Hachette; New York: F. W. Christern).

The letters of M. G. de Molinari to the *Journal des Débats*, written during his third visit to America last summer, have been collected under the title: 'Au Canada et aux Montagnes Rocheuses' (Paris: Reinwald; New York: Christern). The writer has filled out his volume with the letters he wrote to the same journal from Russia in 1882, and from Corsica in 1884. The special occasion of his last journey was the excursion on the new direct line of steamers between France and Canada which the author was invited to join. M. Molinari indulges in the usual chat of newspaper correspondents, with a tendency to touch upon economic and social questions natural enough in the chief editor of the *Journal des Économistes*. He has an avowed sympathy for Riel, and during the whole course of his wanderings he takes every opportunity to urge the advantages of free trade.

The publishers Lecène & Oudin (Paris) have begun a series entitled 'Classiques Populaires,' of which two, 'La Fontaine' and 'Corneille,' both edited by Émile Faguet, have been published. They announce as in preparation 'Victor Hugo' and 'Chateaubriand' by M. Ernest Dupuy, and 'Racine' and 'Lamartine' by M. Jules Lemaitre. The two volumes already issued recount simply the lives of the authors, taking up their principal works, which are analyzed, and from which numerous quotations are given. The volume on La Fontaine selects about sixty of the fables, with a running comment sufficient to give a fair idea of the author. The series, though designed for the young, should find favor with older readers who desire to form or to renew an acquaintance with the chief French classics.

Liberal Germany, through the voice of its ever youthful-hearted poet, Friedrich Bodenstedt, and others, paid a well-merited tribute of respect to the memory of Otto von Corvin (Corvin-Wiersbitzki), at his funeral in Wiesbaden, on the 5th of March. Among German workers and sufferers for the ideas of 1848 he was one of the most courageous and truest. As a journalist and popular historical writer he held an honorable rank, in spite of extreme radicalism and propagandist proclivities. Born in East Prussia, in 1812, he received a military education, and became a lieutenant in the Prussian army, but early left the service and devoted himself to literature. He joined the poet Herwegh, in the spring of 1848, in the rash attempt to republicanize Germany through an invasion of Baden, from France, by a motley band of volunteers. In 1849, during the republican rising in that Grand Duchy which followed the breaking up of the Frankfort Parliament, he was chief of staff of the revolutionary forces in the fortress of Rastatt, down to its surrender to the Prince of Prussia, the present Emperor William. He was sentenced to death by a military tribunal, but the sentence was commuted, and he escaped with six years' close confinement in Bruchsal. On his release from prison he went to London, and in 1861 to Washington, as war correspondent of the Augsburg *Allgemeine Zeitung*, a position which he held to the end of our civil conflict. During the Franco-German war he was employed in the same capacity by the *Neue Freie Presse* of Vienna. Among the more interesting of his writings are 'Illustrirte Weltgeschichte' (written jointly with Held; 4 vols., 1844-51), 'Erinnerungen aus meinem Leben' (4 vols., 1861), 'Geschichte der Neuzeit' (3 vols., 1882-3), and 'Aus dem Zellengefängniss' (1884).

One of our readers in Virginia writes us, apropos of the discussion over the Resolutions of '98, as follows: "*W. C.* Nicholas was Governor of Virginia during the war of 1812. It was his brother George who moved to Kentucky and was prominent in the politics of that State, as another brother, John, was in the State of New York. They were sons of Robert Carter Nicholas, the last Colonial Treasurer and the first Treasurer of the Commonwealth."

By the gift of a generous friend of that institution, the trustees of Smith College, Northampton, will erect this summer an astronomical observatory, the chief instruments of which will be a four-inch meridian circle and an equatorial telescope of eleven inches aperture. The glass for the latter is mounted in the cell by the Clarks, and the construction of the mechanical portions of the telescope, as well as the dome to cover it, is intrusted to a firm in Cleveland well known for its successes in such works. The equipment of the observatory will be well represented in special apparatus, including spectroscopic appliances and arrangements for prosecuting research in astronomical photography. The outfit of the large telescope will be unusually rich in those accessories which facilitate the work of the observer, some of these having been specially planned for this instrument. The specifications of the new observatory and its equipment have been prepared by Professor Todd, of Amherst, and the work on the building and instruments is now in progress.

—The *Atlantic* for April is really distinguished among magazines by having no article that is not interesting. One cuts the leaves to find on every page agreeable and varied reading, and passes with delightful ease across those little thresholds of poetry, so brief that one skips over them almost without knowing it. The freshest topic is "Gouverneur Morris." Mr. Lodge writes a charming study of that brilliant man, whose figure is so exceptional among our Revolutionary patriots because of his humor and satire and worldly penetration; and makes the most of his subject by bringing out this social and modern side of him

with only incidental allusion to his political services. The contrast Gouverneur Morris affords to the Frenchmen he counselled on the eve of the Terror, is very effective in enforcing on the mind the divergence between '76 in America and '89 in Paris. The singular felicity of Morris's political prophecies, his remarkable position as an adviser of the King's friends, and his peculiar literary touch, give uniqueness to his whole character. The article on the "Reformation of Charity," which pleads for societies whose business it shall be to apply only intellect in the way of alms, provokes comment; but we pass it to call attention to Julian Hawthorne's analysis of the 'Scarlet Letter,' which instructs us in the difference between the stories that are made and those that are born. It is significant, for example, that, while we find ourselves differing from him, it is in the region of life and not of art construction. In fact, one cannot analyze any work of creative imagination without discussing in the end our mortality; while in the case of the ordinary realistic novel, one may despatch its art without the least necessity of going outside the domain of literary mechanics.

—It may be observed by any constant reader of the magazines that they have their fixed phases in the annual round, like society; and *Harper's*, which we noted last month as unloading itself and leaving the heavy furniture behind, fairly opens the summer season with its current number, and begins three new serials in fiction, by Warner, Blackmore, and "the author of John Halifax, Gentleman." Indeed, in Mr. Warner's story it almost cheats us into believing for a half-hour that we are enjoying the pleasant March climate of Old Point, where the "watering-place season" begins, at least for Northerners. It seems a strange experiment that the writer has undertaken—to give us an *amour de voyage* among the resorts of fashion; and one is interested to see whether the sketches of the traveller or those of the social humorist or those of the story-teller will prevail, or whether the whole will get inextricably mixed. To judge by the first long instalment, the localities and not the characters are most in the writer's eye—the society fills a larger place than the lovers. Old Point and Atlantic City are effectively drawn, the artist's sketches helping by their truthfulness and representative quality; but with the Ohio business man, the under-bred wife, the gentle and self-possessed daughter, the unchanging young man of the period, we are tediously acquainted already, and through the caravansaries of new paint, rough boards, staring advertisements, and all that, North and South—what a journey is before them! Nothing less than Mr. Warner's unfailing and unperturbed humor could diffuse entertainment over such scenes and persons, "weary stale, flat, and unprofitable," as is the quotation itself.

—The Concord Lectures, 1885, on Goethe have been (with some few exceptions) reprinted in book form by Ticknor & Co., Boston. The contents of the volume are as diversified as the characters of the members of the school. They offer not a little information—some of it rather desultory—and numerous apt criticisms and suggestions. Emerson's influence still shows itself, as might be expected. Prof. White's paper on "Goethe's Youth" is a careful résumé. Mrs. Sherman's, on "Child Life as Portrayed by Goethe," is sympathetic. Mrs. Julia Ward Howe writes on "Goethe's Women" with a frankness and a sound justice that are positively refreshing. Mr. F. B. Sanborn's view of "Goethe's Relation to English Literature" is a proper one, yet we could have wished for greater fulness of facts. The Rev. Dr. Bartol, in his comparison of Goethe and Schiller, is scarcely just to the latter. His tone is too harsh. As for the more philosophic articles by Thomas Davidson, D. J. Snider, and W. T Harris, we shall not attempt to combat them, neither shall we accept them unqualifiedly. They seem to us to put into Goethe a more systematic philosophy than he himself was aware of. First, last, and at all times, Goethe was a poet and a man of the world: to lose sight of this primal fact for a single moment is to be in danger of critical astigmatism.

—The mention of Goethe leads us to speak of a work which should have been discussed long ere this. In 1874 Karl Engel brought out his 'Bibliotheca Faustiana,' which was for its day an admirable survey of the subject. It has now reappeared as a practically new work, under the title, 'Zusammenstellung der Faust-Schriften vom 16. Jahrhundert bis Mitte 1884' (Oldenburg: Schulze [Schwarz]. 1885). We can give our readers only an approximate idea of the richness of its contents. In 718 pages no less than 2,713 titles of books, pamphlets, magazine articles, plastic or pictorial illustrations, musical compositions, and the like are cited and often discussed at some length. One has to be blessed with polyglottic gifts to read all these titles in their original tongues. At any rate, one can now see for himself what a wonderful part the *Faustsage* has played in European thought. Naturally the most interesting sections are the first, second, fifth, and seventh. The first, entitled "Geschichte, Sammelwerke, und Allgemeines," contains 206 numbers, beginning with Johann Tritheim's 'Epistles,' 1536, and ending with Zahn's 'Cyprian von Antiochien und die deutsche Faustsage,' 1882. Tritheim's 'Epistles' being now excessively rare, Engel has quoted entire the letter dated August 20, 1507, memorable for being the first known mention of "Magister Georgius Sabellicus, Faustus iunior, fons necromanticorum," etc. Those who wish to get a "realistic" sense *à la* Zola of the moral character of the historic Faust will read the last paragraph. Section second, "Volksbücher," has 88 numbers, beginning with the famous *princeps historia* of Spies, Frankfort, 1587, and ending with Simrock's and Noeggerath's reconstructions, 1877 and 1882. Section fifth, "Bühnenstücke," brings before us the playbills of the eighteenth century, the puppet-plays, Marlowe's 'Faustus,' and the Faustian ballets and pantomimes. Section seventh deals with Goethe's 'Faust' in all its shapes, early and late, translations, adaptations, commentaries, etc., 667 numbers, with four pages of lecture courses delivered between 1851-1883 at the German universities and schools. Section tenth, "Tondichtungen," is scarcely less interesting, with its 253 numbers. Not the least valuable part of the work is its index of names and anonyma. In short, this remodelled 'Bibliotheca Faustiana' is an honor to its compiler and to Germany. No earnest devotee of the subject can afford to be without it.

—In speaking last week of the English scheme of Latin pronunciation, as ventilated in the London *Academy*, we forgot to mention that our copy went down with the *Oregon*, but floated up later. This we interpret as an omen of the buoyancy and irrepressible character of the cause: "plunged in the depths, it comes out fairer still," *merses profundo, pulchrior euenit.* The scheme has been very promptly followed up by a letter from Professor Roby, who approves of the method in general, but does not speak in very buoyant terms about its adoption: "It will, I hope, lead to a reform in practice." Mr. Roby then asks some pertinent questions, for the details of which the inquisitive are referred to his letter in the *Academy* of March 13. One point, however, we note, as coinciding exactly with what we named last week as an imperfection in the scheme—the vague way in which quantity is referred to: "Again, I do not know how much is intended to be implied by the committee's selection of *sĕcta, rēctus, tĕctus*, as instances of the Roman [Latin?] pronunciation of vowels before two consonants." Surely something more explicit is desired here. In passing, we may remark that many, perhaps most, of the American colleges have abandoned oral examinations for admission, and substituted paper work. The result is a very slovenly and slipshod pronunciation of Latin. On this point the temperate but decided words of Ritschl may be quoted: "The salvation of the world does not depend on these things; but decently, or not at all: *aber ordentlich! oder gar nicht.*"

—The Treasury Commission for investigating the Coast Survey have addressed a communication to the Secretary of the Treasury in which they say: "In the light of the demonstrated inaccuracy of some of the evidence upon which the Committee relied, and to the extent hereinbefore indicated, it is but just to admit that the criticism of Mr. C. S. Peirce in the Committee's report was unwarranted by the facts." It is understood to be admitted that Mr. Peirce's expenditures were overstated and his work undervalued. The only criticism the Committee continue to maintain is, that he practically conducted his operations as he saw fit. His work has been done under detailed instructions issued by the Superintendent of the Survey, and these instructions have been based upon projects which Mr. Peirce was required to submit each season. We will only add that this finding is what every one acquainted with Mr. Peirce must have expected as the result of a calm and unprejudiced examination.

—French sympathies regarding the minor nations of eastern Europe have of late been showing a strong leaning toward the Slavic side, chiefly to the disadvantage of Magyars and Greeks. Panslavism threatens Germany and her ally, Austria-Hungary: it is but natural that it should be favorably viewed by French writers. Its strongest opponents north of the Balkans are the Hungarians, and south of that range the Greeks. M. Louis Leger, Professor of Slavic Languages at the Collège de France, is probably the most diligent exponent of pro-Slavic sentiments in his country. Of his numerous writings we may mention 'Le Monde Slave' (1873), 'Études Slaves' (1875), 'Histoire de l'Autriche-Hongrie' (1878), 'Nouvelles Études Slaves' (1880), 'La Save, le Danube et le Balkan' (1884), and his latest publication, 'La Bulgarie' (1885). M. Leger's knowledge of Slavic things is both extensive and sound, being based in part on personal observation and connections. His friendly bias, however, colors almost every page of his books. The last named, which contains mainly literary sketches—though it requires a flight of the imagination to discover matter for both a "Renaissance littéraire des Bulgares" and a "Littérature bulgare contemporaine"—naturally applauds the union of the two Bulgarias effected by the revolution, or *coup d'état*, of September 18, 1885, but abstains from alluding to the leading actors in that lively little drama. It eulogizes the political abilities of the Bulgarians—a nation which played so conspicuous a part in the history of southeastern Europe in the earlier periods of the Middle Ages, but, after the Ottoman advance, almost disappeared as an ethnic individuality from the scene of history, and as late as sixty years ago (before the Russian armies crossed the Balkans under Diebitsch) was unknown as a people to the greatest writers on the Slavic past and present, such as Kopitar, Dobrovsky, and Schafarik. M. Leger deplores Servia's blindness and

selfish action, but puts the guilt of her hostility to Bulgaria on Austro-Hungarian shoulders. Greece he treats in a less friendly spirit than Turkey herself.

MAINE'S POPULAR GOVERNMENT.—II.

Popular Government: Four Essays. By Sir Henry Sumner Maine. London: John Murray; New York: Henry Holt & Co. 1885.

One source of Maine's power must be obvious to any man endowed with the slightest taste for letters. The author of 'Ancient Law' possesses a more perfect literary style than any living English writer. The very perfection of his mastery, not only of language but of statement—there are writers, like Froude, for instance, who have an admirable command of words and yet cannot state facts or arguments with clearness—is the only thing which ever makes the world forget the admirable quality of Maine's style. It has no affectations; it has no unevenness; it has no dryness; it has no hardness. The words used seem the most natural means for conveying the thoughts or suggestions of the writer. Readers feel as if they knew at once what the author meant, and yet they are not oppressed with that sense of emphatic and irritating clearness which is as trying to human patience and temper as is verbosity or obscurity. The opening pages of 'Popular Government' supply as good a specimen of Maine's literary skill as can be found in his writings. He starts from the text that "the blindness of the privileged classes in France to the Revolution which was about to overwhelm them, furnishes some of the best-worn commonplaces of modern history"; he shows how untenable is the idea, based on our subsequent knowledge, that the French *noblesse* displayed any extraordinary want of foresight, and ends by leading us up to the conclusion that future historians may wonder as much over the blindness of the unprivileged classes in England as we are accustomed to wonder at the blindness exhibited by the privileged nobility of France. Now the point for notice is, for our purpose, not the truth or the untruth of this conclusion, but the wonderful and perfectly legitimate art with which Maine leads his disciples up to the point of view from which he wishes them to contemplate democratic government. Not a word is wasted, no direct appeal is made to argument; but intelligent readers have hardly read through a third of our author's first essay before they are made to realize the uncertainty of all political dogmas, and to feel that our present faith in democracy may be as misplaced as was the easy confidence of the French nobility, who, in the firm belief that they were advancing towards a political millennium, followed the path which suddenly led them into the midst of the Reign of Terror. Our teacher, like an even greater master of style, winds into his subject "like a serpent," and leads his pupils on to the conclusions at which he wishes them to arrive by a process of literary persuasion. He does not irritate his readers by arguing them out of their opinions; he does not offend them by the explanatory condescension of professorial exposition. He rather encourages them to follow out the train of thoughts which naturally come into their minds. Thus his pupils feel, not that they have been converted from dogmatic radicalism by Sir Henry Maine, but that he has revealed to them the fact of their and his conversion.

This command of style is no light matter, for it is command of rhetoric, and good rhetoric means insight into human nature. But gifts of style would not be sufficient to account for the way in which Maine wins over educated men to sympathy with new and (in the case of his last book) unwelcome conclusions. Sir Henry Maine, besides his rhetorical facility, possesses two noteworthy talents, which would be of themselves almost sufficient to explain his literary success. He has, in the first place, the keenest eye for the striking and interesting sides of any subject which he has in hand. This is the quality which gives the extraordinary merit to his 'Ancient Law.' Much of it refers to matters which, though in 1861 they were novelties to Englishmen, had long been discussed on the Continent. But our author gave new life to old topics by omitting unnecessary details and tedious discussions, and dwelling exclusively on the important and general inferences suggested by the history of Roman law. It is preëminently characteristic of this mode of treatment that Sir Henry Maine rarely if ever cites authorities. We do not ourselves censure this omission of references, though it is not without its evils: we call attention to it simply as a trait characteristic of a teacher who makes it his object—and the aim is in itself a perfectly legitimate one—not so much to convey information as to arouse public attention to new ideas. Details are out of place when the object of the painter is to impress the imagination with the large outlines of his subject.

Sir Henry Maine possesses, in the second place, inexhaustible suggestiveness. It would be hard to draw from any of his works, and certainly from his last publication, a list of definite principles which he systematically defends. In this respect he is utterly unlike reasoners such as Mr. Justice Stephen, the late Mr. Greg, or John Mill. Sir Henry Maine can argue, and argue in his way with great force; but he is hardly an argumentative writer in the sense in which this term can be applied to these three distinguished authors. He does not rely for the effect which he produces so much on systematic reasoning as on the force of statement and suggestion. The result is, that while no one can read 'Popular Government' without feeling, and in our judgment justly feeling, that his faith in democratic institutions, though it may not be overthrown, has received a shock, yet none but the most skilful controversialists would be able to put in a fair and quite accurate form the propositions which the treatise is meant to enforce. Propositions are from their nature definite assertions. But the strength of the attack on "popular government"—the expression itself, by the way, is a very vague one—lies not in definite assertions, but in impressive suggestions. What, for example, is the exact lesson to be drawn from the violent ends of many Mexican Presidents, is not perhaps quite easy to state; but the fact that the democracy of Mexico has not produced either order or liberty certainly gives rise to reflections not favorable to popular government. Now to a generation whose taste is repelled by the formalism or pedantry of set argument, or whose indolence dislikes the trouble of systematic reasoning, nothing is more charming than the substitution of suggestions for direct appeals to the understanding. Sir Henry Maine, in short, by his literary brilliancy, by his breadth of view, by his infinitive suggestiveness, exactly meets the taste of the time. His writings correspond with the spirit of the age, and therefore exert immense and in many respects quite legitimate influence.

It is far easier to note the causes than to determine the probable permanence of Sir Henry Maine's influence. Whoever appreciates our author's rare intellectual gifts, and notes the great extent to which literary immortality is due to style, will be inclined to augur that Maine's 'Ancient Law' will take its place among books which have become classics, such, for example, as are Bacon's 'Essays,' Hobbes's 'Leviathan,' Burke's 'Thoughts on the Cause of the Present Discontent in England,' and Montesquieu's 'Esprit des Lois' in France. But when one comes to consider the merits no less than the demerits of Maine's 'Popular Government,' it is impossible not to entertain a doubt how far it will share the fortune of his first and, in our judgment, his best book. The immediate effect produced by the four essays which make up the treatise on popular government is, as the warmest of our author's admirers will admit, due in great measure to the circumstances of the day. The work gives adequate expression to a very peculiar phase of English sentiment. The well-to-do classes in England are not inspired by any hatred of democracy; the lapse of nearly a century has extinguished the anti-Jacobin enthusiasm roused by the horrors of the Revolution. The immense stability exhibited by the structure of English society has impressed upon the mass of educated Englishmen the conviction that political changes produce, if much less good, yet also infinitely less evil, than is conventionally ascribed to them. The governing classes in the country, therefore, have acquiesced in the establishment of democratic institutions; but acquiescence is different from enthusiasm, and it may be doubted whether any generation ever expected less from political innovations than do Englishmen of the year 1886. A fact, moreover, is just at this moment becoming apparent to ordinary politicians which has long been known to thinkers—namely, that the spirit of popular government is not easy to reconcile with the spirit and the exigencies of British imperialism. The time is one marked, to use a word of Maine's own, by disillusionment. 'Popular Government' gives exact expression to this feeling; its drift is, that democracy is a mere form of government, and a form which, like other schemes of polity, may pass away. While it exists, our true wisdom is, our teacher suggests, to make the best of a somewhat indifferent piece of political mechanism. The lesson may be sound or unsound; but, whatever be its intrinsic merits, it singularly suits the prevalent temper of the nation and the class to which it is addressed. This peculiarity, while it contributes immensely to the immediate success of Sir Henry Maine's latest work, is, to say the least, of bad omen for its lasting reputation. A book suggested by temporary causes may indeed have in it elements of permanent vitality. Malthus was roused to write on population in the main (it would appear) from a desire to outargue his father, and to confute the author on whose teaching his father's convictions mainly depended; yet his treatise has influenced the whole current of political and even of moral speculation. The fallacies of 'Political Justice' are forgotten, while the 'Treatise on Population,' if it ever goes out of human memory, will perish only because its essential doctrines have been embraced in the wider principles of Darwinism.

If we seek for the reason of this vitality, we shall find it in the fact that, if the occasion which gave rise to the essay on population was temporary, the author's speculative genius led him to pursue a line of disinterested thought and careful research. Contrast the fate of Malthus on 'Population' with Burke's celebrated 'Letters on a Regicide Peace.' They sounded through Europe like the blast of a trumpet: they summoned hosts to arms; they contained, moreover, a mass of criticism on the Revolution which, one-sided as it is, turns out also to be, as far as it goes, so true that the last historian of the Revolution might be described as a collector of *pièces justificatives* for the invective of Burke. Yet for all this the celebrated 'Letters' are dead; they are read, if at all, for their rhetorical power and not for their substance. The reason of this is obvious. Burke's 'Letters' have every merit but one: the virtue which they lack is the virtue of intellectual disinterestedness. They were composed for a purpose, they attained their ob-

ject; but the qualities which led to an immediate and splendid triumph were, from their nature, fatal to permanent and enduring influence. And what is true in the highest degree of Burke's celebrated 'Letters' is true, though in a less degree, of every word that he wrote or spoke. The necessities of the politician biassed the work of the philosophical theorist, and that judgment of the world which in the long run is unerring, has refused to accept political partisanship for philosophic speculation.

This want of absolute disinterestedness is, from the political habits of Englishmen, the special weakness of English thinkers. But it also infects the writings of foreigners and of men endowed with judgments calmer than the passionate intellect of Burke. Montesquieu's 'Esprit des Lois' teems with acute reflections. De Tocqueville was felt, and rightly felt by the generation whom he addressed, to be the most original thinker of his day. Yet each of these writers is felt by every careful student to be lacking in absolute intellectual disinterestedness. Montesquieu may write about England, China, or Japan—his eye is always fixed upon France; the real object of his work is to detect or censure the defects of the French monarchy. De Tocqueville appeared to himself and to his friends to be the impartial critic of democratic government, but his analysis of 'Democracy in America' is nothing else than a criticism of tendencies, most of which he disliked, in the political and social habits of Frenchmen. Both his great works breathe the spirit of the period in which they were composed. Every word of the 'Ancien Régime' is unconsciously influenced by the author's feeling with regard to the Empire. Of course, in the case of De Tocqueville as of Montesquieu, of whom he is in some sense the follower, the genius of the writer has produced thoughts of permanent value which mankind will hardly let die. But these thoughts will generally be found to be the speculations which had least to do with the immediate wants of the age in which they were produced. Immortal thoughts, like immortal acts, are always disinterested. Now the question which suggests itself to even the most admiring critics of Maine's 'Popular Government' is whether, with all its merits, it contains enough disinterested thought to keep it alive when the sentiment of 1886 has given place to some other form of feeling. That it has some such elements we do not dispute, but it is, both for good and bad, more of a political pamphlet than a speculative treatise. The author may urge that he wrote with the patriotic aim of resisting prevalent delusions. So be it. This aim has been, and no doubt will be, to a great extent, attained; but our cordial admiration for Sir Henry Maine's works inspires us with some regret that the rarest powers of expression and of thought should be employed in the partisan warfare of the moment. Hundreds will read 'Popular Government' who will not care to study 'Ancient Law.' But to students Maine's great work will still remain his 'Ancient Law.'

WALDSTEIN'S ART OF PHIDIAS.

Essays on the Art of Pheidias. By Charles Waldstein, M.A., Director of the Fitzwilliam Museum and Reader of Classical Archæology in the University of Cambridge; Ph.D. Heidelberg; M.A. Columbia College, N. Y. Cambridge, Eng.: University Press; New York: The Century Co. 1885.

It is not quite clear for what class of readers Mr. Waldstein's book is intended. It deals partly with the rudimentary generalities of artistic criticism, and in part with such archæological minutiæ as are usually welcome only to the special student—a discrepancy which is perhaps due to first publishing in the *Century* some of the essays which are now collected, while others were written for strictly technical readers. The book has an air of looking both ways, and carries off this rather difficult attitude as well, perhaps, as is practicable. The essays which make the body of the work are a connected series, discussing Phidias and the sculpture of the Parthenon. The author's method, as he tells us, "consists in leading to the ultimate result of a general and complete knowledge of the subject as a whole; but the fixing of this knowledge in the mind of the reader is effected by means of a continuous series of separate investigations, arranged in a methodical manner so as to enter into every special question and still to cover the whole ground of inquiry." One of his purposes, professed in the Note to the American Edition, is to make clear to his countrymen the modern aims and methods of archæological study; and no better exponent of them could offer. After an introductory essay on the study of classical archæology, the next, on the spirit of the art of Phidias, is followed by a series of discussions of the Parthenon sculptures in series—the metopes, the pediments, the frieze, the Athena Parthenos; and the subject is closed by another general essay on the influence of the school of Phidias upon his followers. Four other essays, on kindred subjects, are reprinted from scientific journals in the form of an appendix.

Mr. Waldstein lays emphasis on the application to his studies of the comparative method, distinguished from the examination of records; that is, by comparison of the works of art themselves, by tracing from one to another the peculiarities of artist and school. The reader may admire the disciplined keenness with which attitudes, proportions, details of the human figure or of drapery, tricks of workmanship, are recognized and followed as characteristic of this or that sculptor or school; the minuteness and the cogency with which reasoning based on these leads from one identification to another, the lights that cross and recross between this line of investigation and the parallel study of texts and inscriptions. Doubtless indifferent readers may be led by the charm of Mr. Waldstein's enthusiasm and the story of his researches to an interest in subjects which were before dull to them, and to new respect for the powers and equipment of mind which they presuppose. The *points de repère* by which Mr. Waldstein lays out his discussions are naturally in most cases the identifications and discoveries to which his own independent study has been turned. Thus the salient topic in the essay on the metopes is his identification of a head, which had lain undistinguished in the Louvre, as that of a Lapith in one of the metopes in the British Museum. This is an archæological find of value and a credit to Mr. Waldstein's knowledge and acuteness. (The Centaur's head, here attached to the same metope, but assigned by Michaelis to another, does not to us look at home in its position in the illustration.) So the burden of the essays on the pediment sculpture is the identification of a fragment which the author distinguished in the Museum of the Ducal Palace at Venice, and the establishing of certain personifications among the figures, which he works out with great ingenuity and abundant parallel examples. Mr. Waldstein follows Brunn in his theory of landscape personification. He agrees with him in considering the figure most commonly known as Theseus to be a personification of Mount Olympus, on whose summit the gods met to witness the birth of Athena. This figure occupied the left-hand corner of the eastern pediment, next the extreme angle where the horses which are universally accounted those of Helios are rising out of the sea. Mr. Waldstein adds the plausible theory that the two reclining female figures at the other end of the pediment, next the descending group of Selene, personify Thalassa in the lap of Gaia. We will not venture into the perils of these questions further than to recognize the force of Mr. Waldstein's citations in favor of this personification of the sea, which is perhaps the most important of his identifications, and the plausibility of his reasonings from analogy. It is noteworthy that though this figure was named Thalassa by Weber as long ago as 1822, none of the later authorities have followed him, and that it was left for Mr. Waldstein, in view of its inseparability from the adjoining figure, to name the two together the Sea and the Land.

In his discussion of the frieze of the cella of the Parthenon, from which the chief part of the Elgin marbles is taken, Mr. Waldstein brings to the front the fragment of a terracotta slab which he discovered a while ago among some unregarded fragments in the Louvre, as those will remember who read the article in the *Century* which here makes the sixth essay. It is an evidence of Mr. Waldstein's quickness and sureness of eye that he at once picked out this bit of terracotta, valuable because it contains in perfect condition the head of Athena (mutilated in the marble), although it had long lain unrecognized under the eyes of its keepers at the Louvre. The artistic quality and the appearance of this relief, which is a third as large in scale as the frieze, were such that Mr. Waldstein, discussing its relation to the marble original, conceived the startling theory that it was not only a genuine antique, but an actual model made by Phidias himself for the marble cutters. Further search showed him another terracotta fragment in the Kircherian Museum at Rome which exactly joined and completed that of the Louvre, while in the Museum at Copenhagen was a third fragment, noted by Petersen, which contained the next adjoining figure of the frieze, and corresponded entirely to the other two. But presently Mr. Waldstein found in Mr. Simmons's studio at Rome a series of plaster casts, much fuller, and containing the subjects of the terracotta slabs. These had come from the collection of the sculptor Tenerani; but neither plasters nor terracottas could be traced far back. Comparison showed them to be duplicates, allowing for the difference of material, but the terracottas were smaller in just the proportion in which they should have shrunk in firing if made from the same mould as the plaster. The plasters, then, could not possibly have been taken from the terracottas, but must either be their parents or children of a common parentage. This seems to us fatal to the antiquity of the terracottas, yet to Mr. Waldstein still "the view which presents the fewest serious difficulties is that the plaques are genuine antiques."

Here is a cue to what are, in our judgment, the shortcomings of Mr. Waldstein's book. With evident desire to argue his propositions fairly and state his cases evenly, he is possessed by his enthusiasms. While these make his discussion interesting and persuasive, they lead him to a positiveness in details which savors of overstatement and lends an ex-parte color to his arguments. This may not offend the general reader, who likes an animated discussion, but it spurs the student to question and dissent. Generalizations and inferences which a cautious writer would be careful to give as probabilities only, are put without hesitation or qualification in a way to easily mislead the trusting inquirer, and even the ordinary reader may be a little shaken when he reads such a passage as this description of the eastern pediment: "Hephaistos has just dealt the blow, and the virgin goddess [Athena], fully armed, swinging her spear, stands before her father, the king of the gods, and the assembled deities, and all are wrapped in wonderment. Hera and Poseidon, Apollo and Artemis, Aphro-

dite and Ares, Dionysus and Hermes, all are there. . . . Selene turns back to give one more look over the sea and land to the heights" —he may be a little shaken, we say, at the thought that the whole centre of the scene has been missing for centuries, and never recorded; that the virgin goddess, the king of the gods, Hera, Poseidon, Apollo, Artemis, Aphrodite, Ares, Dionysus, and Hermes are conspicuously absent, and Hephaistos and Selene only presumably represented by two limbless, headless trunks dug up from the ground below. This, it is true, is not archæology—it is only a peroration; but it is said without qualification, and the same unguarded manner runs through much of the author's argumentation, leading him at times to support even a plausible thesis by arguments which almost discredit it.

A like want of reserve, it seems to us, makes the point of view from which Mr. Waldstein looks at his subject insecure. The worship of Phidias among students of Greek art is probably as thoroughly justified as any hero-worship. We grant him to have been the greatest of sculptors. But every such cult is apt to lead its devotees to ascribe actions to their heroes simply for lack of another claimant. The time of Phidias was clearly a time of transition in art. It was also a time of unusual activity and fecundity, in which the producers as well as the works must have been very numerous. It would seem as if under Pericles's reconstructions all the energy of Athens went into its building; as in Boston and Chicago after their great fires. We are told that Phidias was his commissioner of works, and that he had the oversight of all the artists and workmen with whom Athens swarmed. We are told nothing of his labor upon any of the great buildings which went on at that time, except that it was he who wrought (ἐργάζετο) the chryselephantine statue of Athena, the Parthenos, which stood in the Parthenon, and signed his name to it. But the sculpture of the Parthenon alone included two huge pediments, each a hundred feet wide, crowded with colossal statues of men and horses; ninety-two metopes containing each two figures, or more, under life size, but practically sculptured in the round; a frieze covered with some four hundred figures in relief and a crowd of horses. The Parthenon, the Propylæa, the Odeum, the temple of the Dioscuri, that at Eleusis, all went on under their several architects, and Plutarch says that the most wonderful thing of all was the rapidity of their building. It is difficult to see how the man who had the oversight of the whole could design in detail the decoration of any, least of all a building so enormously elaborate as the Parthenon, while the chryselephantine colossus alone might well have given him two or three years of work.

But it is a habit among archæologists to hold him responsible for all the sculpture of the Parthenon. Mr. Waldstein's book ascribes everything to him. Not only the general iconography of the Parthenon is his, the schemes of composition, the distribution of figures; not only the carrying out of the most important groups is controlled by his supervision, but, in the design of the individual figures the character of heads, the modelling of limbs, the very folds of draperies are his, and even the peculiarities of handicraft in the cutting of the reliefs are idiosyncrasies of Phidias. Among the sculptures of the Parthenon there are considerable differences of style, especially among the metopes, where some show distinct traces of archaism, and others are advanced in style. In these differences Mr. Waldstein sees indications of the personal growth of Phidias, his rapid advance from early imperfection to perfect skill, and the same thing in less degree in the two pediments. But Phidias was presumably at the height of his fame when Pericles put him in authority, and had made himself famous by a great number of important public works, which imply fully developed powers: to assume that he got his schooling among the metopes of the Parthenon, executed as they must have been by many hands and in a wonderfully short time—that is, in great part simultaneously —seems to us very venturesome. Students of the history of art know that in periods of transition great disparities of style are found among artists who have worked side by side. In the thirteenth century, where the record is clearer and the chronology surer, at a period very analogous in its rapidity of development to the time of Phidias, we find convincing examples. We see among the churches of the Isle of France, for instance, ranges of carved capitals which must be contemporaneous, yet show the differences of style that mark successive generations. The conclusion is that they were cut by carvers of different habit —that men who held to an old manner worked side by side with others who were full of a new spirit. The examples are too common to be overlooked, and the analogy in the Parthenon is obvious. In Mr. Waldstein's discussions the vision of Phidias overshadows everything else, and leaves no room for any design, any initiative, any style, any idiosyncrasies but his. This is not going so far as another authority we have met, who ascribes even the architecture of the Parthenon to Phidias, and leaves Ictinus and Callicrates in the cold; but it seems to us going too far. It will be safer to assume that Phidias had under him men who, if less famous, stood as near to him as Giulio Romano to Raphael, or Sebastiano del Piombo to Michael Angelo. But we are only told that certain individual figures in Del Piombo's compositions were actually sketched by Michael Angelo, and it is even known that he gave their combined work a coloring which Michael Angelo could not have furnished. On the other hand, to furnish the model for a single sculptured figure involves more labor than to sketch scores of figures for another's painting.

To see only Phidias in all the sculpture of the Periclean period greatly simplifies the *coup d'œil*, but is likely to be misleading. It were well to study the whole question from a more impersonal point of view, and we may more reasonably say that to our sight Phidias is only a name for a particular phase of a nation's art. If there is homogeneity in the work, it argues homogeneity among the artists: where there are differences, we find what we had a right to expect. What we have sufficient authority for attributing to Phidias is represented to our eyes only by two rude statuettes which imitate the Parthenos, the stamps on various coins, and far-off echoes in the design of a number of statues of later periods. That his reputation entirely overshadowed his fellow-sculptors we have evidence in the works of late writers both Greek and Roman. But how much he had to do with the decoration of the Parthenon is a question of pure conjecture; for while we are told that he made the Athena of gold and ivory within it, and while a score of his other works are described or particularized by various writers, we find no witness of his connection with the work on the Parthenon itself.

Mr. Waldstein discusses at some length the puzzling group in the middle of the eastern end of the frieze. Adopting and improving on a suggestion of Mr. A. S. Murray, he calls attention to the quasi-perspective in the treatment of the frieze, and holds that the figures which, in the middle, break the assembly of the gods, represent a recessed group. They are seen through the gap between the gods, who are separated into two divisions, looking opposite ways towards the two arms of the procession which approach from the north and south sides of the cella. For this view he argues with much clearness and probability. The action of the central group, thus reduced to secondary importance, he holds, with Flasch, to represent the priest preparing for the ceremony, and not, as has been commonly taken for granted, the consecration of the peplos of Athena. To part of his discussion of the frieze we must decidedly take exception. It has been a standing paradox that this enormously elaborate frieze, sculptured with a delicacy and refinement which have been the wonder of later ages, should be set at a height of forty feet, under a narrow portico which cut off all light but what was reflected from below, and is so narrow that the spectator cannot get ten feet away from the foot of the wall which carries the frieze. The false and inadequate lighting must have thrown the modelling into confusion even if the figures were detached from the ground and each other by positive colors: the extreme obliquity of view would have ruined the contours even of a painting in flat tints. Mr. Waldstein cannot accept what seems to us the inevitable. He argues at length and with much minuteness to prove that Phidias took careful account of these disadvantages, and with wonderful technical skill and by the idiosyncrasies of his relief work overcame them and made his sculpture clear to the spectator. The peculiarities of treatment which he cites in support of his position are not idiosyncrasies of Phidias, we think, but have been the common property of skilful carvers of reliefs at all times, most of them having birth in other technical necessities than those to which he ascribes them. That whoever cut the Parthenon frieze used, as a matter of course, the technical precautions which have been common in other finished schools for treatment of reliefs above the eye, and which presumably were so in Phidias's time, we can easily believe; but we cannot believe that they hoped to overcome the peculiar difficulties of the situation. As the frieze is now set in the British Museum, nearly on the level of the eye, it is seen as it never was by Phidias's countrymen. Whoever will take the trouble, as we have done, to study a full-sized cast from the frieze high above the eye at an angle of fifteen degrees with its plane, will soon convince himself that to expect to cure its obliquity by the delicate devices cited by Mr. Waldstein was hardly more hopeful than to mend a broken leg with glue. He will probably decide that Phidias was not the blunderer that Mr. Waldstein's argument would make him out to be, and will prefer to think that the sculptors of the Parthenon, just as in the pediment they carved the unseen side of the Theseus (or Olympus) as delicately as the visible, found their satisfaction in doing their work on the frieze as well as they could do it, rather than in its effect to the eye below.

The application of the comparative method to the study of ancient art, of which Mr. Waldstein's book is an exposition, opens out many lines of investigation to which there is no guide in the study of records. Identifications, the tracing of connections, sequences, developments, become possible beyond the rigid boundaries of documentary evidence. Its processes are naturally more interesting than the sifting of texts, and their results more enticing. It is more attractive to trace the draperies of Phidias or the lines of Praxiteles in the work of other sculptors than to verify texts, or to classify inscriptions by the form of an S and the termination of a genitive. But it is also more hazardous. Conclusions so reached are not so convincingly proved. Observers differ much more in their perceptions of artistic qualities than of dialectic or epigraphic forms. To distinguish securely the technical idiosyncrasies of a particular artist is a problem of elimination which calls for not only a knowledge of the master himself, but familiarity with

the general stock of technical expedients. Nothing is easier than to strain beyond their significance the details of artistic treatment or of subtle interpretations. We think we see an instance of this in Mr. Waldstein's minute discussion of the drapery of the two figures above mentioned as Thalassa and Gaia. Safety lies only in a wide induction. Critics of art are constantly assigning subtle esoteric meanings to things which are simply matters of artistic effect or technical processes; and it is not given to every investigator to add to the trained scholarship of the archæologist an eye so open and so sympathetic to the artist's means of expression as Dr. Waldstein's.

BOOKS ABOUT THE STAGE.

Rachel. By Nina H. Kennard. (Famous Women Series). Boston: Roberts Bros.

Adelaide Neilson: A Souvenir. By Laura C. Holloway. Funk & Wagnalls.

The Art of the Stage, as set out in Lamb's Dramatic Essays, with a Commentary. By Percy Fitzgerald, M.A., F.S.A. London: Remington & Co.; New York: Scribner & Welford.

La Femme du Comique. Par L. P. Laforêt. Paris: Giraud; New York: F. W. Christern.

Les Hommes-Phénomènes. Par Guyot-Daubes. Paris: Masson; New York: F. W. Christern.

THERE was already a shelf-full of books and pamphlets about Rachel—Jules Janin's 'Rachel et la Tragédie'; Mme. de Bury's slightly hostile biography; Beauvallet's 'Rachel en Amérique,' which contains hardly a word of praise for anything American, except for the acting of Mr. William Warren, the Boston comedian; and the collection of correspondence by M. George d'Heylli. This latest attempt at a biography is by an English lady, Mrs. Kennard, who succeeds in giving a distinct and accurate impression of the woman, although she fails in the far more difficult task of setting before us the genius of the actress. We are told repeatedly in these pages that Rachel was a great actress, and evidence is adduced to show that she was regarded as such by the leading contemporary critics and by the wide play-going public. But Mrs. Kennard does not explain to us how she was great, wherein her genius was triumphant over obstacles, or wherein it was aided by the restrictions of French tragedy. It would be interesting to have considered why it was that Rachel was greatest in Racine and Corneille, and why she failed in the few romantic parts she attempted and in all the modern plays written for her, excepting only the classic "Moineau de Lesbie" and the skilfully arranged "Adrienne Lecouvreur." As to the height of her histrionic power, and as to its well-defined limits, the student will get a better idea from Lewes's brief chapter than from Mrs. Kennard's whole book, although the latter abounds in information not without interest. That Rachel was the greatest actress who ever lived—with the possible exception of Mrs. Siddons—seems to us indisputable; and it is a pity that there should not be a biography of her in which the mere facts of her career might be subordinated to a consideration of her artistic development. Mrs. Kennard's book is good enough as far as unessentials are concerned; it might have been well to quote Legouvé's curious account of Rachel's rejection of "Adrienne Lecouvreur" when Scribe read the play to her, and her acceptance of it when he (Legouvé) read the part *at* her; but in general our authoress has been very diligent in collecting suitable material from the many memoirs and pamphlets of the time. It is a pity that her knowledge of the history of the French stage is not equal to her industry and her zeal. For instance, although Mlle. Mars was elected an associate of the Comédie-Française in 1799, it is scarcely exact to speak "of the grace and beauty that enchanted the France of the latter end of the preceding century," for it was not until after 1800 that Mlle. Mars came before the public in a new character of any special importance. There are also not a few unfortunate misprints, *clique* for *claque*, Rancourt for Raucourt, Bohan for Brohan, Baptiste Aimé for *aîné*, "Vendéene" for "Vendéenne," etc. And there is no index.

With all its faults Mrs. Kennard's 'Rachel' is immensely superior to Mrs. Holloway's 'Adelaide Neilson.' In a way one may venture to see a certain likeness in character and in career between Rachel, who was a genius, and Neilson, who was a beauty. Rachel, indeed, had beauty only in so far as her genius gave it to her; and Adelaide Neilson had genius only in so far as beauty is genius. They were both successful and miserable women; and they both were wanting in the chief virtue of woman. Mrs. Kennard honestly and briefly gives the facts about the dark stain on Rachel's character, without dwelling on the matter either prudishly or pruriently; she handles a delicate subject with delicacy and frankness. Mrs. Holloway chooses to be blind to what is notorious in Neilson's career, while yet hinting at "slanderous enemies," "the storms of a wayward and passionate youth," and so on. In the main, Mrs. Holloway's book is a medley of rambling rhapsody and second-hand gossip. There is nowhere any connected account of Neilson's theatrical career, or any serious attempt to estimate her histrionic ability. Such value as this "souvenir" may have is due wholly to the eight photographs of the actress, four of them as *Juliet*—undoubtedly her best part, for beauty is the stage *Juliet's* chiefest requisite—and others of *Pauline*, *Cymbeline*, and *Viola*.

Mr. Percy Fitzgerald is one of the most careless of theatrical biographers: his 'Life of Garrick,' for instance, is a model of what a histrionic memoir should not be, and his 'Lives of the Kembles' is little, if any, better. But he is well read in the history of the stage, he has studied the good critics, and he has laid hold of not a little sound doctrine. From Charles Lamb he has learned most; and, despite his fondness for paradox, Lamb was one of the very best critics of the acted drama. Mr. Fitzgerald has now brought together in one volume Lamb's various dramatic essays, accompanying them with a Comment of his own, in which he seeks to apply Lamb's principles to the contemporary English stage. In England, far more than here or in France, there is a frequent effort to put "the real thing" on the stage—an effort doomed to inevitable failure. Real pumps, real horses, and real cabs, or elaborately "built-up" houses, have nothing whatever to do with the drama. A realistic imitation of nature—instead of an artistic suggestion—is directly contrary to the *optique du théâtre*. Lowell said that Wordsworth was constantly mistaking fact, which chokes the muse, for truth, which is the breath of her nostrils; and M. Zola in his preaching, and many an English manager in his practice, is constantly making Wordsworth's mistake without Wordsworth's excuse. Mr. Fitzgerald's use of Lamb's sharp pen to combat this delusion is most welcome.

Despite the prefatory letter of M. Émile Augier, which led us to expect a serious study from life, M. Laforêt's novel, 'La Femme du Comique,' is of very little value, and is not to be included among the really good stories of French theatrical life, of which M. Jules Claretie's 'Troisième Dessous' (notwithstanding its inordinate length), M. Edgar Monteil's 'Cornebois,' and M. Cadol's 'Rose' remain the best.

About ten years ago M. Gaston Escudier published a picturesque and interesting volume on 'Les Saltimbanques.' It was written from the literary, not to say journalistic, point of view, and was a clever piece of descriptive work. Now M. Guyot-Daubes, in his 'Hommes-Phénomènes,' approaches the subject from the scientific side, and is quite as entertaining. His book belongs to the "Bibliothèque de *la Nature*"; and in it he considers at length and in turn the feats of the professional strong man, of runners (omitting all mention of the anomalous go-as-you-please contests, now happily obsolescent), of leapers, of swimmers and divers, of acrobats and contortionists, of jugglers and sword-swallowers, and of sharpshooters. It is highly amusing, by the way, to note that his authority for the skill of marksmanship supposed to exist among the hunters of Kentucky is Audubon: we cannot help wondering whether the French author really supposes that there has been no change in the half-century or more since Audubon wrote. It is some sop to our national vanity to see that the sharpshooter whose feats seem to be best known to M. Guyot-Daubes is Mr. Ira-Païne, performing in Paris not long ago in some Parisian modification of the American "variety show." Among the most entertaining of M. Guyot-Daubes's always entertaining pages are those discussing the great gifts of the Japanese acrobats and equilibrists; but his observations are not final. A treatise on Japanese gymnastics by an expert is as much to be desired as a treatise on Indian conjuring by an expert: both subjects are little understood.

Flying Leaves from East and West. By Emily Pfeiffer. Scribner & Welford. 1885.

THE author of this volume, although a poetess, was wiser than the sibyl, and carefully consigned her vagrant screeds to the safe custody of the mail-bag. It is difficult to make out whether the little chapters are passages from a note-book, or letters home, or public correspondence. They have the characteristics of all three kinds of fragmentary compositions—now discursive, and now intimate, and again streaked with that sort of social philosophy which takes itself seriously only in London papers. There are a few of these "leaves" from Asia Minor, each prettily pictorial with gardens, and divans, and harems, and decayed palaces, and brides, and eunuchs; but nearly all are from the West—our own country and Canada. The traveller made what she calls "the round trip" from New York by the Canadian cities to Chicago, and thence to California and back to St. Louis and Washington, winding up with Boston. The time, however, was short, and really sufficed only for a view of the celebrated points, and such a surface glimpse of the people as an intelligent and interested tourist would satisfy himself with in any country. With the foreigners' America, as one may call it, from the elephant on Coney Island to the seals in the Golden Horn, she became acquainted speedily. Our hotels, Saratoga, Niagara, Chicago shops, Colorado coloring, the Mormons, the Chinese, the Yosemite, the President's reception (where she marked a lack of the royal art of being bored with ease), and the Boston literary tea-party, make up the great field of her observation. The description of these things would not detain the native reader were it not for the very pleasant style of the narrative, and especially the philosophizing in regard to democracy. In fact, the author did see one bit of our people at the house of a relative, a Wisconsin farmer, and the account of her visit there lies in her pages like a little German pastoral. That she found very charming, but with democracy elsewhere she cannot make any effectual acquaintance. She says frankly she does not like it. It seemed to her that women are not helped in public places as they should be by male strangers; it is an inference

from her own experience, but she admits as a qualifying circumstance that she was attended by her husband. The great rock of offence is the impossibility of obtaining properly subordinate domestic servants, a vice inherent in democracy, from the full disastrous effects of which we are saved for a time by the great boon of the negroes. This cause of dissatisfaction, however, is hardly less than the foreboding of a lost and lonely feeling in not knowing just where she belonged in a society without fixed external distinctions of place and respect.

Altogether, there is a good deal of frank criticism of the social phase of democracy from the standpoint of an Englishwoman of comfortable position. There is, too, a wide reach of knowledge and generalization that is seldom found in books of this sort. The Turkish harem and the Mormon household suggest equally delicate questions, which are discussed with more innocence than reserve. The notes show that the author was one of the victims of last summer's London sensation; and from their confiding faith in the exposure it would be an easy inference that this cultivated and refined poetess might find more useful and pleasant subjects for public reflection than the "artificial prudential check" and like topics of occult science. The temper of the book is very cordial to America, and if the writer did not go back a convert, she certainly went as a friend.

The Journal Intime of Henri Frédéric Amiel. Translated, with an Introduction, by Mrs. Humphrey Ward. Macmillan.

THERE would be little need to say anything of this book after the extended reviews, both French and English, which appeared upon its first publication, were it not that the present translation will introduce it to a new circle of readers. Mrs. Ward says very justly, in her preface, that there are many persons, not ignorant of French, who still have not the power to understand and appreciate the subtle and complicated expressions of such a book. She has done her work most admirably. In spite of the modesty of her acknowledgments of the help of friends, especially of M. E. Scherer, himself no ordinary English scholar, it is evident that her mastery over both French and English is thorough and complete. So choice a piece of work rarely appears in England. She had not only to render smoothly the descriptions and comments upon daily life, to give the point and sparkle of the epigrams which often sum up Amiel's literary judgments, but she had the difficult task of making clear the abstruse philosophical speculations which were almost his passion. So perfectly has she done it all that almost never is the thought of a translation suggested.

Amiel was born of an old Languedoc family, emigrants to Geneva after the Revocation of the Edict of Nantes. Early orphaned, a small inheritance enabled him to pursue at ease a wide and prolonged course of study in various places, though most importantly at Berlin. Returning to Geneva in 1849, he was appointed, at the age of twenty-eight, Professor of Æsthetics in the Academy, and a little later Professor of Moral Philosophy. To his friends the future seemed all his own. Unfortunately this very success proved a disaster, for it involved him in political relationships which, absolutely without fault or agency of his own, alienated him from what was most cultivated, most attractive, and most congenial to him in the society of Geneva. This being thrown back upon himself increased a natural tendency to inaction, a shrinking from practical exertion, which, gaining as years went on, made his life a disappointment to his friends and a bitter, hopeless regret to himself. The different elements of character which led to so sad a result Mrs. Ward has carefully studied in an introduction which will interest even those who have seen the French articles upon the 'Journal.' It was the sole confidant of the lonely thinker, and, like a faithful friend, it now repays his trust by revealing to those who ignored or doubted him the manner of man he really was. Its frank independence has brought upon it some strict judgments (notably in a late number of the *Revue des Deux Mondes*). Paris is not over-willing to hear criticism from Geneva. Amiel himself knew the risk. "Geneva should be to *la Grande Nation* what Diogenes was to Alexander: her rôle is to represent the independent thought and the free speech which is not dazzled by prestige and does not blink the truth. It is true that the rôle is an ungrateful one, that it lends itself to sarcasm and misrepresentation—but what of that?"

The notes on French character are singularly valuable, for Amiel is by blood a thorough Frenchman, yet his German studies and associations gave him an outside point of view. The two pages on Rousseau as "the ancestor of many things" and as "the point of departure" for Chateaubriand, sum up a long literary history. Again and again a single phrase, like a vivid flash, reveals a trait in some author, or the essential quality of a book. "A chronicler may be able to correct Tacitus, but Tacitus survives the chroniclers." "There is not a single echo of chivalry in La Fontaine. For him, the history of France dates from Louis XIV. . . . His defects are eclipsed by his immense variety of different attitudes." "Greek sculpture was Goethe's school of virtue. Completely lacking as he is in the sense of obligation and of sin, he nevertheless finds his way to seriousness through dignity." "In Renan there are still some remains of saintly *ruse*. He strangles with sacred cords." "Schopenhauer professes Buddhism in the full flow of modern Germany, and absolute detachment of mind in the very midst of the nineteenth-century orgie." "Effect is the misfortune of Victor Hugo, because he makes it the centre of his æsthetic system." "Cherbuliez is an Alexandrian exquisite, substituting for the feeling which makes men earnest the irony that leaves them free." "Doudan is an Athenian of the Roman time, a true disciple of Epicurus. The classical world and the Renaissance—that is to say, the horizon of La Fontaine—is his horizon."

Still, Amiel's interest in literature was only the lesser part of his life. We have brought it forward because the reviewers have chiefly occupied themselves with his philosophical discussions, hardly showing on how many different lines the book attracts the reader. Literature and philosophy, wide as their limits are, do not cover all of thought, nor satisfy the whole of the human spirit. "Philosophy can never replace religion; revolutionaries are not apostles, although the apostles may have been revolutionaries. Humanity must have her saints and her heroes to complete the work of her philosophers." It is just here that many minds will feel their closest sympathy with Amiel. They find in him that same burden and bewilderment of intellectual questionings that become only the more perplexing the more we know, and at the same time they see that to him the love and reverence for the old had never lost their force. The old is not a mere form; the tradition that is dear is not of names or rites, but of duties and sacrifices. "Christianity is above all religions; and religion is not a method: it is a life, a communion with God, a calm and deep enthusiasm, a love which radiates, a force which acts, a happiness which overflows." "Righteousness consists in willingly accepting one's lot, in submitting to and espousing the destiny assigned us, in willing what God commands, in renouncing what he forbids us, in consenting to what he takes from us or refuses us." "Piety is the daily renewing of the ideal." This note of personal religion is the more remarkable since there was in Amiel a strong artistic sense, which might have blinded his moral vision. Of Cherbuliez, whose brilliant qualities he admired, he wrote: "It is a splendid organization. Only sometimes he must be antipathetic to those men of duty who make renunciation, sacrifice, and humility the measure of individual worth." These are but imperfect hints of what the book contains; still less do they show the full man. That union of aspiring faith with flexibility of mind that accepts freely the conditions of life and the lessons of experience, while the love of truth is the paramount motive, forms a character that, whatever may be the outward contradictions, speaks to us of our own doubts, raises our hopes, and, though faltering itself, becomes our guide to a higher life.

Amiel has been much compared with Obermann and Maurice de Guérin, but he is far nearer to us than either. Sénancour belonged to the last generation; De Guérin died young. Moreover, there was in Amiel that deeper seriousness which we characterize by the word Puritan. It is for that type of religious mind, of which there are very many among English-speaking peoples, even though they disavow the name, that the book will have the strongest attraction. It is for them, most of all, that Mrs. Ward has done her work.

The Blood-Covenant: A Primitive Rite and its Bearing on Scripture. By H. Clay Trumbull, D.D. Charles Scribner's Sons.

TERENCE'S feeling that he was a man, and therefore nothing human was foreign to him, must, it would seem, be very strong in any one who could enjoy the reading of this book, and still stronger in the author who has made the necessary preparation for its publication. But it is evident that he has been encouraged in his laborious enterprise less by the human—or shall we say inhuman?—interest of his task than by the hope of bringing something out of it for the elucidation of the Christian doctrine of atonement by the blood of Jesus. "Certainly," he says in his preface, "the collation of facts comprised in this volume grew out of no preconceived theory on the part of the author"; and perhaps so much may be allowed, though what is likelier is, that some dim, half-formed conception of the forensic value of the ancient rite for current theological debates inspired him to the prosecution of its study. The operation of the argument will not be universally the same as in the author's mind. There is something wonderfully pathetic in his naïve assurance that it will make the same impression upon all his readers. But many of them will be simply outraged by the connection which he has established, or at least endeavored to establish, between a barbarous custom and a central dogma of the Christian faith, and some of them will even go so far as to suspect him of a covert attack upon the Christian doctrine of atonement under the mask of friendly intercession. Meantime, while the judicious grieve, iconoclasts of the Ingersoll variety will be immoderately pleased. They will declare that Dr. Trumbull has furnished them with such an armory of weapons as they could not have themselves collected without an infinite deal of trouble. But the critic, endeavoring to disengage himself from both the theological and anti-theological bias, will first admire the industry and patience that have gone to the collection and arrangement of so many painful facts, and then acknowledge his surprise that Dr. Trumbull should consider their significance so great for Christian theologians.

The method he pursues is just the opposite of that which was the characteristic method of the early Christians and has always been in general repute in Christendom. This was to magnify the novelty of every Christian rite and doctrine. In our own time, the Christian apologist has generally been suspicious of the studies of comparative religion; and when the more rational apologist has extracted confirmation for his creed from foreign sources, it has been from their purest fountains. But what does Dr. Trumbull do but mix together a heap of facts illustrative of one of the most degrading and revolting superstitions that disfigured primitive society, and endeavor to convert it into a monument in honor of a Christian doctrine? He must not complain if many read his lesson backwards. To read it so will seem to many not only natural but unavoidable.

The book is made up of three chapters and an appendix. The chapters are amplifications of three lectures that were given before the Summer School of Hebrew in Philadelphia, July 16-18, 1885. A certain lack of unity and coherency in their arrangement is very likely owing to the amplification of their original form. The first chapter, on "The Primitive Rite Itself," contains in its first section ("Sources of Bible Study") an almost comical inversion of the natural order of ideas and of their actual development: "But latterly it has been realized, that, while the Bible is an Oriental book, written primarily for Orientals, and therefore to be understood only through an understanding of Oriental modes of thought and speech, it is also a record of God's revelation to the whole human race," etc., etc. How free the author is from any theological bias may be inferred from this sentence, also, which is in the same connection: "Not alone those who insist on the belief that there was a gradual development of the race from a barbarous beginning, but those who believe that man started from a higher plane, and in his degradation retained perverted vestiges of God's original revelation to him," etc. Which theory is Dr. Trumbull's does not admit of any doubt whatever. The discussion fairly opens with an account of blood-covenanting as now practised among Syrians at the base of Lebanon. Then follow examples of the rite in Africa, in Teutonic Europe, in classic literature, in Egypt, and elsewhere. The evidence is abundant that the rite was very general among barbarous and savage races, and that its character was more homogeneous than would be imagined from its geographical extent. In a second chapter, on "Suggestions and Perversions of the Rite," there are more examples of its use, and illustrations of the general importance attached to the blood of men and animals in all primitive societies. The third and final chapter amplifies the Jewish contribution to the argument in circumcision, sacrifice, the Passover, and so on. Lastly we come to "The Blood Covenant in the Gospels." In the Last Supper Dr. Trumbull finds the antitype to all the prototypes of blood-drinking he has brought together, and in the death of Jesus an antitype of all the blood-covenantings of antiquity. Of verbal correspondences there is certainly no lack; for example, "Except ye eat the flesh of the Son of Man and drink his blood, ye have not life in yourselves." In the death of Jesus on the cross, Dr. Trumbull finds the blood of God himself poured out for men's salvation.

We cannot follow him through the textual analysis with which he seeks to fortify the doctrine which he holds. It is apparently ingenuous; it is certainly ingenious. But it may be seriously doubted whether Dr. Trumbull's service will be appreciated by those whom he is evidently looking to for his applause. They will consider it a doubtful matter to ally the most impressive scene in the life of Jesus, and his death also, with the most repulsive of primeval superstitions. They will fear that infidels and scoffers may declare that Dr. Trumbull only proves that Christian rites and doctrines are survivals of antecedent rites and doctrines of the most doubtful character. They will question whether the more legitimate result of his inquiries was not the tremendous influence of an immemorial past upon the *metaphorical* expression of New Testament ideas.

Fishing with the Fly. Sketches by Lovers of the Art, with Illustrations of Standard Flies, collected by Chas. F. Orvis and A. Nelson Cheney. Boston: Houghton, Mifflin & Co.

THIS is the second edition of a compilation of articles on angling, and as such, from the rather scanty supply afforded by American angling literature, is as good a selection as could be made. Mr. Orvis, one of the editors, is a dealer in angling materials, and the illustrations of the book take the form of colored plates of the flies of his tying, well enough done, but in artistic merit below some of the English books written or published by tackle dealers, notably Blacker's 'Art of Fly-making' and Theakston. As Mr. Orvis only gives plates of flies of his own tying, those for salmon fishing are very few in number, and one of them at least is misnamed. Trout and bass flies are depicted in numbers enough to satisfy the ardor, or order, of any angler.

The articles, twenty-four in number, are, as we said above, well selected, and have the advantage for readers in this country of being purely American. "The Salmon and Trout of Alaska," by Mr. Beardslee; "The Resources of Fly-fishing," by Dr. Henshall; "Fly-fishing in the Yosemite," by Mr. Vail, are among the most interesting; and "Suggestions," by C. F. Orvis, is excellent reading for any angler. At the end of each article is a page or two of short extracts from writers on angling. This is a very good idea; you find a bit of philosophy from Christopher North, a beautiful description of a spring morning by Norman McLeod, a scrap of natural history from Buckland, a quaint sentence from Walton—all mixed up with considerable trash from others, yet with considerable that is not.

BOOKS OF THE WEEK.

Adams, O. F. March. Boston: D. Lothrop & Co. 75 cents.
Aumale, Duc d'. Histoire des Princes de Condé pendant le xvie et xviie siècles. T. III. et. IV. Boston: Schoenhof.

VOL. XLII.—NO. 1084. THURSDAY, APRIL 8, 1886 PRICE 10 CENTS.

Messrs. Roberts Bros.'

NEW BOOKS.

1.

A NEW VOLUME BY "H. H."

Glimpses of Three Coasts.

By Helen Jackson. These are "Bits of Travel" in California and Oregon, Scotland and England, and Norway, Denmark, and Germany, partly new and partly reprinted from the *Atlantic Monthly* and *Century Magazine*. One vol., 12mo, cloth. Uniform with 'Ramona' and 'A Century of Dishonor.' Price, $1.50.

2.

Prince Otto.

A Romance. By Robert Louis Stevenson, author of 'Treasure Island,' 'Travels with a Donkey,' 'An Inland Voyage,' 'Silverado Squatters,' etc. Author's Library Edition. 16mo, cloth, price $1.

3.

Talks with My Boys.

By William A. Mowry, A.M., Ph.D., for twenty years Senior Principal of the English and Classical School, Providence, R. I., now editor of *Education*. A new, revised edition. 16mo, cloth, price $1.

"Not since reading 'Tom Brown' have we seen so thoroughly sensible, healthful, and stimulating a book—though not a story book—for youth as 'Talks with My Boys.' To read the book is to conceive a new respect and admiration for the teacher's profession; and it must be a very late lingering and wizened up specimen of poor humanity who does not feel the blood tingle afresh in his veins at these stirring, manly, tender words of the fatherly school-master to his 3,000 boys, scattered now over the whole world."—*The University, Chicago.*

4.

Madame Roland.

By Mathilde Blind, author of 'The Life of George Eliot.' The twelfth volume in the "Famous Women Series." 16mo, cloth, price $1.

5.

Harry Richmond.

By George Meredith. One volume, 12mo, cloth, uncut edges. Uniform with 'Richard Feverel' and 'Evan Harrington.' Price, $2.

6.

London of To-day.

An Illustrated Handbook for the Year 1886. By Charles Eyre Pascoe. 12mo, cloth, price $1.50.

Sold everywhere. Mailed, postpaid, by the publishers,

ROBERTS BROTHERS,

Boston.

A NEW REVIEW.

POLITICAL SCIENCE QUARTERLY:

A REVIEW DEVOTED TO THE

Historical, [illegible] and Comparative Study of Pol[illegible]ics, and Public Law.

Public Library 1886

FIRST NUMBER NOW READY.

Annual Subscription, $3.00; Single Numbers, 75 cents.

The POLITICAL SCIENCE QUARTERLY furnishes a field for the discussion of political, economic, and legal questions. The legal questions treated will be principally questions of public law—constitutional, administrative, and international. The point of view and method of treatment will be scientific. At the same time, it will be the effort of the editors to have the results of scientific investigation presented in an intelligible manner and in readable form. The topics discussed will be primarily such as are of present interest in the United States.

Beyond the demand that articles written for the QUARTERLY shall be *scientific, intelligible, and of interest to Americans*, the editors will impose no conditions upon the contributors. Individually they will express their own opinions, as they will permit contributors to express theirs. Every article will be signed, and every writer who alleges facts not commonly known will be expected to cite his evidence.

BIBLIOGRAPHY.

Each number of the QUARTERLY will contain reviews of new books, American and foreign. It is proposed also to publish once a year, in the form of a supplement, a bibliography of political history, political and economic science, and public law. This supplement will contain: (1) A list of the books of the year, arranged by subjects. (2) Brief descriptive notices of the more important works, with references to any extended critical reviews which may have appeared in the leading American and foreign periodicals.

CONTRIBUTORS.

Promises of support and (eventual) contribution have been received from Pres. F. A. P. BARNARD, of Columbia College; Pres. J. R. SEELYE, of Amherst College; Pres. FRANCIS A. WALKER, of the Mass. Institute of Technology; Pres. C. K. ADAMS, of Cornell University; Prof. THEODORE W DWIGHT, Warden of the Columbia Law School; Hon. JOHN F. DILLON; Hon. DAVID A. WELLES; Hon. CARROLL D. WRIGHT, Chief of the National Bureau of Labor Statistics; JOHN JAY KNOX, late Comptroller of the U. S. Treasury; WORTHINGTON C. FORD, Esq., of the Department of State; HORACE WHITE, Esq., Editor of the *N. Y. Evening Post*; ALBERT SHAW, Esq., Editor of the *Minneapolis Tribune*; Prof. J. B. AMES and Prof. ERNEST YOUNG, of Harvard University; ARTHUR T. HADLEY, Esq., of Yale College; Prof H. B. ADAMS, of Johns Hopkins University; Prof. WOODROW WILSON, of Bryn Mawr College; Prof. ALEXANDER T. JOHNSTON, of Princeton College; Prof. ANSON D. MORSE, of Amherst College; Prof. J. B. CLARK, of Smith College; Prof. H. C. ADAMS, of Cornell and Michigan Universities; Prof. E. B. ANDREWS, of Brown University; Prof E. J. JAMES, of the University of Pennsylvania; Prof. GEORGE B. NEWCOMB, of the College of the City of New York; Prof. GEORGE W. KNIGHT, of the Ohio State University; Prof. C. G. TIEDEMAN, of the University of Missouri.

Send for our new descriptive and illustrated Catalogue and Announcements (1886).

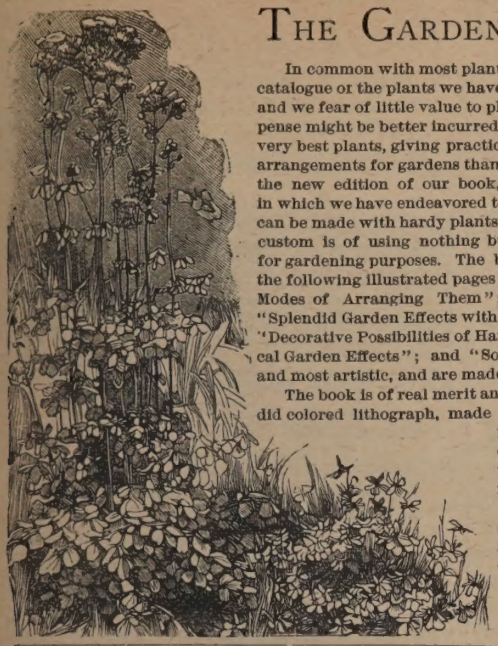
To take full charge of a girl of twelve. None need apply without best English and American references. State age and salary asked. Address RECTOR, 359 Fourth Avenue.



The Garden of Hardy Flowers.

In common with most plantsmen, it has been our custom to issue every Spring a catalogue of the plants we have for sale. This catalogue is necessarily a repetition, and we fear of little value to plant buyers. It has occurred to us that this annual expense might be better incurred in the issuing of pamphlets, describing a few of the very best plants, giving practical cultural directions and suggesting new and better arrangements for gardens than those commonly used. At present we are sending out the new edition of our book, "A Few Flowers Worthy of General Culture," in which we have endeavored to show how a most beautiful and fascinating garden can be made with hardy plants, and how great a mistake the present almost universal custom is of using nothing but the so-called bedding plants, geraniums, coleus, etc., for gardening purposes. The book is superbly printed, and among its contents are the following illustrated pages: "Hardy Plants are Best"; "Hardy Plants and the Modes of Arranging Them"; "Rhododendrons, Kalmias, and Hardy Azalea"; "Splendid Garden Effects with Hardy Lilies"; "Clematises, their Culture and Uses"; "Decorative Possibilities of Hardy Climbers"; "Success with Hardy Roses"; "Tropical Garden Effects"; and "Some Fine Lawn Trees." The illustrations are profuse and most artistic, and are made to show the garden effects of different plants.

The book is of real merit and exquisite beauty, and will be sent free with a splendid colored lithograph, made by Messrs. Armstrong, of Boston, of the wonderful new hardy English rose, "Her Majesty," on receipt of ten cents in stamps for postage. This new rose has received the highest award of merit at every principal rose exhibition in England the past two seasons.

A new American rose of equal merit is the American Beauty. It is extra large and fine, and remarkable for its ever-blooming qualities and ease of culture. We offer strong plants at a low price.

B. A. ELLIOTT CO.,
PITTSBURGH, PA.

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

The Late Mrs. Null.

By Frank R. Stockton, author of 'Rudder Grange,' 'The Lady, or the Tiger?' etc. 1 vol., 12mo, $1.50.

"Mr. Stockton has written a book which you can't discuss without laughing, and that is proof enough of its quality."—*N. Y. Tribune.*

"'The Late Mrs. Null' is the lion of the month, although she comes out with the lambs at the close. All the bright and bewitching qualities of 'The Deceased Wife's Sister' and 'The Transferred Ghost' are visible in this their exquisite though distant relation. Mrs. Null is fascinatingly absorbing for simple charm of character, for delicate touches of fancifulness, and for the most infectious and exhilarating spirit of fun. . . . Like the best of his less considerable creations, 'The Late Mrs. Null' is *sui generis.* She is very jovial company, and will please and cheer and amuse wherever she is known."—*N. Y. Commercial Advertiser.*

"We congratulate the novel reader upon the feast there is in 'The Late Mrs. Null.'"—*Hartford Post.*

The Epic Songs of Russia.

By Isabel Florence Hapgood. With an introductory note by Prof. Francis J. Child. 1 vol., 8vo, $2.50 net.

Miss Hapgood's book opens to English readers an entirely new mythology, and lays before them a series of tales so fresh, wild, and fantastic that they will prove to be as much of a novelty as the Eastern stories were when first put into English. To students of folk-lore and literary history their value cannot be overestimated. They present a new national literature, and at a time when the interest in all things Russian is specially acute.

A DESPERATE CHANCE. By Lieut. J. D. J. Kelley, U.S.N. 1 vol., 12mo, $1.00.

Lieut. Kelley's novel has the fascination which attends a good stirring sea story, and also the interest of a well-developed plot. It is the sort of book which, if once taken up, will be read to the final page regardless of time or season.

VALENTINO. By William Waldorf Astor. New and cheaper edition, $1.00.

AMERICAN DIPLOMACY, AND the Furtherance of Commerce. By Hon. Eugene Schuyler, author of 'Peter the Great,' etc., etc. 1 vol., 8vo, $2.50.

LETTERS TO DEAD AUTHORS. By Andrew Lang. 1 vol, Elzevir 16mo, gilt top, $1.00.

THE HISTORY OF GERMAN Literature. By Prof. William Scherer. Translated under the supervision of Prof. Max Müller. 2 vols., 12mo, $3.50.

HOW TO BE HAPPY THOUGH Married. Being a Handbook to Marriage. By a Graduate in the University of Matrimony. 1 vol, 12mo, $1.25.

STRANGE CASE OF DR. JE- kyll and Mr. Hyde. By Robert Louis Stevenson, author of 'The New Arabian Nights,' 'Treasure Island,' etc. Library edition, gilt top, $1.00; paper, 25 cents.

THE FIGHT FOR MISSOURI in 1861. From the inauguration of Jackson to the death of Lyon. By Col. Thomas L. Snead. 1 vol., 12mo, cloth, $1.50.

THE MEXICAN GUIDE. By T. A. Janvier. 1 vol., 12mo, with maps and plans, $2.00 net.

The best and only accurate Guide to Mexico; convenient in form, complete and reliable, picturesque and graphic.

OCEANA; or, England and Her Colo- nies. By James Anthony Froude, M.A. Illustrated by the author and Lord Elphinstone. 1 vol., crown 8vo, $2.50.

The Nation.

NEW YORK, THURSDAY, APRIL 8, 1886.

The Week.

THE strike of the Knights of Labor in the Southwest has now reached the point to which it has been plainly running from the start—an armed conflict with the governments of three, perhaps five, States. Great satisfaction is proclaimed by the so-called Executive Committees that they are again "united," and that Mr. Powderly's order to return to work has been rescinded. No right-thinking person can feel satisfaction while contemplating public tumult and probable bloodshed, but if there is a wide-spread conspiracy in the United States against law and order, no time can be considered too early for confronting it. By conspiracy we mean a secret society whose object is to prevent anybody but the conspirators from earning a living; not because they object to any man's earning a living outside of the employments they are engaged in, but because they are unable to coerce employers if the unemployed are allowed to work when *they* see fit to strike. The situation in the Southwest has reached this pass, that nobody is allowed to represent Labor except those who refuse to work or allow anybody else to work. When a man has attained the full dignity of Labor, he must be prepared to shoot down any man more distressed and hungry than himself who applies for a situation that *he* has voluntarily given up. It happens in this particular case that the strikers had no reason that they were willing to avow for throwing up their situations. This, however, was only an incident growing out of the assumption that the right to labor belongs exclusively to the Knights of Labor, and that all persons who dispute this pretension must be shot down.

This has been the attitude of the strikers, under the lead of Irons, from the beginning. Mr. Powderly saw that it would end by bringing the Knights into armed collision with the State authorities, as at last it has in Texas, Kansas, and Arkansas, and will soon in Missouri and Illinois. The result of such a conflict cannot be doubtful. Some blood may be spilled, some houses may be burned, some dynamite may be exploded, but the end will be the crushing of the rebellion, and this end cannot be long delayed. The Governors of the several States have been very slow in performing their duty. They have been cowed by the supposed political power of the Knights. They have waited till the sufferings of the community have shifted the balance of political power upon the other side. It is probably true that public opinion in Texas was at first opposed to any harsh measures and in favor of persuasion and conciliation. While the striking Knights are only a handful in the whole State, the power which belongs to organization and secrecy had created a superstition in men's minds, and for a moment paralyzed the reasoning powers of the community, which never fairly awoke until it was found that a new government under the leadership of Irons had usurped the functions of the one elected by the people. Even then it was necessary that some profoundly impressive act should be committed, like the shooting of a deputy sheriff, to bring people to their senses, and to call into activity the forces which society has provided for just such emergencies.

The number of unemployed laborers in the country possessing more or less skill is always sufficient to man a railway, or a congeries of railways like the Gould Southwestern system, after a short time, if not prevented by violence from accepting the vacant places. The number of men who "went out" at the order of the Knights of Labor organization was only a trifle above five thousand. Mr. Martin Irons "claimed" a much larger number, putting it as high as 14,000 in one of his published statements, but this was shown by *Bradstreet's* census of the unemployed in the several towns on the line to be a gross exaggeration. The whole number thrown out of employment on the Missouri-Pacific and the Texas-Pacific was about 10,000, and half of these were non-strikers, who were ready to resume work whenever they could be protected. Both these and the new-comers have been scarcely heard of in the discussions of the period. But, taken together, they are not only the more numerous body of men, the larger representation of labor, but by far the most deserving. The non-strikers, more than 4,000 in number, who have been thrown out of employment through no action or fault of their own, are certainly entitled to the sympathy which the public always accord to men suddenly deprived of the means of livelihood by accident, such as the burning of a factory or the bankruptcy of employers. The new-comers are always the most needy class in the community, since only the most needy will brave the perils which usually assail those who take the places of strikers. Yet it is customary in the dissertations and stump speeches to which such disorders give rise to ignore the existence of any "labor" except that of the strikers. In common parlance, everybody who labors or seeks labor, but does not strike, is a "scab," a "rat," a disgrace to society and unfit for American citizenship, whereas the majority of them are deterred from joining the Knights of Labor or other local organizations by the demagogical character of the local leaders of the unions, and by the repression of individual freedom which membership implies.

The difficulties which Mr. Powderly has had to contend with are a very valuable contribution to the discussion of all the great schemes of state socialism, not excepting Mr. Henry George's land scheme. They all propose the starting of a business enterprise, such as the world never saw—that is, of a factory in which every man and woman in the nation would be an operative or dependent, and in which every product of human industry would be turned out, but they never say where the managers of the concern are to be found. It would in magnitude bear about the same proportion to the greatest railroad corporation in the world that the German or French army bears to a corporal's guard. Now it is with the greatest difficulty and by the offer of enormous salaries that the railroads find competent managers. Where are the managers of Socialistic States to be found? Who are they and where are they bred? What inducement is to be offered them for undertaking work that would land any mere man in the lunatic asylum in three months? We have no doubt Mr. Powderly has begun to ponder these questions himself. The trouble with the less thoughtful and intelligent Socialists is that the State which is to take care of the workingman, and raise his wages, and shield him from competition, always appears in their fancy as an all-wise and all-powerful person, who knows everything and can accomplish everything, without board, lodging, and washing, instead of being, as it really is, a group composed of Smith, Brown, Jones, White, Black, and Green, not one of whom probably could manage a large store, and all of whom are as anxious as anybody to be protected from competition and filled with good victuals at other people's expense.

The Republican Senators are still floundering about in their effort to make a little party capital out of their controversy with the President over nominations, but it becomes daily more evident that Mr. Edmunds cannot hold them to the rule of rejecting men simply because they cannot get the "papers." The otherwise profitless contest, however, is having one good result in emphasizing the absurdity of the "star-chamber" system of considering nominations in the Senate, and in strengthening the sentiment in favor of abolishing executive sessions. The canvassing of this question has revealed, more clearly than was before suspected, the outrageous character of this secret style of doing public business. For example, it has come out that one of the standing rules which govern the Senate in this branch of its duties is as follows:

> "If, however, charges shall be made against a person nominated, the Committee may, in its discretion, notify such nominee thereof, but the name of the person making such charges shall not be disclosed."

The Republican orators who have had so much to say about the "stabbing of character" involved in the President's removal of office-holders evidently have full scope for their eloquence in reforming the rules of their own body.

The almost unanimous rejection by the Senate, on Wednesday week, of a newly appointed Democratic postmaster in a Western State, on the ground that he had been an "offensive partisan" during his brief official career, shows how generally the idea that "public office is a public trust" is coming to be accepted. Two years ago the man would have been laughed at who should have suggested that the utmost political activity on the part of a Federal office-holder constituted a reason for his removal from office. Now even Democratic Senators vote to

reject the nomination of a Democratic postmaster who has been running his office on a political basis, as Republican postmasters used to do without criticism from anybody except a few "doctrinaires."

A bill has been favorably reported authorizing the President to arrange for a conference with the states of South and Central America, for the purpose, among other things, of improving "the business intercourse" between the United States and these countries, and "encouraging such peaceful and reciprocal commercial relations as will be beneficial to all, and secure more extensive markets for the surplus products of each of said countries." We trust that if the bill passes, the President will remember that no arrangement about commercial intercourse will be satisfactory which does not provide that each country shall sell more than it buys, and shall receive more gold or silver from the other countries than it parts with. If this is not looked after, each country will soon have "the balance of trade against it" and all its gold going abroad. The consequence of having the balance of trade against every country on both the American continents would be very terrible, and we shall not attempt to describe it further than by saying that it would probably afford the European despots the opportunity which they have been long waiting for. The Conference, when it comes off, is to cost $20,000, which is cheap enough if it were to do any good: but a conference to promote commercial intercourse with foreigners is surely something the American people will not have at any price. A $5 conference held with that end in view would be dear.

The recent attempt to double the rate of postage on seeds and other articles of "fourth-class matter," is a striking instance of the small pains taken by some lawmakers to know the operation of existing laws or the real needs of the people. Prior to 1872 the fourth-class postage rate was eight cents per pound; the existing rate is sixteen cents per pound. The bill introduced by Senator Wilson would double this and make the postage thirty-two cents per pound. In Canada the postage on this class of mail matter is four cents per pound, while in England it is six cents per pound for the first pound, and less than four cents where the packages are over one pound. In other European countries equally low rates prevail. The proposed bill must have been introduced in ignorance of these facts, or without consideration or regard for the effect it would have on the agricultural interests of the country. Proof of this is found in the fact that the Senator who introduced this bill doubling the fourth-class postage has now introduced another one reducing the rate one-half, evidently acting under pressure of the strong public opinion freely expressed throughout the country. There seems now to be little doubt that the rate of postage on this class of goods will not be increased; indeed, it is probable that before long seeds and scions will be distributed at a cost even less than heretofore, and a little nearer the prevailing rates of postage in other countries.

We are pained to observe that the Gloucester fishermen are not taking their medicine so manfully as might be desired. They held a public meeting at the Parker House in Boston on Friday, to denounce the unfriendly action of the Dominion authorities in preventing them from shipping Canadian sailors in Canadian ports in the customary way for the season's work. Protection to American industry requires an unrestricted supply of foreign labor. What is a duty on fish good for if our captains are to be taxed three or four dollars per head for all the men they hire in Nova Scotia to work their vessels? The meeting demanded retaliatory legislation to prohibit Canadian vessels from coming into our ports. They called on the President to send "a sufficient number of armed vessels" to the fishing grounds, to "look after and protect American vessels." In regard to the headland dispute, they proposed to make a test question at once by having an American vessel seized by a Canadian cruiser, and then calling on the Government to demand satisfaction. This unseemly preparation for hostilities for which the American people are to pay the costs, is on foot, as the resolutions of the meeting state, "for the reclamation of their home markets to the uses of American fishermen." Instead of peace and good will among men which have ruled for more than ten years along the northeastern boundaries and waters, we are to have cruisers making seizures of fishing smacks, upon our own procurement, in order to make a test case for claims for damages, and we are to get into as great a snarl as possible and as speedily as possible over a duty of one cent per pound on dried fish. But that is not all. It was the opinion of Mr. R. S. Spofford that a similar duty should be imposed on fresh fish, and that a delegation should be sent to the lake fishermen to induce them to combine for the purpose of bringing influence to bear upon Congress to this end. An American fishery union should be formed to promote the taxation of fish.

The proposition to put an American vessel in the way of being captured by a British cruiser in order to bring on an international difficulty is extremely brazen, and could only be avowed by persons who have come to look upon the tariff as a matter of religious faith, or as part and parcel of the common rights of man. Something of this spirit lurks in a recent article on the fisheries question by Theodore S. Woolsey, in which the argument is quite faultless if one concedes that a protecting duty is among the indefeasible rights of a fisherman, like life, liberty, and the pursuit of happiness. The class of people who are opposed to the whole system of mutual robbery, and especially to that part of it which relates to the people's food, will not find any common standpoint with Mr. Woolsey, or with Mr. Spofford, or with Judge Woodbury. Even those who are indifferent as to the tariff controversy will be likely to ask what has happened lately to bring us into hot water with a friendly and kindred Power, with whom we have been at peace so many years. When they find that it is all about a beggarly duty on codfish they will, perhaps, think that it is better to repeal the duty than to have any international trouble at all. As regards the proposed martyrdom of an American fishing-smack, which is to be thrust into the jaws of a British cruiser, we presume that Secretary Bayard will at once, when the case comes before him, propose arbitration. Our judicial decisions and those of Canada on the headland question run so nearly parallel with each other that we should be much embarrassed to decide the test case without the moral support of an impartial umpire. Out of deference to the feelings of Mr. Blaine, it might be stipulated that we should not accept the late Minister of Belgium as a referee.

The death of Judge John Baxter last week is of especial public interest at the present time, owing to the fact that the Government suit to annul the Bell telephone patent has lately been begun at Columbus, O., in the circuit of the United States Court over which Judge Baxter presided. It has for some time been an open secret among the profession that Judge Baxter had strong sentiments against letters patent, and it needed to be a very clear case of infringement to secure success before him. So prevalent had become the feeling about his views in this particular that many suits were discontinued in his circuit, and few were begun there, the owners of patents preferring to allow infringement to go on unmolested in that district rather than to risk their rights in a suit, although their patents may have been sustained in other circuits. Under these circumstances the appointment of a successor to Judge Baxter by the President will be looked for with considerable interest.

The amount of work done by the judges of the United States Courts and the small compensation awarded them in salary have long been a subject of public discussion. It is now some years since a committee of the American Bar Association, after thorough consideration of the subject, reported a plan which would serve as a basis for a bill to relieve the Supreme Court and the Circuit Courts from the existing pressure of business, and several bills have been introduced for that purpose, but nothing of practical importance has yet been done by Congress. The sudden and unexpected death of Judge Baxter should bring the subject again into prominence and demand attention. The circuit over which Judge Baxter presided extends from Tennessee to Michigan, and his position required the performance of a vast amount of judicial labor. Aside from slight lameness, Judge Baxter was a man of robust health and energetic temperament, and his unexpected death was in all probability indirectly, if not directly, due to overwork. Of the United States judges in that circuit district, Judge Withey has for some time been too ill for service, and is trying to regain his lost health; Judge Brown, the District Judge at Detroit, has been so overworked that he is unable to leave his home to attend to court business, and according to last reports will not be well enough to hold court for some time to come. The death of Judge Baxter therefore leaves the United States Courts in Michigan without any judge to try causes or attend to court business

until his successor is appointed. In our own district, here in New York, it has become quite the practice for United States judges from Vermont, Connecticut, Northern New York, and Brooklyn, to assist in the disposition of cases which constantly accumulate upon the calendar, and all this judicial labor is performed for a salary less than one-half that paid the judge of our City Court. But a still worse state of affairs exists in the mass of business heaped upon the Supreme Court by the great and increasing number of causes coming up on appeal from the different circuit courts sitting in the various States. Suits involving questions of the greatest importance to the commercial and manufacturing interests of the country, in many instances, become almost matters of history before they can be reached in regular order and decided by the Supreme Court at Washington. This subject has been so long under consideration by Congress that there is doubtless now before the Judiciary Committee some feasible plan for the relief of the United States Courts, and the public interest requires that such a plan should be embodied in a law without delay.

Mayor O'Brien, of Boston, has again vindicated the confidence of his supporters that he would treat public questions submitted to him on a common-sense basis. The City Council recently passed an order that every laboring man employed by the municipality should receive a full day's pay for eight hours of work, after the 1st of May. A demagogue in the Mayor's chair would have promptly approved such a measure, especially when it had been supported by almost every member of his party in both branches of the Council. But Mr. O'Brien insisted upon examining into the matter. He applied to the Corporation Counsel for an opinion as to the legality of the proposed ordinance, and asked the head of each department for an estimate as to the additional expense of the eight-hour system. Investigation showed that the change would increase the cost of running the city government by about a million and a half dollars a year, which would involve not only a higher tax rate, but the repeal of the law passed by the Legislature limiting the rate of taxation in Boston, while the Corporation Counsel gave his opinion that under the new city charter the Council had no right to make so radical a change in the executive work of the different departments. The Mayor therefore returned the order without his signature, with a clear statement of its illegality and impracticability, and with the suggestion that the only feasible thing to do was to ask the Legislature for the changes in law required to render the change possible. Considering the strong temptation there was for him to content himself with signing the order and leaving the future to expose its weakness, Mr. O'Brien's course in this matter is most creditable to him.

Mayor Grace has made the gratifying announcement that in selecting new Excise Commissioners he will not appoint any one connected with the liquor or beer interest. He said that he had been requested to appoint "one man for the brewers, one for the liquor interest, and one outsider" to compose the new Board, and had declined the proposition. This was about the same composition as the present Board, which contained two members who refused to act with the third "because he was not in sympathy with the liquor interest." The curious notion that the Excise Board is designed not to limit and control the liquor traffic, but to encourage it, and if necessary shield it from the harshness of the excise laws, is a prevalent one in liquor circles, and is a perfectly natural outgrowth of the way in which the laws have been executed for many years. The Mayor is trying to change this by putting a different kind of men upon the Excise Board, but he will be prevented in his worthy intentions unless the Assembly makes haste to pass the bill for removing from the Aldermen all voice in the selections. The idea that the Aldermen would exercise a reforming influence in matters relating to the liquor traffic is so preposterous that we should think the Assembly would be ashamed to entertain it for a moment.

The Portland *Oregonian*, which certainly has enjoyed ample opportunities for forming a correct judgment, sums up thus briefly its conclusions as to the really effective way of stopping the anti-Chinese war on the Pacific Coast:

"If the Chinaman can be taught to drink whiskey, given the right to vote, and induced to spend his money in the vile drinking holes, the 'agitation' against him will cease at once. He will then be accepted without further struggle as the associate and equal of Cronen, Hamilton, Cradlebaugh, Baker, Gilson, and the other 'champions of labor,' and the 'Anti-Coolie Association' will disband."

We commend this opening for missionary work to the reverend gentleman who, it was recently announced, had become agent of the league organized in California to drive the "heathen" out of this Christian land.

The internal dissensions which are said to exist within the ranks of the Irish party in this country are not very serious. All the trouble comes from the dynamite faction, which is led by such professional agitators as the *Irish World*, Alexander Sullivan, and Patrick Egan. From the moment that Mr. Parnell began to show faith in Mr. Gladstone's plans for home rule, these agitators have held aloof from him. They took no part in the recent effort which was made to send money to him from this country. They have been able, through their control of the organization, to postpone indefinitely the holding of a National League Convention, thus preventing any approval of Parnell's course which such a convention would be certain to give. They have refused to place any faith in Gladstone's sincerity, and have persistently argued that anything less than complete separation between England and Ireland should be rejected by the Irish. Yet they are only a noisy minority of the Irish-American party. Their recent efforts to raise funds for various purposes have been complete failures. They cannot deceive the ignorant masses of their own party any longer, and it is now plain that they cannot deceive Mr. Parnell, for word is cabled from Dublin that he is "making arrangements to collect funds in America irrespective of the League agents." Nothing has ever done more to repel American sympathy from Ireland than the prominence of the dynamite agitators in the Irish party here, and their open rejection by Parnell would be a great gain for his cause in the estimation of the American people.

The signs of war in the Balkan Peninsula steadily multiply. Greece has not only not disarmed, but has continued to increase her forces. Turkey has been straining every nerve all the winter to get ready for her, and Prince Alexander, of Bulgaria, has steadily refused to acquiesce in the temporary, instead of the permanent, union of Bulgaria and Rumelia, which Russia insists on as some sort of precaution against what she most dreads, the growth of a powerful and independent State between her and Constantinople. Accordingly she now proposes to punish his obstinacy by occupying Bulgaria, which would, of course, be a direct violation of the Treaty of Berlin. That Germany would stand this is very unlikely. It is still more unlikely that Austria will stand it, or will not occupy Servia on the smallest sign of a Russian invasion of Bulgaria. The materials for a great blaze of war, in fact, seem to be all prepared.

By a curious small coincidence, both the London *Spectator* and the *Saturday Review* for March 20, not prompted by the same topic, contain precisely similar observations upon a dangerous form of conceit to which the collectors of paintings, china, bric-à-brac, etc., are subject. It is the tendency to go off at score with a self-created idea of their own good judgment, and never to learn anything afterward; to depend upon a purely imaginary power of discernment, without improving knowledge by study, or even without recognizing the need of studying; and, moreover, to back the cherished opinion with great sums of money, to the ultimate confusion and disappointment of their heirs. The *Saturday Review* says:

"Forgetting that, as a rule, a good thing will fetch very nearly, if not quite, its full value, they imagine that bargains are to be had much more often than is the case; and they commit the further mistake of persuading themselves that everything they have bought is much more beautiful, and more genuine, and more valuable than it ever was before."

The *Spectator* justly remarks that this foible may be noted also among buyers of horses and of stocks, and asks why such men do not know their own ignorance, and are self-deceived. The answer to this question it finds somewhat elaborately in the working of two passions—vanity and greed. The *Saturday Review*, it will be observed, slightly connotes the latter cause. Yet the case is probably simpler than this. Greed sharpens the dealer's perceptions and rectifies his judgment, and should perform the same office for the collector. On the other hand, vanity is practically non-existent with the dealer. We doubt if even in stocks greed has much to do with the delusion over "sure things"; it is much more likely to be vanity about one's special means of "information," or conceit of one's "judgment." The collector's besetting danger is only the weakness which makes nearly every man believe that he rides at least tolerably well, and is a "fair" shot.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, March 31, to TUESDAY, April 6, 1886, inclusive.]

DOMESTIC.

THE Senate on Thursday passed the bill appropriating $500,000 for a monument to Lincoln at Washington.

In the Senate on Monday Mr. Frye sharply criticised the course of the State Department on the fisheries questions, and its decision that American vessels were now bound by the provisions of the Treaty of 1818. He was only waiting, he said, for the seizure of some American fishing vessel by Canadian cruisers, which would probably happen within a week, when he would introduce a ten-line bill barring out Canadian vessels from American ports, and ask the Senate to put itself on record in support of that proposition. On Tuesday the Arbitration Bill passed by the House was favorably reported to the Senate.

Mr. W. L. Trenholm was confirmed by the Senate on Monday as Comptroller of the Currency.

The nomination of Mr. Lyman for Civil-Service Commissioner was reported favorably some days ago. The name of Mr. Oberly is also before the Senate. Mr. Edgerton is alone now on the Commission and is overworked. The delay in confirming the two new Commissioners is the occasion of embarrassment, as there are questions pressing which cannot be taken up while these nominations are held in suspense.

Caleb W. West, of Kentucky, was on Monday nominated by the President to be Governor of Utah Territory. He served in the Confederate army and has been a county judge. Speaker Carlisle recommended him.

The President on Friday nominated Col. Thomas H. Ruger, of the Eighteenth Infantry, to be Brigadier-General in place of General Terry, and Col. Joseph H. Potter, of the Twenty-fourth Infantry, to be Brigadier-General in place of Gen. O. O. Howard.

A caucus of Republican Senators on Friday without reaching a vote made it evident that a majority are opposed to Senator Edmunds's course, and will practically ignore his resolutions in dealing with nominations. There were also very strong expressions of opinion in favor of doing away with secret sessions.

The House of Representatives on Saturday passed the Labor-Arbitration Bill by 195 to 30. It was modified so that arbitration is optional, and the Government pays the expenses up to $1,000 for each case.

The Ways and Means Committee on Saturday took up the Hewitt Customs Bill, and added to it the free list of the Morrison bill so far as it applies to lumber, fish, salt, flax, and hemp. Wool was also added to the free list. Under the head of dutiable goods the chemical cotton schedules of the Morrison bill were added, with amendments relating to fine qualities of cotton goods, and the sugar duties were reduced 10 per cent.

The House passed on Monday the bill for a Congressional library building. The cost of it is limited to $550,000.

The House on Monday afternoon passed the Mexican War Pension Bill by 158 to 68. Mr. Dingley (Rep., Me.) introduced the following resolution: "That the President be requested to furnish the House with any information in his possession relative to the exclusion of American fishing vessels from the right to enter ports of entry of the Dominion of Canada for the purpose of trading, purchasing supplies, or landing fish caught in deep water for shipment in bond to the United States, or doing other acts which Canadian or other British vessels are freely permitted to do in ports of the United States; and also to inform the House what steps have been taken, or are proposed, to bring such unwarrantable acts of the Dominion authorities to the attention of the British Government."

The public-debt statement shows a decrease of $14,087,884 in March.

Geronimo, the Apache chief, with twenty other Indians, has escaped from Lieutenant Maus's custody.

General Miles has been transferred to General Crook's department in the Southwest. General Crook will relieve General Howard of the command of the Department of the Platte, the latter taking command of the Division of the Pacific.

An alarming incident of the strike occurred on Saturday. A Missouri-Pacific freight train left Fort Worth, Texas, in charge of twenty armed deputies. Two miles from the city it stopped on meeting a party of men, who were asked what they were doing, to which they replied that they were not armed, and had no intention of interfering with the road. As the officers returned to the cars they noticed several men sitting or lying on the grass a few yards from the train. The entire posse advanced toward the men in ambush until they reached the ditch alongside the track, when they commanded a throwing up of hands. The men in ambush then opened fire with Winchester rifles, killing one deputy and badly wounding two others. The fire was returned by the posse with revolvers. One rioter is known to have been killed and two wounded. There was intense excitement in Fort Worth on Sunday night, and many citizens were under arms. Several companies of militia and one battery have arrived there. Some of the prominent citizens are in favor of organizing a vigilance committee and hanging the leaders of the anti-law element. It is stated that these leaders have made out a list of houses to be pillaged and burned in case the strike is not settled peaceably. On Monday quiet was in a measure restored, and maintained by the militia.

The Missouri-Pacific officers refused to take the striking Knights of Labor back as a body, but considered their applications individually. This delayed the final settlement of the Gould system strike, though many freight trains were run without interruption. On Friday Vice-President Hoxie telegraphed to Mr. Gould: "While there may still be some trouble at a few points, I think that the worst is over. Things may not run smoothly for some days, but I have plenty of force to run trains and do repairs, and I am gradually recruiting my force with new men." By Saturday freight was moving from St. Louis in almost normal quantities. The blockade still continues at East St. Louis, where the strikers are very determined.

At St. Louis trains were freely running on Monday, although Mr. Hoxie had failed to reach any agreement with Messrs. Turner and Bailey, of the Knights of Labor. At East St. Louis the blockade continues, and more trouble is apprehended. The whole situation was further complicated by an order issued by the General Executive Board early Monday morning, recalling the order which directed the men to return to work. The reason for this action was Mr. Hoxie's refusal to take back all the Knights or to treat with their order as a body.

A sensation was created in political circles in this city on Thursday, when it became known that ex-Alderman Waite had made a statement to the District Attorney involving a number of members of the Board of 1884 in the Broadway franchise scandal. As a result William P. Kirk, who was President of the Board in 1884, was arrested on Thursday evening, and ex-Alderman Pearson on Friday, charged with bribery. Ex-Alderman Fullgraff is allowed his liberty, it is said, only on condition that he will give certain testimony which is in his possession.

FOREIGN.

The British Cabinet on Thursday discussed the scheme of buying out Irish landlords. In consequence of the unfavorable attitude of the Scotch Liberal Association, Mr. Gladstone proposed to modify his project in several particulars, but no agreement could be reached by the Cabinet.

Mr. James Stansfeld, the new Secretary for Scotland, in his address to the electors of Halifax, asking reëlection to the seat in Parliament made vacant by his acceptance of office, says he agrees with the principles enunciated by Mr. Gladstone in his Midlothian platform, and is resolved to assist the Premier in the work of practically realizing those principles. He has been reëlected.

A great mass-meeting was held in London on Friday afternoon in Guildhall to protest against the granting of a Parliament to Ireland. The Lord Mayor presided. Sir John Lubbock (Liberal), member of Parliament for London University, moved the adoption of a resolution condemning Mr. Gladstone for his intention of "handing Ireland over to Mr. Parnell, whom he previously denounced." A workingman arose and offered an amendment to Sir John Lubbock's resolution, but he was howled down, and the resolution was carried amid wild enthusiasm. But 200 persons in the immense audience voted in the negative. The name of Gladstone was repeatedly and vigorously hissed.

The British Conservatives are making strenuous efforts to form a coalition of the Whigs against Gladstone. Lord Hartington had a long interview with the Queen on Tuesday and also with Lord Salisbury.

Mr. Gladstone, on Tuesday afternoon, submitted his home-rule scheme to the Cabinet. It was reported that the discussion which followed resulted in continuing the Ministerial opposition to certain features of the Premier's proposals. The Earl of Kimberley, Secretary for India; Mr. Childers, Home Secretary; Sir William Vernon Harcourt, Chancellor of the Exchequer, and Mr. Mundella, President of the Board of Trade, were, it was said, as much opposed as ever to that feature which surrenders control of the customs in Ireland. Later in the day, however, it was announced that the Cabinet feud had abated. Mr. Gladstone modified his proposals regarding customs control, by giving the English Parliament the right to veto all fiscal enactments of Ireland, providing that an imperial Receiver shall collect customs and excise, and making imperial claims the first charges on the revenues. The malcontents consequently withheld their resignations.

The following outline is given with reserve: Mr. Gladstone proposes the establishment at Dublin of a statutory Irish National Parliament of a single chamber, elected largely by the same franchise as the existing representation in Parliament. Special guarantees will be taken to secure the presence of an adequate proportion of Protestant members. Mr. Parnell agrees to an arrangement by which at least 75 out of a House of 300 members will be allotted to the Protestants. To this Parliament will be handed over the whole administration of Ireland, together with the exclusive right to legislate on Irish affairs. An Irish Ministry will control the magistrates and police, undertake the enforcement of the law, and have supreme authority over all Irish affairs, except the military forces of the Crown, which will remain under the exclusive control of the Viceroy. The Viceroy will be appointed by the Crown, and will probably be non-political, as is the Viceroy of India. The existing constabulary, as an armed and drilled military force, will be under the direct orders of the Viceroy, as will be the other imperial troops garrisoned in Ireland. The statutory Parliament will impose, remit, and collect all taxes levied in Ireland, and defray from the same the cost of the local administration. The new body is forbidden

to impose a protective tariff which would close the Irish markets to English goods. The number of Irish members in the Imperial Parliament will not much exceed a score. They will only sit in the House of Commons when questions involving imperial considerations are under discussion. A veto upon all acts of the Irish Legislature is to be vested in the Crown, and exercised by advice of the Imperial Ministry. If the House of Commons wishes to challenge the exercise of this veto, or censure a minister for not advising its exercise, the Irish members will be admitted before the debate takes place.

The Dublin *Freeman's Journal* says that the Irish Land Bill which Mr. Gladstone will propose does not, as has been stated, involve either a compulsory purchase or the advance of any specified sum from the Imperial Treasury. What the measure will enact will be the right of any owner of land in Ireland to claim from the Government of Ireland, after home rule has been granted, the privilege of being bought out at a sum regulated by law. This sum will be arrived at by multiplying the amount of the rent where it is judicially fixed, or of a fair rent where it is not rated judicially, by a term of years to be agreed upon by Parliament. The imperial exchequer is to provide the purchase money. The Irish Government is to guarantee repayment and is to attend to the business of reimbursing the empire for all these outlays, by disposing of the purchased lands to occupiers, and collecting in the shape of payments therefor such rents as will cover the whole sum back in forty-nine years. As at present framed, Mr. Gladstone's bill fixes the rents to be paid by the tenants at 4 per cent. per annum on the amount of the purchase. When the tenant has paid in rent to the Irish Government the amount the land cost the Government, he is to become the owner. Although the tenant is to pay the Irish Government 4 per cent. per annum, the latter will be responsible to the Imperial Treasury for only 3½ per cent. per annum, the difference to go into a sinking fund to meet bad debts, the cost of collection, and so forth.

The House of Commons at 2 o'clock on Friday morning took up the bill for the relief of the poor of Ireland and passed it to a second reading. The bill authorizes boards of guardians to make grants of food to the poor, subject to the sanction of the local-government board. The first two sections of the act passed in 1883 for the relief of distressed unions are revived, but the total amount of grants must not exceed £40,000. Briefly stated, the object of the bill is to legalize the granting of out-door relief in kind, on such conditions as the local-government board may specify.

It is rumored that Mr. Parnell contemplates making arrangements to collect funds in America irrespective of the League agents.

William E. Forster, Chief Secretary for Ireland under the previous Gladstone Ministry, died on Monday. He was the son of William Forster, a minister of the Society of Friends, and was born at Bradpole, Dorsetshire, England, on July 11, 1818. His father came to the United States on an anti-slavery mission during the great struggle. He died during the visit and was buried in Tennessee. As a monument to his father's memory Mr. Forster founded a Quaker school at Friendsville, Tenn., in 1874. In April, 1859, Mr. Forster entered upon his political career by unsuccessfully contesting Leeds as a candidate for the House of Commons. In February, 1861, he was returned for Bradford, for which borough he has been returned at every succeeding election. In politics Mr. Forster was what is termed a "Philosophical Radical." In December, 1868, he became Minister of Education. This office he held until Mr. Gladstone retired in February, 1874, having been admitted to a seat in the Cabinet in 1870. He achieved a commanding position during Gladstone's first Administration, his name being especially connected with two of the most vital measures of that period—the Educational Act and the Ballot Act. When Mr. Gladstone resumed office in April, 1880, Mr. Forster was made Chief Secretary for Ireland, and held that position until May, 1882, when he resigned and was succeeded by the unfortunate Lord Frederick Cavendish. His incumbency of the Irish Secretaryship was a stormy one. He began by pressing through the House of Commons the Irish Compensation and Registration Bills, which were thrown out by the House of Lords. In 1881 he managed the Irish Land Bill and secured its enactment, but this measure he accompanied by a coercion bill and by a proclamation which declared the Land League illegal and criminal, and caused the arrest and imprisonment of Mr. Parnell and about 1,000 others for the part taken by them in the land agitation. As a result, he became very unpopular with the Irish element in England as well as at home. He was forced to resign on May 3, 1882. Although out of office, Mr. Forster did not abandon his policy, but continued to expound it forcibly in the House of Commons.

The London *News* demands of the British Government an explanation of the statement printed in New York that British contractors and officers are interested financially in the construction of the new vessels to be built for the American Navy. The new cruisers, it is asserted, are to be designed by a syndicate, of whom Sir Nathaniel Barnaby, ex-Chief Constructor of the British Navy, Mr. White, the present Chief Constructor, and the gunnery firm of Sir William Armstrong & Co., are the principal members. The last-mentioned firm deny the truth of the assertion. Mr. White, however, writes to the *News*: "I believe that the American Government purchased from Messrs. Armstrong & Co. some designs which I prepared while in their service and out of the public service. These designs were the property of Messrs. Armstrong & Co., and were unlike any existing in the British Navy. Sir Nathaniel Barnaby took no part in drawing up the designs." Sir Nathaniel Barnaby writes to the *News*: "I consider that the fact that I am pensioned does not debar me from designing for foreign countries, if I thereby obtain work for British builders. As to the alleged facts, the Marquis of Ripon, First Lord of the Admiralty, has the right to question me." From unofficial sources it is learned that our Navy Department is in possession of copies of every design of value relating to naval construction that has been prepared by the British Government.

Sir Charles Dilke's lawyer has been informed that providing Dilke and his witnesses will make affidavits of his innocence, a third party will apply to court showing cause why the decree of divorce should not be made absolute. This places Dilke's fate, if innocent, in his own hands.

Cambridge defeated Oxford in the annual boat-race on the Thames, on Saturday, by half a length. It was one of the best contests ever rowed between the Universities.

A gloomy view was taken on Friday of the whole Eastern question. There was great activity at the British Foreign Office. The Russian fleet was ordered to return to Suda Bay, and two French ironclads were placed in readiness for immediate despatch to the Mediterranean.

Sir Horace Rumboldt, the British Minister to Greece, was ordered on Friday to join with the other foreign diplomatic representatives at Athens in sending to the Greek Government a final remonstrance against Greece's warlike attitude. This will be tantamount to an ultimatum, and if Greece ignores it, the foreign fleet will act forthwith.

Mr. Bryce, Under Foreign Secretary, said in the House of Commons on Monday that Greece had not accepted the advice of the Powers as to the course she should pursue in her troubles with Turkey. He also said that the Government had no information which would enable them to say that Greece would refrain from war.

The Russian Government has notified the Powers that Russia will take no part in coercing Greece. The Greek and Turkish armies on the Turco-Greek frontier have lost 10 per cent. of their men by extremely cold weather.

The Balkan Conference at Constantinople will appoint Prince Alexander Governor of Eastern Rumelia for five years, ignoring the Prince's refusal to accept the appointment for that term.

Prince Alexander refuses absolutely to submit to the Powers, as demanded by Russia, the question whether his title of Governor of Eastern Rumelia is for life, as he claims, or, as Russia contends, for the term of five years. The Bulgarian papers applaud the attitude of the Prince. A despatch from St. Petersburg says the Russian Government has definitely decided to occupy Bulgaria within a few weeks unless Prince Alexander submits to the wishes of Russia.

M. Tricoupis, ex-Prime Minister of Greece, in an attack on the present Government on Saturday in the Chamber of Deputies, blamed the Ministers for missing the opportunity of arriving at a good understanding with Turkey presented by the recent war between Servia and Bulgaria. He also criticised the Government for failing to organize properly the Greek army, and urged that the raw recruits be sent home and well-trained men be added to the army, so that the country might be in a state of military readiness in case of emergency.

The Greek Minister of War on Monday returned from a tour of inspection of the frontier defences. He expressed his delight to the various commanders at the efficiency of the works. Before leaving Arta, he requested the officers to inform their men that they were destined to uphold the honor of Greece on the field of battle, and would not return to their homes until that honor was satisfied. The trip of the War Minister and the expressions used by him were taken to indicate a speedy declaration of war. A late despatch on Tuesday asserted, however, that the King of Greece and his Ministers had decided to abandon war preparations, as Prince Alexander had yielded to the Powers.

M. Ristitch has withdrawn from the task of forming a new Servian Ministry. He was not satisfied with the war budget. M. Garashanin has consented to attempt the formation of a Cabinet.

Returns from the Spanish elections so far show the election of 301 Ministerialists, 60 followers of Castillo, 18 Federal and Zorillist Republicans, 26 Democrats, 10 Independent Conservatives, and 8 followers of Dominguez. The elections were orderly.

MM. Roche and Ducquerey have been arrested at Decazeville, the scene of the French mining troubles, and taken to the prison of Villefranche. This has caused a sensation in Paris. Socialists have called an indignation meeting, when, it is believed, they will decide on some form of retaliation for the arrests.

Another of Pasteur's Russian patients has died of hydrophobia.

The German Reichstag on Wednesday by a vote of 173 to 146 prolonged the Anti-Socialist Law two years. The majority consisted mainly of National Liberals and Conservatives, and the minority of German Liberals. The Socialists abstained from voting.

The Lower House of the Prussian Diet on Friday adopted the first clause of the Polish bill placing 100,000,000 marks at the disposal of the Government for establishing German colonies in West Prussia and Posen.

Despatches from Anam report fresh massacres at the Catholic missions in the province of Quang Bing. The number of victims is said to be 442.

MR. WEEKS ON ARBITRATION.

THE promoters of the O'Neill Arbitration Bill in Congress—those, at least, who desire to be useful to their day and generation, and not merely to scramble for the "labor vote" in the next election—will do well to possess themselves of Mr. Joseph D. Weeks's tract on labor differences and their settlement, just issued by the Society for Political Education. Although the arguments in favor of arbitration and conciliation as opposed to strife and contention are as plain and obvious as the advantages of peace over war among nations, or those of trial by jury over trial by ordeal among individuals, it is surprising how few of the current disputes between employers and employed are actually settled in that way. The explanation is, that when a strike or a lockout has once got headway, men's passions are enlisted, and the voice of reason has no hearing until one side or the other is pretty well exhausted—that is, until a great deal of misery has been endured. To make arbitration successful, as Mr. Weeks shows, it is necessary to have it in the house before the difficulty begins. The court or committee to decide the disputed points must have been appointed and empowered beforehand, must be within reach at all times, and ought to hold regular meetings, whether there is any question to arbitrate upon or not, since the habit of meeting tends to produce a friendly feeling among the arbitrators, which is reflected back upon their constituents.

Mr. Weeks finds it necessary to "take a hack" at political economy in his prefatory chapters before introducing us to the main body of his argument. The doctrine of *laissez-faire* he demolishes by first confounding it with competition, and then demolishing that. The *laissez-faire* of the economists is simply a denial of or protest against State interference with the industrial occupations of individuals. It has nothing to oppose to voluntary combinations of workingmen or of employers, still less to arbitration and conciliation. It would, of course, be opposed to compulsory arbitration, which should seek to make contracts obligatory upon parties for future work. This Mr. Weeks is opposed to, and he shows that such arbitration can never be enforced, and that it would be harmful if it could be.

Mr. Weeks's attack upon competition is not more successful than his attack upon *laissez-faire*. It is not necessary to show at length where his argument fails, but a single remark may serve to indicate that he does not grasp the meaning of competition when he offers arbitration as a remedy for it. No system of arbitration between employer and employee can prevent the children of both from growing up and competing with others, perhaps with their own parents, for the possession of the world's goods. The value of arbitration consists not in suppressing competition—that could not be done if the whole world should solemnly vote to do it—but in avoiding the loss and waste, the misery, vice, and crime, consequent upon the suspension of industry. It is possible to change the direction which competition shall take, but not to lessen it in the aggregate. This is the only criticism we make upon Mr. Weeks's timely publication, and this upon the theoretical branch of the discussion only.

The arguments in support of the principle of arbitration are, as has been stated, all on the surface. They need not be recounted. Arbitration has been practised on an extensive scale in many countries on many different plans. It has yielded its best results in three places and trades in England, the Nottingham hosiery and glove trade, the Durham collieries, and the north of England iron furnaces. At Nottingham—

> "The Board consists of twenty-two members, half operatives and half manufacturers, elected for one year, each class electing its own representatives. The delegates have full powers, and the decisions of the Board are considered binding upon all. There is provision for a Committee of Inquiry, to whom all differences must be referred before the Board will act upon them. This Committee has no power to make an award, acting only as conciliators. A month's notice is to be given to the secretaries before any change in the rates of wages will be considered. Regular meetings are held quarterly. The chairman, in the original constitution of the board, has a vote, and a casting vote as well, in case of tie. This was one of the weak points in the organization, and, as the chairman was an employer, trouble resulted. A referee is now called in case of a failure to agree.
>
> "The proceedings under these rules are very simple. When any difference arises between the employers and employed the secretaries endeavor to arrange it. In the event of their failure it is brought before the Committee of Inquiry, who try to settle it; and it being unable, it is then brought before the Board. One of the invariable conditions of any arbitration is that work shall be continued pending the trial of the case; that is, that there shall be neither strike nor lockout. The proceedings before the Board are very informal. The members sit around a table, workingmen and employers interspersed. The discussion is without ceremony, and the difference is settled by endeavoring to arrive at the best arrangement possible under the circumstances. If no agreement can be reached, the umpire is called upon."

The Nottingham arrangement is a type of the most successful application of the principle that has ever been made. The Board may make binding decisions on any questions brought before it except the future rate of wages. Upon this question it may only recommend. The reason for this limitation is the very obvious one that it is impossible to require a manufacturer to keep his works going if he thinks they are to be run at a loss, and equally so to keep men at work in a particular place if they can do better elsewhere. All systems of arbitration and conciliation are agreed as to this, the legalized boards of France and Belgium as well as the voluntary ones of Great Britain. Mr. Weeks evidently favors the voluntary system, but is so much the friend of arbitration that he would have it made compulsory within proper limits. Arbitration does not prevent strikes. It does not even prevent violence, as events have recently shown in Belgium, where legal arbitration has existed under the *Conseils des Prud-hommes* for half a century. But it prevents many unnecessary and unjustifiable strikes, and saves a vast deal of trouble and loss arising from unfounded suspicion and misunderstanding of facts. The next great industrial reform in this country should be the organization of arbitration. Even boycotting would disappear under its influence.

AN ECONOMIST'S ADVICE TO THE KNIGHTS OF LABOR.

IT would be hard to find a set of men who need good advice more than the Knights of Labor do, and we are glad to find Dr. R. T. Ely, the well-known Baltimore economist, so ready in supplying it. Dr. Ely is, we believe, the leading instructor in political economy in the Johns Hopkins University, and is one of several graduates of German universities who have brought across the ocean that curious admixture of sense and nonsense, commonly but wrongly known among us as German political economy. He is an ardent believer in popular government, which is all right, and he is a yet more ardent supporter of labor movements, which are about the only enemy popular government seems likely to encounter in our time. His latest effort, which appeared in the Baltimore *American* of Thursday, is a long and elaborate "open letter" to the Knights of Labor, appealing to them to come out in support of civil-service reform. The soundness of its advice, the naïveté of its argument, and its simple-minded faith in the wisdom, purity, and high-mindedness of the men it addresses, all combine to render it an interesting document.

Very early in the letter the writer betrays a consciousness that his task is rather an awkward one, in that civil-service reform was invented by a class of men of whom Knights of Labor entertain a deep distrust. They are all eminently respectable men, who wear swallow-tail coats and white neck-ties, but we find no leaders of the masses among them, and "they have seemed to overlook the essential character of our Republican Government." Here, as in several other passages, Dr. Ely's ground is not at all clear to us. In order to become "leaders of the masses," is anything more necessary than that they should succeed in getting the masses to vote with them? If they do this, are they not, by that very fact, leaders? In other passages he points out that the only other leaders the masses have are "liars, liquor-dealers, and the worst elements." Was it a mistake to permit these men to remain outside of civil-service reform associations? If not, who were the neglected leaders so pointedly referred to? We have studied the letter in vain to find a reply to this question.

How much soever we may regret this vagueness, there can be no doubt that Dr. Ely sugar-coats his pill with great art. Although he intimates that there is another side to the question, he cannot squarely deny that civil-service reformers belong to a very objectionable class of men. And yet he wants the Knights to accept their doctrine. So, with persuasive rhetoric, he points out that they can take his advice without getting into any bad company: "If you don't want to march with them, you can at least enter into their labors and appropriate what they have done as a free gift." We shall look with great interest to see whether his clients will accept this view.

Leaving out this rather awkward introduction of the civil-service reformers to their future constituency, Dr. Ely's whole tone is that of unlimited confidence in the wisdom and statecraft of the men he is addressing. He says that the very work the Knights are at-

tempting is an elevation of the people to a higher intellectual and moral level. If he means all he says, he must think that the stoppage of trains, the "killing" of engines, the mobbing of "scabs," and the expulsion of Chinese, are the dawn of a higher civilization, and that ignorance of the boycott will yet be looked upon as one of the features of the dark ages. But perhaps he does not mean all this, so let us return to his actual advice. He says the most pressing need of the time is that the Government, under the right of eminent domain, shall purchase all telegraphs, telephones, and railroads, and no longer allow any corporation to transport intelligence, passengers, or freight. This will require an immense increase in our army of civil servants, and unless they are faithful and trained men, our property will be mismanaged, our lives risked, and perhaps we may still be plundered as badly as ever. The word "perhaps" is brought in with great rhetorical skill. It would hardly do to tell the Knights categorically that things could be worse under their policy than they are now. But they can stand such a statement as this: If when Government manages the railroads all the engine-drivers, switch-tenders, and train-starters are appointed and discharged on the recommendation of pot-house politicians, then *perhaps* things might be as bad as before.

These are not all the cogent appeals for administrative reform which the letter urges upon the Knights. Their attention is pointedly called to the low character of the politicians at Washington and Annapolis, and their gross neglect of their legislative duties. "There are fifty measures which you (Knights) want passed at once," and which you are sending delegations to urge, but instead of attending to this business, the politicians talk of nothing but "petty personalities which are not of the slightest concern to the laboring classes." So, the Knights must vote for civil-service reform, and then we shall have men who will at once proceed to legislate. The first of the fifty measures to be taken up must be that for the purchase of the railroads and telegraphs. How fast the other forty-nine will be passed is not indicated, but we are sure that less than one a day would show a lack of energy to which the civil-service reform Knights would never submit.

We must congratulate Dr. Ely that his letter appeared in the nick of time to prevent a possible insinuation against his motives on the part of his more bigoted opponents. On the very morning of its publication came a press despatch from Reading, Pa., stating that some seventy cigar factories could not sell their products in the West unless they bore a label showing that they had been made by Knights of Labor. From stopping the sale of all cigars not made by Knights to stopping all teaching by political economists not licensed by the Knights to teach, would be a very short step to a power which wanted fifty measures, like those just alluded to, passed by Congress at once. Had the letter not appeared till after this announcement, there would have been room for the insinuation that Dr. Ely wanted to be on the right side when the Knights decided who should teach political economy. Happily there is now no ground for such a suspicion.

PLUNKITT'S "PROPOSITION."

Mr. Plunkitt has introduced in the State Senate a bill, which has been read twice, providing for the submission to the electors of the State of a proposition to "abolish the office of Civil-Service Commissioner and the Civil-Service Commission, and to repeal the laws relating thereto." It enacts that a vote shall be taken at the election of this year for or against this proposition. This bill has been introduced at the instigation of the Tammany opponents of the Civil-Service Law from this city, as the only means of overcoming or getting around the opposition to its repeal which they encounter in the Legislature every year. They calculate that if they can get a majority at the polls in favor of the proposition, the fear of "the reform club," under which even the worst legislators now live, would be removed, and they would make haste to restore the offices to the spoilsmen, whose importunities they now find it so difficult to withstand.

But why should they expect a majority at the polls? it may be asked. For the simple reason, which they have constantly in mind, that it is very hard to call out a full vote of the electors except on plain, pressing, and practical questions, possessing a strong public interest, which the election will decide, such as the election of high officers and the adoption of Constitutional Amendments. On "propositions" submitted by the Legislature merely for the purpose of ascertaining the drift of popular opinion, that great mass of the electors who are busy with honest industry, will not take the trouble to inform themselves, or even to go to the polls. But the other kind of voters, to whom "politics" means simply a struggle for the offices, and to whom the Civil-Service Law is, therefore, odious, would take the deepest interest in the proposition, and would drag to the polls every one whom they influence, and might possibly get a majority on a light vote. At all events, what the supporters of the Plunkitt bill count on is the apathy of the friends of the reform and the great activity of its enemies, in what would probably be their last chance to strike a blow at it.

This much by way of explanation of Plunkitt's scheme. Now as to its propriety. The people of New York pay the State Legislature $211,200 for about six months' work, and provide them with a costly building to work in. This work is legislation, and legislation does not mean simply reading bills three times and then voting on them. It means the careful examination of the subjects on which legislation is proposed, within the limits set by the Constitution, and the decision by the legislators, with such lights as they have, what ought to be done about them. That is what they are paid for, and they are paid handsomely. They are, in other words, hired by the voters to attend to their law-making, and to save them the trouble and expense of voting on every piece of business which has to be done for the State. Any legislator who does not feel himself competent for this work, or who feels the need of a popular vote before he can make up his mind about such a commonplace matter as the best mode of ascertaining the fitness of State employees for their places, ought to resign and go home. If Plunkitt be in need of this guidance, Plunkitt ought to resign. If the Judiciary Committee who have reported this bill favorably, feel the need of it, every man of them ought to go home, and tell their constituencies that they are not up to their work. Their performance is nearly as absurd as that of a bank cashier who insisted on getting the stockholders together every day or two to balance his books. In other words, if the bill is passed, it will be a confession of fraud and incompetency on the part of every man voting for it.

Moreover, the Legislature of the State of New York as created by the Constitution is a law-making body, and not a committee for arranging plébiscites. The sole case in which the Legislature is justified in taking a popular vote on a law is prescribed in the Constitution, section 12 of article vii., where popular approval is required for the creation of a State debt over and above a limited amount. This question was fully discussed by the Court of Appeals, in the case of Barto against Himrod, which arose under an attempt of the Legislature to shirk its responsibility in the same way in the matter of an act establishing free schools. It tried to throw the burden on the people by taking a popular vote on the bill, but the Court of Appeals pronounced the act unconstitutional and void. That decision is not exactly applicable to Plunkitt's proposition, for we do not understand that he thinks a majority vote in its favor will make it a law, but the Court was very emphatic in its condemnation of the Plunkitt principle, namely, that the Legislature "may take a popular vote on the identical question which the Constitution makes it the duty of the Legislature itself to decide." Said Chief Justice Ruggles:

> "They have no more authority to refer such a question to the whole people than to an individual. The people are sovereign, but their sovereignty must be exercised in the mode which they have pointed out in the Constitution. All legislative power is derived from the people; but when the people adopted the Constitution, they surrendered the power of making laws to the Legislature, and imposed it upon that body as a duty. They did not reserve to themselves the power of ratifying or adopting laws proposed by the Legislature, except in the single case of contracting public debt. They probably foresaw the evil consequences likely to arise from such a reservation. These are well and forcibly expressed by Mr. Justice Johnson in his opinion in the case of Johnson v. Rich, 9 Barb., 686. 'I regard it,' said he, 'as an unwise and unsound policy, calculated to lead to loose and improvident legislation, and to take away from the legislator all just sense of his high and enduring responsibility to his constituents and to posterity, by shifting that responsibility upon others. Experience has also shown that laws passed in this manner are seldom permanent, but are changed the moment the excitement under which they are ratified has abated or reversed its current; of all the evils which afflict a State, that of unstable and capricious legislation is among the greatest.'"

It was discussed again in the case of the Bank of Chenango against Brown (26 N. Y., p. 470), with like result. The Court again said that the Legislature "cannot delegate to the people the power to vote on the precise question which the Constitution makes it their own duty to decide, that is, the expediency of a given law." It was discussed again in the case of Clarke against the City of Rochester (28 N. Y., p. 633), and Chief-Justice Denio then said:

"The Government organized by the Constitution was considered to be, as it undoubtedly is, that of a representative republic, and no power existed in the Legislature to convert it into a pure democracy. The organization of the law-making power is one of the principal purposes of a constitutional charter of government, and in all communities of considerable extent this must be effected by means of a system of representation by which people at stated intervals delegate to citizens chosen by them the power of enacting general laws by which all members of the State are to be governed. That purpose is expressed in the Constitution of this State by the declaration that the legislative power shall be vested in the Senate and Assembly."

We would warn members of the Legislature that they will not escape these weighty condemnations by the cheap device of submitting "propositions" to the people, instead of actual bills. They began this plan of shirking their responsibility in 1883 by submitting a proposition about convict labor; but the public will not stand another repetition of this. They will not submit to be saddled with the expense and trouble of deciding questions which they have hired legislators to decide. Therefore, any member of the Legislature who does not feel himself mentally or morally competent to vote aye or no out of his own head on so simple a matter as the question whether the Civil-Service Commission, which the Legislature itself has created, ought to be abolished, ought to resign at once and make way for a better man.

POLITICAL SCIENTISTS.

Professor Huxley's manifesto about the Irish question, published in Saturday morning's *Tribune*, is extremely interesting, as showing what kind of government the modern world would get were the Comtist scheme, of having councils of scientific men set to rule over the nations, carried out. He expresses in thorough Carlylese hi; contempt for "government by average opinion," which he says "is merely a circuitous method of going to the devil," and demands instead of it "one real statesman" of "the calibre of Pitt or Burke, to say nothing of Strafford and Pym." The only mark of such a statesman that Mr. Huxley furnishes to the English people is, that he (the statesman) would "stand up" and tell his countrymen that "the proposed disruption of the Union [with Ireland] is cowardly wickedness," "an act base in itself and fraught with immeasurable evil." But if this performance is all that is necessary for statesmanship, England swarms to-day with real statesmen. Hundreds of politicians, and particularly Lord Randolph Churchill, have stood up and told Englishmen this very thing, and yet Mr. Huxley says, a little further on, that at the last election "he would have voted for the Conservatives for the first time in his life had it not been for Lord Randolph Churchill."

In Parnell he recognizes a genuine leader of men of the Carlylese sort. He says of him:

"Mr. Parnell has great qualities. For the first time the Irish malcontents have a leader who is not eloquent and who is honest, who knows what he wants and faces the risks involved in getting it. Our poor Right Honorable rhetoricians are no match for this man, who understands realities. I believe that he will succeed, and that success will destroy him, and I am very sorry for him. I respect him. I believe also that his success will destroy English politicians who permit themselves to be his instruments, as soon as a bitter experience of the consequence has brought Englishmen and Scotchmen, and I will add Irishmen, to their senses."

Nevertheless, instead of rejoicing that the Irish have got a genuine leader who "understands realities," and encouraging the English, who have not got one, to listen to him and heed him, he dismisses him with the pleasant remark that "success will destroy him."

Carlylese philosophers discoursing on politics have always been a little obscure. They have never yet furnished the world with a good working plan of government, but we doubt if any of them have been more barren in their utterances than Mr. Huxley. What encouragement is there for public men to "understand the realities," and become genuine leaders of men, when success will only ruin them? Surely if the Carlylese gospel had real salvation in it, it would be the duty of the English public now to throw their own statesmen overboard and buckle to Parnell with all their might. In fact, it seems to us painfully apparent that there is no use in being a real statesman, or grasping the verities, if one does not agree with Professor Huxley on the leading question of the day.

The manifesto also gives no reason for despising "the average opinion," except that on a particular question Professor Huxley does not share it. If it agreed with his own, touching Gladstone's effort to settle the long quarrel with Ireland, it is plain it would be much more respectable. The appearance of Sir John Lubbock at the furious Jingo meeting at Guildhall at which Gladstone and Parnell were hissed, makes the scientific opposition to Gladstone now very complete. Tyndall is as furious a Jingo and anti-Gladstonian as anybody, and we suppose there are other scientists of less note also boiling over with indignation against him more privately.

The phenomenon is most regrettable, because it will help to increase the growing popular contempt and dislike for "the scholar in politics." The occasional appearances of scientists like Tyndall and Huxley in the political arena are mischievous, because they do not bring with them a scrap or vestige of their scientific equipment. When they get "inside politics," they rant and roar just like any stump orator. This is not all. They go much further in the direction of non-science than any politician, for they demand before they begin their experiments, not the facts as they are, but facts as they would like them to be. Mr. Gladstone did not make modern England or modern Ireland. He found them as they are—that is, what six centuries of causation have made them; and the problem he has to solve is to make the actual Englishman and Irishman, and not the ideal Huxleyan Englishman and Irishman, stop quarrelling. The "average opinion," which Huxley abuses him for regarding, is also one of the great facts of the problem. There is no more use in calling him names for taking it into account than abusing a chemist because alkalis are alkalis instead of being acids, or an artillerist for allowing for the resistance of the air. In truth, the scientists rarely open their lips about politics except when they are much excited about it, and they then almost invariably reveal their incapacity for political thinking. The difficulty of collecting and arranging the facts of all political problems, and the noise and confusion through which average opinion expresses itself, shock their sense of order and disturb their judgment. If they were ever to succeed to the government of the world, they would never be satisfied with anything short of a drilled society, from which political opinion would issue in prescribed lengths with official labels of soundness.

QUESTIONS FOR THE BRITISH PREMIER.

London, March 27.

Mr. Gladstone's closed hand is to remain closed until the 8th of April. On that day he will make a statement and possibly ask leave to introduce a bill relating to the government of Ireland. It is taken for certain that before the statement is made Mr. Chamberlain and Mr. Trevelyan will have retired from the Cabinet. They will retain office, if they can, until the Crofters' Bill is well on its way through Committee; then they will go, and their places will probably be filled by smaller men. As to the nature of Mr. Gladstone's scheme, and the points at issue between him and his colleagues, we have literally no information. We have indeed a considerable number of paragraphs with large-type headings, but the headings have nothing behind them. They are like the scenes run forward while the chief tableau of the piece is being prepared. A vast extent of country is indicated or suggested; secondary characters enter and engage in conversations which nobody follows; the attention of the audience is held in reserve by the mysterious sounds of shuffling and thumping behind. It would be a waste of time to discuss all the statements which have been made this week "on the best authority." They may all be summed up in the phrase of Goldsmith's coffee-house politician, "A certain Minister is reported to cherish secret intentions, but this requires confirmation." Before Mr. Gladstone tells us what his intentions are, your readers may, perhaps, like to know what are the questions which the country will expect him to answer.

First, he will have to let us know in what order he proposes to take the various branches of the Irish difficulty. Is it to be a case of home rule first—Mr. Parnell's one-plank platform of November last; or shall we have a land-purchase measure first—a bridge on which the landlords may cross St. George's Channel before Mr. Parnell comes to his kingdom? This question the Prime Minister will probably meet by demanding to have the two measures considered together. They are indeed so closely connected that neither can well stand without the other. If they are taken together, the effect on parties will be curious. Landlords who have been looking forward with dread to the possible policy of a native Parliament will welcome home rule if it is combined with a generous scheme of land purchase. On the other hand, many Radicals who are willing to grant home rule will object strongly to a scheme for buying out the landlords on the credit of the imperial exchequer.

If Mr. Gladstone proposes purchase, he will have to meet opposition from two quarters. There are the enemies of the landlords, who grudge them the proposed compensation. Mr. Davitt has already been heard to protest against any leniency being shown to an "idle and worthless class." An ardent Home Ruler tells me that he means to echo this protest as soon as he gets a chance—and why? Because he thinks it would be a mistake to turn the landlords out altogether. He wishes to curtail their power and to get as much out of them as possible; but they do serve certain use-

ful purposes, and therefore, for the sake of the tenants and laborers, the landlords should not be permitted to sell out.

Again, any scheme of land purchase is sure to be opposed in the name of the British taxpayer. Here again we have to note one of those odd changes which Irish questions so often produce among English politicians. Hitherto our economists have been to some extent in sympathy with the landlord; they have taken objection to any argument which seemed to deny or undervalue the owner's interest in the land. Now they seem to be bent on showing that the owners of Irish land have no interest on which it would be safe to advance money. Sir James Caird has committed himself to the proposition that the majority of small holdings in Ireland cannot pay rent at the present time; his assertion was eagerly taken up by the *Times*, and we were told that land purchase meant simply the purchase of rents which are "practically irrecoverable." The *Freeman's Journal* was evidently puzzled and alarmed by this unseasonable waving of the No Rent flag; at the same time, it could not venture to shock Irish opinion by contending that rents ought to be easily recovered. It took refuge in what a lawyer would call confession and avoidance. "True it is," said the organ of the middle-class home-rule party, "that the tenants cannot pay rent *now*. But if we get a native Parliament, the circumstances of the country will improve, and even the poorer tenants will be able to pay a moderate rent."

It is not impossible that land purchase may be opposed in the name of other classes who consider that their claim to be assisted by the State is as good as that of the Irish tenants. If we are to pledge the public credit in favor of Irishmen who wish to set up as peasant proprietors, why not in favor of Englishmen out of work? If the answer is that Irishmen have become a political danger which must be averted, the English workingman is shrewd enough to reply, "Then if *we* behave like the Irish peasantry, you'll think over the advisability of buying somebody out on our behalf?"

These objections to land purchase are formidable, and they may perhaps prevail with some who were inclined to look favorably on Mr. Giffen's scheme of expropriation. Difficulties on this point can only be met by showing that home rule offers the prospect of some benefit which will justify us in running a financial risk. What is the benefit to be? We cannot anticipate Mr. Gladstone's positive answer to this question; but there are advantages claimed for some other schemes of home rule which we may be tolerably certain his scheme will not endeavor to secure for us. In the first place, there will be no complete separation between British and Irish finance. It would in some ways be a gain to us if we were relieved from the necessity of raising, spending, or lending money in Ireland for the future. But to carry out this programme would involve administrative changes of great difficulty; it would also embarrass the question of land purchase by leaving us without any hold on our Irish debtor. Gentlemen at the Treasury say, "The thing is impossible"; and it is well known the Treasury has great influence with Mr. Gladstone.

It seems also most probable that the removal of the Parnellites from the House of Commons will not be one of the attractions of the Government plan. Mr. Morley, indeed, before he was in office, spoke in favor of this course; but the repeal of the Act of Union would point plainly to separation, and the British advocates of home rule are bent on showing that the scheme is to bring about a closer union between the two countries. It is very uncertain whether the Irish members wish to go, and they have some strong motives to insist on remaining. So long as they are with us, they can hold over us the threat of obstruction, and they may consider this a useful and even indispensable safeguard against oppression by the Imperial Parliament. Then, in the House of Commons they have the aid of men who would not care to sit in an Irish legislature. I wonder what Mr. Justin McCarthy would take to live in Dublin? If the Irish members remain, their position will be anomalous; they will interfere with our local affairs, while we shall be debarred from interfering with theirs. It has been suggested that Mr. Gladstone may meet this objection by admitting the Irish members to vote only on questions concerning the whole United Kingdom. If any such limitation is introduced, it will be as fatal to Mr. Gladstone's measure of home rule as the "gagging clauses" were to his Dublin University Bill of 1873. But it is impossible to believe that an experienced statesman will make the rash attempt to distinguish between one Parliamentary question and another. Mr. Gladstone is governing the Empire at this moment because the Irishmen voted for him on an amendment proposed in the interest of English and Scottish laborers. He cannot surely dream of proposing that Irish members may in future be shut out from a division on an English question, even if the division be one which affects the fate of a government.

I have endeavored to state the questions to which Mr. Gladstone will have to find an answer when he makes his long-expected statement. There are many politicians, Liberal and Conservative, who are not willing to decide absolutely against home rule; but at the same time they do not see their way out of the difficulties I have indicated, nor do they feel sure that Mr. Gladstone can find a way. Their doubts are treated as treasonable by some devout admirers of the Liberal leader, but the name of Gladstone is not sufficient to conjure away all our fears. There are even some significant symptoms of reaction against the personal influence of the Prime Minister. Some advanced Liberal journals have declared that this Government is founded on a mistake; that the party should not have gone into office until it had an Irish policy. Others again hold that this Parliament has no mandate to settle the question of home rule. It is curious that a Radical paper should bring up at this moment an incident almost forgotten by the admirers of Mr. Gladstone—his prompt, not to say hasty, recognition of the Confederate Government. It is suggested that he has given Mr. Parnell credit for having "formed a nation," just as he gave the same credit to Mr. Jefferson Davis, and that the ultimate result may be the same in both cases. The comparison is worth noting, but we must not be ready to accept a sinister omen. Whatever our differences with Ireland may be, we must at least endeavor to settle them without recourse to the arbitrament of war.

R.

TWO NOVELS BY PAUL BOURGET.

PARIS, March 23, 1886.

FRANCE is undergoing a curious revolution: it is fast becoming one of the greatest fields of what I might call the fiction industry. The word industry is not misplaced: there must be somewhere large factories where novels are made by the thousand, as there are factories of shoes and clothes. I confess that I am perpetually astonished when I pass before the shop-windows of the book-venders and see every week—I might almost say every day—a large array of new novels, with their catching titles, their yellow, pink, red, blue covers, with the illustrations which often adorn these covers, so as to make them more attractive. I confess having bought some of these books, merely on account of the cleverness of these title-illustrations. Alas! the outside was better than the inside, and I was not well rewarded for my little sacrifice. The fashion has set in not to make edition after edition, but to count the thousands of copies: you see on the title "fifth thousand," "sixth thousand," etc.; sometimes the numbers go much higher. There is a sort of mercantile spirit in this new literature: if a book does not sell rapidly, it disappears; it goes nobody knows where. Everything must be fresh and brilliant, as in a *magasin de nouveautés*. This eruption of novels marks a transformation in the public mind. I sometimes ask myself, What can be the intellectual and moral condition of the devotees of this new literature, of those who write these novels and of those who read them? Shall we pity more the former or the latter? The former have an excuse; they have perhaps a family—"J'ai quatre enfans à nourrir," as we read in one of Molière's plays. What can be the excuse for the latter? I am afraid that a moralist would be tempted to place the novel-reading mania with many others, such as the morphine or chloral mania. The systematic reader of novels needs to forget his own thoughts and troubles in the thoughts and troubles of imaginary persons; he needs an artificial sort of excitement; and this is probably the reason why the sensation novel supersedes by degrees the psychological and purely analytic novel.

The popular mind wants a somewhat coarse food; I have been conversing with some of the men who furnish novels to the penny papers which have the largest circulation. They are almost obliged to amuse their public with crimes and detectives. I should have thought that real crimes were sufficiently numerous and sufficiently interesting; but it seems they are not.

There is no disputing tastes: we must recognize hard facts, and must admit that France, which, even in my memory, was a very poor field for novel writers, has become most fruitful in this respect. If poor Balzac lived now, he would no longer struggle perpetually with creditors; the publishers would all be at his feet. There is not much in all this new literature which deserves the attention of the critic. The new novels are written for one day only; they are doomed to immediate oblivion, like newspaper articles. Here and there, in this chaos of trivial, obscene, dull, inarticulate literature, something more artistic emerges, as a fine flower blooms on a dunghill. My attention was first drawn to a writer called Paul Bourget, by the first number of a novel entitled 'Cruel Enigma,' which appeared in the *Revue Nouvelle*. It described the placid life of two ladies, poor and highly genteel, who were educating a young man, their son and nephew, with the most delicate and tender care. This début was charming; the description of this quiet home, this Eden of virtue, of respectability, of peace, in the midst of Paris, had real merit. To be sure, it reminded one of many passages in Balzac's 'Scènes de la vie de province,' for our great Balzac was admirable in these descriptions of humble and domestic lives: he knew how to place his pure figures in their *cadre*, and how to give a sort of life to this *cadre*. But it is not everybody who can make you think of Balzac, and I conceived at once a high opinion of the talent of M. Bourget.

I saw also at once how the drama would develop itself: how this tender, delicate, refined, but too feminine education of the young hero would ill prepare him for the temptations of life. I was not deceived; the young man falls under the influence of a bad woman, a married woman, and you can imagine the rest—the struggle between the pure affections and impure love, the hesitations, the victories, the defeats of the human will subjected to the action of conflicting forces. It is the old story of Hercules placed be-

tween virtue and vice; it is, alas! the old story of the final and irreparable fall. This "cruel enigma" is no enigma at all: it is the common story. The work of long years of education, the teachings of ancestors, even the clearest possible vision of right and wrong, the consciousness of a great fault and of a great folly—all is vain. Man must meet his fate, and the punishment comes at once, in the diminution of the will, in the impotence of liberty, in the degradation of all the faculties which represent the divine in man. This book, 'Cruel Enigma,' is not a bad analysis of the struggle which too often ends in the subjugation of a fine nature to a coarse, common, and bad nature. It is artistic in so far as it is analytic; it is inartistic in so far as the mind is never kept in suspense, and that you can see at once how it will end. The young man who represents Hercules between virtue and vice, is not enough of a Hercules; he is too weak, you can expect nothing of him. He is not very interesting; you cannot help despising him almost as soon as you know him.

The last novel by M. Paul Bourget, 'Un Crime d'Amour,' is an extraordinary mixture of qualities and defects. It is, like 'Cruel Enigma,' essentially analytic, and in some parts the analysis of human passion becomes powerful, as it is dramatized and not purely descriptive. It is impossible for me to imagine why, having chosen the subject of this 'Crime d'Amour,' M. Bourget has wilfully treated it with a sort of coarseness, I might almost say, of brutality, which is evidently not natural to him, which is obviously forced and artificial. The *dramatis personæ* are always few in number in his novels. In this case, as usual, we have "le mari, la femme et l'amant." The husband is a good, honest, hard-working, innocent, and unsuspecting engineer; the wife is a romantic and dissatisfied person who has made a marriage "de raison." She falls in love with a friend of her husband, a man of the world, idle, clever, for whom love is an occupation more than a passion. The woman does not understand him; she loves in him the man of her dreams; she is blind and becomes guilty. She sacrifices to a dream, to a chimera, her duty, her honor, her peace of mind; and her sacrifice is vain. The two criminals are punished in a different way; the woman, by the gradual discovery of her lover's true character. She finds out in the end that her sacrifice has not been even understood. Her lover does not believe that he is her first lover; he has heard that she had in past times shown some preference for a certain M. de Varades; in reality Hélène (that is the name of our heroine) repulsed with contempt the advances of M. de Varades. But Armand (our lover) thinks that M. de Varades has obtained as much of Hélène as he has himself; and if he has, why have not others? He is extremely ingenious in discovering in all the arts, the forced precautions, the feminine coquetries, of Hélène the fruits of experience; he degrades constantly in his own mind the woman who was to be his idol; he is a sort of moral iconoclast. He sees a mere episode, a mere adventure, in what seems to Hélène the object and foundation of her whole existence. The more she believes in him, the less he believes in her. Her passion has a sort of repellant effect; they do not understand each other. She has given everything to him, and he does not know it or comprehend it. He has been always looking, during the idle years of his youth and of his manhood, for real love—for an absolute, boundless, unselfish affection; he has it, and does not know it. His perverse egoism makes him blind and poisons everything for him. He is not happy; and she is not happy, at first because she knows that she is a bad wife and a bad mother, and afterwards because she discovers that her sacrifice has been vain, and that the man for whom she has done so much makes no difference between her and the women who take lover after lover, and who have made for themselves, as the poet says, "un front qui ne rougit jamais."

She becomes absolutely wild with anger and shame when Armand reproaches her with M. de Varades; and chance will have it that this Varades, whom she has not seen for years, whom she had dismissed from her sight, is thrown again in her path. Here Bourget has copied an incident in the 'Petite Comtesse' of Octave Feuillet. The "petite Comtesse," unjustly accused by the man she loves of having loved another, throws herself in the arms of the latter; she becomes guilty because she has been thought guilty. The "petite Comtesse" punishes herself by death for this moment of folly. In the novels of M. Bourget things are not so tragical. Hélène throws herself in the arms of the astonished Varades; and she then can say to Armand: "Now you can despise me, now I am despicable, but I was not so when you thought I was." This confession convinces Armand at the same time of the sincerity of Hélène and of his own folly; he knows what he has lost, and is conscious of having lost it by his own fault.

I do not like this episode of Varades. I can hardly understand a woman behaving like a child who has been punished unjustly for doing a thing, and who feels that he must do it. Hélène, as M. Bourget depicts her at first, is a little above this puerility. The conclusion of M. Bourget may be moral, if he wished to show all the tortures of mind of a married woman and her lover: but the details of his work are sometimes coarse, sometimes even indecent, and the impression which is produced by it cannot be said to be very healthy. There is something morbid in his delineation of character, in his views of human existence; something unnatural and illogical in his conception of man and of woman.

Correspondence.

IMPORTATIONS OF CARPET WOOL.

To the Editor of The Nation:

Sir: The late decision of the Secretary on the question of "scoured" Donskoi wool would seem to relieve me of the necessity of replying to the letter of the wool-growers' attorneys, published in your last issue. But as they have given the figures on which they have based their previous charges, I may be permitted to point out the fallacy of relying on undigested official figures in matters of this kind. In doing this your correspondents show an increase of importations of Russian carpet wools from 3,322,700 pounds in the fiscal year 1879–80 to 16,151,392 pounds in 1884–85. Now, the fact is, that in 1879–80 one single house in New York alone imported from Russian ports in the Black Sea upwards of 8,000,000 pounds of washed Donskoi wools. The apparent discrepancy arises simply from the circumstance that before 1881 the system of shipping on through-bills of lading from the Black Sea was comparatively unknown. The bulk of the shipments were made to English ports, arrived here under English bills of lading, and were officially recorded as importations from England. I have not the means at hand for verifying the official figures quoted to prove the great increase of importations of carpet wools in the calendar year 1884 over those of 1885; but your correspondents are certainly wrong in ascribing such increase to the alleged evasion of duty, since it is a fact well known and easily proved, that no washed Donskoi wool has ever before this year been classed as scoured, and that in the years 1878, 1879, 1883, and 1884 all, or nearly all, white washed Donskoi wools have been admitted here at the lower rate of duty.

Gustav Schwab.

New York, April 3, 1886.

THE TEST OF NUMBERS FOR COLLEGES.

To the Editor of The Nation:

Sir: The reply which Mr. Bourne has made in No. 1080 of the *Nation* to Mr. Page's criticisms of the Yale policy goes to show that the test of numbers is misleading. To those who are familiar with the inside workings of a college it is evident that this test is also positively mischievous.

The method of instruction in classes requires that a minimum of work shall be demanded of all students, in order to make the class a unit. If this standard is not maintained, the lower half of the class falls so far away from the upper that instruction cannot be given to both together, and one or the other must be neglected. Moreover, the effect of stimulating teaching is constantly to raise men from the indifferent to the working section, and the best results cannot be obtained, even among the best students, unless the college machine is constantly eliminating from the lower end of a class the men who will not work.

The test of numbers, when it is applied to the work of a college faculty, puts a clog upon this machinery and has sometimes stopped it entirely. Into every vote upon the question of dropping a man, the test of numbers enters as a disturbing element. The President, especially if he is an ambitious man, anxious for the success of his administration according to the standards of the public, becomes *ex officio* the defender of all low-stand students; if he is at the same time a scholar, he will attempt to ride the two horses at once, and more than one of the difficulties into which college presidents have lately seemed prone to fall has come from this cause.

The introduction of this test just now is especially dangerous, not only to Yale, but to all good colleges. For there are in the country a couple of dozen preparatory schools in which the work of the Freshman year could be thoroughly well done, and perhaps a dozen colleges which are capable of advancing their standard a single year. It looks as if the next step in the progress of higher education would be made by raising the standard of admission. But right in the way of this stands the test of numbers, suggesting to trustees that such an advance will lessen the attendance; and a college president must be a courageous man if he does not use his veto to prevent a move which seems to threaten disaster to his administration.

The method, too, in which the New York alumni have for some years been trying to apply this test to Yale College deserves notice. The normally developed American college passes through three stages: first, it consists of a board of trustees, served by a president and by a number of teachers; second, the president absorbs the powers of the board of trustees over the internal matters, and the college becomes a one-man affair; third, the college is (not has) a faculty of instruction, whose leading member is the president, and the trustees attend to the funds and to little else. These three stages are about as marked as the oligarchy, tyranny, and democracy of a Greek city constitution.

Yale and most of the New England colleges have reached the third stage: the trustees have nothing to do with elective courses, or with the standard of scholarship, and but little with the appointment of new professors. Their work is confined mostly to the management of the funds. The criticisms of the New York alumni, therefore, while they have been directed ostensi-

bly against the Corporation, bear, in fact, chiefly upon the Faculty. They desire to see changes in the Corporation, in order that the new Corporation may become more completely the governing body, and may change the courses of instruction. They wish to take the management of internal affairs out of the hands of the Faculty and put it into the hands of the trustees—that is, to bring the College back from the third stage to the first. Already a trustee of the New York party has attempted to instruct the mathematical professors about the functions and arrangement of an astronomical observatory.

Such a revolution in the college constitution will have two results. It will lower the *morale* of the Faculty and render a position there less attractive to men of independence and of first-rate ability, precisely as the application of rigid denominational tests lowers the value of a professorship in some colleges. Upon the Faculty thus weakened a corporation of the Young Yale spirit will bring the test of numbers to bear with double force, and the scholarship will go down.

And, second, the revolution will result in a long period of disturbance and struggle at Yale, the end of which will inevitably be the recovery by the Faculty of the position which they now occupy. They have the same advantage (if they will pardon the comparison) which the ward politician has over the good citizen in the primaries—the advantage of being always on hand.

Mr. Page has written two forcible letters, but he is mistaken, I think, in saying that "results are the ultimate criterion by which all policies are judged," when by "results" he means number of students; and equally mistaken, therefore, in supposing that his figures present "the shameful history of Yale's decline." He seems to me mistaken, also, in the tone of his letters, which is that of a stern reformer letting the light and fresh air of public opinion in upon a roomful of selfish and dim-eyed pedants. On the contrary, he is applying to the affairs of a great college, and to the work of an able body of men, a test which in crudity and mischievousness is second only to the bricks-and-mortar standard. Some of Mr. Page's references to Dr. Porter would be hardly pardonable in a letter the facts and reasoning of which were without a flaw.

Very respectfully, M.

JOHN HARVARD AND HIS ANCESTRY: NOTES ON MR. WATERS.

To the Editor of The Nation:

Sir: Drawing from the winter season in which I write an illustration of my meaning, I may say that when once the ice has been broken it is easy to enlarge the breach. Mr. Waters, whose successful labors I fully appreciate and have elsewhere acknowledged, will receive in the spirit in which they are offered these remarks on some portions of his article in the *New England Historical and Genealogical Register* for July, 1885 (vol xxxix, pp. 265-284).

Thomas Harvard, in his will (p. 277), speaks of certain property which his brother and he jointly held by lease from the Hospital of St. Katharine, near the Tower, and the lease was doubtless granted between July, 1635, and July, 1636. If the lease could be found, it could scarcely fail to show where John Harvard was residing at the time, and would thus lead the way to what he was doing between 1631, when he left Cambridge, and 1637, when he went to New England. Accordingly, by the kind intervention of the Rev. I. S. Blunt, the present Master of St. Katharine's Hospital, search was made by Mr. I. G. Rugg, the Assistant Chapter Clerk, among the muniments of the hospital, the substance of whose report deserves to be preserved, and is here placed on record.

The Registry Books of St. Katharine's—that is to say, books containing copies of the leases granted by the hospital, and of other documents—do not go further back than 1681, while the Chapter Minute Books extend only to 1698, and the Receivers' Accounts only to 1819. There is, however, in the Chapter Safe a book of Constables' Accounts from 1599 to 1706, which appears to contain a record of certain courts leet held for the Manor of St. Katharine—that is, for the ancient precincts; but Mr. Rugg was unable to find any mention of the name Harvard, or any clue whatever. "The property held by the Harvards doubtless formed part of the original precincts, and it may be just possible that when the sale was made to the London and St. Katharine Docks Company, about 1836, the then existing and expired leases might have been handed over to the purchasers." In the Chapter Safe are also old leases, expired and cancelled, some hundreds in number, and it is possible that an inspection might disclose John Harvard's place of residence, "but such inspection means time, and consequently money, and the question arises, 'Is the game worth the candle?'" Inquiry at the office of the Docks Company met with a courteous reception, and the reply that the index to their deeds threw no light on the matter.

Grant of probate of Thomas Harvard's will was made to one only of the two executors appointed, power being reserved of making the like grant to the other, who was John Harvard, the founder, "when he should come to seek it." This was the set form invariably followed in such a case, and cannot, therefore, be taken as implying anything beyond what appears on its face, namely, that the other executor did not then prove. Let me note in the certificate of probate the omission of "uno" before "executorū," and also the error of "petitur" for "petitum" (p. 280).

On pages 280–1, Mr. Waters gives various particulars respecting the Harvard family, to which I am able to make an addition, so far as concerns Thomas Harvard, brother of the founder. The records of the Clothworkers' Company show that Thomas Harvarde bound himself apprentice to William Coxe for eight years from June 24, 1627. I give the entry, extending the abbreviated Latin of the original:

"Thomas Harvarde filius Roberti nuper de Southwarke in comitatu Surrey lanii defuncti posuit seipsum Apprenticium Willielmo Coxe Civi & Clothworker London par Octo Annos A festo Nativitatis Sancti Johannis Baptistæ præterito Datum undecimo Septembris 1627" (Apprentice Book, 1606–1641).

The apprentice, as Thomas Haward, was admitted to the freedom in 1634, before his eight years had expired, the explanation being that he had fulfilled the term of seven years, which was all that the use and custom of the city of London required.

On page 284 we read of John Sadler, father of John Harvard's wife: "he was settled at Ringmer, where I find he was inducted 12 October, 1626." Mr. Waters appears here to be mixing up the two separate acts of induction and institution, because the latter is the act of which the Episcopal Register preserves the record, there being no need of anything further because, institution having been given, induction follows as a matter of course. By institution, the bishop commits to the clerk presented to him the cure of the souls of the parishioners; by induction, the clerk is merely put into formal possession, on the spot, of the temporalities which of right are his.

Speaking of John Sadler, brother of John Harvard's wife, as Master of Magdalene College, Cambridge, Mr. Waters says (p. 284) he "was admitted 1650 and deprived at the Restoration." This statement can only have been made in ignorance of the facts, which may be stated in few words. The founder of the College had provided that the Master should be appointed by the owner for the time being of a certain mansion-house and estate; and Sadler, not having been so appointed, had no right to the office, nor can it be said that he was deprived when he was forced to give place to the rightful head. The truth is, the boot belongs to the other leg. Dr. Rainbow was appointed Master in 1642, and was reinstated in 1660, Sadler having been intruded in 1650. I believe that Sadler is regarded by the College in the light in which my language will indicate, and I am told that an account of him is to be found in the *Gentleman's Magazine*, vol. 91. 2, p. 567. Z.

Cambridge, Eng., March 22, 1886.

SUICIDE IN INSURANCE LAW.

To the Editor of The Nation:

Sir: In your last issue, you announce a recent decision of Judge Dyer in Chicago, to the effect that the self-killing of an insane man is not suicide within the meaning of that term in insurance law. To those of your readers who prefer, with Coke, "petere fontes quam sectari rivulos," it may be interesting to note that the decision in question is but a repetition of the doctrine, and to some extent, of the words, contained in the opinion of the Supreme Court of the United States in Manhattan Life Insurance Company vs. Broughton, reported in 109 United States and decided in November, 1883. The head note of Mr. Justice Gray in the latter case is this: "A self-killing by an insane person, understanding the physical nature and consequences of his act, but not its moral aspect, is not death by suicide within the meaning of a condition in a policy of insurance upon his life, that the policy shall be void in case he shall die by suicide."

Joseph C. France.

Baltimore, April 3, 1886.

PROTESTANT EXCOMMUNICATION.

To the Editor of The Nation:

WHAT BISHOP FOWLER SIGNED.

Editor The Voice.—I see in a late issue of *The Voice* that Bishop Fowler is reported to have signed a petition for High License. I would like to know if it is a fact. Have you evidence to prove it? I am a minister of the M. E. Church, and I am telling my members if they sign a petition for license they will have to leave the church. I hope it is only a rumor. Rev. S. Dimmick,

Kinzua, Pa.

Sir: This letter was printed in the Prohibition organ, *The Voice*, with approval. Can anybody point out any difference in principle between the act of Rev. Mr. Dimmick in excommunicating members of his church, and the abuse of priestly authority which is attributed to the priests of the Roman Catholic Church? A.

March 29, 1886.

A LIQUOR-DEALER DEFINED.

To the Editor of The Nation:

Sir: In a number of articles you have recently used the word "liquor-dealer," as, for instance, on page 249, first column, in your issue of the 25th inst., you say: "No party would venture to put a liquor-dealer on a ticket which was to be submitted to the whole city for election."

As no harm can arise from making your positions perfectly clear to your readers, will you be kind enough to state precisely what you mean by a "liquor-dealer"?—Very respectfully yours,

Charles McK. Leoser.

University Club, Madison Square, March 30, 1886.

[A retail vender of rum, gin, whiskey, brandy, porter, ale, or beer, across a bar, or counter,

or wooden partition of some kind, for cash or on credit.—Ed. Nation.]

A PEN SLIP.

To the Editor of The Nation:

Sir: From a medical point of view I read with much pleasure and profit Dr. T. M. Coan's interesting article in the *Nation* of March 25, on the "Curative Properties of the Waters of La Bourboule"; and at the same time my knowledge of Biblical history was increased to the extent of learning that it was Ahab of old who insisted on choosing his own Abana and Pharpar.

Medicus.

Lemont, Pa., March 27, 1886.

[We will not say that Dr. Coan's studies, like those of the physician in the 'Canterbury Tales,' "have been but litel on the Bible," but when he wrote Ahab for Naaman it was doubtless because those studies have occupied him with mineral waters of more recent vogue than those of Abana and Pharpar, which are not now entered in the manuals of Braun, Hellft, Le Pileur, Trousseau, or of any other modern balneographer known to us.—Ed. Nation.]

Notes.

The publishers' spring announcements invite our customary summary selection. (New York) *D. Appleton & Co.*:—'Songs and Ballads of the Southern People,' collected by Frank Moore; 'The Rear-Guard of the Revolution,' by Edmund Kirke; 'Tales of Eccentric Life,' by Dr. W. A. Hammond, and his daughter, Mrs. Clara Lanza; 'The Development of the Roman Constitution,' by Ambrose Tighe; 'Comparative Literature,' by Prof. A. M. Posnett; and 'Shattesbury,' by H. D. Traill. *A. C. Armstrong & Son*:—'The Last Days of the Consulate,' translated from the French of Fauriel. *Cassell & Co.*:—The second volume of Henry W. Lucy's 'Diary of Two Parliaments'; 'Fresh Water Fishes of Europe,' by Professor H. G. Seeley, of King's College, London, illustrated; 'Manual of Greek Archæology,' by Maxime Collignon; 'The Education of the Artist,' by Ernest Chesneau; and 'Representative Poems by Living Poets,' selected by themselves and edited by George Parsons Lathrop. *Harper & Bros.*:—Richard J. Cleveland's 'Narrative of Voyages and Commercial Enterprises,' a work a quarter of a century old, now edited by the author's son, H. W. S. Cleveland; 'Economics for the People,' by R. R. Bowker; 'George Eliot and her Heroines,' by Abba Goold Woolson; 'Mary and Martha, the Mother and Wife of Washington,' by Benson J. Lossing; and 'Memoirs of Mrs. Edward Livingston,' by Louisa Livingston Hunt. *Henry Holt & Co.*:—The second volume of Doyle's 'English Colonies in America,' and of Fyffe's 'History of Modern Europe,' respectively; 'Cyclopædia of Greek and Latin Literature,' by Thomas Sargeant Perry; and 'Whom God Hath Joined,' a novel which appeared serially in the *Catholic World*, by Mrs. Elizabeth G. Martin. *Macmillan & Co.*:—'The Letters of Thomas Carlyle,' edited by Professor C. E. Norton; and a preliminary 'Life of Peter Cooper.' *W. W. Munsell & Co.*:—'History of New Haven, Conn.,' by the Rev. E. E. Atwater—a subscription book, 4to, illustrated. *Publishers' Weekly*:—'Copyright; its Law and its Literature,' by R. R. Bowker and Thorvald Solberg. *G. P. Putnam's Sons*:—'The Political History of Canada,' by Goldwin Smith; 'The Greeks of To-day,' by Charles K. Tuckerman; 'Documents Illustrative of American History, 1606-1863,' edited by Howard W. Preston; and 'History of the United States from 1840 down to the close of 1885,' by Prof. Alexander Johnston. *Charles Scribner's Sons*:—The two latest volumes of Mommsen's 'History of Rome,' translated by Dr. W. P. Dickson; 'Persia, the Land of the Imams,' by the Rev. James Bassett; 'The Epic Songs of Russia,' translated from the original by Miss Isabel F. Hapgood, with an introduction by Prof. F. J. Child; an American edition of Fischer's 'History of Modern Philosophy'; and a translation of Ribot's 'Contemporary German Psychology.' *Scribner & Welford*:—'Letters of George Sand,' translated and edited by R. L. de Beaufort, with six portraits; Johnson's 'Rasselas'; Goldsmith's 'Vicar of Wakefield,' in facsimile of the first edition of 1766, with preface by Austin Dobson, and a complete bibliography; Hatton's 'North Borneo,' and Johnston's 'Kilima-Njaro Expedition.'

(Boston) *Estes & Lauriat*:—A fine library edition of George Eliot's works, 500 copies, with original painter-etchings and photo-etchings by American artists; and Rossetti's 'Complete Poetical Works of Shelley,' in three volumes, a special edition of fifty copies. *Houghton, Mifflin & Co.*:—Prof. Josiah Royce's 'History of California'; and 'Hamlet's Note-book,' by W. D. O'Connor. *Lee & Shepard*:—'Down the West Branch; or, Camps and Tramps around Katahdin,' by Capt. C. A. J. Farrar; 'A Winter in Central America,' by Helen C. Sanborn; and 'Forgotten Meanings, or, An Hour with a Dictionary,' by Alfred Waites. *Roberts Bros.*:—'Hours with German Authors,' by the Rev. F. H. Hedge. *Ticknor & Co.*:—'The Imperial Island; or, England's Chronicle in Stone,' a collection of historic buildings, by James F. Hunnewell; and 'Italian Poets,' by W. D. Howells.

(Philadelphia) *J. B. Lippincott Co.*:—'Othello,' the sixth volume in Mr. Horace Howard Furness's Variorum Edition.

(Cincinnati) *J. Fletcher Brennan & Co.*:—'Autobiography of Cassius M. Clay, of Kentucky,' a subscription book.

(Providence, R. I.) *J. A. & R. A. Reid*:—'The Providence Plantations for Two Hundred and Fifty Years,' compiled by Welcome A. Greene, assisted by the Rev. William H. Fish.

The second volume of Messrs. Matthews and Hutton's 'Actors and Actresses' (Cassell & Co.) will appear before the end of the month. It covers the period of the Kembles, and contains sketches of Mrs. Siddons, John Philip Kemble, and Charles Kemble, by Mr. Matthews, while Mr. Hutton has considered the careers of Charles Lamb's favorites, Liston and Munden, as well as those of Miss O'Neill, George Frederick Cooke, and Master Betty. Mr. Archer has written about Mrs. Jordan and Elliston—another of Lamb's comic actors; Mr. R. W. Lowe about Miss Farren, who became the Countess of Derby; Mr. H. G. Paine and Mr. H. G. Henderson have sketched Charles Mathews (the elder) and Charles Mayne Young; and Mr. Joseph N. Ireland, the historian of the New York stage, has told the life of Thomas Abthorpe Cooper.

Mr. Walter Herries Pollock has abandoned his intention of writing the life of David Garrick for Mr. Lang's series of 'English Worthies,' and instead he will write the life of Sir Francis Drake.

Mr. Alfred Ainger, who has done much for the memory of Charles Lamb, has now edited, with his usual learning, tact, and skill, 'Mrs. Leicester's School, and Other Writings in Prose and Verse' (A. C. Armstrong & Son), in which he has gathered all of Lamb's writing which he has deemed worthy of preservation, and which had not already been included in his two earlier volumes, the 'Essays of Elia' and the 'Plays and Poems.' Together the three volumes give us a Lamb almost complete (and we wholly approve of Mr. Ainger's few omissions), carefully and sympathetically annotated, and well printed: it seems to us quite the best edition of Lamb now to be had. We observe with much pleasure that Mr. Ainger purposes to extend it still further by the collections of Lamb's letters, no wholly satisfactory edition of which has been made.

The huge volume of 'Historical Lights' (Funk & Wagnalls), compiled by the Rev. Chas. E. Little, and consisting of 6,000 alphabetical quotations from standard histories and biographies, has avowedly a practical object, viz., to assist in the preparation of addresses, essays, sermons, newspaper articles, etc. This dictionary has the merit of textual quotation from the sources, and is furnished with a general index and abundant cross-references. The execution of the plan is occasionally grotesque, as when we meet with this scrupulous use of brackets and inverted commas: "3910.—ONE, power of. *Christian.* "The Society for the Promotion of Christian Knowledge," and also "The Society for the Propagation of the Gospel in Foreign Parts" [were both established about 1698, mainly by one admirable man, Dr. Thomas Bray].—Knight's Eng., vol. v, ch. 13, p. 206." The odd heading, "One," is matched by "Depreciation, Financial," from which we warn any Congressman who seeks to garnish a speech on panics; it relates that the managers of the Plymouth Colony had in four years expended $34,000, and that there was neither profit nor the hope of any. Whether it would occur to any orator or essayist to imagine headings like "Follower, An Inferior"; or "Leader, Unnatural," we cannot judge; but we dare say this volume will be deemed a prize by the intellects to which it caters.

Two of the late Mrs. Helen Jackson's stories, published originally in the "No Name Series," viz: 'Hetty's Strange Story,' and 'Mercy Philbrick's Choice,' have been reissued in uniform style by Roberts Bros.

The admirers of George Meredith will rejoice in the newly begun uniform English edition of his nine stories, bearing the American imprint of Roberts Bros. 'Richard Feverel' and 'Evan Harrington' are before us, and are to be praised as manufactured articles.

Mr. Scott Keltie, in his *Statesman's Year-Book* (Macmillan), follows the *Almanach de Gotha* in admitting the Congo Free State to the sisterhood of nations; and he also now for the first time gives a distinct place to the Straits Settlement and to Fiji. We notice that in the list of Presidents of the United States Mr. Cleveland is credited to New Jersey, his native State, instead of to New York, his adopted State and his political belonging *par excellence*. There would be no objection to this if the table were made up on that principle, but it is not. Virginia would then appear as the mother of seven Presidents, and Ohio's three (Grant, Hayes, Garfield) would show an immediate succession from that State for four terms, like Virginia's succession for six in the case of Jefferson, Madison, and Monroe. In this table, by the way, we ought to find General Grant's death recorded; and in the list of non-official publications at the end, Dr. von Holst's History should be allowed four volumes instead of two.

A good deal more than the commonplaces of obituary literature will be found in the volume of 'Letters and Addresses in Memory of Winfield Scott Hancock,' published with liberal margins and with a portrait and many autographic facsimiles, by G. P. Putnam's Sons, for the Military Service Institution. Not only have we the more or less frank estimate of General Hancock by eminent brother officers and some civilians in high station, but a considerable fund of anecdote and reminiscence is amassed for the biographer of this distinguished soldier of the civil war.

E. P. Dutton & Co.'s "Élite Monthly Menu Cards" are certainly praiseworthy as tending to diminish the thought given perforce to what we shall eat and what we shall drink. They are mere lists of dishes, etc., but are far handier than the ordinary index to receipt books. The cards have a neat Russia-leather frame.

A literary curiosity is reproduced in Mr. S. S. Rider's *Book-Notes* (Providence) for March 27—"Old Grimes," as first printed in the Providence *Gazette* for January 16, 1822. Like more famous and more elevated poetry, these verses of the late Albert G. Greene have suffered some modifications in being copied and recopied.

The frontispiece of the April *Book-Buyer* is a very effective portrait of Dr. George P. Fisher, and the chief illustrated article is the third of Mr. Laurence Hutton's papers on noted American Bookplates, in which we find not a few playful strokes of humor, not to be expected in an essay on a dry subject. Among the announcements are two new American novels to be published this month by Charles Scribner's Sons, 'The End of the Story,' by Mr. H. C. Bunner, and 'A Desperate Chance,' by Lieut. J. D. J. Kelley.

A very graphic description of the slides on Tripyramid Mountain, N. H., with some observations on land-slides in general, by the Rev. Alford A. Butler, forms the opening paper in *Appalachia* for March (Boston: W. B. Clarke & Carruth). A subject of growing interest, 'Earthquakes in New England,' for which scientific data are wanting, is briefly set forth by Mr. William Morris Davis, with the aid of a map showing the areas most visited in 1872-1884. Professor Edward C. Pickering gives a list of accurate Appalachian Mountain heights (New England and New York), and there are numerous reports of mountain exploration and adventure. Nor should we omit to mention the map of the Middlesex (Mass.) Fells, a proposed preserve, whose roads and paths are here delineated for the first time, by Mr. R. B. Lawrence.

In the April number of the *Academy* (Syracuse, N. Y.: George A. Bacon), the editor bids good-by to the practice of noticing school-books by writers whose names are signed to their reviews. In hardly any branch of literary criticism, in fact, is anonymous reviewing so imperative, if independence—of publishers and of favoritism—is to be attained. This change is one more mark of the discretion with which this periodical is conducted. The *Academy*, in the line of its main object, is collecting statistics regarding the study of Greek in this country.

The threatened disuse of the London Charterhouse as a home for pensioners endangers the preservation of the wonderfully interesting old buildings themselves. To arouse public opinion against such a consummation is the aim of an interesting article in the *English Illustrated Magazine* for April. Of the accompanying cuts, that representing the Charterhouse as Sutton left it is the most valuable, for a fine series of autotype views of this architectural monument are among the publications of the Society for Photographing Relics of Old London.

Mr. Henry Harrisse returns, in *Le Livre* for March, to the subject of the plundered library of Fernando Columbus, with the prime object of discussing the hitherto unknown first edition of one of the most curious works of Clément Marot—a translation of the sixth psalm of David. This stolen rarity, in four pages small octavo, has no date, but bears an inscription, in Fernando's hand, of having been bought in 1525. By the aid of the internal evidence and much historical lore, Mr. Harrisse acutely discovers the true date of Marot's becoming valet de chambre to Francis I.; by fixing the date of the death of his father, whom he succeeded; shows, therefore, that 1525 must be an error (probably for 1535); and that the date of this first essay at translation is earlier than 1533. Among the announcements in *Le Livre* is the completion of volume i. (A. B.) of M. Paul Guérin's 'Dictionnaire des Dictionnaires.' Among the reviews is that of M. Ambroise Tardieu's 'Dictionnaire iconographique des Parisiens,' being a general list of natives of Paris of whom engraved or lithographed portraits exist, with a biographical sketch of each of the 3,000 names cited, and some rare portraits reproduced by photogravure. M. Tardieu in reality catalogues his own incomparable collection, and is engaged by way of recreation on a biographical dictionary of Parisians either celebrated or worthy of remembrance—some 7,000 of them. This work is about three-quarters done. His example may be held up to any rich American of civic pride whose leisure exceeds his capacity to turn it to useful account.

Polybiblion announces that the well-known writer on old French, M. Frédéric Godefroy, is going to undertake, through Hachette, a 'Répertoire Universel de la Langue Française écrite et parlée,' comprising "all the words and all the dialectic or orthographic forms of words from the beginning to our time, with an indication of their age"; the most important terms of the provincial patois (those of the south of France excepted), including the Walloon, those of Switzerland, Canada, Isle of Bourbon, Île de France, and Martinique; the nomenclature and explanation of the chief proper names, personal and of places, found in ancient texts; and a grammatical sketch, with the general laws of the formation of French vocables.

The first volume of Victor Hugo's posthumous works was announced to appear on the 30th of March, under the title 'Théâtre en liberté.' It contains, besides the prologue, two comedies, "La Grand' Mère" and "Mangeront-ils?" one drama in five scenes, "L'Épée"; a *fantaisie*, "La Forêt mouillée," and three *saynètes*. The beginning of a preface was found among the papers of the poet, in which he says that "La Grand' Mère" alone could be presented on the stage. The other plays would be possible only in the "ideal theatre that every one has in his mind."

'Les grands Maîtres du xviie siècle' (Paris; Lecène & Oudin) is a series of literary and dramatic studies on thirteen authors of the seventeenth century, beginning with Corneille and ending with Saint-Simon. This book is illustrated, not too well, with portraits. The author, M. Émile Faguet, dwells at length upon only a few of the most important works of each writer. His general plan is to give briefly the life, then to speak of the method, the character, the philosophical or poetical theories of his author. He then, almost invariably, closes with an excellent appreciation of the literary merits of his style, explaining briefly what is peculiar in his language, analyzing with a fine critical sense his process of composition. His chapters on La Bruyère are particularly interesting. 'Les grands Maîtres' is evidently a condensation of the teaching of M. Faguet, who is one of the first ready with a work which meets the demands of the new official requirements for secondary education in France. He had only to abridge his larger work for his school edition, 'Notices littéraires sur les Auteurs français' (Lecène & Oudin), adding, however, a few pages on Voltaire and Montaigne. His 'Recueil de Textes' is a companion volume, containing three classic plays in full and other extracts, as prescribed by the new programme of studies.

The Paris papers announce the death of the very clever and prolific writer, "P.-J. Stahl," who, under his real name, Pierre-Jules Hetzel, was a very successful and enterprising bookseller and publisher. His memory ought to be dear to the many persons who, in their younger days, have handled the profusely illustrated books which he has published. In connection with M. Jean Macé he founded and conducted the excellent *Magazin d'Éducation et de Récréation*, which since 1864 has held the first rank among French magazines for the young. It is in this that the greater part of the stories of M. Jules Verne appeared and continue to appear before they are published in volumes. Hetzel (or rather Stahl, for he will continue to be known under that name as an author) was more than a writer for the young. He was a humorist and a fine moralist, who, in the words of M. Émile Montégut, combined "German sentiment with French wit." Two of his most important publications were 'Le Diable à Paris' and 'Les Animaux peints par eux-mêmes.' His best work, a masterpiece in the judgment of Sainte-Beuve, was 'Les Amours d'un Notaire.' Hetzel at one period of his life became much involved in politics, but after his exile in 1851 he devoted himself exclusively to his literary work and to his duties as a publisher. He was seventy-two years of age at the time of his death.

A study of the list of members of the new Weimar Goethe-Gesellschaft (see *Nation*, No. 1079) suggests one or two reflections. Berlin heads the list with 257. Putting Weimar aside, for obvious reasons, we count 53 in Halle, 59 in Hamburg, and only 56 in Leipzig. Certainly 53 is a good showing for Halle, and 59 for so materialistic a city as Hamburg. But the comparison between Berlin and Leipzig is not favorable to the latter. And what shall we say of Dresden, with its 36? Or of wealthy Frankfort, Goethe's first home, with only 37? America "shines" with 6!

The American Historical Association will hold its third meeting at Washington, on April 27–29, in the large lecture-hall of the Columbian University. The President, Mr. George Bancroft, will give the opening address. Reduced rates are offered to members by the proprietors of the Ebbitt House, corner of F and Fourteenth Streets.

—The *Century* War Papers for April all relate to the cruise of the Confederate ship *Alabama* and her final combat with the *Kearsarge*. The first is the story of the *Alabama's* outfit and cruising by Mr. P. D. Haywood, "one of the crew," and who was an English sailor enlisted to serve before the mast. It seems to be an impartial, and is certainly a very interesting, account of life on board the cruiser, of the character and discipline of the crew, and of the fight in which she was destroyed. It gives the "inside view," not from the standpoint of an officer or one who has a theory to sustain, but from that of a man who had satisfied his spirit of youthful adventure in serving on the ship, and has no motive but to tell frankly what he remembers of that which he saw. The other papers are from the executive officer of the *Alabama*, and one of the surgeons of the *Kearsarge*. They are clear narratives of the naval battle more than of the history of the vessels, though Captain Kell gives also a sketch of the *Alabama's* cruise. The only point of real disagreement is with regard to the question whether the *Kearsarge* fired upon the *Alabama* after the latter had struck her flag. Surgeon Browne explicitly declares that the *Alabama* reopened fire after the flag had been hauled down, and that this made necessary a further discharge of cannon by the *Kearsarge*, when a white flag and a signal of distress were both shown, the *Alabama* being in a sinking condition. The Confederate officer insists that no renewal of firing by the *Alabama* was ordered or made. The character of the officers of the victorious ship is the best evidence that they would not knowingly injure an enemy who had surrendered, even though they had been accustomed to consider that enemy as little less than a corsair. The portraits of

Winslow and Semmes, and of the executive officers of the ships, Thornton and Kell, with others of the subordinates, are noteworthy additions to the *Century's* gallery of war worthies, and the naval scenes are good examples of spirited illustration.

—The *Southern Bivouac* for April has a second article by Mr. Durrett upon the Kentucky Resolutions of 1798 and 1799, in which, noting the difference between the resolutions of 1798 as they passed the Legislature, and the draft by Jefferson, the point is made that Kentucky was never committed to the right of nullification by a single State, and that even in the resolution of 1799 it was nullification by the joint action of the States which was asserted to be the remedy for alleged violations of the Constitution by Congress. No one has now any interest in giving to those famous resolutions a meaning not fairly implied in their words interpreted in the light of the situation. Since the nationality of the Government is now admitted to be established, and the alleged rights of secession and nullification to be non-existent, it is only a question of history and of logic whether this result be the decision of war or of a proper interpretation of the Constitution. We think the candid reader of the Resolutions of 1798 and of the arguments of Mr. Breckenridge by which he supported them, will feel that the softening of the conclusion from Jefferson's language was a matter of policy and not of logic Mr. Breckenridge said in the speech which Mr. Durrett reprints, "If upon the representations of the States from whom they [Congress] derive their powers they should nevertheless attempt to enforce them [the obnoxious laws], I hesitate not to declare as my opinion that it is then the right and duty of the several States to nullify those acts and to protect their citizens from their operation." This is precisely the doctrine enunciated in 1799, and which was in the original eighth resolution as Jefferson drew it. To argue, as the writer does, that the right and duty of the *several* States to nullify acts of Congress, only means the right and duty of the States *collectively*, will hardly be thought tenable by those accustomed to interpret English, especially when the resolution of 1799, after all but one of the States which responded to Kentucky had declared against the doctrine and its application, combats the idea that Kentucky, "in momentous regulations like the present," was bound to "surrender its opinion to a majority of its sister States." But the fundamental heresy of the whole series, of both years, is the declaration that the United States was not a nation, but a confederation of States, "sovereign and independent," the Federal Government not being even so much as a "party" to the "compact." It has been too much the fashion in the South to speak of the idea of nationality as if it had been a late growth; but whoever will take the trouble to read Mr. Bancroft's 'History of the Constitution' will find how completely Washington and the great movers in the establishment of the present Government were filled with the thought that the aspiration of the people of these United States for a truly national existence was the impulse they were obeying in framing the Constitution, and was the irresistible force which overcame the objections and the jealousies of local politicians. The argument that "we, the people of the United States," not "we, the Thirteen States of America," ordained the Constitution, was as pointedly used by Mr. Murray in this very Legislature of Kentucky in 1798 (quoted by Mr. Durrett), as it was by Daniel Webster more than thirty years afterwards.

—Miss Lucy M. Salmon's 'History of the Appointing Power of the President' (G. P. Putnam's Sons) appears as No. 5 of the Papers of the American Historical Association. It is a clear, orderly, and interesting account of the subject. Miss Salmon has evidently searched well a wide range of authorities. She states the various theories that were entertained by the framers of the Constitution in fixing the appointing power, and gives the early interpretations of the Constitution. At the close of the first debate in Congress "four important conclusions had been reached: 1. That the appointing power includes the removing power; 2. That both belong to the President, the Senate having simply a negative on appointments; 3. Where the tenure of office has not been provided for by the Constitution, the office is held at the pleasure of the appointing power; 4. Heads of departments are not 'inferior officers.'" The practice of the various administrations in exercising the appointing power is stated in an intelligent and interesting way from the beginning, showing the lapse from virtue, the attempts at reform, and the discussions, down to the approval of the Pendleton Act on January 16, 1883. The early administrations, to 1829, are grouped as belonging to the "Merit Period"; the succeeding ones, to 1861, as of the "Spoils Period"; and the latest are designated as making up the "Reform Period." After all that has been accomplished, the author points to the Four Years' Limitation Law, a baleful influence ever since its ill-starred enactment in 1820, as something to be repealed; and other fields for reform are indicated by allusions to the narrow scope of the Pendleton Act, applicable to only one-seventh of our civil offices, to the abuses in appointing to consular offices, to the loose practices possible under the head of removals for "offensive partisanship," and to the almost untouched regions of State and local administration. The reformers of the civil service are greatly indebted to Miss Salmon for this excellent contribution of full, well-ordered, well-authenticated, and well-illustrated narrative. On page 23 a striking statement is made as to the number of offices in the Post-office Department from 1789 to 1817. During the first two years of the Government there were only seventy-five. The next year they rose to eighty-nine. In 1800 they were 903. In 1817 they were 3,459. Now, it might be added, they are no fewer than 51,252.

—The *American Law Review* (St. Louis: Review Publishing Co.), with the bi-monthly number of last November, finished its nineteenth volume. It began, as a quarterly, at Boston in October, 1866; three volumes have now appeared since its transfer to St. Louis. It was and is a fact discreditable to the legal profession and the legal publishers of the East that they should have allowed the leading law periodical of the country to pass to the banks of the Mississippi. But thanks are due to those of the West that they maintain it, and with so much credit. It is greatly to be regretted that the *Review* has lost its hold on such a contributor as Mr. Justice Holmes, whose articles formerly gave distinction to the *Review;* such a journal should seek to represent the scholarship of the profession as well as its more common gifts. In the main the present volume compares favorably with the earlier ones. Mr. Wm. M. Meigs's article on the "Relation of the Judiciary to the Constitution" (pp. 175-203) is full of valuable suggestion on a topic which has never yet been so carefully explored as it should be. Mr. Meigs's views have a certain ante-bellum flavor, and they lack that illustration from foreign sources of which one gets a hint in Dicey's recent book; but his thorough and accurate presentation of the early precedents and discussions on the topic in question is the best that we have ever seen; it is very valuable. Mr. Edmund Kelly's article on "The French Law of Evidence" (pp. 380-399) will be found highly instructive by reason of the side-light it throws on our own system. But the most important article in the volume is that of Mr. Glendower Evans on "Jurisdiction in Mandamus in United States Courts" (pp. 505-546), an altogether admirable piece of work, both in method and substance, and one which should be preserved in permanent form. It is devoted to showing that our Federal Courts have fallen into an error in denying that the Circuit Courts (and so the District Courts), in the exercise of their original jurisdiction, can use the writ of mandamus otherwise than as a writ of execution. A careful examination of the cases is conducted with skill in statement, strength of argument, and excellent temper. This is a paper which must command attention in any future discussions of the subject. Two articles by Mr. Edward C. Moore, jr., treat with learning the perplexed topic of the apportionment of dividends between life-tenant and remainder man, a subject which was illuminated some years ago by the wit and sense of Mr. John O. Sargent in his pamphlets on "The Rule in Minot's Case."—Since the foregoing lines were written the tidings come of the sudden death of Mr. Glendower Evans, at Boston, at the untimely age of thirty years. He was a man of excellent gifts of mind and character, and already had begun to justify the high expectations of his friends. In various public affairs he had taken an important and successful part. The death at so early an age of a person so accomplished, able, and public-spirited, is a heavy loss to any community.

—In the introduction to his 'Measures of the Velocity of Light,' recently published in vol. ii of the 'Astronomical Papers prepared for the use of the American Ephemeris and Nautical Almanac,' Prof. Newcomb gives an admirable review of the work of previous investigators in the same field, beginning with Galileo, to whom it first occurred that light might take a sensible interval to pass from one point to another. He suggested an experimental investigation of the question, in a form which was undertaken by the Florentine Academy, and which failed of detecting the non-instantaneous propagation of light only because its velocity was so great as to elude their rude appliances. Prof. Newcomb points out the fact that the principle on which the method of the Academicians was based is identical with that which underlies one of the most celebrated methods used in recent times for the attainment of the same object, and known to physicists as the toothed-wheel method of Fizeau. Prof. Newcomb's own measures were conducted with apparatus embodying a modification of Foucault's method of the revolving mirror. Nearly twenty years ago, in his classic 'Investigation of the Distance of the Sun,' he pointed out the importance of repeating Foucault's own determination on a much larger scale; but it was not until 1878 that definite steps were taken by bringing the matter before the National Academy of Sciences, through the report of which to the Navy Department Secretary Thompson in 1880 secured a Congressional appropriation of $5,000 to defray the expenses of the experiments. Under the direction of Prof. Newcomb, the complicated apparatus now known as the phototachometer was constructed by the Messrs. Clark, of Cambridgeport, and installed at the military post, Fort Whipple (now Fort Myer), in Virginia, and at a distance of 2,550 metres from the Naval Observatory, on the grounds of which the return-mirror was set up. Finding, after a few months' experience, that the observations might be conducted over a much longer line, the position of the return-mirror was changed to a point near the base of the Washington Monument, and at a distance of 3,720 metres from the apparatus at Fort Myer,

With this new arrangement the work of actual experiment was concluded in the autumn of 1882, from the discussion of which Prof. Newcomb concludes that the velocity of light *in vacuo* is 299,860 kilometres per second. If we combine this result, according to the well-known relation, with the constant of aberration, 20".492, as determined by the recent labors of Dr. Nyrén at Pulkova, the resulting parallax of the sun is 8".794, corresponding to a distance of practically 93 millions of miles—a value which, if the general drift of results obtained by other methods is to be trusted, cannot be much displaced by any subsequent research.

LONGFELLOW.

Life of Henry Wadsworth Longfellow. With extracts from his journals and correspondence. Edited by Samuel Longfellow. 2 vols. Boston: Ticknor & Co. 1886.

THIS biography is characterized by its good manners. There is no line in it, any more than in his poems, which the poet dying would wish to blot, and this is double good fortune. Those who were his acquaintances need not fear any disillusion as to their place in his real esteem, and those who worshipped him from afar will find no appreciable lessening of the proper heroic distance between themselves and the object of their devotion. At the end, it is as if one had grown familiar with the study at Craigie House, had heard the poet talk of his past and his books with a discreet suppression of names not already public by virtue of their owner's repute, and had listened to extracts from the journals and correspondence, while all the time the doors leading out of the library are kept closed. The editor—and he is indeed only an editor—has adopted that modern substitute for autobiography which consists in a selection and arrangement of papers written by the man himself and connected by the slightest thread of narrative. He says in his preface that this method is one by which "the reader would best learn how a man of letters spends his time and what occupies his thoughts." This plan has been rigidly adhered to, and consequently the work is essentially Longfellow's diary, expanded and illustrated in parts by letters, and exhibits to the public the surface of events and thoughts in the life of a poet, in the literary and social environment of Boston, who was one of the most cultivated members of the group that gave distinction to the period.

The editor himself describes this life as that of a man of letters; and whether or not he meant to distinguish sharply between the phases of Longfellow's career as poet and as scholar, the effect of the mode of biography chosen is to present its subject as a scholar who wrote poetry rather than as a poet primarily and always. In nearly all accounts of men in whose lives the world takes interest there are some salient points, some deeds or works or incidents which have attracted attention to the individual; but in telling the story in detail the biographer often finds difficulty in managing those intervals in which his hero's days did not differ from those of ordinary mortals. It is in such portions that the much lamented "disillusion" usually makes itself known. In Longfellow's case the writing of a series of poems has drawn the curiosity of men toward his personality, and if one would get at the true record of his poetic life, that would be the biography for which men would care most; but that is a very secret matter, and hard both to discover and to disclose. Moods visited him and he wrote; but between these, and filling up the intervals of his poetic life, was a life of letters, and it is this life of which his diary was a transcript. This was easy both to record and to publish. Longfellow himself tells us what he thought of its relative importance in his real history: "How brief this chronicle is, even of my outward life. And of my inner life, not a word. If one were only sure that one's journal would never be seen by any one, and never get into print, how different the case would be! But death picks the locks of all portfolios and throws the contents into the street for the public to scramble after." Waiving all question as to the degree of privacy to which a poet's life is entitled, let us take it at once on this best authority that the diary which is spread before us is not the true record of a poet's soul, but the jottings of what happened to him in the body, the cities he saw, the men and women he met, the scenes of natural beauty and childish festival he witnessed, the society he dined and talked with, the books he read or wrote, and such of his thoughts, sentiments, and moods as he was not unwilling that the public should "scramble after." The letters, both of his own inditing and from others, which supplement the diary, will not affect the matter, since they belong to the same outer region of life.

It has generally been believed that Longfellow's life was, in its human relations and its social and material surroundings, very charming; in these volumes this opinion is sustained by page after page of detail. Whether as host or guest, as son, father, or citizen, as stranger or as bosom friend, the element of urbanity pervaded his character. One finds it only too easy to quote instances in which his refined amiableness gave beauty to trivial or even mean and intrinsically ugly incidents. This social phase of the biography presents our cultivation in the intercourse of life with the greatest perfectness which it has yet found in any literary record; the diary, in this regard, becomes at once an indispensable part of the *memoirs* of manners. So much is true of it in relation to the entire coterie (and it was not a very small band) of which Longfellow was one of the most finished members; but beyond this, some of the individuals whom he habitually mentions gain in agreeableness by what he has to say of them. To take the most notable instance, it is certainly impossible to lay down the volumes without a much pleasanter impression of Charles Sumner's nature than the public has thus far entertained. Longfellow was not blind to the grandiose quality in his friend, but he writes of him so warmly, and displays his attachment in so many ways, and insists so often upon the affectionate, humane, and simple heart of his Herculean orator, that the statuesque memory of the Senator loses something of the chill which has belonged to it; and the glimpses one gets of Sumner during his frequent visits to Craigie House display him in an attractive guise. On the other hand, Sumner's friendship seems to have reacted on Longfellow, to develop in him an interest in politics not natural to him, and to quicken his patriotism and enlarge his life with public sympathies. The vigor and decision of Longfellow's remarks upon the state of the country, the clear and certain tone whenever that conflict of "the North wind against the Southern pestilence" is spoken of, free him from the doubt which has been sometimes indulged, that he secluded himself from the great cause of his day more than befitted a complete man. There is evidence enough in these pages to show how intense and constant was his aversion to the violence of politics, but in spite of that he entered into the spirit of the time, and from an early period had his heart in the right place. That this was in some degree due to his intimacy with Sumner also seems plain; and thus the withdrawal of the veil of privacy from their friendship is a gain to the memory of both.

The social feature in Longfellow's life is, perhaps, the leading trait of this work, and its most immortal part; its charm is to be felt, as the editor justly says, only by the perusal of a multitude of details as they follow day by day in the record of the poet's own hand. Scarcely second to this, however, is his friendship and association with books. From early years his genius was fed from this source; and the fortunate accident of time, which made his graduation at Bowdoin College coincident with a desire on the part of the trustees to found a chair of modern languages, determined his fate as a poet who should lean much on books. The travels and studies which were undertaken to fit himself for the prospective professorship may be said to have controlled his career. He returned with an admirable literary culture, which his later post at Harvard helped to perfect. His reading from that time was in Continental rather than English literature, and his poetry showed its influence. It is true that he derived many poetic impressions directly through the eye in the course of his journeys abroad, but for the most part he obtained them through the foreign romantic poets and the primitive imagination of the northern bards. Had he been in closer contact with poetic motives in life itself, he might have been touched with passion; but as he felt them at second-hand, as it were, he could not lift his mood higher than the region of sentiment in that considerable portion of his work which deals with mediævalism, or with the contemporary picturesqueness which still survives in the ruins of the Gothic past. In those parts of his poetry where the literary influence is less obvious, it is no less potent. He was a poet who was developed by books, and not by experience; even when he draws from life itself, his cunning is bookish. This is the impression already given by his works, and his biography makes it deeper. It is the "man of letters" whose history is given to us. The poetic temperament, nevertheless, is very frequently to be observed. The susceptibility of the organization to slight changes in the surroundings; the restlessness, the weariness, the fret of the spirit; the delight in receiving the impression, and the reluctance to work it over into expression; the joy in the vision that comes at the rare moment, and the shrinking from the labor of the spell that bids it stay forever and be seen of all eyes—these and the other common qualities of temperament which are often as keen in those who have no faculty of language, can be noticed throughout all his long life. Longfellow's personality is revealed in these passages, but this is merely the light and shadow of life's surface; the poetic nature is deeper than that. Probably the point of view under which he is viewed in his own diary is the correct one, as it is the common one among critics. His art, taste, and treatment present the qualities of culture; and the forms of which the theme is immediately from life about him are just those which cause him to be called "the poet of the affections." Outside of home-life, books were his inspiration; in other words, generally he was sustained in the poetic mood by the beauty and virtue of which he read.

Some light is thrown upon Longfellow's methods of composition. He wrote with singular ease; indeed, we recollect no poet of equal rank who is known to have been blessed with like facility. The shorter poems, and particularly the "psalms," as they are half-humorously entitled, came to him without effort, sometimes "by whole stanzas and not by lines," as he says, and they required little correction—usually, it seems, only the strengthening of a phrase, but no complete recasting. Similarly with the long poems, when his subject was once settled on and the work begun, he apparently ran on "trippingly," and was satisfied with the corrected first draft. This shows admirable mastery as well as speed,

while it suggests that the feelings of the poet were not excited to any great energy. One notes, too, that his subjects for shorter poems were frequently selected and the poems written later; a practice which generally indicates the forcing of a poet's talents. Another characteristic, which is rich in suggestions to an analyzer of literary men, is the habit he exhibits of setting down in his diary striking figures of rhetoric heard in sermons or elsewhere, not for the sake of the thought, but of the form. Sometimes one comes upon a landscape sketched in a few exquisite lines, but such entries do not seem to be notes for future work. On the whole, the young poet will not learn much about the craft from these volumes; so far as anything can be inferred from such slight material, equability marked his poetic life as invariably as it did his social intercourse.

Thus this biography in nowise contradicts or modifies the popular estimate which was long ago arrived at in respect to the poet. It merely sustains and amplifies the opinion that has been so often expressed. We have not been surprised by the gift of the intimate and unguessed record of a noble soul—one of those memories which are shrines of the ideal life; but we have what was to be expected, a full and delightful history of the external aspects of a lettered life in a refined society, as it was led by a man who fulfilled his duties in the varied relations of his sphere in a way that made his days beautiful and his memory a humanizing influence upon all who have any perception of the sources of its charm. Our polite literature gains greatly by this, more than by any work which has been published for some time in this country. Nevertheless these volumes are neither a complete account nor a thorough study of Longfellow's life. They occupy in his works a similar place to Hawthorne's note-books. Autobiography is of necessity an imperfect view of its writer's individuality; it is usually invaluable, it is often agreeable, but it is always insufficient. Other memoirs must supplement this by showing how he seemed to the eyes of others, and the scholar who seeks the genesis of his poems must establish the logical connection between the life and the works. Of his personality we are not likely to know more—one suspects there was really little more to know; but of the quality of his genius, in the light thrown on it by his private life, a good deal is yet to be written.

THE COÖPERATIVE HISTORY OF AMERICA.

Narrative and Critical History of America, edited by Justin Winsor. Vol. II. Spanish explorations and settlements in America from the fifteenth to the seventeenth century. Boston: Houghton, Mifflin & Co. 1886.

WITH the first instalment of this work in our hands, a work long expected with an interest inspired by the success of the coöperative method under the same guidance in the 'Memorial History of Boston,' we naturally review in thought the work done in modern times by other hands upon the history of this continent. It is a high standard that has been set by the labors of Robertson, Humboldt, Prescott, Kohl, Parkman, and Bancroft, and yet the 'Narrative and Critical History of America' must be pronounced in scope and method the greatest contribution that has been made to the literature of our history. Not that it can compete in beauty of artistic workmanship with much that has preceded it: it makes no effort so to do. Though not devoid of literary excellence, it is first and foremost a scientific work, as truly such as is Helmholtz's 'Lehre der Tonempfindungen.' Strange as it may sound to those whose memory goes back to the date of the Treaty of Guadalupe Hidalgo, its only rival is that valuable and ponderous series now issuing from the laboratory of Hubert Howe Bancroft on the Pacific Slope. One of these books will probably henceforward suggest the other, as the trick of a feature will sometimes recall a totally dissimilar physiognomy. Both owe their origin to the specializing tendency of the present, which makes coöperation first possible, then necessary; and the fact of coöperation, though not the distinguishing feature of Mr. Winsor's work, is the first to attract attention. Here the likeness begins and ends—nay, coöperation even has taken on a different guise in the East and West. The Californian editor, in a land where worth of personality is supposed to be most fully appreciated, carefully, systematically suppresses the individuality of his assistants; Mr. Winsor's plan is based upon a most scrupulous accrediting to each co-worker his every line and word.

If we may not justly adapt to the new history the sentence wherein Sir William Jones defined the work of the Asiatic Society of Bengal, and write, "The bounds of its investigation will be the geographical limits of America, and within those limits its inquiries will be extended to whatever is performed by man or produced by nature," we may safely say that in scope it is unapproached. It deals with the two Americas, from the earliest period to which surmise can reach, to the generation that tells the tale. Of the eight stout volumes we are told to expect, those at present published, the second, third, and fourth, relate the discoveries and settlements of the Spanish, English, and French; the later volumes will continue the narrative, while the first will handle the aboriginal history of the continent, as well as the strange, fascinating story of the pre-Columbian discoveries, and that dim—we had almost said telepathic—half-knowledge of the existence of a western world which haunts all the earlier centuries of history. This volume will be among the last to appear, in order that full use may be made of the present study of our native ethnology and archæology, when every year is giving what, before the war, a decade failed to give.

It is not the scheme of authorship—the striving to pick out for each era and topic the one man who knows most about it—it is not its unrivalled scope, that gives this work its enormous and permanent value. The method of construction insisted upon in the felicitous title, '*Narrative and Critical* History of America'; the coupling with each narrative chapter a chapter descriptive at length of the sources of information upon which the narrative was based, and of their comparative value—this is the feature of the book. The nature of the ordinary "history" is well known: the author, having collected his material and selected his point of view, writes his text well or ill according to his kind; to this he appends, perhaps, notes explanatory and otherwise, and references to his authorities, which he quotes by designations often inaccurate and not seldom unintelligible; sometimes, to our rejoicing, he devotes a couple of pages to an account of the authorities, and of his diligence in examining them. Such work grows less common, but a reminiscence of it lends zest to our appreciation of a scientific method. Surely all scholars who like to know the ground whereon they walk, will welcome the application of such a method upon such a scale.

The second volume, which lies before us, deals with the explorations and settlements of the Spaniards from the fifteenth to the seventeenth century. It opens with the voyage of Columbus and closes with that of Magellan. In turning the pages there appears to be about as much critical matter in small type as narrative matter in larger type. Another thing strikes us at the first examination: editorship, as Mr. Winsor understands it, is no child's play. Of the 617 pages in the volumes (exclusive of the index) some 340 are from his pen, and very many of the others bear traces of his care. He has written the chapters upon Columbus and Cortes, and the critical chapter on Vespucci, and about all the cartographical matter. The other writers and their subjects are as follows: Sydney Howard Gay takes Vespucci, and Doctor Edward Channing the other early followers of Columbus; Dr. John G. Shea writes of Ancient Florida, of Ponce de Leon, De Soto, and the tragedy of Fort Caroline; the Rev. George E. Ellis sympathetically recounts the life of Las Casas; Prof. H. W. Haynes, of the Archæological Institute, follows the early explorations of New Mexico; the Conquest of Peru is described by Clements Markham, and the Rev. E. E. Hale lends a new charm to Magellan's voyage. Such a roll of names guarantees thoroughness and care in workmanship, and no one who goes to the book will be insensible of it. As we have already said, history is here treated scientifically, not artistically; the critical part has overbalanced the narrative. The general reader must approach the book with his loins girt up. He will be constantly reminded that the pursuit of truth is no longer compatible with a journey upon that broad and easy way which we all like now and then, despite its dolorous goal. No sooner is he suited to one author than he will be thrown violently out of the saddle by a critical chapter or bibliographical note, and when he has climbed in again it is only to find that he must adapt himself to a different pace. We are not cavilling; we merely wish to explain that this history is not to be read as one of Prescott's is read, and was not meant to be. The literary merit of the separate narratives is overcome by the lack of artistic adjustment pre-ordained in the conception of the plan. To regret this would be, as George Eliot has said, to demand that not this book but another should have been written.

Throughout the volume the object has evidently been to epitomize the results of what has been done before, rather than to enter upon new lines of investigation. Thus the first chapter condenses all that has been written about Columbus down to the latest phase of the discussion regarding his last resting-place, and gives an account of the mingled light and darkness which Harrisse has just thrown upon his history; but the writer has been careful to refrain from deciding doubtful questions, and is conservative in his utterances, though sharing the estimate of Columbus's character which every rebellious reference to the sources renders more probable. In dealing with Vespucci, too, neither Mr. Gay nor the editor throws any new light on the mysterious first voyage, but we are left with the belief that we have all the light there is. An impression of novelty there undoubtedly is in Mr. Shea's article, but we suspect it to lie rather in the point of view than in the facts. His heart is warm towards the Spaniards, and one will hardly recognize, as it comes from his persuasive pen, the story of the vengeance of Dominique de Gourgues which so thrilled us in Mr. Parkman's telling. Dr. Shea corrects a common injustice in pointing out good reasons for believing that the expedition of Ayllon in 1521 along the northern coast to Virginia was very particularly not intended to be a slave voyage.

It was well to devote a chapter to the "Protector of the Indians," for we heartily agree with Dr. Ellis that the dare-deviltry of the conquerors did often bewitch our earlier writers from a proper portrayal of the effect of the conquest upon the natives. Nor is the scientific method of dealing with such matters much better than the Carlylesque. Dr. Dewey wrote (and Dr. Ellis

quotes): "History should teach men to estimate character; it should be a teacher of morals, and I think it should teach us to *shudder* at the names of Cortes and Pizarro." If it does not, it is not because it teaches us to look on the sufferings of lower races as on an interesting vivisection, full of valuable results, but because it teaches that one mortal may not venture to shudder at the acts of another mortal.

The account of the exploration of New Mexico and particularly that of the expedition of Coronado in 1539–1541 to the Grand Cañon of the Colorado, the Zuñi pueblos, and the plains of Kansas, will prove one of the most attractive chapters, for the subject has not as yet crept into general literature, and the identification of localities recently achieved adds greatly to its interest. Worthy of note by all who have to deal with tradition is the fact that Mr. Cushing finds to-day, among the store of Zuñi legends, one of the killing of the black Mexican, whom he identifies as the negro who in 1539 preceded Fray Marcos to Cibola. Even more interesting would it be to know the exact tenor of that legend. Dr. Shea observes that in the summer of 1541 the forces of Coronado and De Soto were within a few days' march of one another, and this impresses one anew with the wide range which exploration had reached in that year. It was 1541, too, that saw Orellana float down the Amazon to the Atlantic, and Valdivia invade Chili. On page 503, in the chronology quoted from Duro, Coronado's expedition is inserted once under 1531 and again correctly. A reference to page 500, where the error is explained, would have been in place.

It is difficult to speak of the bibliographical and critical work without seeming too laudatory. Were the book intended for readers only, it might be justly urged that a clear conception of the subject has sometimes been sacrificed to luxuriance of detail, and it may happen that the seeker after a reference will be in doubt where to turn; but as a rule fulness and clearness are both attained. To give an idea of the character of the work we briefly analyze the critical chapter on Cortes and his companions. After a few pages descriptive of the sources which have been made public since Prescott wrote, we come to thirty pages of notes classified thus: A. The letters of Cortes, each described separately with its editions and translations. B. Three contemporary writers (Gomara, Bernal Diaz, Sahagun). C. Other early accounts. D. Native writers. E. Earlier historians (Acosta, etc.). F. Modern historians (Solis, Robertson, Clavigero, Prescott, Wilson). G. Yucatan. H. Bibliography of Mexico. Such detail as this is not always necessary, and no one desiring a guide can go wrong who follows the methods of Mr. Channing, Dr. Shea, or Prof. Haynes.

Cartography plays a very important part in this book. Nowhere else is such a mass of information on the subject brought together. When the series is complete, the work which Dr. Kohl was defrauded of doing for this Government will have been done in a manner which his resources would not have permitted. In this volume there are articles on the earliest maps of the Spanish and Portuguese, on the early cartography of the Gulf of Mexico, on the discovery of the Pacific Coast, tracing the rise and fall of the insularity of Lower California, and the history of the Straits of Anian, and on the Amazon and the mythical Lake Parima. The cartography has also been kept in view by the contributors to an unusual extent.

The volume is bountifully illustrated, and in the best sense of the word, for every one of the nearly three hundred cuts illuminates the text, and not merely exhibits the skill and mental capacity of the artist. In this respect the 'Narrative and Critical History' reminds us of Oncken's 'Allgemeine Geschichte,' although it has no folding-plates, and in facsimiles does not attempt to reproduce paper and external form. The cuts include portraits, signatures, title-pages, etc., and over a hundred maps. Almost all are extracted from ancient books, and their origin is indicated.

In spite of general good make-up, one is sometimes forced to sigh for a paginal date and a less rigid system of headlines. The cuts and maps have been included in the general index, but a chronological list of the maps reproduced is lacking, though it would be of great value. We hope that it is intended to present such a list for the complete work. Nothing is left to be desired in mechanical execution, though the volume is somewhat heavy. The page is pleasant to look upon and easy to read, and the illustrations have that combined clearness and delicacy which does honor to both editor and printers.

RECENT FICTION.

What's Mine's Mine. A Novel. By George Macdonald. Harper's Franklin Square Library.

Mauleverer's Millions. A Yorkshire Romance. By T. Wemyss Reid, Harper's Handy Series.

Fortune's Wheel. A Novel. By Alex. Innes Shand. Harper's Handy Series.

Adam Hepburn's Vow: A Tale of Kirk and Covenant. By Annie S. Swan. Cassell & Co.

Snow-Bound at Eagle's. By Bret Harte. Boston: Houghton, Mifflin & Co.

"MR. MACDONALD writes with a higher purpose than transient amusement," says the *Athenæum;* yet in some of his novels he has not found it impossible to write with a high purpose and still give a certain portion of transient amusement to his readers. Nor are the two things entirely incompatible; there may be dull and amusing morality as well as moral and immoral amusement. But morality is one thing and amusement another, and the sooner one finds this out and lays it to heart the better off he will be in any walk of life, and especially if he is given to novel-writing. In 'What's Mine's Mine' Mr. Macdonald has altogether given over being amusing, and if some reader take it up remembering 'Sir Gibbie,' he will in all probability be disappointed. The machinery of the story does not work without a hitch every now and then; the characters are overdrawn for the sake of contrast, and the "higher purpose"—which seems to be the teaching of a pleasant Christian pantheism—is about the only purpose of the book. The final enrichment of the poor laird of Glenruadh, from the oil found on his American possessions, is one of those gratuitous incidents that go far toward spoiling the effect of an example that would otherwise have been meritorious. It has too much of the reward-of-virtue spirit in it, and the laird's nobleness in giving up his land for the sake of establishing his people in Canada is forgotten as soon as sudden wealth enables him to buy it back. Mr. Macdonald is welcome to his use of "factitude" and to such antitheses as "his truth elicited what there was of hers; the true being drew to the surface what there was of true in the being that was not true."

'Mauleverer's Millions' is a novel of quite another sort — one of the constantly increasing number of imitations of 'Called Back.' "A Yorkshire Romance" on the title-page is misleading, for the story is merely sensational. Some ingenuity is expected in these plots, which usually open with the hero and mysterious heroine falling in love at first sight, and Mr. Reid has managed to have more or less of it in the story of Mauleverer's millions. There is the orthodox trial of the heroine for murder, with the usual scene at court. The important evidence which clears her, however, instead of being produced on the last day of the trial, is kept back until after she is convicted, and then produced to secure her pardon. Mr. Reid, one may be sure, wrote his tale with no higher purpose than transient amusement; yet, just as in Mr. Macdonald's novel, there is a minor incident at the very end concerning money. Mauleverer's millions are given up by his heirs because he had made, but never executed, a will leaving them to charitable institutions.

We have not had the ill-fortune in a long while to read so poor a novel as 'Fortune's Wheel,' about which there is absolutely nothing to commend. It is a poor story, poorly told, tediously padded out to an unconscionable length, and filled with a pretentious spirit that is not the least meretricious of its many bad qualities. To one of any depth or sincerity whatever, nothing can well be more exasperating than the false ideas of life and success that are produced by such histories as that of Jack Venable's financial enterprises and Ralph Leslie's easily-acquired fame as a poet, which are as unreal in their way as 'Vivian Grey,' and are only the worse for their air of possibility. It is bad enough for life in every-day England and Scotland to be painted in such untrue colors; but when the trite incident of the captive maiden, rescued from savages by the devoted lover, recalls our dime-novel days—with wild Malays replacing the fiery Apache braves—it is time to protest.

It is not often nowadays that a writer attempts the historical novel. When one sees a first chapter headed "The Travellers," and beginning, "Toward the end of a bleak gray February afternoon, in the year 1638," one is apt to read on, remembering the delight which such an opening once promised. And with an unconscious protest, perhaps, against the realists and their stories of one's next-door neighbors, Smith and Brown, one generally reads on to the end. But we must admit, nevertheless, though we still read Scott and Dumas, that if supply and demand have anything to do with making good novels, historical novels are gone out of fashion. As for 'Adam Hepburn's Vow,' it is a disappointment, for the tale of kirk and covenant there is little more than an uninteresting account of one or two outrages committed by the English dragoons upon field-meetings, with an occasional mention of Claverhouse, Montrose, or Sharp to give the color of the time. There is but little either in the way of plot or incident to awaken the reader's concern. Adam Hepburn dramatically swears never to sheathe his sword until he has destroyed as many dragoons as his wife had years when she was killed by a careless bullet meant for a dog at her feet. The savage pleasure he took in keeping his oath, and his sorrow at Bothwell Bridge because he was taken prisoner while one of the twenty-eight dragoons he had sworn to kill was still alive, make the explanation of his desperate courage to one of his comrades rather amusing. His companion, "though void of any touch of sentiment, stranger as he was to the finer feelings of human nature, felt himself deeply moved."

It is a great relief, after these four English novels, with their thousand or more pages of tedium, exasperation, and disappointment, to take up the Little-Classic volume which contains Bret Harte's latest novelette, 'Snow-Bound at Eagle's.' The story is too good to be told except by the book itself. The grotesque of life in the mountains in the stage-coach days is kept well under control, though the temptation to overdo it must have been strong. Yet Bret Harte does not neglect his opportunities, and the expressive slang of the colonels, captains, and judges, the nonchalance of the "old-timers" when a coach is robbed, as well as the wonderful scenery of the Sierras, all have their due weight in making

the story pleasant and taking. The unconscious metamorphosis of John Hale from the precise, law-abiding Bostonian to the comical figure presented before his wife after a week's hunt for the highwaymen—when Mrs. Hale objects to his hat, to his trousers being rolled up over his boots, and to the familiar bearing which had been assumed towards him by the colonels and captains—is delicious. As a rule, the slang is of the soil

WHEELER'S GREEK ACCENT.

Der griechische Nominal-Accent. Von Benjamin I. Wheeler, Dr. Phil. Strassburg: Trübner. 1885.

THE hackneyed quotation from Voltaire—"L'étymologie est une science dans laquelle les voyelles ne sont rien, et les consonnes peu de chose"—indicates very well the general direction that the would-be science had to take to rid itself of merited reproach. First came the consonant system. The main facts concerning the relations of the mutes were discovered and established by the labors of Grimm, Bopp, Curtius, and Schleicher. Then came the next important phase in the development of the science, the elaborate investigation of the history of the vowel system. Here the achievements of Brugmann and his school mark a new epoch. But it soon appeared that neither system could be fruitfully studied without reference to the other. This became very evident in the last decade. The phenomena of palatalization were then subjected to rigorous investigation, and the mutual interdependence of the vowel system and the consonant system was speedily recognized.

But this was not all: the fact of the dependence of both systems upon the Indo-European accentual system was also brought to light. Verner showed that a most important class of "exceptions" to Grimm's law of the permutation of consonants were themselves all conformable to a law conditioned by original differences of accent. Brugmann and Osthoff went further, and showed how these same conditions of accent have affected the coloring of the entire Indo-European vowel system. In the present phase of the discipline of comparative grammar, therefore, nothing could be better calculated to accomplish a real advance in our knowledge of the subject in general than careful and detailed investigations of its several chapters from the point of view of the accent-phenomena. To one of these chapters, accordingly, Dr. Wheeler, formerly a pupil of Osthoff, and now an instructor at Harvard, has addressed himself.

The historical study of the Indo-European system of accent is essentially comparative, and finds its material chiefly in the facts of the Sanskrit, Greek, and Germanic. Among these languages, the Sanskrit holds the first place by virtue of its remarkable conservation of the leading features of the primitive system of word and sentence accent More or less widely at variance with this system are the facts of the Greek. The accent of the latter is, as the school-books teach, under the domain of the "law of the three syllables." To discover and set forth the precise nature of this "recessive accent," to categorize and find the laws of the Greek divergencies from the historically primitive accent, and to deduce and formulate from the facts of enclisis some of the principles which underlie the Greek sentence-accent—these are the problems here taken in hand.

The author seeks to prove that the *original* phenomena of the recessive accent are due to a pervading phonetic law, whose palpable result was that *a* (not *the*) tone-stress fell on the third or fourth mora from the end of a word, or of a group of words constituting a phonetic word-unit. Wheeler differs essentially from his predecessors in regarding, for example, the accent of πεντεκαίδεκα, not as having jumped in some mysterious way from its original place on the first syllable (for the word means 'ten-*n*-five') to the third, but rather as the secondary and sole surviving one of two coexisting accents, πέντεκαίδεκα. There was a period in the history of the Greek language when two accents often existed in approximate equilibrium in the same word, the one being the original Indo-European accent and the other the secondary accent developed under the specifically Greek law of the three morae: thus, in ἄνεπίθετος, the *a* has the old accent, and the *ι* has the secondary. The secondary ousted the original accent in words or word-groups whose three or four last morae were originally accentless. Interesting survivals of these coexisting accents are seen in groups like ἄνθρωπόντινα, which is phonetically one word.

The principal part of the investigation is devoted to the laws governing the relations of the specifically Greek word-accent to the Indo-European word-accent. These are as follows: 1. Monosyllabic forms, and dissyllabic forms with short ultima, *i. e.*, forms which do not admit a secondary accent, keep the old accent; thus, πούς, ποδός. 2. If the old accent was further back than the secondary, only the latter remains. 3. If the old accent was in the same place as the secondary, it remains. 4. Primitive oxytones with dactylic ending become in Greek paroxytone. 5. Where the old accent was nearer the end of the word than the secondary, the result was now in favor of the one and now of the other, for reasons which are sometimes to be found out and sometimes not. The fourth principle is treated with great fulness of detail and illustration—see, for examples, page 62; and appended to it is a new and interesting view of the anastrophe. This the author regards as a real anastrophe, and puts the phrase σοφίας πέρι, for σοφίας περί, in the same category of dactylic endings with μητροκτόνος, for μητροκτονός.

The phenomena of Greek accent are here treated as living realities, and, so far as feasible, with the same spirit and method as is our own mother tongue in the admirable little book of Sweet, noticed in No. 1066 of the *Nation*. On the other hand, the author seems to have made a careful study of the traditions of his subject, if we may judge by his ample quotations from the Alexandrine grammarians. Apropos of the recent discussions of the word in the *Academy*, we note that he prints consistently *disyllabisch*, not *diss-*. His command of material for comparison from the related languages is extensive and his use of it judicious. It is to be regretted that he has not put together the titles of the abundant literature which he cites, as a convenient bibliographical list of the subject. If an American may be permitted to judge his own countryman in such a matter, we should say that the author's German was thoroughly idiomatic, and here and there, if anything, a little too German for perfect lucidity; but then the book is not "parlor philology." The use of the volume for reference is made easy by an ample index of some two thousand entries, and by a good analytical table of contents. Dr. Wheeler has made a solid contribution to science, and his book is a credit to Young America in Germany. We wish him continued success in the studies so auspiciously begun.

The Mexican Guide. By Thomas A. Janvier. With two maps. Charles Scribner's Sons. 1886.

ONE is slightly repelled by the apparent assumption in the title given this book. Perhaps, however, the use of the definite article is a sort of echo from the author's studies in the Spanish of his authorities, where it does not have the exclusive air which English gives it. At any rate, the name is not strictly accurate, since this new 'Guide' is not as complete as some that have gone before it. Mr. Janvier has not left the beaten paths. He has not followed Mr. Conkling to Oaxaca and Guerrero, to Durango and Guadalajara and Guaymas, nor Mr. Bishop to Acapulco and Manzanillo and San Blas. To be sure, he has given all that ninety-nine out of a hundred tourists to Mexico would need, and yet he might have avoided the danger of misleading the one hundredth, who would want more, by adopting a less pretentious title.

Once over this feeling of resenting what seems to be an undue claim of superiority and completeness, there is little but hearty praise to be given to Mr. Janvier's work. He has succeeded in producing a happy combination of Baedeker and Murray, uniting the practical helpfulness of the former with the latter's tendency to supply artistic and historical details. There might seem, at times, to be a little too much of the last, as in the full accounts given of the various religious foundations, yet this is all so new (in English) and so good that it can readily be pardoned. In accuracy, in experienced suggestions, in genial and shrewd appreciation of the people and the country, 'The Mexican Guide,' within the limits noted, seems to us to be almost beyond criticism. Especially pleasant is it to note Mr. Janvier's high estimate of the artistic resources of Mexico, her churches, monuments and scenery, her people, their costumes, and homes. This, of course, was to have been expected at the hands of "Ivory Black." When Mr. Church comes to give us the results of his sketching trips in Mexico, to be added to what Mrs. Foote and Mr. Bishop and, now, Mr. Janvier have written, we shall understand more of the picturesque charm which attaches, in so high a degree, to Mexico. One novel and admirable feature of the 'Guide' is the alphabetized list of streets of the city of Mexico, with references to the accompanying map to indicate the region of the city in which each street is to be found. The need of such a thing arises from the senseless custom of changing the name of a street with every block. It is always a cause of wonder to one using the hackney coaches, to see the unhesitating way in which the drivers will dash off with you unerringly to any one of the more than 650 streets (blocks) of the city. We fear that they will lose some custom in consequence of this new list and map.

In the way of suggestion for revision, which Mr. Janvier, in his preface, invites, we have little to offer. It ought, perhaps, to be mentioned that the railway connection between Vera Cruz and Jalapa (p. 70) is by horse-cars; although this may be sufficiently implied in the statement made on page 72, that it takes a full day to cover the sixty miles. Instead of saying (p. 31), "In proportion to its population the city of Mexico has almost as many newspapers as New York," it would be nearer the truth to say that the number is absolutely as great, if reference is had, as it would seem, to daily newspapers. It is not strictly accurate to say that the rate of domestic postage is "ten cents for each half ounce or fraction thereof" (p. 32). That rate is increased to 15, 20, and 25 cents, according to distance. The population of the city of Mexico is confessedly something that no one knows, yet Mr. Janvier in putting it at 300,000 is some 50,000 in excess of the best estimates. Our author does not appear to be fully informed as to the wretched sanitary condition of the city. He speaks, it is true, of the "thoroughly and radically bad system of drainage," and is aware that typhoid fever is one of the surprising pests of a city at an elevation of over 7,000 feet. But if he had seen the report of the Board of Health for 1885 he would

have discovered that pulmonary diseases and intestinal diseases carried off, each, five times as many victims as typhoid. In fact, if Vera Cruz deserves to be classed, as it is by Mr. Janvier, among "the most unhealthy cities of the world" (p. 70), Mexico belongs there, too, as its death-rate for 1885 exceeded, if anything, that of Vera Cruz. The frightful mortality in the capital appears to be due to overcrowding, lack of efficient hygienic supervision, a system of drainage which would be a farce if it were not a tragedy, the wretched homes of the poor, and, finally, the diminishing area of the neighboring lakes, according to the principle noted by Darwin, as long ago as his *Beagle* days, that a small swamp seems to be more fatally miasmatic than a large one.

Bird-Ways. By Olive Thorne Miller. Boston: Houghton, Mifflin & Co. 1885. 16mo, pp. 227.

It is evident that the author of this book is an ardent admirer of Michelet, but this in no way detracts from the merit of her work. In part, her studies were made from birds that were guests rather than captives: they were allowed in common the freedom of the large room in which they were kept (the study and bedroom of the author), and at the same time were provided with separate private apartments, their cages. Other birds were made to tell their stories from the trees and boxes. There is a great deal about the ways of birds in this little book. It does not pretend to be scientific, yet all who read its delightful pages will be impressed with its truthfulness—the best of science. The limited number of observations, and the abnormal conditions under which many of them were made, naturally provoke a critical examination of the conclusions reached. Among them, however, the number one would mark as in much need of confirmation is comparatively small. Woven into the text are notes on the various characters, traits, and habits—the joking, mischief, insolence, timidity, curiosity, obstinacy, selfishness, anger, quarrelling, talking, scolding, singing, sneezing, coughing, snoring, fainting, wooing, building, training, marriages, divorces, marriages of convenience, murders, etc.; and they are aptly followed by the chapter, "These Are Your Brothers." For those who interest themselves in Nature and her children the book is filled with entertainment and profit. All who love birds will heartily enjoy it.

BOOKS OF THE WEEK.

Armitt, Annie. In Shallow Waters: A Novel. Harper & Bros. 25 cents.
A Stroll with Keats. Illustrated by Frances Clifford Brown. Boston: Ticknor & Co.
Ayres, A. The Essentials of Elocution. Funk & Wagnalls.
Baynes, Rev. R. Easter Song: A Poem. Illustrated. A. D. F. Randolph & Co. $5.
Blow, Susan E. A Study of Dante. G. P. Putnam's Sons. $1.25.
Boisgobey, F. du. The Matapan Affair. Rand, McNally & Co. 35 cents.
Boyd, Rev. A. K. H. A Characteristic of Modern Life. Five Essays by the Author of 'The Recreations of a Country Parson.' A. D. F. Randolph & Co. 40 cents.
Burnham, B. F., and Celeste, S. The Life of Lives: Being Records of Jesus. 2d ed. Boston: Cleaves, Macdonald & Co.
Code of Nomenclature and Check-List of North American Birds. American Ornithologists' Union. $3.
Collins, Mabel. Lord Vandecourt's Daughter: A Novel. Harper's Franklin Square Library. 20 cents.
Conn, Dr. H. W. Evolution of To-Day: The Progress of a Quarter of a Century. G. P. Putnam's Sons. $1.75.
Cooke, Rose Terry. The Sphinx's Children, and Other People's. Boston: Ticknor & Co. $1.50.
Crawford, F. M. A Tale of a Lonely Parish. Macmillan & Co. $1.50.

Marshall, Emma. No. XIII.; or the Story of the Lost Vestal. Cassell & Co. $1.
Merrill, G. Studies in Comparative Jurisprudence and the Conflict of Laws. Boston: Little, Brown & Co.
McCarthy, J. H. Our Sensation Novel. Cassell & Co.; also, Harper's Handy Series. 25 cents.
McWhinney, T. M. Reason and Revelation Hand in Hand. Fords, Howard & Hulbert. $1.50.
Michel, A. François Boucher. Paris: J. Rouam.
Morley, J. Diderot and the Encyclopædists. Macmillan & Co. 2 vols. $3.
Packard, Prof. L. R. Studies in Greek Thought. Boston: Ginn & Co.
Parker, J. The People's Bible: Discourses upon Holy Scripture. Vol. III. Funk & Wagnalls. $1.50.
Perkins, Mrs. Sarah M. Helen: or, Will She Save Him? Funk & Wagnalls. 75 cents.
Poems of Goethe. Consisting of His Ballads, and Songs, and Miscellaneous Selections. Done into English Verse by William Gibson. Henry Holt & Co. $1.50.
Preston, Rev. T. S. The Watch on Calvary: Meditations on the Seven Last Words of Our Dying Redeemer. Robert Coddington.
Robinson, Edward. Harmony of the Four Gospels in English. Revised ed. M. B. Kiddle, D.D. Houghton, Mifflin & Co. $1.50.
Rohé, Prof. G. H. Eczema. Baltimore: Thomas & Evans.

Fine Arts.

THE NATIONAL ACADEMY EXHIBITION.

The sixty-first annual exhibition, now open to the public, is one of the least interesting we have ever seen within the walls, being poorly furnished with works of any sort of sustained effort, and about equally indigent in happy impromptus or lucky sketches. The latter, the efforts of the men who make a short leap at a subject and leave it, are the most workmanlike and satisfactory, and, in a discordant show, form exceptional resting-places, where one can at least repose on something definite.

Thus, Walter Shirlaw's "Jealousy," which is simply a dash at the gates of a certain school, and for which Makart worked while Shirlaw was sleeping, has at least the energy of proved effort and recognizable rhetoric. The moody woman biting her fingers is thrown upon the canvas all of a piece, her clothes and crockery are painted by well-tried recipes in broadest touches, and she hits the accent with acceptance for all to whom the accent is not jarring. There is not much truth to nature in Mr. Shirlaw's studio method; a faithful idolater in exile, he carries out his worship of Runic gods most piously the furthest he gets from the seat of his *cultus*. That he can paint a real Munich picture at this distance of time and of geography is a touching and almost a creditable fact; he at least works like a workman among a crowd of painters who work like old maids. David Neal, in a style of painting not absolutely dissimilar, shows a lady between two ages, whose sharp face supports with much courage an undertaker's tray of heavy black feathers, and who stands against a damask curtain. The face is modelled with thoughtful knowledge of forms and a sly feeling for character, while the technic reveals that success in striking a note which seems almost too easy, and looks like some inevitable formula of a cook-book. Near this last picture, Stephen Hills Parker sends from Paris a portrait of not dissimilar technic, a spirited Jewish-looking dowager who runs to black in hair and costume, and whose effigy shows that assured delivery of paint for paint's sake which seems to smack again of Munich, and to show that rule-and-line technic is not for a single school, but for all lands. Professor John Weir has a girl's head, almost in profile, with a captivating, Bernhardt-like versatility of expression; its moods seem to change as you look, and all is well but the harsh, inflexible hair. The cadet brother, Alden Weir, contributes a difficult study of a young woman in shadow, showing that flesh so shaded is not opaque, but dimly luminous; her environment of twilight is sombre and vibrating, and she only needs the gods' best gift of beauty to be impressive and fascinating.

The genre pictures and illustrations are in oppressive abundance, and in many cases show a sad medley of ignorant intentions. One of the more positive and clear-motived is C. Y. Turner's "Queen of Montauk," a desolate, trudging Indian woman in a lonely landscape; the style of modelling is sculptural, harsh, and appropriate, and the picture does not lack force. The same artist's wedding procession from "Miles Standish" is far more tame, the bride and the bull she rides having a perfect fraternity of expression, and the bridegroom being supremely fatuous, while the remote figures are on exactly the same plane of distance as those in the foreground. Robert Koehler's socialistic painting, "The Strike," some twelve feet across, is simply a newspaper illustration, without knowledge of the figure, knowledge of landscape, or other equipment for so ponderous an undertaking. Gilbert Gaul's military picture is no doubt a boon to military men; but subjects of this sort are treated with such incomparable superiority in other lands that we are constrained to refuse admitting this among works of art at all, and to relegate it also to the ranks of pictorial journalism.

One of the best genre pictures is "In the Plaster Shop," by G. R. Barse, jr. The contrast between the chalky populace of the room and the solitary flesh-and-blood spectator is piquant and well defined. This subject is not a novelty, the motive having been well wrought out in a successful Luxembourg canvas and in others, but Mr. Barse has added a live member to the group. Mr. Fitz's "A Moment's Respite," showing an old woman about to peel a dish of apples, is an intelligent and skilful piece of naturalism, a blood-relation of the fine school of Dutch art with similar domestic topic. Hovenden's negro boy, shooting out his tongue in a desperate challenge to his copy-book, is a workmanlike and graphic study. When the same artist elects to illustrate Kingsley's "Harbor Bar," he sadly proves that knowledge of drawing and form does not help one to dignity of sentiment, and that Bastien-Lepage's Joan of Arc does not willingly give away her grace and beauty even to the flattery of imitation.

Beckwith's country nurse with a babe in her arms is one of his least successful works, his bright decision of modelling here giving place to woodenness and indefiniteness; only one hand is fairly shown, which is a heresy in pictures with a single principal figure, and that hand is an infant's, quite a masterpiece of slurred and contemptuous design. Maynard's infant picture, of a resolute and determined little maid in a beehive hat, with tumbling blonde hair and light complexion, is a success in fair flesh and positive character, both so hard to get in the soft clay of child portraiture. Dielman's refined head of a young lady in broad black hat and well-sketched black costume we were tempted to mention along with the Munich plaster sketches of Neal and Shirlaw, but reflected that this would do injustice to its elegance and cosmopolitanism; it is of a delicacy that effaces the barriers of the schools, and makes a standard of its own.

The best successes of the season are in the landscapes, and we shall come to these on a future occasion with genuine pleasure.

READY THIS WEEK:

I. THE LIFE AND LETTERS of JOEL BARLOW, Poet, Statesman, and Philosopher, with extracts from his works and some hitherto unpublished poems. By Charles Burr Todd. Octavo, with portrait in steel and facsimile of portion of the manuscript of the 'Hasty Pudding.' Cloth extra, gilt top, $2.50.

"The author of the 'Columbiad' and the 'Hasty Pudding' was a man of might in his day, and will not pass out of literature or history."—*E. C. Stedman.*

Among the great men of the post-Revolutionary age there was one who excelled in at least three departments of human effort—in statesmanship, letters, and philosophy—and whose practical talents were, perhaps, greater than those of any one of his contemporaries. That man was Joel Barlow, the subject of these pages. His verse first gave American poetry a standing abroad, and his prose writings contributed largely to the triumph of republicanism at home. He was the first American cosmopolite, and he was twice in a position to avert from his country a threatened foreign war. He was the godfather of the steamboat and canal, and sponsor with Jefferson of the system of national internal improvements, and to him belongs the first idea of a great national university.

II. SUMMER HAVEN SONGS. By James Herbert Morse. 16mo, cloth extra, $1.25.

III. UNWISE LAWS. A Comprehensive View of the Operation of the Protective Tariff upon Industrial and Commercial Affairs. By Lewis H. Blair. 8vo, cloth, $1. Questions of the Day, No. 35.

***Putnam's new lists sent on application.

BACK NUMBERS OF HARPER'S, Scribner's, and all other American and European Magazines. T. BERENDSOHN, 86 Fulton St., N. Y.

COMPLETE INDEX TO LITTELL'S Living Age. Number 8 (Plus IX.—Russell, Lord John) now ready and mailed for examination to any address. Prof. ROTH, Philadelphia.

LIFE OF HENRY WADSWORTH LONGFELLOW.

Edited by Rev. Samuel Longfellow. 2 vols., 12mo. With five new steel-engraved portraits and many wood-engravings and facsimiles. In cloth, $6; in half calf, with marbled edges, $11.00; in half morocco, with gilt top and rough edges, $11.00.

"Altogether the most fascinating book that has been published for months. It is full of the most interesting and picturesque and poetic things." *Boston Record.*

"Indeed, *the* life of the poet; and it will take its place side by side with the standard Boswells of literature. Back of every line one is charmed to note the touch of a hand made mellow by tender memories."—*Philadelphia Press.*

"These volumes tell the story of his life with exquisite taste; they also unfold a panorama of the literary history of America, and are among the rare and monumental books of the present century."—*Boston Traveller.*

THE PRELATE.

By Isaac Henderson. Covers designed by Vedder. 12mo, $1.50.

"The story is dramatic, powerful, irresistible in its interest as a love story alone. The rapid action carries the reader spell-bound in its thrilling interest. 'The Prelate' will doubtless be held as the greatest work of the day in imaginative art."—*Boston Traveller.*

"He exhibits a capacity for individual work not less marked than is shown by Mr. F. Marion Crawford."—*Brooklyn Union.*

THE SPHINX'S CHILDREN.

By Rose Terry Cooke. $1.50.

"In spite of a style which is carefully clear and elegant, in spite of a tone that is wonderfully pure and healthy, what one remembers longest in Rose Terry Cooke's writings is these dialect passages, forgetting for their sake her delectable descriptions of quaint, old-fashioned gardens, pretty girls, odd old maids, and odder old men, and even forgetting the bit of a moral usually concealed in each story. . . . Full of bits that one reads over and over again, enjoying their flavor anew each time."—*Boston Transcript.*

A Story of the Huguenots. By THOMAS ARCHER. Extra cloth. Price, $1.00.

ADAM HEPBURN'S VOW.

A Tale of Kirk and Covenant. By ANNIE S. SWAN. 12mo, extra cloth. Price, $1.00.

"The scene of this story is laid during the stirring times of the Scottish Covenanters, and holds the attention of the reader from the first chapter to the end."

By Author of 'The Bar Sinister.'

WITHOUT BLEMISH.

TO-DAY'S PROBLEM.

By MRS. J. H. WALWORTH.

1 vol., 12mo, extra cloth. Price, $1.25.

"The author in this volume deals with a vital subject. While her book has a moral purpose, it is not a dry dissertation, but is full of dramatic action and thrilling incident."

The Nation

VOL. XLII.—NO. 1085. THURSDAY, APRIL 15, 1886. PRICE 10 CENTS.

D. Appleton & Co.

HAVE JUST PUBLISHED:

I.

Comparative Literature.

By Professor H. M. POSNETT. Volume Fifty-four of "The International Scientific Series." 12mo, cloth. Price, $1.75.

This work is an attempt to follow the effects of social and individual evolution on literature, from its rudest beginnings of song down to the present time. It is an application of historical science to a study of the relativity of literature and of the principle of literary growth.

II.

The Elements of Economics.

Volume Two. By HENRY DUNNING MACLEOD, M. A., of Trinity College, Cambridge. 12mo, cloth. Price, $1.75.

Volume Two of Mr. Macleod's work completes Pure Economics. Its subjects are: The Relations between Value and Quantity of Labor and Cost of Productions; Profits; Interest and Discount; Banking Discount; Rent; Labor, or Immaterial Wealth; Rights, or Incorporeal Wealth; Foreign Exchanges; Law's Theory of Paper Money; Currency; The Bank of England.

III.

Tales of Eccentric Life.

By WILLIAM A. HAMMOND and CLARA LANZA. 12mo, paper cover. Price, 25 cents.

A collection of tales by Dr. Hammond and his daughter, depicting original characters and strange phases of life.

IV.

"Don't" in a new style.

Don't:

DIRECTIONS FOR AVOIDING IMPROPRIETIES IN CONDUCT AND COMMON ERRORS OF SPEECH. Vest-pocket edition. Cloth flexible, gilt edges, red lines. Price, 30 cents.

In presenting this well-known work in a new and elegant form, some slight changes have been made, and a few notes added.

V.

Love's Martyr.

A Novel. By LAURENCE ALMA TADEMA. 12mo, paper cover. Price, 50 cents.

'Love's Martyr' is by the daughter of Alma Tadema, the distinguished artist, and is her first essay in literature. The story is unique in treatment, and exhibits no little power.

1, 3, and 5 Bond Street, New York.

F. W. CHRISTERN,

37 West Twenty-third Street, New York,

Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogue of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

NEW BOOKS:

[Ready Saturday, 17th.]

ST. GREGORY'S GUEST, AND RECENT POEMS.

By John Greenleaf Whittier. 16mo, parchment, $1.00.

Mr. Whittier has here collected the poems he has written since the publication of "The Bay of Seven Islands," in 1883.

SIGNS AND SEASONS.

By John Burroughs, author of "Wake Robin," "Fresh Fields," etc. 16mo, gilt top, $1.50.

CONTENTS:—A Sharp Lookout; A Spray of Pine; Hard Fare; Tragedies of the Nests; A Snow Storm; A Taste of Maine Birch; Winter Neighbors; A Salt Breeze; Spring Relish; A River View; Bird Enemies; Phases of Farm Life; Roof-Tree.

CALIFORNIA.

From the Conquest in 1846 to the Second Vigilance Committee in San Francisco. A Study of American Character. Vol. VII in series of American Commonwealths. By Josiah Royce, Assistant Professor of Philosophy in Harvard College. With a fine map. 16mo, gilt top, $1.25.

Dr. Royce is a native Californian, acquainted with the State as a citizen, and by the most careful research he has collected in a single volume the curious and remarkably instructive facts which the unique history of California offers.

THE AUTHORSHIP OF SHAKESPEARE.

By Nathaniel Holmes. New Edition, greatly enlarged. 2 vols. 12mo, $4.00.

Judge Holmes is a firm believer in the theory that Lord Bacon wrote the plays which bear Shakespeare's name. His work on the subject is unquestionably the fullest and most worthy of attention of all the books ever written to maintain this thesis.

For fifteen years has been a standard remedy with Physicians who treat mental or nervous disorders. Not a secret. Formula on every label.

It aids in the bodily and wonderfully in the mental growth of children.

It restores the energy lost by nervousness, debility, over-exertion; refreshes weakened vital powers in old or young. A Vital Phosphite, not a Laboratory Phosphate.

It is used by the Emperor Dom Pedro, Bismarck, Gladstone, and all great brain workers.

F. CROSBY CO., 56 WEST 25TH STREET, NEW YORK.

For sale by druggists, or mail, $1.

BUFFALO LITHIA WATER

From the Buffalo Hills, Mecklenburg Co., Va.

For the Cure of Gout, Rheumatism, Dyspepsia, Bright's Disease, and all Kidney and Bladder Troubles, Uric Acid Diathesis, and Malarial Poisoning.

"In all Gouty and Rheumatic affections I regard it as highly efficacious."—Dr. Alfred L. Loomis, New York.

"It is an admirable general Tonic and Restorative, especially efficacious in Acid Dyspepsia. I do not hesitate to express the opinion that in all diseases depending upon or having their origin in Uric Acid Diathesis, it is unsurpassed, if indeed it is equalled by any water thus far known to the profession."—Dr. Harvey L. Byrd, Pres. and Prof. Balt. Med. College.

"I have for some time made use of the Buffalo Lithia Water in cases of affections of the Nervous System complicated with Bright's Disease of the Kidneys, or with a Gouty Diathesis. The results have been eminently satisfactory. Lithia has for many years been a favorite remedy mith me in like cases, but the Buffalo Water certainly acts better than any extemporaneous solution of the Lithia Salts, and is, moreover, better borne by the stomach."—Dr. Wm. A. Hammond, New York.

"I feel no hesitancy whatever in saying that in Stone in the Bladder, and in all Diseases of Uric Acid Diathesis, I know of no remedy at all comparable to the Buffalo Lithia Water Spring No. 2."—Dr. Wm. B. Towles, Prof. Materia Medica, Univ. of Va.

"In Gouty Dyspepsia I know of no water which I consider at all equal to Buffalo Lithia Water."—Dr. J. S. Welford, Prof. Med. Col. of Va.

"In nothing is the action of the Buffalo Lithia Water more remarkable than in that long catalogue of ills coming under the head of Malarial Poisoning, and I have no hesitation in expressing the opinion founded upon a professional acquaintance of nearly half a century with the most noted mineral springs of the country, that as a medicinal agent in this class of disease it is incomparably superior to any other mineral water of which I have any knowledge. Chronic Intermittent and Remittent Fevers it is especially efficacious, and it is by no means of unusual occurrence that sufferers from these maladies find relief from a visit to these Springs after a failure of all the ordinary resources of Materia Medica."—Dr. Z. M. Parchall, Oxford, N C., Member Med. Soc., N. C.

Send for New Pamphlet by Dr. Boyland.

Put up only in cases of 12 half gallon bottles. Price $5 at Springs, or $5.50 at New York.

FOR SALE BY ALL DRUGGISTS AND DEALERS.

Scribner & Welford's

NEW BOOKS.

Scenes from English History.

With Portrait. Crown 4to, oblong. Cloth gilt, $2.25.

By RICHARD DOYLE.

In the year 1840, as appears from 'Dick Doyle's Journal,' Mr. John Doyle, the well-known "H. B.," was residing with his seven children at 17 Cambridge Terrace, Hyde Park. It was a family of artists, and once a week there was what the boys called a "Show," on which occasion each member of the family exhibited some recent production for the admiration or criticism of the father. On many of these occasions, Richard, the second son, then fifteen years old, who was at that time showing a decided taste for Antiquity and Romance, exhibited what he called a "History"—that is to say, an original design in water-color intended to illustrate some well-known scene in the History of England. Finding, however, in the course of the next year that the public appreciated his comic rather than his serious vein, and encouraged no doubt by the unexampled success achieved by "The Tournament," the publication of which is so often alluded to in the Journal, he took it into his head to perpetrate a burlesque edition of some of his own serious efforts of the preceding year. Twelve of these "Comic Histories" are now for the first time published, and are a facsimile reproduction by chromo-lithography of the finished water-colors. The legends attached to each drawing have been supplied by the kindness of Mr. James E. Doyle, the elder brother of Richard, who doubtless frequently assisted in the selection of the episodes.

A Journal Kept by Dick Doyle in the Year 1840.

Illustrated with several hundred sketches by the author. With an introduction by J. Hungerford Pollen, and a Portrait. Demy 4to, $7.50.

*** The Journal has been reproduced in facsimile, and is printed on fine paper. It is handsomely bound in cloth, and forms a very elegant gift-book.

WHIST.

Modern Whist;

A GUIDE TO THE WINNING GAME.

By Clement Davies, M.A. 1 vol., 12mo, $1.50.

WHIST DEVELOPMENTS: AMERICAN LEADS AND THE PLAIN-SUIT ECHO. By "CAVENDISH," author of 'The Laws and Principles of Whist,' etc. Now ready. 8vo, handsomely printed in red and black, cloth, gilt extra, $2.

"CAVENDISH" ON WHIST. THE LAWS and Principles of Whist Stated and Explained, and its practice illustrated on an original system by means of hands played completely through. 15th edition. Printed in colors. 12mo, cloth, $2.

BEAUTY AND THE BEAST; or, A Rough Outside with a Gentle Heart. A Poem by CHARLES LAMB, now first reprinted from the original edition of 1811. With Preface and Notes by RICHARD HERNE SHEPHERD. Fcp. 8vo, parchment, $4.20. One hundred copies printed; only 50 now for sale.

THE FAUST LEGEND. Its Origin and Development. From the living Faustus of the First Century to the "Faust" of Goethe. By H. SUTHERLAND EDWARDS. 50 cents.

STARVING LONDON. The Story of a Three Weeks' Sojourn Among the Destitute. By A. S. KRAUSSE. Fcp. 8vo, 60 cents.

AN AMERICAN IN NORWAY. By JOHN FULFORD VICARY, Author of 'A Danish Parsonage,' and 'Readings from the Dane.' Crown 8vo, cloth, $3.00.

"The respectable and sometimes excellent translations of Bohn's Library have done for Literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

Bohn's Libraries.

Containing Standard Works of European Literature in the English Language, on

History,	Theology,	Natural History,
Biography,	Antiquities,	Poetry,
Topography,	Science,	Art,
Archæology,	Philosophy,	Fiction,

With Dictionaries and other Books of Reference, comprising in all Translations from the

French,	Spanish,	Anglo-Saxon,
German,	Scandinavian,	Latin and Greek.
Italian,		

$1.40 or $2 per volume (with exceptions). Complete sets in 677 volumes. Special prices on application.

The following works are recommended to those who are forming public or private libraries. The volumes are sold separately:

ADDISON'S WORKS. 6 vols.	1.40 each.
BACON'S ESSAYS, MORAL AND PHILOSOPHICAL WORKS. 2 vols.	$1.40 and 2.00 each.
BOSWELL'S LIFE OF JOHNSON and TOUR IN THE HEBRIDES, &c. (Napier). 6 vols.	$1.40 each.
BURKE'S WORKS AND LIFE. 9 vols.	1.40 each.
BURNS'S LIFE. By Lockhart.	1.40 each.
CERVANTES' DON QUIXOTE. 2 vols.	1.40 each.
CHAUCER'S WORKS (Prof. Skeat). 4 vols.	1.40 each.
COLERIDGE'S WORKS. 6 vols.	1.40 each.
DEFOE'S WORKS. 7 vols.	1.40 each.
GIBBON'S ROMAN EMPIRE. 7 vols.	1.40 each.
GOETHE'S WORKS. 14 vols.	1.40 each.
GOLDSMITH'S WORKS. 5 vols.	1.40 each.
HAZLITT'S WORKS. 6 vols.	1.40 each.
LAMARTINE'S WORKS. 8 vols.	1.40 each.
LESSING'S LAOKOON, &c.	1.40.
LESSING'S DRAMATIC WORKS. 2 vols.	1.40 each.
MILTON'S PROSE WORKS. 5 vols.	1.40 each.
MOLIÈRE'S DRAMATIC WORKS. 3 vols.	1.40 each.
PLUTARCH'S LIVES (new translation by Long and Stewart). 4 vols.	1.40 each.
SCHILLER'S WORKS. 6 vols.	1.40 each.
VASARI'S LIVES OF PAINTERS (with new appendix by Dr. Richter). 6 vols.	1.40 each.
BURNEY'S (Mme. D'Arblay's) CECILIA. 2 vols	1.40 each.
BURNEY'S (Mme. D'Arblay's) EVELINA.	1.40.
FIELDING'S NOVELS. 4 vols.	$1.40 and 2.00 each.
PETRARCH'S SONNETS.	2.00.
MANZONI'S BETROTHED. (I promessi Sposi).	2.00.
PEPYS'S DIARY. 4 vols.	2.00 each.
KANT S CRITIQUE OF PURE REASON	2.00 each.
SPINOZA'S CHIEF WORKS. 2 vols	2.00 each.
HUMBOLDT S COSMOS AND TRAVELS. 3 vols.	$1.40 and 2.00 each.
STAUNTON S WORKS ON CHESS. 4 vols.	$2.00 and 2.40 each.
GILBART ON BANKING. 2 vols.	2.00 each.
LOWNDES'S BIBLIOGRAPHER'S MANUAL. 11 parts	$1.40 and 2.00 each

*** *The above books will be sent upon receipt of advertised price. Catalogues of our regular stock, also of Bohn's Libraries, will be mailed, if desired, to those interested. New Catalogue of Choice, Rare, and Second-hand Books ready. New Catalogue of Musical Literature ready.*

SCRIBNER & WELFORD, 743-745 BROADWAY, N. Y.

Absolute Unanimity.

THE NEWSPAPERS have received Mr. Frank R. Stockton's novel, THE LATE MRS. NULL, in a way which must be regarded as entirely unique. The bookwas published on March 23d; it had already been widely announced, and was extensively reviewed as soon as copies were put into the hands of the editors. The story has now been noticed by most of the prominent papers in the country, but there has not appeared *an unfavorable comment.* It is hardly necessary to say that the success of the book has been complete; more than 5,000 copies were ordered by the booksellers before publication, and the demand has not only been maintained, but increased.

BOSTON COURIER.	It is almost superfluous to say that every one wants to read MRS. NULL. Mr. Stockton is undeniably the most original and unique among living American story-tellers, and this, his first effort as a sustained novel, is marked by as much novelty, humor, and unexpectedness as any of the shorter tales which have made his name famous.
NEW YORK MAIL AND EXPRESS.	It will be read with satisfaction by the admirers of Mr. Stockton and his whimsical methods of telling or hinting a story. He is one of our best humorists.
PHILA. RECORD.	There is nothing like it in the domain of English fiction. It bubbles over with merriment; it leads you up to the most unexpected incidents; it has all the breezy charm of a pastoral.
TOWN TOPICS.	Much more clever than 'The Lady or the Tiger?'
WASHINGTON CAPITAL.	When we say that the story is characteristic of Mr. Stockton it is perhaps the highest praise that can be bestowed upon it.
BROOKLYN TIMES.	Every one who ever reads novels and who enjoys a healthy, breezy, and witty story should read MRS. NULL.
THE CRITIC.	We can assure prospective readers that their only regret after finishing the book will be that never again can they hope for the pleasure of reading it again for the first time.
NEW YORK TRIBUNE.	Mr. Stockton has written a book which you can't discuss without laughing; and that is proof enough of its quality.
HARTFORD POST.	We congratulate the novel-reader upon the feast there is in 'THE LATE MRS. NULL.'
BUFFALO TIMES.	Altogether, Mr. Stockton has added another to the unique creations which have been winning for him a growing appreciation and a large audience, and has made a contribution to the growing literature of native fiction which will command universal attention.
BOSTON JOURNAL.	THE LATE MRS. NULL is delicious.
HARTFORD CHRISTIAN SECRETARY.	Among the gloomy sensational tales or the pathetic ones which harrow up the sensitive soul, this author's comes to us as a breeze from the sweet, health-giving sea on some July day.
BOSTON TRAVELER.	The delicious comedy of Mr. Frank Stockton was never more delightfully developed than in THE LATE MRS. NULL, whose length and plot quite entitle it to rank as a novel.
N. Y. COM'L ADVERTISER.	Like the best of his less considerable creations, 'THE LATE MRS. NULL' is *sui generis.* She is very jovial company and will please, cheer, and amuse wherever she is known.
N.Y. JOURNAL OF COMMERCE	Original, bright, and full of the author's delicate humor.

1 vol., 12mo, $1.50.

The Nation.

NEW YORK, THURSDAY, APRIL 15, 1886.

The Week.

THE vote in the House a week ago against Mr. Bland's bill for the free coinage of silver, and the vote against suspension of the present coinage, have substantially defined the fiscal and monetary situation for a year to come. It is evident that there is a balance of power in Congress, consisting of members really "unfriendly to silver," but who are compelled by the sentiment or prejudice of their constituents to vote against any cessation of the coinage. They perceive, as clearly as anybody can, that the existing law is unphilosophical, useless, and worse than useless, being in fact a wasteful expenditure of $2,000,000 per month for a kind of property not wanted. They have learned this by experience, observation, and discussion, and they would be ready to cast their votes for a suspension of the coinage if they believed that they could safely do so. While they cannot do this at the present time, they can vote on the side issues of the coinage question in such way as to frustrate the intentions of the "friends of silver," and to save the country from the misfortunes of a change in the monetary standard.

What we have to face, therefore, is the continued purchase of $2,000,000 worth of silver bullion per month, and the stamping of the same with the figure of a buzzard and the consoling legend, "In God we Trust." The resulting coins will continue to pile themselves up in the Treasury. No Secretary will touch them, except, of course, so far as may be necessary to transfer them from one vault to another. Nor is it likely that any Congress will compel him to do so. The question of the paying out of silver is one of the side issues upon which the balance of power in Congress may be cast either way without much danger to the individual Congressman. It is not probable that a bill directing the Secretary of the Treasury to pay out silver would get any greater number of votes than Mr. Bland's bill for free coinage received. It is very certain that such a bill would be vetoed, and that it could not be passed over a veto. The course of events is likely to be monotonous for some time to come, consisting of the silent working of the mint and the useless heaping up of silver dollars. Can this go on forever without bringing about a change in the monetary standard? This question cannot be answered *ex cathedra*. If the public revenues exceed the public expenditures by $2,000,000 per month, and if there is no coercive legislation to force the hand of the Secretary of the Treasury, we do not see why the present coinage may not continue indefinitely, without any worse result than a waste of $24,000,000 per annum of the public resources, or rather of the difference between the purchase price and the selling price of that amount of bullion. It is now probable that the coinage will continue until the majority of the people in the South and West get tired of paying this tax, or rather until they come to see that it is a tax and that it can never be anything else. But they will find out the truth some time. Meanwhile there is a chance that Mr. Bland himself may get tired of the present law, which he never favored, and which he has always been trying to supersede by free coinage, and that he may expose its unphilosophical character. It is much to be desired that he should do so, because he would be listened to by the "friends of silver" everywhere. That the present condition should be permanent is politically impossible, whether commercially possible or not. We think that the changes from this time forward must be favorable to the gold standard, and that the decisive vote against free coinage is the first sign of the turning tide.

The bloody collision between deputy sheriffs and the mob at East St. Louis on Friday, in which several men and one woman were killed, is only what was to have been expected any day for the past fortnight. The despatches attempt to apportion the responsibility for the slaughter among the deputy sheriffs who fired the fatal shots, and to fasten the chief blame upon one of them, who is represented to be a cowboy of the dime-novel school. But this is a waste of words. The man really responsible for the loss of life is Richard J. Oglesby, Governor of Illinois, in which State East St. Louis is situated, just as the man responsible for the similar loss of lives at Fort Worth the other day was John Ireland, Governor of Texas. These men, as chief executive officers of their States, were bound by their oaths to dispel mobs and maintain order. Yet they deliberately and persistently refused to do their duty, and by their inaction encouraged ignorant and desperate men to suppose that the power of the State might be defied with impunity. For days before the collision at Fort Worth it had been notorious that the civil authorities of the town needed the support of the commonwealth to protect men who were engaged in the peaceable attempt to keep open railroad communication, and yet the Democratic Governor of Texas neglected to order out the military until the killing had occurred. For days it has been notorious that the small force of civil officials at East St. Louis could not properly protect property and maintain order, yet the Republican Governor of Illinois left these few deputy sheriffs to cope with a mob which was growing more desperate every day. The sheriff of the county may have selected poor material for deputies, but the fact needs to be emphasized, for the benefit of other Executives who may be placed in similar circumstances, that the one man primarily responsible for the East St. Louis killings is the Governor of Illinois, who, knowing by personal observation what duty demanded of him, refused to exercise the power of the State to end the anarchy which has for weeks existed with his connivance.

The investigation into "the disturbed conditions now existing in the relations between railroad corporations engaged in inter-State commerce and their employees in the States of Illinois, Missouri, Kansas, Arkansas, and Texas," moved by Mr. Morrison and adopted by the House, is manifestly nothing but a tub to the whale. There are no disturbed conditions in the relations existing between the Missouri Pacific Railway and its employees. The only disturbance existing is between certain persons who voluntarily ceased to be employees of that company and the officers of the law. If Congress intends to investigate that disagreement, well and good. It is within the scope of its powers to regulate commerce between the States, and if it finds such commerce obstructed, it may remove the obstructions. It may be within the scope of its powers to inquire into the proceedings of a secret society which sets itself up as a branch of Government, which is not the executive, or the legislative, or the judicial branch, but which claims powers belonging to all three. When it finds out what the pretensions of this fourth branch of government are, it may properly express an opinion as to the foundation of its claims, and tell us whether they are reconcilable with the Constitution of the United States. Beyond this it cannot go, as all the members who voted for the resolution well know. The Knights of Labor in the Southwest have worked themselves into the belief that they are a Power, with whom treaties are to be made by other Powers. All their talk runs to the conclusion that, until they are satisfied, there is a disturbance of the comity of states. Even the Executive Board sent out to St. Louis by Mr. Powderly share in this delusion. Much of their talk, which to the average citizen looks like a congeries of unaccountable lies, becomes intelligible if they consider themselves a fourth estate in the affairs of government, struggling for "recognition" by the other accredited authorities of the land.

One of the curious things in the talk of the representatives of the strikers in the Southwest is that they invariably maintain that the strikers commit no acts of violence to persons or property, that the stopping of trains, "killing" of engines, tearing up of tracks, and disarrangement of switches and threatening or assaulting of guards, are all the work of wicked outsiders. It makes little difference, however, who does the actual violence, if violence be the constant accompaniment of every strike and the first condition of its success. People who deliberately and knowingly give wicked men a chance to commit wickedness, are just as bad as if they were wicked themselves. As a matter of fact, no large strike of unskilled or slightly skilled labor in this country would succeed for two days in stopping any kind of business, but for the prompt appearance of wicked outsiders to kick and cuff and maim and murder the persons who take the place of the strikers, and to break or burn or in some manner damage the machinery, or utensils, or stock in trade of the employers. The whole strike system, as at present con-

ducted, is, in fact, based on fraud and violence, and the feeble requests of the Master Workman and the Secretary to the strikers to be good and gentle and rely on justice and moral suasion, are sickening the public.

Plans for boycotting Jay Gould are said to be on foot in the councils of the local organization of the Knights of Labor. It was commonly understood that the strike on the Missouri-Pacific Railroad was a boycott of Gould on the largest possible scale, and that it had turned out a failure. If there are any other resources in the armory of Knighthood by which Gould can be reached, it would be interesting to know what they are. The proceeding would at least divide public attention with the boycott of Mrs. Gray. It might even rehabilitate Gould to some extent in public estimation. The way of getting at him will need to be first devised, and this will be a matter of no small difficulty, seeing that he keeps a private yacht and can load it up with provisions and run out to sea in case he finds himself cut off by the butcher and baker and candlestick-maker in the city. We advise the local Knights not to make themselves ridiculous by dividing their forces between a Missouri boycott and a New York boycott. Let them rather concentrate their efforts in sustaining Martin Irons and his followers in their heroic abstention from labor in the Southwest. Every dollar contributed to the support of idle men on the line of the Missouri-Pacific Railway will fill Gould with dismay, while he will laugh in his sleeve at all attempts to cut off his private bread and butter in New York.

The latest phenomenon in the "labor question" is the closing of a silk mill in Paterson employing 1,200 hands. A cigarmaker from Albany, holding some sort of position among the Knights of Labor, went down there a few days ago, and insisted on having important changes made in the management of the dye-house. Being denied, he "snapped his fingers," as he passed through the factory, and thereupon every man and boy in it quit work. None of them knew why the cigarmaker snapped his fingers, and they say now it was tyrannical of him to do so, but they quitted work just the same. The local Assembly has since waited on the proprietor, Mr. Strange, to say it was all a mistake and ask him to take the strikers back; but on ascertaining that the cigarmaker had not been expelled or even censured for snapping his fingers, he refused to do so, and will not reopen the mill as long as his business is at the mercy of wandering cigarmakers. There is a comic side to nearly everything, and the comic side of this is that a body of men who can be made to abandon their means of livelihood on receiving a sign from an unknown man, complain bitterly of "the tyranny of capital." In this city the drivers and conductors on the Fourth Avenue Railroad after having settled all their differences with their own employers, struck again, without knowing why, on having two fingers held up to them by a man who walked along the track. And yet these men are American citizens, and look down on the Russians and Prussians and I-talians.

The discussion in the Senate last week over the proposed amendment to the Army Bill allowing the employment as officers in the Federal army of men who served in the Confederate army, reads like a leaf out of some old history. Among the men on the Republican side of the Senate sat one of the chief of the Confederate brigadiers, the trusted lieutenant of Robert E. Lee, engaged in making laws for the nation which he sought to destroy. With this spectacle before him the ancient Conger of Michigan, a relic of the bloody-shirt era which everybody else sees has past, had the assurance to get up and make a long speech, urging that it would be disloyal to allow some unknown Confederate soldier to earn by his merits a place in the Federal army, while one of the most famous Confederate generals sits in the Federal Congress and helps to frame the laws which the army may be called upon to enforce! It is seldom that we have a chance to speak well of Mahone, and we are therefore glad to say that he showed consistency and sense in voting to make no distinction between the "Confederate brigadier" and the Confederate private. More noteworthy than this is the fact that two other Republicans, who were on the Union side during the war, voted with the ex-rebel Republican and the Democrats for the proposed amendment. When men like Jones, of Nevada, and Don Cameron, of Pennsylvania, show independence enough to take such a stand, bloody-shirt orators of the Conger school must recognize that their occupation is gone.

The President's appointment of Senator Jackson, of Tennessee, to fill the vacancy in the United States Circuit Judgeship caused by Judge Baxter's death, is highly commended by candid men of all parties. Like his selection of Mr. Merrick for the Supreme Court of the District of Columbia last year, it shows that Mr. Cleveland can be trusted to discharge this most responsible branch of the Executive's duty with a conscientious purpose to do the best thing for the country. The assurance that new judicial offices would be filled in this spirit ought to stir up members of both parties in each branch of Congress to the passage of some bill for the relief of the overworked Supreme Court of the United States, either by an addition to the present bench or by the creation of a new intermediate court.

The Forty-ninth Congress has earned a long credit-mark by passing the bill providing for the erection of a National Library building at Washington. The plans which have been adopted contemplate a structure about 460 feet in length and 310 feet in depth, and the most eminent European architects commend the scheme as likely to produce the finest building, for the purpose in view, to be found anywhere in the world. The building will be placed a square east of the Capitol, and will add another to the growing attractions of the city, while its erection will end the long-standing scandal of the present grossly inadequate arrangements for housing the vast library already collected.

When Congressman Willis, of Kentucky, some three weeks ago, decided to take the Blair bill away from the Committee on Education, he picked out the Labor Committee as one which could be trusted to report it back to the House favorably without the slightest hesitation. But the members of the Labor Committee no sooner began to examine the matter than they were impressed with the fatal objections to the scheme, and a majority of the Committee is found to be opposed to the project. The opponents of the bill have always maintained that a careful consideration was the only thing needed to secure its rejection, and every new development in its history shows that they were right.

The passage of the Mexican Pension Bill by the House is a discouraging sign that good sense stands little chance in that body in a contest with demagogism. The measure proposes to give $8 a month to every man who was enlisted in the United States army during the war with Mexico, whether he saw any active service or not, whether he was wounded or not, whether he is to-day a millionaire or a tramp; and to the widow of any such man. It is, in short, in the form in which it was presented, an utterly indefensible measure, and yet only 69 Representatives recorded themselves against it, to 157 in its favor. High praise must be awarded the few Southern members who voted against it, for it is the one possible pension measure which promises to do anything for their section, a large share of the United States army in that war having come from what is now called "the solid South." We are glad to see that on the short "roll of honor" which records the members with independence enough to vote their convictions, are so many New York names.

It is a great pity that the Committee on Rules had not reported back that proposed change, which authorizes the addition as an amendment to any pension bill of a clause imposing the extra taxes which the bill will require. The money which it is proposed to toss about in this haphazard way is money which must be raised by taxation, and by new taxation. This is the fact which ought to be pushed home every time by the opponents of every scheme for extravagant appropriations, since nothing can be more fatal to even the most plausible project. As Congressman Tucker, of Virginia, told a correspondent the other day, in speaking of the $77,000,000 Educational Bill: "If the money which it is proposed to appropriate had to be raised by direct taxation, there would not be a vote in the House for the measure." The real strength of all these pension jobs is the impression which has been so sedulously cultivated that there is a "vast surplus" in the Treasury, which may be drawn upon for any purpose without any taxpayer's being a cent worse off. It cannot be too often repeated that there is no surplus at all for the next fiscal year, opening with the 1st of July, 1886, for which Congress is now making appropriations. On the contrary, Secretary Manning has shown that the estimated expenditures of the Government for that fiscal year exceed the estimated re-

venues by $24,589,552, and that was before the passage last month of the bill increasing the rate of widows' pensions and calling for $6,000,000 more a year, which increases the estimated deficit for the fiscal year 1886-87 above $30,000,000.

The fact that several Democrats in the Senate voted on Saturday with the Republicans for the bill to admit into the Union Washington Territory, after the northern "pan-handle" of Idaho has been united with it, indicates that there may be a chance for the measure in the lower branch of Congress. Public sentiment would sustain such action. The Territory has already sufficient population and assurance of future growth to justify its erection into a State, and the manly fashion in which its people put down the anti-Chinese rioters a few weeks ago shows that it is no longer a frontier settlement, but a well-ordered community. The House should, however, insist upon a change in the name of the Territory before it becomes a State. It would be a grave mistake to perpetuate the confusion caused by retaining the present title, and the mistake would be the more inexcusable when so ideal a substitute as Tacoma is at hand.

The special-delivery service of the postal department does not grow in popularity. On the contrary, the number of letters carried in the mails under this stamp has grown smaller every month since the system was started, and the total for February was only 65,159, against 86,123 in November. There is nothing strange about this, for the service has little to recommend it. Anybody who really demands celerity is pretty sure to prefer the telegraph or the messenger service, and the possible field is thus very restricted. Then, too, the system causes no little inconvenience to recipients of letters. A letter bearing this stamp, if received at the office at any moment before midnight, must be delivered that night, and the result is that people are waked out of their sleep at half-past 12 or 1 o'clock to receive letters which would be brought around by breakfast-time at the first carrier's round, and which they do not care about getting before that time. The amount of midnight profanity caused by this special-delivery business in the course of a year is by no means inconsiderable.

Thursday was so-called Fast Day in Massachusetts, and the incongruity between the name and the thing was never more marked. For the overwhelming majority of the population the occasion is a holiday, pure and simple, while its observance in a religious way grows more perfunctory every year. That it has become an anachronism, and has no strength except the *vis inertiæ* possessed by every tradition, is strikingly demonstrated by these comments of the Boston *Congregationalist:*

"Thursday of this week is Fast Day in Massachusetts, and Governor Robinson has issued a proclamation, as usual, recommending its observance. So long as it is set apart annually thus, it certainly is desirable that Christian people refrain from treating it as a mere holiday, like the Fourth of July. The question whether it would not be wiser to abandon its observance—except in cases of special and recognized importance, such as occurred now and then during the war of the Rebellion—continues to be discussed actively. A few object to its appointment on the ground that the State should not determine religious occasions, and others because of its treatment by such multitudes as a day of actual jollification. The desire of many for a business holiday about this time is met by the proposition to make a legal holiday of April 19, the anniversary of the battle of Lexington."

The *Congregationalist* is the recognized organ of the denomination whose name it bears—a denomination which only two generations since was still virtually the established State Church of Massachusetts. Yet the *Congregationalist* utters no word of protest against the talk about abolishing Fast Day, but tacitly endorses the proposition to substitute for the obsolescent religious occasion a genuine popular holiday. It is evidently only a question of a short time when this change will be made.

Good sense is so seldom shown in the nomenclature of States and towns that any exhibition of this quality merits general commendation. Horseheads had been, from its earliest settlement, the name of a village in Chemung County, half-a-dozen miles north of the city of Elmira. It perpetuated the memory of an interesting historical event—the slaughter by General Sullivan's forces of their horses, on their return from the expedition against the Six Nations, as the remainder of the journey back to civilization was made by water. The name was distinctive, historical, unique; in short, it possessed every claim to preservation. About a year ago, however, somebody conceived the idea that the title was "not sufficiently high-toned," and managed to get it changed to the meaningless North Elmira. But, after taking time to think the matter over, the people of the village have repented of their folly in hastily consenting to the alteration, and they have just secured the restoration of the familiar old name.

The prospects of Mr. Gladstone's Home Rule Bill seem to be slightly improving within the last day or two, the first burst of rage and surprise among its opponents being over, and the figure cut by the revolting Liberals having proved on the whole poor. Nobody in the opposition has suffered more than Chamberlain. His attack on Gladstone was inexcusably fierce and bitter, even if it had been strong. But the reference to Gladstone's opinions about the prospects of the Southern Confederacy had all the marks of a demagogue's trick. He drew the inference, amid Tory cheers, that Gladstone's having made a mistake on a question of foreign politics concerning which his information must at best have been exceedingly slight and vague, created a presumption of some force that he was also mistaken about a question of home politics with which he had been familiar for fifty years, and to the study of which he had given his best powers. It is impossible to suppose that any man in Chamberlain's position can resort to a device of this sort toward a colleague without permanent injury to his reputation and influence.

The Greek war fever continues to trouble the kingdom and the diplomatic world. The Minister of War has visited the northern defences, and promised a speedy call to the field of battle if the claims of Hellenic honor are not satisfied. The warnings of the great Powers remain unheeded in Athens. Coercion is threatened, but not unanimously, Russia ostentatiously refusing all participation in it. Greece has won the special favor of the Czar by arming against Bulgaria simultaneously with Servia, without being, like that kingdom, a protégé of Austria-Hungary. On this favor and the known, though diplomatically disguised, repugnance of both the English and French Governments to the use of force in favor of Ottoman sway, against a Christian people aspiring to national integrity, the Greeks reckon in their patriotic excitement. Yet they may easily overestimate the value of that repugnance. Not only is their old friend Mr. Gladstone very uncertain of to-morrow's possession of power, but he may, however reluctantly, himself carry out the threats of coercion already made, with the same startling deviation from cherished principles and predilections which he has shown in Afghanistan, in South Africa, in Egypt and the Sudan, and in Burmah. And France cannot afford to separate her action from that of England and make common cause with Russia as long as the influence of Germany is emphatically exercised on the anti-Russian side. The occupation of the Piræus by a hostile fleet, with all that it implies, may be executed under the auspices of Mr. Gladstone and M. Freycinet as effectively and injuriously as it was executed under those of Lord Palmerston and Napoleon III. during the Crimean War.

On the other hand, Greece is encouraged by the recollection of favorable issues in similar complications. Like the House of Savoy in our time, she has repeatedly made territorial acquisitions without achieving them with the sword of victory. Clamors and agitations, with threats of warlike risings, sufficed to induce the British Government to give up the protectorate of the Ionian Isles, and surrender them to her, in 1863. She threatened the invasion of Thessaly and Epirus, without drawing the sword, in 1876 and 1877; she did not dare to strike a blow even after the fall of Plevna, but continued to menace, obtained a vague promise of cession in an article of the Berlin Treaty, armed and blustered, extorted conference after conference during the Turco-Montenegrin frontier difficulties, and finally, in 1881, wrung from the fears and exhaustion of Turkey the cession of the greater part of the coveted two provinces. She hopes to extort the rest now, by perseveringly acting in the same way, though at an immense financial sacrifice. Besides, after having gone so far on the war-path, the Delyannis Cabinet can retreat with honor and safety only before the combined power of Europe, and it thus consciously challenges warlike coercion. In fact, not only the Delyannis Administration is exposed to a sudden collapse, but the throne of George I. himself may be swept away by the popular indignation at a cowardly lowering of the national banner. Was not the alleged neglect of warlike duty, in 1854 and after, the main cause of the downfall of the throne of Otho I. in 1862? It is, however, clear that the obstinacy of the Greek Government is at this juncture too inopportune, too dangerous to the peace of Europe to be long tolerated by the western and central Powers.

SUMMARY OF THE WEEK'S NEWS.

WEDNESDAY, April 7, to TUESDAY, April 13, 1886, inclusive.]

DOMESTIC.

THE Republican majority in the Senate have made another concession to the Executive in dealing with appointments. Certain nominations were sent to the Senate to fill the places of suspended officials. Under the ruling of the majority these nominations were held up. In the meantime the terms of some of the Republican incumbents have expired, thereby creating vacancies. Instead of confirming the nominations before them, such nominations were, at the suggestion of Republican Senators, withdrawn and the same persons renominated, with the understanding that no objection will be urged against them.

The President has withdrawn from the Senate the nomination of Orlando W. Powers, of Michigan, to be an Associate Justice of the Supreme Court of the Territory of Utah, against whose character much has been said.

The President on Monday nominated Senator Howell E. Jackson, of Tennessee, to be Circuit Judge of the United States for the Sixth District, to succeed the late Judge Baxter. He was immediately confirmed. His term would have expired in 1887.

In the Senate on Wednesday on the debate on the bill to increase the army to 30,000, Mr. Gibson (Dem., La.) moved an amendment which would repeal the law forbidding the employment as officers in the Union Army of any man who served in the Confederate Army. He held that the law was unconstitutional, as it was class legislation, and that there was no longer any reason for such a statute. Mr. Gibson's motion was lost by a vote of 24 yeas to 25 nays, Cameron of Pennsylvania, Jones of Nevada, and Mahone of Virginia voting with the Democrats in the affirmative. The Army Bill was then defeated by 19 to 31, the following Republicans voting nay with the Democrats: Bowen of Colorado, Chace of Rhode Island, Conger, Hale, Ingalls, Jones of Nevada, Plumb, Sherman, Teller, Van Wyck, and Wilson of Iowa.

The Senate on Thursday passed the bill granting to the Kansas and Arkansas Railroad Company a right of way for a railroad through the Indian Territory—yeas 36, nays 8.

On Thursday the Senate passed the House bill to provide for the erection of a building on Capitol Hill for a Congressional library.

The Senate on Tuesday began debate on the question of abolishing secret executive sessions. Senator Platt, of Connecticut, favored that action in a vigorous speech.

When the Free-Coinage Silver Bill came to a vote in the House of Representatives on Thursday afternoon, Mr. Dibble (Dem., S. C.) offered an amendment providing that unless, through concurrent action of the nations of Europe with the United States, silver be remonetized prior to July 1, 1889, then and thereafter so much of the act of February 28, 1878, as authorizes and directs the Secretary of the Treasury to purchase silver bullion and cause the same to be coined, shall be suspended until further action by Congress. This was defeated—yeas 84, nays 201. The Free-Coinage Bill was then defeated—yeas 126, nays 163. Of the 163 votes cast against the bill, 70 were cast by Democrats and 93 by Republicans. Of the 126 votes cast for the bill, 97 were cast by Democrats and 29 by Republicans.

The House on Monday voted to appoint a committee to investigate the strike in the Southwest.

The House Committee on Territories has, by a vote of 6 to 5, agreed to report favorably a bill to provide for the organization of the Indian Territory and the public land strip into the Territory of Oklahoma.

Joseph Pulitzer has resigned the position of Representative in Congress from the Ninth District of New York, for the reason that he is not able to attend to its duties and to his business as an editor at the same time.

The Secretary of the Interior has revoked the order of Commissioner Sparks, of the General Land Office, of April 3, 1885, suspending final action upon entries upon the public lands.

The Chinese Minister at Washington has made formal complaint to the Secretary of State in regard to the treatment of his successor at San Francisco at the hands of the United States customs officials. The United States officers at San Francisco deny that there was any discourtesy.

General Miles has succeeded General Crook in command of the Department of Arizona. General Miles says he will continue the pursuit of the hostile Apaches until they are killled or captured.

A mob of 1,000 strikers on Wednesday visited the railroad yards in East St. Louis, Ill., and drove all men from work. At the Chicago and Alton yards they were driven back by deputy marshals armed with rifles. There was no fighting.

A crowd of strikers formed at the Relay depot in East St. Louis on Friday, and advanced in the direction of the railroad yards to stop work by the new men now employed there. They were met by a small guard of deputies, who ordered them to disperse. The mob refused, and made a rush for the yards, when the deputies levelled their Winchesters and fired, killing seven of the crowd, including one woman. The strikers throughout the city became very much incensed, and at 10 o'clock on Friday night began burning railroad property by way of retaliation. The Louisville and Nashville, and the Cairo Short Line freight yards were visited and about fifty cars were burned, with scale houses and a lumber yard. Roundhouses and shops were partly saved. The total loss was about $50,000. Governor Oglesby at last ordered the militia to the scene of trouble, and nine companies were on duty on Saturday. They preserved order throughout the day.

The Gould system railway strike on Tuesday seemed to be dying out. Freight was moving freely from St. Louis and East St, Louis. No disorders were anywhere reported.

In the Rhode Island election on Wednesday, Governor Wetmore and all the rest of the Republican ticket were elected except Attorney-General Colt. The latter was defeated by Edwin Metcalf, candidate of the Democrats and Prohibitionists. His majority was 1,620. The Constitutional Amendment prohibiting the manufacture and sale of intoxicating liquors was carried by a decisive majority. The result was a surprise to the Republicans, and was brought about by dissatisfaction with the way in which Mr. Colt's renomination had been forced on the party, and by the Prohibition vote.

The Field Code was reported favorably in the New York Assembly on Thursday by the Judiciary Committee.

Interest in the Broadway Railway scandal of this city was increased on Friday when it became known that ex-Alderman Miller had been arrested in Florida. This was intensified when about noon President James B. Richmond, of the Broadway Road, was also arrested charged with bribery. The excitement reached its height on Tuesday, when ex-Aldermen Wendel, Duffy, Sheils, O'Neil, Fullgraff, Cleary, McCabe, McQuade, Farley, and Sayles, all of whom were members of the Board of Aldermen of 1884, were arrested and taken to Police Headquarters. Later in the day ex-Alderman Finck was also arrested. Fifteen ex-Aldermen in all are now under arrest on the charge of bribery. Twelve of them were formally indicted by the Grand Jury on Tuesday.

Thomas Anthony Thacher, LL. D., Professor in Yale College of the Latin Language and Literature, was found dead in bed of heart disease on Wednesday. He was seventy-one years of age. He was graduated at Yale in 1835, and with some interruptions has been connected with that college since 1838. Professor Thacher was a prolific writer. His 'De Officiis' of Cicero and 'Madvig's Latin Grammar' are widely known.

Mr. John Welsh, Minister to England during President Hayes's Administration, died in Philadelphia on Saturday aged eighty-one.

Thaddeus Fairbanks, the inventor of the platform scales, died at St. Johnsbury, Vt., on Monday, aged ninety years. He was a very wealthy and a very liberal giver, educational buildings alone at St. Johnsbury having received from him over $200,000.

FOREIGN.

The scenes in and around the House of Commons on Thursday, the day set for Mr. Gladstone's great speech, surpassed any similar event within the memory of living men. The doors were opened for members of Parliament at 6 o'clock in the morning, and they immediately began to secure advantageous seats. The Parnellites massed themselves opposite Mr. Gladstone's seat. In a very short time the House was filled, and the members were prepared to wait all day for the eventful speech. Outside, the crowds were tremendous, and covered all the space down to Westminster Bridge, and extended pretty well up Parliament Street toward Whitehall. Irish and Liberal political clubs without number were there prepared to give the Premier a great reception. Mr. Gladstone went in an open carriage from his house in Downing Street to the Parliament Building. The enthusiasm of the people all the way from the door of his house to the Commons entrance was spontaneous and thrilling. It vented itself at the beginning of the journey in a roar of applause, and when the whole immense multitude caught the signal, one tremendous, long-sustained cheer was sent up, the like of which was seldom if ever before heard in London, and which was plainly audible in the House. The cheering continued long after Mr. Gladstone had entered the Parliament buildings. Inside the building his reception was equally cordial. He entered at 4:30 P. M. As soon as the cheering had ceased Mr. Gladstone rose and moved for permission to introduce a bill to amend previous legislation, and to make provision for the future government of Ireland.

Mr. Gladstone spoke for three hours and twenty-five minutes, and achieved a splendid personal triumph. It is only possible to give in a brief paragraph a few of the significant features of his scheme for home rule. It provided, he said, for an independent Irish Parliament, the duration of which is not to exceed five years. The functions which it was proposed to withdraw from the cognizance of the legislative body were three: everything which related to the Crown; all that which belonged to the defence, the army, the navy, the entire organization of the armed force, and our foreign and colonial relations. It would not be competent to pass laws for the establishment or endowment of any particular religion. The bill proposed to introduce two orders who would sit and deliberate together, with the right of voting separately on any occasion and on the demand of either body, which should be able to interpose a veto upon any measure for a limited time, either until the dissolution or for three years. The orders would be constituted as follows: First, there were the twenty-eight representative peers, who could not continue to sit in the House of Lords after the representatives of the Irish people left the House of Commons. They would have the option of sitting as a portion of the first order in the Irish Parliament, with the power of sitting for life. He proposed that with the twenty-eight peers now in the House of Lords there should sit seventy-five representatives elected by the Irish people. With regard to the powers of election, the

constituency would be composed of occupiers of the value of £25 and upward, and they would be elected for ten years. The property qualification of these representatives would be £200 annual value, or a capital of £4,000. Mr. Gladstone then said he proposed that the 101 Irish members in the House of Commons should be members of the Irish Parliament, and while the first order of the legislative body would consist of 103 members, the second order would consist of 206.

It was proposed to retain the Viceroy, but he would not be the representative of a party or quit office with the outgoing Government. The Queen would be empowered to delegate to him any prerogatives she now enjoyed or would enjoy. The religious disability now existing, which makes Roman Catholics ineligible to the office, would be removed. The constabulary would remain under the present terms of service and under their present authority. The charge for the constabulary was now £1,500,000 per annum, and the speaker felt confident the charge would be reduced, but for the present he proposed to relieve the Irish legislative body of all expenditures for the constabulary in excess of £1,000,000 per annum. The proportion of the imperial burdens which he had to propose that Ireland should bear was as one to fourteen. He then entered into an elaborate calculation of the total income and expenditure of Ireland, in the course of which he stated that the total charge to Ireland as an imperial contribution he put at £3,242,000 per annum. He estimated the total expenditure of Ireland, including a payment as a sinking fund for the Irish portion of the national debt, at £7,946,000 per annum. Against that there was a total income of £8,350,000, or a surplus to the Government of £404,000.

The peroration of Mr. Gladstone's speech was most eloquent and impressive. Mr. George Otto Trevelyan, who had resigned his position as Secretary for Scotland, then proceeded to explain his reasons for that course, and, as an alternative scheme, said he would propose that the execution of the law and the maintenance of order should be maintained in the hands of the central government. Then he would propose the creation of certain local bodies which should be composed of members freely elected. These bodies should be intrusted with and held responsible for many of the subordinate functions of government, such as providing for education, superintending the details of local government, providing for the relief of the poor, and so forth.

Mr. Parnell then delivered an eloquent address, praising Mr. Gladstone's scheme, and incidentally justifying the course of Americans and Irish-Americans toward Ireland. The bill, he said, nevertheless contained blots which the Irish representatives would do their best to remove. One of these was to be found in the financial proposals of the bill, which he regarded as very unfavorable to Ireland, especially in regard to the Irish tribute to the imperial exchequer. He also complained of the proposition relative to the two orders intended to constitute the Irish Parliament, on the ground that the first order, consisting of peers not subject to the influence of the popular vote, would have the power of hanging up measures demanded by the people and their representatives for two or three years. On the whole, however, apart from these defects, he believed the measure would be cheerfully accepted by the Irish people and their representatives as a satisfactory solution of the long-standing dispute between the two countries, and as tending to prosperity and peace in Ireland and to satisfaction in England.

In the House of Commons on Friday night Mr. Chamberlain rose to explain why he had resigned from the Cabinet. He began by introducing certain features of the land-purchase scheme, and was immediately interrupted by Mr. Gladstone, who said that her Majesty's Government had not given him permission to reveal the land proposals. An angry discussion ensued, which greatly disconcerted Mr. Chamberlain. In his speech, which was coldly received, he took four principal objections to Mr. Gladstone's scheme for governing Ireland. The first was to the proposal to exclude the Irish members from Westminster. His second objection was to renouncing, as proposed, the exercise of the right of imperial taxation. In the third place he objected to the surrender of the appointments of judges and magistrates, and, finally, he objected to the supreme authority given to the Irish Parliament in matters not specially excluded from its authority. He would propose to deprive landlords of the power to evict for six months, guaranteeing them six months' rent, the land being security for the sum advanced. During this period a peace commission, composed of members of every section represented in Parliament, could conduct an exhaustive inquiry into the land question. Besides this, he looked for a solution of the home-rule matter in the direction of federation. He was not, he declared, pedantically pledged to his former proposals for a national council.

The Marquis of Hartington made a notable speech, which was moderate in its opposition, but determined. In the course of it he said if the scheme was good for Ireland, it was good equally for Scotland and Wales. If the latter demanded domestic legislatures of their own, and the demand was conceded, the result would be that there would be a house of Parliament with every Scotch and Welsh member excluded, acting as an imperial legislature for the whole United Kingdom. If the people of England and Scotland thought injustice was being done to the minority in Ireland, that minority would not appeal to them in vain, and he feared that in that way this bill, introduced in the interests of peace, was likely to occasion more serious disturbances than any that had yet arisen. "We cannot," he said, "escape from responsibility by the delegation to another body of executive power, which we know would be used by it in a manner we should condemn." Mr. John Morley also spoke, vigorously defending Mr. Gladstone's policy. The debate was then adjourned.

In the House of Commons on Monday night Lord Randolph Churchill resumed the debate on the home-rule scheme. He said that after long consideration he had come to the conclusion that the scheme involved such a complicated and inextricable mass of contradictions that if anybody besides Mr. Gladstone had proposed it, it never would have been taken seriously. He had vainly searched all the authorities, ancient and modern, for a precedent for Mr. Gladstone's two orders which were to compose the proposed Irish Parliament. The first order was intended specially to represent property, and it was worthy of attention that the great leader of the great Liberal party had chosen such an antiquated and discarded machine as the property qualification for the electorate of this first order. The second order was also elective. Both orders were to sit together, and one order could veto any measure brought in by the other. The real principle of the bill, he said, was simply repeal of the Union. On the question of Ulster he asked if an Irish Government could pay its way if Ulster were withdrawn. That the English Government could not make up its mind in regard to Ulster proved the almost insoluble character of the home-rule project. The Premier justified his proposals on the ground that there were eighty-six home rulers in the House. But why should the voices of eighty-six Irish members prevail over the voices of the 584 other members? History showed the rise and decline of former Irish parties. So the Parnellites, formidable to-day, were in danger of disunion to-morrow. Lord Randolph's speech lacked his usual aggressiveness and caused disappointment. Mr. Russell, the Attorney-General, made a labored reply. Mr. Bradlaugh and others spoke.

On Tuesday night Sir William Vernon Harcourt, Chancellor of the Exchequer, made a forcible speech in defence of the Government measure, dwelling on the want of unity among its opponents, and uttering a warning against an aristocratic desertion from the Liberal ranks on account of it. Mr. Goschen also spoke effectively on the other side, rehearsing with much vehemence the difficulties in the way, but proposing nothing except a system of government through local and municipal bodies in Ireland. Sir Michael Hicks-Beach followed, not very weightily. Mr. Gladstone's summary reply was very spirited and telling, and intimated that the removal of the Irish delegation from Westminster was not a vital part of his scheme. Leave to introduce the bill was then granted without a division.

Lord Wolseley, in a speech in London on Saturday night, said that the English Empire had been built and preserved through the valor and endurance of its soldiers and sailors, directed by able statesmen. Hitherto it had been their lot to defend their country against foreign foes, but now they were called upon by the people of England to do duty in trampling under foot enemies more serious, because they were enemies within the civil boundaries. He called upon the English nation to say, "Stand off!" to any one, whoever he might be, who should dare to try to break or dismember the empire, thereby ruthlessly destroying it. The speech was received with deafening cheers.

A sensation was caused on Monday in London by the sudden right-about-face of the *Daily News*, the Ministerial organ, and the only London journal hitherto supporting Mr. Gladstone's home-rule scheme. It said editorially: "We are constrained to admit our conviction that the country is not yet ripe for home rule in Ireland. We regard Mr. Gladstone's scheme as one of the most consummate pieces of constructive statesmanship presented even by the author of a series of Irish land acts which have delivered Ireland from the incubus of an alien church. But we do not conceal our belief that though the measure may pass its first or second reading, it cannot, unless a remarkable change takes place in public opinion, become a law at this session."

The lower house of the Prussian Landtag on Wednesday, by a vote of 214 to 120, adopted the bill expropriating the land of the Poles in Posen, and colonizing the province with Germans.

Prince Alexandria, of Bulgaria, telegraphed to the Porte on Thursday his formal acceptance of the protocol limiting his Governorship of Eastern Rumelia to five years.

The Porte has sent to the Powers a circular declaring that as Bulgaria has settled its dispute with them, it becomes necessary to put a stop to the bellicose conduct of Greece, as it is compelling Turkey to support an enormous military outlay.

The Greek Chamber of Deputies has passed a vote of confidence in the Government by 129 to 83. The crowd outside greeted the result with enthusiasm, showing the strength of the war sentiment.

Just after the train carrying the Czar and Czarina to the Crimea had passed Tcharkoff on Wednesday, four men, who acted in a suspicious manner, were arrested on the railroad track at that place. It is supposed that they had been engaged in a plot to blow up the train.

The intended journey of the Czar to Nova Tcherkask to present his son to the Cossacks as their chief, has been prevented by the discovery of a dynamite plot to assassinate the imperial party. A Cossack officer and his brother have been arrested. They are believed to be Nihilist agents.

A third member of the party of wolf-bitten Russians who came to Paris to be treated by M. Pasteur, has died. Like the other two, he showed symptoms of hydrophobia.

The Italian Ministry of Signor Depretis, formed June 29, 1885, has resigned.

MR. GLADSTONE'S TRIUMPH.

It is not too much to say that Mr. Gladstone was on Thursday the leading figure in the greatest incident in Parliamentary history. There were scenes in the Long Parliament which, seen through the light of subsequent events, surpassed it in tragic interest, but in no legislative assembly either in Great Britain or America has there ever been so great a purely Parliamentary occasion. Neither could any dramatist, by the highest exercise of his talent and skill, have prepared for his dénouement with half the completeness and impressiveness with which the ordinary course of British politics prepared for Mr. Gladstone's entry on the stage a week ago. Everything that had been happening in England and Ireland during the last fifty years seemed to have contributed something to create the pomp and pride and circumstance which surrounded the last act in a great career. Everybody who was present must have felt that he had witnessed the greatest example the world is likely to see of the art of persuasion applied to the work of government—that is, oratory rendering its best service. For, unlike most orators in our time, Mr. Gladstone had neither to announce the resolve of a great party, nor to charm the ears of weary or idle people with picturesque imagery or rounded periods. He had to win over a nation to a sacrifice which nearly every quality to which it owes its greatness makes exceedingly hard; to satisfy a whole people that even a partial measure of Irish independence does not mean the dismemberment of the empire on which generation after generation has expended so much blood, and money, and genius, and valor.

That he has succeeded it would be premature to-day to assert. But he has done all that oratory in the service of the most remarkable constructive power the modern world has seen can do. The effect of his speech was heightened by the blunder of allowing Mr. Trevelyan to follow him as his first critic with a "plan" of his own; Mr. Trevelyan, being a gentle, amiable man, of no capacity whatever as a legislator, with but little as an orator, and still somewhat damaged by his failure as Irish Secretary. Opposition which opened in such a way seems almost doomed to disaster. It would have been wiser to follow the example of Pitt in moving the adjournment of the House after Sheridan's speech on the Begum charge in the Warren Hastings case, on the ground that calm discussion was impossible while the influence of such eloquence was still fresh. The one person to speak was Mr. Parnell, and he had but to say, and he said it, that the Irish accepted Mr. Gladstone's scheme, to make its final success all but certain. We say final success, because it is impossible to suppose that such a popular greeting as Mr. Gladstone has had, and such a speech as he has made can be disposed of or made null and void and of no effect by anything this Parliament, or indeed any Parliament, can now say or do. They both stand, and will continue to stand, as momentous and impressive endorsements of the Irish position. No man can successfully maintain hereafter before the English public that the Irish demands are unreasonable or even dangerous. Their claims have been brought within the domain of practical politics by the endorsement of the greatest lawgiver of our time, and they are certain now to remain there until they are satisfied. English timidity, which is now the main obstacle to their satisfaction, will vanish through familiarity with them, and the "leap in the dark," from which Conservatives now recoil, will be taken finally with as good a heart as the former one in 1867, when the suffrage was extended. The opposition to it, in fact, rests now on nothing better, as Mr. Gladstone pointed out in one of the finest and shrewdest passages in his speech, than "a basis of despair." Its opponents have really nothing to urge against it, in view of what has happened in various other countries of the modern world, than the theory that "an Irishman is a *lusus naturæ*; that justice, common sense, moderation, national prosperity have no meaning for him; that all that he can understand and all that he can appreciate is strife, perpetual dissension." This is really the argument of Froude and Goldwin Smith and some other literary politicians, but it, of course, can only be urged on practical politicians as a *jeu d'esprit*.

The part of the plan which is exciting most hostility, strange to say, appears to be the exclusion of the Irish from seats in the Imperial Parliament. The Irish are glad to go, but they find, probably to their surprise, now that their going seems near at hand, that the Conservatives and Whigs want them to stay, and that their staying would reassure a good many doubting Liberals. That is to say, the proposed total withdrawal of the Irish from all participation in the work of legislation at Westminster gives the scheme the air of a complete separation which the British public finds startling. On this point Mr. Gladstone, it is now said, is prepared to make modifications; that is, he is prepared to retain some Irish representation at Westminster to vote on the imperial appropriations and other matters of joint concern. This appears to be all the more necessary if, as he also proposes, the Irish customs are to remain in the hands of the English Government. Their proceeds, it is true, are to be applied to Irish purposes, but as long as the Irish do not control them or share in control of them, the scheme is open to the charge, which Lord Randolph Churchill makes, of being taxation without representation.

The importance of the scheme to this country is only second to its importance to England and Ireland. We do not need to call our readers' attention to the debauching influence on American politics of this prolonged and bitter strife between England and Ireland. In asking the 2,000,000 of men and women of Irish birth who are now in this country to withdraw their attention and interest from that strife, on taking up their abode here, and busy themselves in their duties as American citizens, Americans have not been asking more than the Constitution of the United States and the best interests of the country called for; but they have been asking more than human nature could ever give. No people similarly circumstanced would probably act any better under the circumstances, barring the dynamite, than the Irish Americans have done. Nor was it fair, as we pointed out two or three years ago, when the dynamite was a burning question, to throw on this Government the sole burden and responsibility of keeping within the limits of order and humanity and law the vast mass of Irish discontent and hatred cast on our shores. As long as Ireland was governed in absolute indifference to or in defiance of Irish opinion and feeling, this Government was more or less paralyzed in any attempt to prevent Irish plottings on these shores against English peace and dignity. But, worse than this, it was impossible also to prevent Irish questions from forcing their way into American politics, and exerting a most demoralizing influence both on our elections and our legislation. Demagogues in and out of Congress have been getting every year more and more into the habit of pushing their own ends by denunciations of England and the encouragement of hostility to her, in order to catch the Irish vote. In 1884 there is little question that James G. Blaine would have been overwhelmingly defeated in this State but for his success in securing the support of the Irish, who deal with all American questions from the Irish standpoint. They voted for Blaine because they believed, and he meant them to believe, that if he was President, he would inaugurate in the administration of foreign affairs a policy of hostility and annoyance to Great Britain. Should Gladstone fail now in his great attempt to heal Irish discontent, we shall probably witness the same sort of phenomenon in 1888. Should he succeed, he will do almost as much for the purification of our politics as for that of the politics of his own country.

CONGRESS AND THE UNION PACIFIC RAILWAY.

The House Committee on Pacific Railroads have under consideration a resolution ordering an investigation of the affairs of the Union Pacific Railway Company, with a view to discovering whether that corporation has not, by means of dishonest bookkeeping, falsified accounts, and various fraudulent transactions, cheated the Government of large sums which properly belong to the sinking fund established by the Thurman Act. The resolution was introduced by Mr. Henley of California, but is said to have been drawn by an ex-clerk in the office of the Railroad Commissioner, who was found to be using his official position for stock-jobbing purposes and was dismissed in consequence. The terms in which it is drawn, the time and the manner of its introduction, leave no doubt as to its object. It is simply to affect the stock in the interests of speculators. Though not generally known elsewhere, it is notorious in Washington, that certain well-known bear operators in the stocks of the Pacific roads keep a permanent lobby at the capital, whose sole occupation it is to devise schemes to weaken the credit and depress the stock of these corporations by threatened legislation or action of the departments. The original plan of the operators, upon the accession of the present Administration, was to secure the appointment of two of their agents as Government Direc-

tors of the Union Pacific. This failing, they succeeded in getting one of them into a confidential position in the Commissioner's office, where there were abundant opportunities for usefulness. His career was cut short by his too great zeal and too little discretion.

The lobby are now working the Railroad Committee of the House, and the Henley resolution is one of its instrumentalities. The method of attacking the credit of the company by ordering an investigation is somewhat ingenious. A funding bill is now pending in the Senate by the terms of which the relations between the Government and the Pacific roads are established upon a permanent basis, upon a plan of fixed semi-annual payments, which will extinguish the debt at the end of eighty years. It increases the present security for the subsidy debt by including all the company's property in its branch lines in the mortgage, and provides that the whole debt shall become due and payable upon default of a semi-annual payment. It has been reported favorably by the Judiciary Committee of the Senate. Its general plan is favored by the Interior Department, and it is understood that a sub-committee of the House Committee on Pacific Railroads is preparing a similar bill. The passage of such a bill would make an end of all the vexed questions concerning "net earnings" arising under the Thurman Act, would do away with the hardship now borne by the companies of being compelled to invest their surplus in a sinking fund producing a little over 2 per cent., and, what is perhaps more important, would remove from needy Congressmen the temptation to speculate in stocks whose prices are so easily affected by legislation.

It is to arrest the progress of this bill that the stock jobbers propose an investigation. The suggestion naturally commends itself to the Congressional mind. It means for the investigators free railroad transportation to the Pacific Coast, and plenty of entertainment. The railroad companies cannot object to being investigated without exposing themselves to suspicion. But the public is not a fool after all. It discerns the purpose of these schemes pretty clearly. The ostensible object of the investigation is to find out whether the Union Pacific is not, by some crookedness of bookkeeping, or technical subterfuge, avoiding its obligations to the Government. Briefly stated, it is the old question of definition of "net earnings"; what are proper deductions to be made from the gross earnings before provision is made for the sinking fund? Now the sinking fund referred to is a confessed failure. Its modification or repeal has been urged over and over by the Railroad Commissioners, Government Directors, and Secretaries of the Treasury and of the Interior. Under the provisions of the Thurman Act the Company gets but a fraction over 2 per cent. for investments on sinking-fund account. It has now over six millions in the fund returning but 2 1-5 per cent. per annum. The demand of the stock jobbers is that the lines be more strictly drawn in the construction of "net earnings" so that more of the Company's surplus shall be diverted to this fund. To what end? To secure the Government debt? Not at all. Why not make an end of all these disputes over "net earnings" by establishing fixed payments extending over a period of years, adapting the requirements to the Company's ability to pay, but strengthening the Government's security for its debt?

This we understand to be the aim and the scope of the funding bill now pending in the Senate. This is what a committee of second-mortgage bondholders, situated as the Government is situated, would do. The payments under the existing law are of uncertain amount, and are embarrassing to the debtor company. The Thurman Act is unscientific. It ought to be superseded by something which shall yield a fixed and known sum to the Government, and shall leave the company free after making these payments to employ its resources as other companies employ theirs, in making needed improvements and extensions of its lines.

THE ILLEGALITY OF BOYCOTTING.

PUBLIC interest in the boycott upon Mrs. Gray's bakery continues to grow. The most noticeable feature of it is the increasing desire to have the instigators of the boycott brought to punishment. It has been pointed out that this could be done through the District Attorney's office, since the boycotters were clearly liable to fine and imprisonment for conspiracy, libel, and blackmail. The law is very clear in making a combination of this kind a conspiracy. A very interesting decision in point was given by the Supreme Court of this State in 1835. Some journeyman shoemakers in Geneva, Ontario County, formed a combination for the purpose of preventing any journeyman shoemakers in that village from making a certain kind of coarse boots for a less price than $1 a pair. Any member of this association who made boots for a less price was to pay a penalty of $10, and all members were pledged to refuse to work for any master shoemaker paying a less price. A shoemaker named Pennock made a pair of boots for an employer named Lum for 75 cents, whereupon all of Lum's workmen left him and refused to return to work until he discharged Pennock, and promised not to employ him again. The District Attorney of Ontario County had several of the members of the Shoemakers' Association indicted for conspiracy to do an act of injury to trade, and, upon a demurrer to the indictment, it was held good by the Supreme Court of the State.

The opinion in the case was given by Chief-Justice Savage, in which he held that a conspiracy of journeyman workmen of any trade or handicraft to raise wages, by entering into combinations to coerce journeymen or master workmen employed in the same trade or business to conform to rules established by such combination for the purpose of regulating the price of labor, and carrying such rules into effect by overt acts, was "an act injurious to trade or commerce," within the meaning of the Revised Statutes, and as such a misdemeanor. The Chief Justice used the following language in the course of his opinion:

"All combinations, therefore, to effect such an object are injurious not only to the individual particularly oppressed, but to the public at large. In the present case an industrious man was driven out of employment by the unlawful measures pursued by the defendants, and an injury done to the community, by diminishing the quantity of productive labor and of internal trade. In so far as the individual sustains an injury, the remedy by indictment is taken away by our revised statutes, and the sufferer is left to his action on the case; but in so far as the public are concerned, in the embarrassment to trade by the discouragement of industry, the defendants are liable to punishment by indictment. If combinations of this description are lawful in Geneva, they are so in every other place. If the bootmakers may say that boots shall not be made for less than $1 per pair, it is optional with them to say that $10 or even $50 shall be paid, and no man can wear a pair of boots without giving such price as the journeyman bootmakers may choose to require. This I apprehend would be a monopoly of the most odious kind. The journeyman mechanics might, by fixing their own wages, regulate the price of all manufactured articles, and the community be enormously taxed. Should the journeyman bakers refuse to work, unless for enormous wages which the master bakers could not afford to pay, and should they compel all the journeymen in the city to stop work, the whole population must be without bread . . . Truth is, that industry requires no such means to support it. Competition is the life of trade. If the defendants cannot make coarse boots for less than $1 per pair, let them refuse to do so; but let them not directly or indirectly undertake to say that others shall not do the work for a less price. It may be that Pennock, from greater industry or greater skill, made more profit by making boots at seventy-five cents per pair than the defendants at $1. He had a right to work for what he pleased. His employer had a right to employ him for such price as they could agree upon. The interference of the defendants was unlawful; its tendency is not only to individual oppression but to public inconvenience and embarrassment."

A few years after this decision the same question came before the Court of Common Pleas, and an elaborate opinion was written by Chief-Justice Daly, in which he differed from the Supreme Court upon the question of the mere association of workmen to increase wages being a misdemeanor, and, after a most elaborate and learned investigation of the law on the subject, stated as the result of his examination "that it is lawful for any number of journeymen or master workmen to agree, on the one part that they will not work below certain rates, or on the other that they will not pay a certain price; but that an association or combination for the purpose of compelling journeymen or employers to conform to any rule, regulation, or agreement fixing the rate of wages to which they are not parties, by the imposition of penalties, by agreeing to quit the service of an employer who employs a journeyman below certain rates, unless the journeyman pays the penalty imposed by the combination, or by menaces, threats, or intimidations, violence, or other unlawful means, is a conspiracy for which the parties entering into it may be indicted."

This view of the law was practically adopted by the Legislature of 1870, when an act was passed providing that the provisions of the statutes regarding conspiracy "shall not be construed in any court in this State to restrict or prohibit the orderly and peaceable assembling or coöperation of persons employed in any profession, trade, or handicraft for the purpose of securing an advance in the rate of wages or compensation, or for the maintenance of such rate." The principle

as thus modified has been uniformly maintained by the courts in several cases, and the general doctrine established that any agreement or conspiracy to commit an act injurious to trade is illegal. Upon the enactment of the Penal Code in 1881 the definition of conspiracy was enlarged, and a new provision was inserted declaring it a misdemeanor for two or more persons to conspire—

"5. To prevent another from exercising a lawful trade or calling, or doing any other lawful act, by force, threats, intimidation, or by interfering or threatening to interfere with tools, implements, or property belonging to or used by another, or with the use or employment thereof."

The provisions of the statute of 1870, in regard to peaceable and orderly combinations, quoted by us above, were at the same time added to the Penal Code, where they stand as section 170. Together they make the law so clear that there can be no misunderstanding it. There is not the slightest doubt that the use of the boycott as an aid in a strike is a conspiracy against trade, and punishable by fine and imprisonment. Mrs. Gray's case has excited widespread interest and indignation because the victim is a woman; but otherwise the boycott upon her bakery does not differ from that used in thousands of other cases. Her case is likely to be of great value in arousing public indignation against boycotts of all kinds, and in awakening the officers of the law to their duty of promptly bringing the perpetrators of them to punishment.

BIRD SLAUGHTER.

Some seven years ago there appeared in Paris at a ball of the *demi-monde* a woman wearing on her head-dress a dead bird. The bird had artificial eyes, and its wings and tail were spread out so as to give it a life-like appearance. It was a small, stuffed bird, not a bird-skin stretched on wires. Its introduction as an ornament in fashionable bad society was not received with much favor at first, although the wearer succeeded in attracting attention to herself by the singularity of her adornment. This was all that she desired or intended to accomplish by fastening a bird's corpse to her head-gear. She had not the smallest expectation that she would be imitated, even by her immediate companions, still less that the whole world of fashionable good society in France, England, and America would "fall into line" at her heels. Probably her only thought was that the oddity of her costume would serve as a striking advertisement, like "S. T., 1860, X.," and cause her to be talked of among the males and females of her kind.

Strange indeed are the caprices of fashion. Seven years have passed by, and we find the eccentricity of a woman of the town become the craze of millinery—so great and deadly a craze that State Legislatures are considering bills to prevent the extinction of our song birds, and of all birds not too large to be worn on the bonnets of women and children. Nothing more revolting to good taste can be imagined than the "remains" of an animal fresh from the dissection of a taxidermist as an ornament to a woman's forehead. The very suggestion ought to excite horror and disgust, as well as pity for the slaughtered songsters of the grove. But the instincts of refined taste and the promptings of humane feeling are alike crushed by the Juggernaut of fashion. The appeals of naturalists and the sarcasms of the press are alike unavailing to suppress or even lessen the massacre of the innocents. The destruction goes on at a rate limited only by the number of birds within reach of the sportsmen's guns and nets. Seventy thousand corpses of the white curlew were delivered in New York in four months' time. They have almost disappeared from our coasts. Linnets, bluebirds, orioles, woodpeckers, snowbirds, song-sparrows, indeed everything that has feathers and is not too large a load to be carried on one's head, is coming to the shambles of millinery. As the smaller varieties become scarce the larger ones are taken and cut in pieces, their heads going to one style of head-dress and their wings and tails to another. But no one can tell how large a bird can be worn on a woman's head by walking on Fifth Avenue. It is necessary to take a ride in a Second Avenue car to get the full effect of the prevailing fashion. There one may see on the headgear of poorer classes, and especially of colored women, every species of the feathered kingdom smaller than a prairie chicken or a canvasback duck, and every color of the rainbow.

The public are beginning to realize that there is danger of the total destruction of small birds to satisfy the demands of an odious trade founded upon a worse than barbarous fashion. The barbarian carries dead animals on his person as charms against the powers of darkness, but not for purposes of adornment. If any daring traveller had found among the bushmen of Australia, or the savages of Africa, a people wearing dead humming birds for earrings or dead rats for necklaces, the discovery would have stirred commercial and philanthropic zeal among civilized nations to supply them with suitable beads and brass ornaments to take the place of such heathenish attire. Yet the composing of a circlet for a young girl's brow from the heads of twenty bobolinks, woodpeckers, wrens, kingfishers, and other decapitated beauties of the forest and the seashore—a sight beheld by a correspondent of the *Evening Post* at the Academy of Design last week—is hardly to be distinguished in point of good taste from the wearing of humming-birds as pendants to the ear or small rodents to adorn the neck. In this case it is evident that the object was to get as many different insignia of bird slaughter crowded into one place as possible.

There is a bill pending at Albany to prohibit the killing of certain species of harmless birds. It ought to prohibit not only the killing but the traffic in birds of this class, and authorize the seizure and destruction of the same after a reasonable time sufficient to give all people warning, and to enable those who have money invested in them to get rid of their stock. Our game laws prohibit the killing of certain kinds of birds at certain seasons, and in order to make the prohibition effectual they prohibit the having of them at such times. Possession of the prohibited thing is itself a misdemeanor, and rightly so. The object of these laws is to preserve the species from extinction, so that the generations who come after us shall not be deprived of a valuable birthright through our negligence. Societies of ladies have been formed in England to discourage the practice of wearing birds on the head. Mrs. Celia Thaxter proposes, in the *Evening Transcript*, that a similar society be formed in Boston. But it may be doubted whether a fashion, however opposed to good taste, can be frowned down. If our birds are to be saved, public authority must come to the assistance of private effort. Societies for the suppression of bird slaughter will be useful and effectual, however, in aid of the law, or to promote its enactment and enforcement.

A FRENCH MEMOIR OF OUR COLONIAL HISTORY.

The National Library of Paris has lately received a curious acquisition in a manuscript work entitled 'Voyage au Canada dans le Nord de l'Amérique Septentrionale fait depuis l'an 1751 à 1761, par T. C. B.' The author, when very young and at his wits' end for a living, took an opportunity which was offered him of going to Canada, and there enlisted in the *troupes de la marine*, which composed the standing military force of the colony. As his education was much above his new position, he sometimes acted as secretary to his commanding officer, and was at length made storekeeper at Fort Duquesne, where, as he ingenuously remarks, there were good opportunities of making money without much risk. It was a time when the storekeeper of a military outpost in Canada rarely failed to make a modest competence at the expense of the King. "T. C. B." found himself at the end of the war in possession of something more than 80,000 francs, nearly all of which melted into nothing through the depreciation of Canadian paper money.

His book would be more valuable if it were less ambitious. He says that he made notes of what he saw in Canada, from which, many years afterwards, he wrote his story; but these notes must have been of the most imperfect kind. An exact copy of the whole work is before me. It forms 428 pages of manuscript, including a preface, an index, and a long treatise on the Indians. In short, it is a book prepared for the press, though it was never printed. "T. C. B." would have done well if he had contented himself with relating his own experience, instead of undertaking to recount the whole course of the war. He did not write his book till thirty or forty years after his return to France, and his memory, in spite of the notes which he says that he kept, often plays him strange tricks. Thus, he puts the defeat of Braddock in 1756 and the removal of the Acadians in 1754, though they both occurred in 1755; and he makes the capture of Fort William Henry and the defeat of Abercrombie occur in the same summer. His account of the Indians and his long descriptions of the animals of the country are very inexact. According to him, the Canadian porcupine darts its quills at all comers, while the *carcajou*, or wolverine, has a tail several times longer than its body.

During the winter of 1758 and 1759 he returned to Quebec with pockets full of paper money from his lucrative service at Fort Duquesne, and engaged himself in marriage to a young woman of the city, hired a house, furnished it at the cost of 10,000 francs, and somewhat prematurely installed in it his intended bride and mother-in-law; after which he changed his mind and broke off the match, assigning no reason to his readers

or to his betrothed, whose disappointed parent gave him great trouble before he could dispossess her of the house and furniture. Resuming his military life, he was captured in the summer of 1760 and sent prisoner to New York. His account of that place and what befell him there is interesting and curious. Being sent to France with other prisoners, he rejoined his family, and, at length, growing old, put his story upon record, apparently about the end of the last century. As historical evidence the value of his work is small. Even in the events of which he was himself a part his memory is often at fault, and where he tells of what he did not see, his story is worthless. Even in his own reminiscences men and events are sometimes confused by the lapse of time.

His first military experience was on the expedition sent by the Marquis Duquesne in 1753 to occupy the Upper Ohio. He accompanied the party, however, no further than Presquile, having been sent with a detachment to Detroit and Lake Huron. In the next year he was one of the party that drove Ensign Ward from the forks of the Ohio and built Fort Duquesne. He was at this place when Jumonville was killed and his men captured by Washington, but he adds very little to what is known of that affair, except some particulars about the Canadian who escaped the fate of the rest. He was also one of the force under Villiers who defeated Washington at Fort Necessity. His account answers pretty well to the French contemporary reports, none of which, however, give the number of Indians who accompanied the expedition. This "T. C. B." puts at three hundred, which, if true, makes the total French force upwards of nine hundred, against about three hundred and fifty under Washington.

He gives a horribly minute account of the torture of English prisoners by the Indians at Fort Duquesne in the summer of 1755. He was present at the scene, which seems to have left an indelible impression upon him. He not only puts the defeat of Braddock in the wrong year, but his account of it is extremely short and unsatisfactory, adding nothing to what is already known, though he says that he took part in it. He seems impartial in his mistakes, which sometimes tell against his own countrymen. Thus, he declares that at the battle of Lake George the whole French force was killed or taken, while in fact the greater part escaped. His ambition to make a book has led him to sacrifice rare opportunities of leaving behind him a record of personal observations which might have been of great interest and value. He apologizes for having so much to say about what he himself saw and did, but his real fault is in adding anything else.

F. Parkman.

THE STRIKE IN THE SOUTHWEST.

St. Louis, April 1, 1886.

The strike which has now been prevailing in the Southwest system of railroads, commonly called the Gould system, for nearly four weeks, has brought to the surface so many features of economic, social, and governmental import, that a critical review may not be out of place. The public has been fairly well informed of the incipiency and progress of this remarkable upheaval; but the coloring given to it by the press, and by associated and private despatches in different sections of the country, has had a tendency to hide from the outside public many of the local features to which attention must be given in order to understand its origin, rise, and inevitable consequences.

To begin with, the country should understand that this was not a strike. It had neither the meaning nor the dignity attached to that word. Webster defines the word strike to mean, "to quit work in order to compel an increase or prevent a reduction of wages." Neither of these elements had anything to do with this quasi-revolutionary movement. It was a *boycott*, pure and unadulterated, with no element of a reasonable or even alleged cause for a strike, on the above accepted definition, in it.

The public generally accepts the term of boycott to be a sort of a good-natured and not unlawful method of applying the screws to a refractory employer. Such may have been the intention of the originators of this method, but, as at present applied, it forbodes incalculable mischief. It partakes more of the nature of the "lettres de cachet," the papal bulls of excommunication, the Vehmgericht, or the Spanish Inquisition; it is, in fact, a revival of the cruel and relentless practices of the Middle Ages.

When a boycott is decreed, it is directed against every man, woman, or child, against every firm, corporation, or individual, against everybody who —directly or indirectly, whether for profit or love, whether his life or his health or that of his wife and children depended on it, whether he or they were sick, suffering or starving, whether impelled thereto by ties of friendship, of gratitude, or humanity—helped, aided, worked for, or in any way assisted the person, corporation, or institution which had incurred the displeasure of and been declared to be under the ban by a chartered lodge; and to abide by this order when given, all Knights of Labor are solemnly sworn.

Tracing the history of this strike, it will be seen that this was the course it took. A railroad in Texas discharged one of its employees. It is irrelevant for our purpose to argue for what reason; it is only relevant to know that he belonged to the order of the Knights of Labor. The Knights demanded his reinstatement, which the managers refused. Thereupon a strike on that line, which covered nearly the entire State of Texas, was ordered. Within twenty-four hours after, it became apparent that this mode of coercion did not bring about the reinstatement of the discharged man, and the bull of excommunication was decreed over another road, the Missouri-Pacific. Ostensibly the laws were to be respected, but in fact no law was to stand in the way of preventing the excommunicated road from being operated; and violence, destruction, and panic were to, and did, follow in the wake of the Knights' secret order.

St. Louis being the key of the situation, and the chief offices of the road as well as of the Knights being located here, this city became the main point of attack. It is needless to describe the open acts of violence that were committed—they are matters of history; but the secret and invisible acts of terrorism are not. The thousands of employees who were serving the company, directly or indirectly, from the best paid artisan down to the day-laborer and the poor women who scrub the cars, were waited upon by a "committee" and "requested" to stop work instanter. Generally they were served with a written notice, reading as follows:

"You are requested not to . . . work in the shop . . . repair tracks . . . take out an engine, etc., etc., from and after — o'cl. this day. By order of the
{ Seal of Knights of Labor. } Executive Committee."

It will be observed that the word "requested" only is used, designedly for the purpose of serving as a cloak to the boast that the Knights never used violence; but there is a terrible meaning attached to the word "request," which every laboring and working man in the country now understands. It means that whoever does not heed that request may consider himself outlawed; that when going to or returning from his work he will be hooted, hissed, and spat upon; that he will be beaten, his wife and children insulted, his tradesmen forbidden to sell him goods, his landlord ordered to oust him from his home. All his social relations will be cut off, and he will become the Ahasuerus of his tribe. No wonder that the most loyal and the stoutest among them give up their manhood rather than incur the consequences of such demoniac persecutions.

To continue my history: The Missouri-Pacific boycott not producing the desired result, it was extended over the St. Louis bridge, with its vast organization and hundreds of employees, and later on over East St. Louis and the dozen railroad lines terminating there as the outlets of some of the most important trunk lines. The strikers there outvied the St. Louis mob. Under the guidance of the Knights all avenues of trade and industry were closed. The St. Louis Transfer Company, which owns several hundred teams, had to suspend operations. Its teamsters were "requested" to quit, and quit they did. They were all loyal to their employers, were poor, needy, hard-working men, and they met afterwards among themselves and published a protest in the papers against this unwarranted interference, but they dared not to ignore the "request." Other teams, belonging to private parties, endeavoring to haul goods to and from East St. Louis, were ordered back, and nothing was permitted to be touched. Railroads trying to move trains had their engines killed and disabled and their trainmen beaten and insulted. Perishable goods had to be left to rot and spoil. Thousands of tons of coal from Illinois, on which St. Louis depends for its supply, were standing in the railroad yards, but not a bushel was permitted to be moved. Presently the coal famine made itself felt in St. Louis. One factory after another had to let its fires go out. The great flour industries of St. Louis had stopped some time before, because they could get no grain in and could ship no flour out. Thousands of employees, mostly of the poorest class, had to be discharged. The price of coal rose from the average of seven cents per bushel or $5.50 per ton to fifty cents or $40 per ton. Provisions rose enormously. The army of teamsters who make their living by hauling goods to and from East St. Louis not only were forced into idleness, but had to pay enormous prices for feed for their horses who were idle in the stables. How the poor fared may be imagined.

The East St. Louis strike was confessedly ordered without cause or grievance. The Chairman of the Assembly of Knights which ordered it, Sullivan by name, openly stated that it was done only "to help their brethren" in Missouri.

It would draw this letter to undue length to dwell upon the vain efforts of the railroads and the public to obtain protection or enforcement of the law from either the city authorities of East St. Louis, the Sheriff of the county, or the Governor of the State. Suffice it to say that the apathy of the officers in connection with the approaching April elections had an unmistakable significance.

But let us return to Missouri. During all this time, while these acts of violence were going on, not a word was said about wages, not a single grievance was presented. It is true that the leader, Irons, issued a pronunciamiento, red-hot and flaming, in which the bloated bondholders, the millionaires, the stock-watering and Wall-Street gamblers were denounced as being at the bottom of the strike, and incidentally saying that the Missouri-Pacific should pay its bridge mechanics and its shop apprentices higher wages; but this was issued two weeks after the strike—it was "post hoc" and not "propter hoc."

Many of the men ordered out were of the best-paid, the best-contented employees, had their own homes and brought up their families in a

respectable way. They belonged to the best type of the industrial class. I know many of them who are gentlemanly, intelligent, and good citizens. They joined the order of Knights of Labor at its early inception, when its aims and methods were such as every well-wisher of humanity could endorse. They are of the type which Mr. Powderly represents. Now they feel and see with dismay that it has grown beyond controllable limits, hydra-headed, with venom in its fangs. But they see no escape outside of revolt, and revolt means boycott, and boycott means the consequences which I have outlined above.

Finally, when the leaders saw that they had no ground to stand upon, they proclaimed that all they wanted was "recognition." In plain English, it meant that they should be recognized as a state within the State, as a power subject to no control and to no established tribunal, as the dictator to decree, for reasons satisfactory only to themselves, that the people shall neither buy from nor sell to, neither trade nor contract nor have any commercial or other intercourse with, anybody who has incurred their displeasure or ignored their demands. The calamitous results to the individual, to the community, to innocent thousands, to the people of the States, nay, to the entire nation, count for nothing, so that their power to avenge the real or alleged wrong to an individual or the alleged violation of their orders is "recognized." That such a recognition means the surrender of manhood, of all liberty of action, of all democracy; that it must be a barrier to all civilization and progress, never enters the minds of these fanatics.

I will not attempt in this letter to present a history of this tremendous movement, its labor side and its railroad side. In fact, the end is not yet. I have only endeavored truthfully to portray its results and its possibilities, in order that your readers may know what may be in store for them, anywhere and everywhere, and at any time, and that they may take warning. This issue will have to be met by the people of the country sooner or later, and it may be a blessing to those not affected by the events of the last few weeks, that its monstrosity has been uncovered. Nor is there meant to be in this warning any offence or opposition to organized labor. The Inquisition was no more of the essence of the Catholic religion, or the burning of witches of the Protestant religion, than the enormous practices and doctrines of the Knights which I have described are of the essence of protected labor.

THE TRIAL OF THE PEASANT REBELS.

VENICE, March 27, 1886.

"NOT guilty," say the jury; "Not guilty," shout the people stived like herrings in the court; "Not guilty," repeat the anxious crowd without, passing the glad news from bridge to bridge, from gondola to gondola, till it echoes from the lagoon to the Lido, while the telegraph carries it from the tombs of the martyrs in San Michele to those of Belfiore, and Mantua responds, "Viva Venezia! Viva la libertà! Viva la fratellanza! Welcome home to our innocent and calumniated peasants!" This is the result of the attempt made by the Government to secure a verdict against the peasants of whose "rebellion" I wrote to you in February, by translating them from their natural judges in the Mantuan province to the assizes in Venice. In this hope, manacled and escorted by carbineers and a strong body of police, nineteen citizens, ill and emaciated by a year's previous confinement, were transported from Brescia to the prison palace three centuries old, in nothing changed since Byron

"—stood in Venice on the Bridge of Sighs,"

looking here to the Ducal Palace, there to the palace of the prisons. The vaunted progress of the nineteenth century has not changed a bar or a stone in the old prisons of the *Serenissima;* only the *Pozzi*, on a level with the water, and the *Piombi*, under the roof, are no longer used. Nothing has been altered in the dark, damp cells, deprived of light and air; and whereas in Mantua the prisoners were allowed an hour's walk each day, here they have been denied this privilege, permitted only to the condemned, because all communication between these supposed delinquents was forbidden. Each day since the 16th of February, when the trial commenced, they have been transported in the old prison gondola from the Riva degli Schiavoni to the Court of the Assizes, where, in a strong iron cage guarded by carbineers, seventeen have been exposed to the public gaze; two, admitted to bail, left outside, and free.

The counsel for the accused, resolving itself into the "college for the defence," is composed of advocates from the principal cities of northern Italy, members of Parliament, professors of the universities of Pavia, of Siena, and the greatest of all Italian jurisconsults and pleaders, Ceneri, the Professor of Law in the University of Bologna. The President, Cavaliere Scariensi, and the Judges, De Poli and Grasselli, and the Public Minister, have from first to last maintained strict impartiality. Without browbeating or pressure, the defenders have elicited from willing and unwilling witnesses such stories of misery and suffering endured, of oppression unresisted, of deliberate cruelty inflicted and unavenged, as Ireland cannot outrival, and by the same process they have proved most of the accused to be patriots who have exposed their lives for their country, citizens who have upheld and even administered law and maintained order in their respective communes. Siliprandi, for example, has been through all the campaigns for Italian independence from 1848 to 1870, gaining six medals for military valor, and is now a retired captain with a pension derived from the medals. Sartori served in the army, was an artillery officer up to 1870, is knight of the *Corona d'Italia.* None of the accused have ever been condemned by a criminal court, but several of them for press offences. All the accusations formulated against them of conspiracy against property and proprietors, of fomenting strikes, of intimidating such of the peasants as declined to sign a demand for fixed wages, have fallen to the ground. The "inflammatory publications" are proved to be "honest and moral in their tendencies," such as the 'Doveri degli Uomini' of Mazzini, and 'La Storia del Contadino,' a really well-written historical narrative of the Italian peasantry from the days of Rome to our own time, while the "statutes of the Anarchical Society of Viadana" would be rejected by any peasants out of Italy as drawn up in the interest of proprietors. Most of the articles written by Siliprandi end with the words *Calm* and *Solidarity;* most of the letters sequestrated are appeals to members of Parliament and well-wishers to the working classes, such as Professor Bovio, Senator Guerrieri Gonzago, inviting them to come and "enlighten the peasants as to the best methods of ameliorating their wretched condition."

More than once the college of defence voted thanks to the president for the ample liberty of speech allowed to the accused during the interrogations. An inspector of the police bore witness to the excellent character of several of the accused; other policemen admitted that they had arrested numbers of persons without any mandate; some even confessed that they had entrapped the men and then imprisoned them by surprise. If we except some well-known landed proprietors, who affirmed without any proof that the peasants were leaguing to get the land into their own hands, no single accusation has been proved. Deputy Panizza, a Mantuan, at one time parish doctor of three districts, affirmed that the proprietors, while exhausting the physical strength of the peasants by exacting twelve and fourteen hours' work in the broiling sun, denied them sufficient even of the coarsest food, or the money wherewith to purchase it, to restore their exhausted frames. He denied the existence of any secret conspiracy, and affirmed that the rumors spread by the papers of vineyards cut down, of incendiary fires, were utterly false. Deputy Fabbrici, also of Mantua, declared that the wages of the peasants were insufficient to keep them alive; that this justified their combining to secure an increase, but that in the organization of the society no idea of sedition entered. Cadenazzi, also a Mantuan deputy, a noted advocate and a man of order, had examined all the tariffs proposed; some were absurdly low, others were exaggerated, but no disorders had occurred. Not a single fact alleged could be proved, he added. The *Gazzetta di Mantova*, in announcing with terror that the socialist deputy, Costa, was coming to organize a rebellion of the peasants, had confounded him with Costa the sculptor, who was coming to Mantua to concert with the municipality for a monument to Garibaldi! An immense sensation was created by the deposition of Dr. Achille Sacchi, Garibaldi's "fighting doctor," now director of the Mantuan asylum, where by far the greater number of the wretched denizens are peasants gone mad from *pellagra.* His picture of the Mantuan peasantry was sad indeed—the property in the hands of few, *who do not live on the soil*, immense *latifondi;* comparatively few peasant families housed and engaged by the year, hence a superabundance of day laborers so badly remunerated that a robust peasant can scarcely secure food for himself, and when he divides it with wife and children all verge on starvation. *Pellagra*, Dr. Sacchi affirms, is a direct consequence of these causes; in the towns, soup kitchens have done something to diminish this scourge, but the condition of the surrounding peasantry daily deteriorates. In short, by the time that the case for the accusation was closed, it seemed as though the proprietors and not the peasants were on trial.

The arrests in the commencement were 200. Gradually, throughout the year, relay after relay were set at liberty, until, as we have seen, the prisoners dwindled down to 19. When, after thirty-seven days, the public minister harangued the jury, it became more than ever apparent that he had no case to lay before them. He himself absolved the "Society of Viadana," denounced as a promoter of disorder; paid tribute to the patriotic merits of Siliprandi, but feared "that he had substituted the red flag for that under which he had fought his country's battles"; professed his *belief* that to the constitution of the society of the peasants must be attributed the discontent of the Mantuan provinces; dwelt fully on the assertion of the great landed proprietor, D'Arco, that Mantua was on the verge of civil war; withdrew all accusations against six of the accused, and finished up with an appeal to the impartiality of the jury. The counsel of defence divided their labors admirably. Prof. Ceneri's eloquent discourse was "an act of accusation" against the Government. He dwelt forcibly on the abuses of the police, connived at by the magistrates—mandates of arrest being left in blank for the police to fill up with what names they chose; on the insult and maltreatment of respectable citizens, the refusal of doctors to the prisoners when sick, the atrocious persecutions against the families of the arrested. "Truly, he said, we are worthy missionaries of civilization to the Africans! One by one he disposed of the general accusations, then one by one proved the lawful deeds and virtuous intentions of the accused,

He affirmed that strikes are no longer punishable by law, that the condition of the Mantuan peasants justified and justifies such strikes, and, certain that the jury would absolve his "estimable friends" the accused, he sat down amid deafening applause which the president strove in vain to quell.

While I write, the liberated victims, borne in triumph by the populace, who occupied the entire space between the court of the assizes and the Ponte di Rialto, pale, trembling, and dazed by the air and light which for the last year has been denied them, grateful for the affectionate sympathy shown to them by the Venetians, are preparing to return to Mantua, to their desolate families, and, alas! in many cases to their barren hearths. Has any Government ever received a severer sentence or a more deserved castigation? Nor is this the first since I last wrote to you; the "republicans" whose trial had just then commenced, though they had declared that Italy had been brought to such a pass of slavery, corruption, immorality, and misery that they had set themselves to bring about a republic, were also absolved by a Roman jury. On the other hand, Cotta Ramusino (the friend of Depretis), the fraudulent bankrupt absolved by corrupt judges, was, on a new trial claimed by the sufferers, condemned to five years' imprisonment and a heavy fine.

At the present moment a rumor is afloat that Leo XIII. intends to withdraw the veto: "Neither electors or elected," at least for the old sub-Alpine provinces, and for Lombardy and Venice ceded by Austria to Italy by treaty. If this be so, the Catholics in the other provinces will take French leave, and though, as I have said before, the Catholics for the greater part do now vote under the rose, and their voting as a body will not greatly increase the aggregate number of electors by sending up Catholic Conservatives to Parliament, they would create a party round which non-Catholic Conservatives would rally, and for once we should see a Conservative party and a Liberal Opposition. The Liberals must then have a programme of their own, and in this case there may be yet a chance for representative institutions in Italy. Nothing, in my opinion, could be worse for the country than a political-social revolution with finances in their present state, commercial and industrial depression, agrarian misery and discontent, whose manifestation will be increased by the verdict of to-day, deepening daily. In England and America and now in France discontent comes to the surface and appears even greater than it is; here it is suppressed, stifled, and earthed over; hence it takes daily deeper and wider hold of the soil; should it burst out suddenly and at different points the conflagration will be fearful. We have barely escaped a general strike of the railway servants, and even this, I fear, is postponed rather than subdued.

SIR HENRY MAINE AND THE PATRIARCHAL THEORY.

To the Editor of The Nation:

Sir: The review of Sir Henry Maine's 'Popular Government' in last week's *Nation* called to mind the regret which I felt—and, I think, a good many others also—when it was first announced that he had in preparation a book on a subject so remote from that in connection with which his earlier reputation was made. This was not at all because 'Popular Government' or 'Democracy' is not a theme of contemporary human interest, or because it is not helpful to have his views on this as well as on the other things about which he has written. But in the first place, his earlier works have developed a popular interest in the study of primitive institutions which it seems his duty to satisfy and direct. And in the second place, there is so much need for a scientific restatement of the patriarchal theory that one would be glad to have its author sum up his side of the case, now, when there has been at least enough testimony produced against him to make it clear that an intelligent jury will not give him a verdict without leaving their seats.

There is nothing presumptuous, I am satisfied, in saying that the criticism made by the various disciples of the anthropological school is, in a fair view, destructive of the picture which one gets of the development of primitive society from reading the 'Ancient Law' and the 'Early History of Institutions.' This, of course, is no new discovery, but the well-founded opinion, I take it, of every careful student of sociology. The influence of the "patriarchal theory" on contemporary thought, however, has been too profound to warrant hasty conclusions as to its general worth from what may be nothing more than a fault of presentation. The patriarchal theory has surely a permanent place in science, if not in the form under which Sir Henry Maine has already given it to us, then in some other form. But the duty of showing that it is elastic enough to readjust itself against the attacks which are made on it, rests with its advocates. I cannot find that Sir Henry Maine himself has attempted this. Where he has undertaken a reply to the strictures of his critics, as in some of the chapters of the volume on 'Early Law and Custom,' he has contented himself with presenting the difficulties which stand in the way of accepting the generalizations offered as a substitute for his own. This, however, is not a hard task. The most enthusiastic follower of McLennan or Morgan will hesitate to claim that their speculations have the highest constructive value. They help to supply the material for an ultimate theory of the development of society rather than a satisfactory theory itself. But at the same time they bring to clear view problem after problem which cannot be solved by any formula printed in the works of Sir Henry Maine.

Now there naturally suggest themselves to every one who studies the subject with any interest, various modifications or limitations of the patriarchal theory which will bring it into the current of this other thought. I, for example, have at times counted it quite likely that the theory shall be ultimately acknowledged to have no application at all to sociology, but to belong exclusively to the history of law. Here it may be treated as a belief, having all the influence on the development of Roman law of a fact, just as various theological delusions have shaped human thought and conduct in spite of their intrinsic worthlessness. This, of course, is a very radical view, but it suggests the extreme necessity which exists for one in authority to advance something less destructive. The logical result of the sort of warfare thus far waged between the two schools is to put the mind of the student in a position of uncertainty which is very proper in discussions about the beginnings of things. If this condition of intelligent agnosticism were general, one would have no reason to be apprehensive. But the singular fascination of Sir Henry Maine's literary style has given his views a currency which seems to me extremely inimical to scientific thinking. This appears both in deliberate written rehearsals of his ideas and in popular thought on the questions which he has discussed.

Professor Hearn, for example, in his work on the 'Aryan Household,' undertakes, in behalf of the patriarchal theory, to eliminate some of the difficulties suggested by the anthropological school. He proposes to this end to consider in his book the structure of an Aryan family only, without regard to the family organization as seen in other races. The reason for this exclusion is obvious. No small part of the problems incapable of solution, as we have said, by the method of Sir Henry Maine come from the history of peoples lower in the social scale than were any of the Indo-European races when we first have knowledge of them. There is nothing at all open to criticism in this proposition of Professor Hearn's. As he himself puts it, there is enough in the story of the Aryan household to fill a volume without any mention of the households of other races. One can, even in these days, write a Latin grammar without at the same time writing a comparative grammar. But it surely would be quite out of the question for the Latin grammarian who had no knowledge of Greek and Sanskrit, or who avowedly excluded them from consideration, to undertake confident generalizations in Latin historical syntax. And if he did attempt such generalizations, it would only be by chance if they failed in many cases of being monstrous. But it is a precisely parallel course which this disciple of Sir Henry Maine takes. He deliberately omits from his data whatever would belie his conclusions, and then declares with confidence that the *gens* in its historical origin was not a subdivision of the Horde nor an artificial union of families, but a natural aggregation of kinsmen held together by the ties of blood and such other bonds as were taken to be evidences of relationship in primitive society. I do not here dispute at all the accuracy of this definition. The clan may or may not have been based on kinship. But I claim that it is utterly unscientific to leave unexplored the annals of many peoples which are filled with facts apparently inconsistent with this view, and to found such a generalization on the social history of only a few races, and those, too, in a comparatively advanced stage of civilization.

But this sovereign disregard for the value of rebutting evidence is of course still more characteristic of the average unprofessional advocate of the patriarchal theory. I actually heard a scholar of no small attainments seriously state, not long since, that modern science had not brought to light a social custom which did not help to establish the truth of the notion that the typical clan was a natural union of kinsmen; and, by way of illustration, he showed how difficult it was for McLennan or Morgan to account at all for the origin of exogamy, but how simple was the explanation if you assumed that the clan was in the beginning a family. Its members then, of course, took wives, not from among their sisters, but from among the members of neighboring families. When all these families enlarged into clans, their members, without reason, continued the custom of their fathers, and the strange rule of marriage without the clan was made as imperative as that of marriage without the family had been. This seems to me a delicious example of history run mad—a remarkable revival of the etiological-myth method of Blackstone, long since abandoned. Nor is there anything unfair in holding the patriarchal theory at least partially responsible for such aberrations. Its advocates have to resort to some sort of juggling when they undertake to reconcile it, in its present shape, with the revelations of careful sociological investigation.

ACCURACY OF TRANSLATION AGAIN.

To the Editor of The Nation:

Sir: The praises bestowed the other day in the *Nation* on Mrs. Ward's translation of Amiel's

'Journal' induce me to point out a few of the exceptions which may be taken to such favorable criticism, though I should agree with your reviewer so far as to think this translation better than most translations.

Setting aside consideration of the quality of *expansion*—to which Mrs. Ward confesses in her preface, and which most of us must think a mistake—it may be observed that there is frequently a lack of *exquisiteness* in the rendering of the thought: its shades are not conveyed. An illustration, with comments, will better define my meaning than any amount of assertion; and a very unimportant passage, which I have by accident just been led to compare with the original, may serve my purpose as well as any:

"Nuit superbe. Firmament étoilé, causerie de Jupiter et de Phébé en face de mes fenêtres. Effets grandioses de ténèbres et de rayons dans mon préau calviniste. Une sonate remontait du gouffre noir comme une prière de repentir s'échappant du lieu des supplices. Le pittoresque se fondait en poésie, et l'admiration en emotion."

"A superb night—a starry sky—Jupiter and Phebe holding converse before my windows. Grandiose effects of light and shade over the court-yard. A sonata rose from the black gulf of shadow like a repentant prayer wafted from purgatory. The picturesque was lost in poetry and admiration in feeling."

Now, sentence by sentence: first, why change the original punctuation? Next, "holding converse" is not the equivalent of "causerie," which has a little delicate touch of humor in it. Gods, indeed, would "hold converse," but Jupiter and Phebe that night before his windows were (one might say) "gossiping together." Or, if that be too bold, were they not at least "*idly* conversing"? My next criticism may seem a hypercriticism, but I think it not so. "Ténèbres" is not identical with "ombre," nor "rayons" with "lumière"; and I should be much inclined here to speak of "patches of blackness and shafts of light" over—the courtyard, says Mrs. Ward!!—"in my Calvinistic meadow," wrote Amiel, thereby conveying a thousand suggestions in a phrase. One sees the little grassy field, illuminated with moonlight and rendered unfamiliar by strange shadows, metamorphosed into "grandiosity," yet still "Calvinistic," still in the neighborhood of Geneva, still a droll place for Jupiter and Phebe to loiter in. How much of all this could one get at through Mrs. Ward? To continue: "the black gulf" is precisely as intelligible to an English reader as "le gouffre noir" to a French one—neither more nor less; why add "of shadow"? "S'échappant du lieu des supplices" ("escaping from the place of torments") is terribly weakened in "wafted from purgatory." If Amiel's thought could have been expressed by "purgatory," he himself would have said "le purgatoire"; and if "wafted" had been what he meant, he certainly would *not* have said "s'échappant." Again, he said "the picturesque melted into" (became one with, not "was *lost* in") "poetry, and admiration into emotion" (not "feeling" merely, which is but the cause of emotion. "Émotion" is the English *emotion: feeling* is in French "sentiment").

Very many of Mrs. Ward's pages are open to this sort of fault-finding; but it is not with any sense of special grievance against her that I say this. Rather her work rises enough above the average to be worthy of very careful and thoughtful criticism—of a kind to make evident the low standard now prevailing among translators. There is never an *artist* among them. If only, then, they would content themselves with giving us an honest *photograph!* But they all "touch up" the "negative," and resemblance then—how much is there?

A Lover of Trustworthy Work.

WALDSTEIN'S ART OF PHIDIAS.

To the Editor of The Nation:

Sir: If you can spare me a little of your valuable space, I should like to express the pleasure I have had in reading your admirable review of Prof. Waldstein's book on the 'Art of Phidias.' Mr. Waldstein is, without doubt, a man of ready and acute perceptions and of a vivid imagination: his inductions are plausible and his generalizations are brilliant, but some of them seem to rest on such meagre foundations that we all must ask for greater caution. You are perfectly right in your treatment of the question of the frieze: it was knowingly put where it could not be well seen, in just the same spirit as the back of the Ilyssus was modelled as carefully as the front, though no human eye should behold it.

But for one thing we should be profoundly grateful to Mr. Waldstein, and that is for calling the seated figures of the Pediment "The Sea and the Land." It is exactly what they are; and how perfectly they express the idea. It is extraordinary that when this had been pointed out it was not at once adopted. The figures are in such attitudes as never would have been chosen except to express something definite and characteristic, and they are not characteristic of any of the personages whose names have been hitherto attached to them. But how perfectly do they express the Sea lying in the lap of the Land—the Land bending over the Sea! These wonderful forms are given a new meaning, and, if possible, an even more attractive beauty than before.—Yours truly,

Geo. C. Lambdin.

Philadelphia, April 5, 1886.

WORK FOR THE KNIGHTS.

To the Editor of The Nation:

Sir: The Knights of Labor are wide of the mark in supposing that their action in any way seriously affects Jay Gould. Many families may be pinched, many a scanty score of earnings be exhausted, many local or even national interests may suffer, but Mr. Gould will be in none of these. On the contrary, he needs no better leverage than the present attitude of the strikers gives him. If all the employees on a system of roads can be depended upon to "go out" if one of their number is unjustly discharged, the managers can make more money by causing strikes than by working their roads. They have only to "sell short," unjustly discharge some workman, and provoke a strike, allowing the wrong to be righted and the work to go on only when they have "covered their shorts." A splendid scheme for the unscrupulous capitalist, but does it bring the laborer any proportionate good? The shrewdness that has brought Mr. Gould through so many struggles with organized ability, backed by capital, is little likely to fail him now.

Only one thing can mitigate the evil already incurred, or furnish a safeguard against the accumulation of wealth by dishonest means. No clear-headed laboring man inveighs against wealth fairly acquired. To do so is to cry out against that storage of power which every day shows him is necessary for all great works. It is to condemn in others what he himself, if a prudent man, is trying to do—accumulate his savings. It is wealth dishonestly obtained that hurts the laboring man as it hurts the whole community. It is the immunity and reward given to dishonesty and fraud on a grand scale which presses heavily on the country. If, leaving to peaceful settlement all direct differences between employer and employed, organized labor would turn its attention to securing good government, we should see such changes in the country as no other agency can work. At present Democrats and Republicans struggle for the mastery, and a few thousand dollars from some rich man or corporation easily turn the scale and always debase the office. If the efforts of all labor organizations, independently of party, could be directed to securing just judges, and legislators with intellect and courage and integrity, not only would capital cease to furnish a grievance, but a thousand other abuses and annoyances would disappear. In no other way does a crusade against a manifest wrong seem likely to avail. Here it will surely succeed. B.

THE FRENCH SPOLIATION CLAIMS OF 1831.

To the Editor of The Nation:

Sir: Prof. Alexander Johnston's justly valued 'History of the United States' makes a rather remarkable misstatement, to which it seems to me that attention may properly be called.

In speaking of the strained relations with France ensuing upon the treaty of 1831, the author in substance asserts that the claims against France allowed in that treaty originated during the troubles prior to 1801, and that the money paid for their liquidation is still retained by the United States (p. 224).

These statements are quite erroneous, and result from a singular misapprehension on the part of the historian. The claims of 1800 were settled by the Conventions of 1801 and 1803, and the American claimants do still fruitlessly seek relief from their Government. But the claims adjusted in 1831 arose from 1806 to 1811, during the operation of the Berlin and Milan decrees of the Emperor Napoleon; and the money paid by France, some five millions of dollars, was promptly paid over to the creditors when received by the United States.

I will only refer to Charles Sumner's report, 'French Spoliation Claims' (page 39), to the treaties with France and the Treasury documents of 1837. (*Vide* Niles, vol. lii, title, "French Indemnity.") C. M. M.

Madison, Wis., April 7, 1886.

Notes.
